## More than soap

Do you realize that soap can be more than soap? Ordinary soap is simply a cleanser. Resinol Soap cleanses as perfectly as any—better than most. But, besides, it contains just enough of the gentle, soothing Resinol medication to relieve clogged, irritated pores and to give nature the chance she needs to make the complexion clear and healthy. Resinol Soap is the fine adjustment between a cleanser and a healer.

Yet, with all this, Resinol Soap costs but twenty-five cents a cake—little enough when compared with what is often charged for other choice soaps, but sufficient to insure the utmost refinement of manufacture, the utmost satisfaction in use. Sold by all dealers in toilet goods. For trial cake, free, write to Dept. 27-E, Resinol, Baltimore, Md.

## Horsford's Cold Weather Plants

are not injured by severe winters. His fall and spring lists offer about a thousand kinds of shrubs, trees, vines, bulbs, wild flowers, hardy ferns, orchids, fruits, stock, &c., which you ought to know about. Ask for catalogue A.

# INDEPENDENT OPINIONS

The fact that there are two sides to every question makes much less trouble in the world than the additional fact that there is generally a third, a fourth, an *n*th side, too. These factors upset even the logical mind, and the "forgotten alternative" has risen up to confound many a pair of methodical debaters who thought they had a question comfortably in hand.

So we are again taken to task by some of our readers for not giving all the political parties a place in our own series of articles on Both Sides of the Campaign.

But in every presidential campaign of the last twenty years The Independent has published a direct statement from each of the candidates of the little and big parties, and we can promise our readers that we shall be just as catholic this time as we are in the habit of being. And, to be sure, we have given space often to the special causes in which our correspondents are interested.

Please do not make the blunder of assuming that "Both Sides" includes all sides. There are some of the opinion that the two sides of American politics are the conservative side and the progressive side. "Both Sides," as quoted by you, are conservative, and the real progressive voter must find some other political organization to represent him. I am one of the progressives that does not consider progressive enough a national political party that straddles woman suffrage and strangles prohibition in its platform; that declares suffrage for black men a proper matter for federal enactment but franchise for women a subject upon which the nation should not speak, only the states; that coolly if not cowardly passes by, as irrelevant to a great campaign, the great moving militant question of national prohibition.

As a forward looking man I propose to support in this fight ex-Gov. J. Frank Hanly, of Indiana, not only for the straightforward position of his party on the above mentioned issues but for the clear cut, progressive principles announced in its platform. I am not alone in this position. I should be pleased if The Independent should make some arrangement to give a hearing to the progressive side of American politics as well as the conservative.

C. C. FRENCH

Monmouth, Illinois

After one of the greatest dodging contests known to history in the making of platforms, and the effective muzzling of the leading men, the two old parties have gone before the country with not a word to say about the prohibition of the manufacture and sale of intoxicating liquors as a beverage. A few years ago that would have been thought nothing of, but in this day of progress, when state after state is wheeling into the prohibition column, to be silent on that question is nothing less than abject cowardice, not to use a stronger word that is perfectly applicable.

Are you not going to have anything to say about this "side" of this campaign?

Mendon, Ohio

O. F. GEIGER

It was no part of our plan to let President Schurman and Mr. Hapgood do all the talking for both—or all—sides,

and we are glad to open the platform for an assortment of pre-election opinions. Mr. Leavitt, a lawyer of New York, challenges Mr. Hughes on a point which is likely to be the center of much campaign talk; in an open letter to the candidate from which we quote in part:

The Independent, in a column headed "Remarkable Remarks," in its issue of July 17, on page 77, attributes to you the truly remarkable remark that promptness and decision on the part of the administration would have prevented the "Lusitania" tragedy.

The pith of the deliverance in question lies in the use of the word "would." A remark as to what "might" have been, would have been remarkable only for banality. To affirm that "if the administration had acted promptly with decision" the murder of our countrymen "would have been prevented," is to make a charge so serious that, if true, it should be backed up by a bill of particulars; and if untrue, should be withdrawn.

Hence a question which a candidate who is seeking to persuade the American people to swap horses while crossing a stream must answer:

What is the specific act of promptness and decision which President Wilson could have done, which, if done, would have prevented the "Lusitania" tragedy?

JOHN BROOKS LEAVITT

We are children for being too kind and too unkind to Colonel Roosevelt. George Bond, of McAlister, New Mexico, writes that

It looks as tho he wanted to deliver the Progressives into the hands of those very fellows whom he so roundly denounced four years ago. The Republican party is dominated by the same men today as four years ago. If it was the part of a big man to create a new party four years ago in order to rid himself of such men and measures, how is it the part of a big man today to support the same men and measures and at the same time to destroy politically the usefulness of so many who so faithfully trusted him to lead them out of political unholiness into political righteousness?

But from Kailua, Hawaii, Dr. E. S. Goodhue complains that we have not been just, kind, or consistent in dealing with him:

The politicians were the whole thing at the Republican National Convention, as everybody knows, as well as at the Progressive Convention.

The latter should never have convened as an organization.

For the people as a mass were and are for Colonel Roosevelt, altho in view of later developments I have no doubt they will support Mr. Hughes. It is the only thing to do.

A clergyman of Cambridge, Massachusetts, who remembers Beecher's editorials, thinks that we have fallen from grace in saying certain good words about the Republican candidate.

The Independent favored the Republican party in its early history. It was then the party of progress and humanity. It has greatly fallen in the last years. Today it stands preeminently for graft. It is the party of special privilege. It believes in

the taxation of all the people for the benefit of the few. . . . Its record of the past thirty or more years proves this. It is the party of industrial corporations. It has become as a consequence utterly corrupt. Roosevelt and other men broke with it for these reasons. They wished to reform it—but it cannot be reformed—no matter how honest or just a man heads the ticket.

Roosevelt advocated, indeed, elected Taft. He had faith in him—an honest man—but “the interests” were too strong for Taft, they controlled him. This was the cause of Roosevelt’s break with Taft. It is the same today. Roosevelt is making the same mistake. He now favors Hughes—a good man—so was Taft. But “the interests” will be too strong for him, as they were for Taft. It is still the party of graft. It has not changed. Why should it? It is the party of the corporations. They simply wish to get into power again, and “do” the people further.

Publish my letter four years hence. I know the rottenness of this whole business and I am sorry if The Independent will not live up to its earlier traditions.

I am not a Democrat but I shall vote for Wilson. M. ANGELO DOUGHERTY

We do not believe that either party has a monopoly on democracy, or that Mr. Hughes is one whit more likely to become the tool of predatory wealth than President Wilson; nor do we find ourselves particularly at home with the political bedfellows ascribed to us by a correspondent who wants us to stop his paper till after election:

“T. R.” Penrose, Smoot, “The Interests,” the Hyphenated Americans, the Kaiser, the Mexicans, the Turk unspeakable, up to his eyes in the blood of a million Armenian martyrs—all are found standing on one platform, which platform, when boiled down, comes out in four words: “Anything to beat Wilson.” And The Independent has taken its place among them. S. H. McKOWN

Gerrardstown, West Virginia

There is one good reason for voting for President Wilson. If you believe he has made good, and that his party is right, you will not vote to swap horses. Here is a reader who is enthusiastic in that belief. But the idea that a republic must be “grateful” is not the best premise for an election decision. There is no reason for reelecting a “good president” if there is a better one available:

Your hobby is efficiency, yet you do not support the most efficient President we have ever had. You do not favor imperial forms of government, yet you advise defeating for reelection the greatest advocate of a democratic form of government we have ever had. Nothing would so discredit us, and strengthen the belief in the divine right of kings to rule, as the defeat of Woodrow Wilson this fall. You would prove that republics are ungrateful.

Albion, Michigan C. K. FARLEY

In our department of “Remarkable Remarks” we quoted Dr. Washington Gladden the other day as saying that “Each nation must have its own God; religion is a purely ethnical affair.” This turns out to be one of the cases where the quotation is correct, but, being taken out of its context, makes a good doctor say exactly what he didn’t intend to say. Dr. Gladden writes us: “It is true that these words are taken from my book, ‘The Forks of the Road’; they are quoted from my resumé of ‘the theology of militarism,’ which I am at-

The Original Food-Drink for all ages. More nourishing than tea, coffee, etc. In the home, or at Hotels and Cafes. Substitutes cost YOU Same Price.

the Senior English Class of the Wenatchie High School wishes to express its opinion of the article in a contribution to the "Independent Opinions" of your magazine.

The author says we must fight with Germany. We admit Germany's inhuman and illegal submarine warfare, but we also believe that Great Britain has treated us unjustly in her seizure and search of our ships and mails.

He states that the United States could shorten the war and bring on permanent peace by entering the war. This seems unsound for we are in no position to send an army to Europe and our supplies are now going to the support of the Allies. Would the United States in the war make the world any surer of a permanent peace?

We are a democratic nation and advocates of peace, but if we enter the war against Germany we must ally ourselves with Russia, and are the forces of Russia any more democratic than those of Germany?

The class believes the article to have been written from an unneutral standpoint, and with the purpose of influencing American minds against Germany.

We would have this nation stand for peace, humanity and democracy. But we can better do this by remaining honorably aloof from this war and lending a helping hand in the end.

In pursuing this course we would not allow our national rights or honor to be trampled on. We support President Wilson in his stand on the submarine question, and would have Germany acquiesce in our demands or sever diplomatic relations.

FRED DEAN

Wenatchie, Wisconsin

Why read after thirty? Mr. Robert C. Holliday, in your issue of June 12, tells us as a result of ceasing to read we suffer a hardening of the intellectual arteries. I am not sure that he is right. I have been an omnivorous reader. Several books a week was my average for years. Now I read magazines, as deplored by Mr. Holliday, and perhaps skim thru a book or two a month, and I protest that my intellectual vigor instead of waning is increasing immensely. May I offer a suggestion for keeping the "intellectual clock" moving? Instead of reading a thousand books between the ages of thirty and seventy, let any one try writing just one, not for publication, but merely as a preventative of mental ossification, and by the time he has written a chapter or two he will probably find that his brain cells have been in need of exercise which they could never have received from reading.

In the "Composite Educational Autobiography of Independent Readers," in the same issue, I noted the fact that the power to absorb knowledge seemed the most useful thing obtained from schooling and that initiative was learned only after leaving school. From thought to action is a natural sequence, so if after thirty one finds his interest in books diminishing, and his concern in the doings of the world as set forth in new papers and magazines increasing, if he has found his place in the social mechanism and is intent on filling that place creditably it is a sign of progression. Let him re-ice and instead of trying to learn to read again, let him grow along the line of his own individuality.

LILY M. LEAMAN

Ogden, Utah

In Memphis a colored man was on trial for felony. The judge asked him if he desired the appointment of a lawyer to defend him. "No, sah," said Sambo, "Ise gwine to throw myself on de ignorance ob de court." — *Puck*.

Absolute knowledge have I none;  
But my aunt's charwoman's sister's son  
Heard a policeman on his beat  
Say to a freeman in Downing Street  
That he had a son, who had a friend  
Who knew when the war is going to end.

# New and Forthcoming Novels

H. G. Wells' New Novel

## MR. BRITLING SEES IT THROUGH

A story of profound interest and appeal in which Mr. Wells gives us a most vivid picture of the real effects of the war in the hearts and minds of the English people—in particular its far-reaching effect upon the lives of Mr. Britling and his family.

Published September 20. \$1.50

## THE GREEN ALLEYS

Eden Phillpotts' New Novel

Another brilliant story by Mr. Phillpotts having for its background the Kentish hop fields. Like "Old Delabole," it is a fresh demonstration of Mr. Phillpotts' unique place in modern literature.

Published September 7. \$1.50

## MULTITUDE AND SOLITUDE

John Masefield's Novel

A fascinating story of adventure from which the reader will derive the same sort of pleasure as he does from a Masefield ballad.

Ready October 25.

## CHANGING WINDS

St. John Ervine's New Novel

As admirable in its character drawing and in theme as Mr. Ervine's recent and highly successful stories, "Mrs. Martin's Man" and "Alice and A Family."

Ready in October.

## THE SECRET TRAILS

Charles G. D. Roberts' New Book

Fascinating stories of animal life and the great out-of-doors by one whose work in this field has won for him international recognition.

Ready in October.

## THE TURTLES OF TASMAN

Jack London's New Book

A collection of the best new stories by Mr. London, containing tales of adventure, of character, of unusual experiences in unusual places.

Ready September. \$1.25

## THE HUNGRY STONES; and Other Stories

Rabindranath Tagore's New Book

Mr. Tagore's short stories in his own translations and illustrated by native Indian artists. None of the material in this volume has ever appeared before in English.

Ready in October.

## GOLD MUST BE TRIED BY FIRE

Richard A. Maher's New Novel

As brimful of action and character as Mr. Maher's recent novel, "The Shepherd of the North," which was considered by many as one of the most interesting stories of the season.

Ready in October.

## PILOT

H. Plunkett Green's New Novel

"Pilot" is a roguish and cunning dog who is an inveterate poacher and has a distinct sense of humor—about him Mr. Green has woven a thoroughly enjoyable story.

Ready in October.

George Moore's New Novel

## THE BROOK KERITH

"The Brook Kerith" tells in a most striking way a new story of the life of Jesus . . . . The narrative, embodying a most revolutionary interpretation of the founder of Christianity, is carried through in George Moore's well-known manner, with a great deal of realistic detail and with great simplicity and beauty of style.

100 Northern Pacific Ry.	7%	112	6.30
100 Pennsylvania R.R. (\$50 par)	6%	56	5.40

IN discussing the relative safety of some of the recent European war loan bonds, the writer was reminded by a member of a prominent banking firm that there is no such thing as an *absolutely safe* investment. We have been accustomed to regard government bonds as the safest form of investment, but even this rating must be qualified according to the credit posset by the country issuing the securities.

For example, Mexican Government bonds have been selling at a large discount for years, due to the demoralized political and industrial condition of the country, while United States 3% bonds are selling at par. Now we have the new British Government Secured 5% notes selling on a 5½% basis, while other good European government securities sell on from a 6% to a 10% basis. There are reasons.

The reader must again be reminded that as the rate of interest increases the element of safety decreases, and while we may be considering government bonds, the only manner in which the investor can assure himself of comparative safety of his total investment is to *diversify* his holdings properly. Diversification does not mean merely distributing one's funds by the purchase of different classes of securities such as those of governments, railroads, municipalities, public utility and industrial bonds and stocks, but a careful geographical diversification as well. For the intent is to minimize possible losses thru an unavoidable calamity such as a flood affecting a section of the country or a general depression in another section or a coal strike or bad management in one particular corporation, and other contingencies that may arise.

So the sensible man does not "put all of his eggs in one basket," even tho he has but few eggs. He buys investments of various classes yielding him from 4% to 6%, or an average of about 5%, and a reasonable assurance as to safety of principal. The selection should comprize not only securities of corporations doing different classes of business but the corporations' assets should be

located in sections widely apart from each other.

In considering railroad securities, it is well not to select those of railroads having the same character of traffic in predominance. For there are grain roads, coal roads, lumber roads and ore roads, meaning roads having the greater percentage of their traffic in those commodities. In the event of a depression in any of the industries supplying those products a man having all of his funds in a road carrying a predominating amount of coal, or wheat, or lumber—as the case may be—might see his securities depreciate in value, and if the depression was serious might experience a loss in income from his stocks.

With proper geographical distribution, an adverse condition existing in one part of the country might affect one concern whose securities formed a part of the investment but would not affect the greater part of the fund. For example, a depression in the cotton industry would affect all southern securities, railroad, industrial and public utility to a certain degree but it would not affect in the same degree securities of northern corporations, excepting perhaps those of cotton mills. A prolonged traction strike that would tie up the New York City surface lines would cause a great decrease in earnings of the corporations affected, followed by lower prices for their securities; but it need not affect to any appreciable ex-

tent the securities of Chicago, St. Louis, Omaha, Portland or San Francisco tractions unless there was the prospect of a country-wide traction strike.

Perfect diversification is more easily accomplished in the case of a large investment fund, say, of \$50,000 to \$100,000 than in a small one of \$1000, for the reason that there are comparatively few bonds in smaller denominations than \$1000. It would be very desirable to include in the investment of \$1000 from five to ten different securities. Figuring on a properly diversified investment of from \$1000 to \$5000, there could be included 30% in railroad stocks, 20% in government bonds, 10% in municipals, 20% in railroad bonds, 20% in public utilities or industrials.

For the convenience of the intending investor of \$1000 the appended list has been compiled. It might have been wiser if we could have included a greater percentage of public utility bonds, but, unfortunately, few good public utility concerns issue bonds in \$100 denominations. Public utility securities possess the advantage of being very little disturbed by any except the most extraordinary depressions and are therefore very favorably regarded.

No investment fund is too small to be susceptible of some degree of diversification and the small investor is advised not to place any amount over \$100 in one form of investment unless he already has a diversified selection. This advice is intended for the man or woman who can save a hundred dollars every few months, in which case it is wise to purchase a bond or stock of a different sort at each instance.

It is a good habit to form and if practised when one begins to invest will cause no regrets when the fund has grown to large proportions. Not only does the investor secure safety of principal, adequate yield, marketability and diversification, but in seeking these various elements he learns how to discriminate between safe and unsafe securities and gains a valuable education regarding investment securities.

### THE INVESTOR'S SERVICE

*The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.*

PEBBLES

Sexton I—Do you have matins at your church?  
Sexton II—No, we have oilcloth.—*Cleveland Leader*.

Revised version, after the landing of the submarine "Deutschland," "Rule, Britannia, Britannia rule the wave, except on Tuesdays and Saturdays."—*Masses*.

"Is there any particular sport you are fond of, Miss Effie?"  
"No—but—er—I like you very much, Mr. Snaggs."—*Scribner's Magazine*.

Visitor—My good man, you keep your pigs much too near the house.  
Cottager—That's just what the doctor said, mum. But I don't see how it's a-goin' to hurt 'em.—*Punch*.

"Is this a free translation?" asked a customer in the book store.  
"No, sir," replied the clerk, "it will cost you a dollar fifty."—*Boston Transcript*.

"Good Sunday yarn this," declared the exchange reader. "Parson doubts that Jonah lived three days in whale's belly."  
"Great!" agreed the Sunday editor. "Interview Jonah and get a photo of the whale."—*Judge*.

"Aren't you the boy who was here a week ago looking for a position?"  
"Yes, sir."  
"I thought so. And didn't I tell you then that I wanted an older boy?"  
"Yes, sir; that's why I'm here now."—*Brooklyn Citizen*.

Murderer—Is this the guy who is to defend me?  
Judge—Yes; he's your lawyer.  
Murderer—If he should die could I have another?  
Judge—Yes.  
Murderer—Can I see him alone for a few minutes?—*Boston Transcript*.

A three hundred pound man stood gazing longingly at the nice things displayed in a haberdasher's window for a marked-down sale. A friend stopped to inquire if he was thinking of buying shirts or pajamas.  
"Gosh, no!" replied the fat man wistfully. "The only thing that fits me ready-made is a handkerchief."—*Harper's Magazine*.

At a military church service during the South African war some recruits were listening to the chaplain in church saying, "Let them slay the Boers as Joshua smote the Egyptians," when a recruit whispered to a companion:  
"Say, Bill, the old bloke is a bit off; doesn't he know it was Kitchener who swiped the Egyptians?"—*Tid-Bits*.

It was an overland dining car, and a miner who had struck it rich in Alaska and outfitted regardless of expense in San Francisco, was eating in the company of his seven year old daughter. She satisfied herself before pa had finished his meal, and started to leave the table.  
"Come back, daughter," called pa, earnestly concerned to do his best for her, and speaking in a big voice so softened with tenderness that it was beautiful to hear. "Take a toothpick, Honey. Be a little lady!"—*Harper's Magazine*.

A certain conscientious young sub. was in the front line the other day when a major on the Divisional Staff came along and began questioning the boy, with a view to testing his alertness and efficiency.  
"What trench is this?"  
"I don't know, sir."  
"What regiment is on your right?"  
"I don't know, sir."  
"How do your ratings come up?"  
"I don't know, sir."  
"Well, you don't seem to know much, young fellow, do you?"  
"Excuse me, sir, but I don't know who you are."—*Manchester Guardian*.

Diversified Investments

Securities suitable for the varied requirements of individuals, trustees, savings banks and other financial institutions.

The selection comprises a well-diversified list of municipal, railroad and public utility bonds yielding from 4.00% to 5.20%.

## You Take No Risk

This Razor is  
GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for life. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel can—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, **\$2.00**

In remitting, mention your dealer's name, and a chamois lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884

Capacity 6,000 razors daily

**Shumate Razor Co., 613 Locust St., St. Louis, U.S.A.**

## Skidmore School of Arts

A College for the Vocational and Professional Training of young women, located in America's leading health resort.

Six Departments:

DOMESTIC SCIENCE AND ARTS; MUSIC;  
FINE ARTS; PHYSICAL EDUCATION AND  
ORAL EXPRESSION; SECRETARIAL; TRADES

Four dormitories accommodate over two hundred students. Outdoor sports. Non-sectarian. Diploma commands Teacher's or Supervisor's certificate in New York and other states. Catalog on request. Winter and Summer Sessions.

Charles H. Keyes, Ph.D., President, Saratoga Springs, N. Y.

## Union Theological Seminary

**W. E. UNDERWOOD**

### THE DEFERRED DIVIDEND SCHEME

There is scarcely an angle from which we might view the system of deferred dividend life insurance that does not reveal it as destructive of the equities of the great majority of the policyholders who buy it. When we realize that all old line premiums are so heavily loaded against every possible contingency that each insured person substantially overpays the amount necessary to carry his risk, on the condition that the overplus will be returned to him once a year, we should conclude that any scheme which endangers the return of that money violates the principles on which life insurance is founded. As I have repeatedly asserted: under the best results that the most skilled and economical management can attain, life insurance is an expense. Therefore, any plan which enlarges the cost is an obvious wrong to the bearer of the burden.

Policyholders who knowingly and deliberately agree to leave these overcharges of premium, commonly called dividends, with their companies under a contract which provides that if the insured fails to pay his full premiums during the period of years agreed on—generally twenty—or if he dies during that time all the dividends accumulated to his credit up to the time of the default by lapse or death, pass automatically out of his possession to the policyholders who did not default, are participants in a game of chance—a form of immorality wholly inconsistent with the nature and objects of life insurance. The practise, reduced to its simplest form, cannot be regarded as less than gambling.

An incident has recently occurred which graphically illustrates another risk which deferred dividend policyholders must accept. In this case the entire deferred dividend accumulation was wiped out. A company which at the beginning of 1915 possessed a deferred dividend fund of \$1,225,000 (in round numbers) and nearly \$400,000 additional policyholders' surplus, was examined by its State Insurance Department this year. Among this company's assets was real estate which it valued at \$5,800,000. Some of this property has not been yielding a net income commensurate with the value at which the company carried it on its books. The appraisers reduced its value to \$4,770,000. The result of this revaluation brought the entire policyholders' surplus to \$334,000. As will be seen, the deferred dividend surplus suffered extinction.

Altho the policyholders earned divi-

# Salt Mackerel

## CODFISH, FRESH LOBSTER

FOR THE  
CONSUMER

NOT THE  
DEALER

FOR YOUR OWN TABLE

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS., by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT-LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

dends year by year and received proper credit for them as they were earned, the fact that they were there made them usable in reparation of any other defects in the company's financial condition. They were surplus.

The depreciation in real estate values was the slow growth of years, as was the accumulation of the deferred dividend fund. Policyholders who took their dividends annually and those who matured their deferred dividend contracts before the examination did not bear their share of this loss. It fell upon those who were caught with deferred dividend policies maturing in the future. And so I say that no matter from what angle you consider the deferred dividend scheme it is an injustice to its participants.

The system was outlawed in the State of New York in 1906, and later by several other states. But it flourishes in some sections of the South and West, many comparatively small companies practising it because it aids in increasing assets; but more attractive to them, it gives them funds with which to operate and for which, during long periods, they do not have to account.

A. H. M., Greencastle, Ind.—The National Life Association of Des Moines is an assessment organization with an unscientific arrangement for providing a reserve. This reserve is made up by collecting from each member per year a sum equal to fifty cents of his age, in addition to the assessments. The fund thus accumulated is used to pay all death losses in excess of twelve per thousand members. I do not consider that the arrangement is safe nor do I believe the present rates can be maintained.

F. X. M., Oakland, Cal.—Legal reserve life insurance may be, as you say, a heavy burden, but you may rest secure in the conclusion that, under the best management, it is as light as the mortality statistics will permit of, absolute security considered. Innumerable assessment schemes have been invented during the past forty years in an effort to furnish insurance at less than the net cost of the legal reserve companies and none have succeeded. The mortality table cannot be circumvented. At one time the assessment companies advised insureds to keep the reserves they were paying old line companies in their pockets. Now, all of them in existence today are accumulating some sort of reserve, nearly all of them short of what is sufficient and based upon various fantastical mathematical assumptions. The only result of these efforts has been to furnish insurance at less than its actual cost to those who die early, and to pile inequitable and, finally, unbearable burdens on those who survive to advanced ages. The scheme which you describe is certain to be a failure in practice because success is not possible without a full mathematical reserve calculated on a standard mortality table assuming an interest rate not higher than four per cent.

At one of the military camps some recruits were being put thru the riding test. One man didn't know much about horses, but trusted to luck to get thru.

He had not properly adjusted his saddle, and on mounting he swung—saddle and all—right under the horse's body between its legs, where he was suspended for a few seconds.

"Hi, there," yelled the non com., in derision, "call that riding, do you?"

"Oh, no, Sergeant," was the instant answer, "that's a new trick for the Dardanelles. Riding under here's a fine protection from the sun."—Tid bits

# 18,000 Smokers Agree With Me

Exact Size

While on a trip through the Vuelta district in Cuba I first tasted the tobacco I now use in my J. R. W. cigar. I had never tasted such a delightful, cool smoke and upon my return I imported some for my own use. My friends liked this wonderful tobacco equally well. They told their friends and today over 18,000 smokers agree with me that they have never tasted so delicious and smooth a smoke as the J. R. W. cigar.

## Not for Sale at Stores

You can't get the J. R. W. cigar at stores. That's why you are able to get this cigar at the price you do. You pay for no salesman's expenses, no store upkeep, no dealers' profits—you pay for nothing but straight tobacco goodness and value.

And J. R. W. cigars are always fresh. They come direct from me to you. No standing in cases or on shelves until they have lost their smooth mellow taste and delightful aroma.

## This Is My Offer

Just to convince you that you cannot duplicate the J. R. W. cigar at double their cost, I want you to smoke five of these cigars at my expense. Merely send me 10c for packing, postage and revenue with your letterhead, business card or reference. If you like them send me a check for \$2.60 for the full box of fifty. Write today for this delightful smoke.

# THE CHAUTAUQUA IDEA

THE MOST AMERICAN THING IN AMERICA

## THE FLOWER OF DEMOCRACY

BY DR. FRANK CRANE

The Chautauqua Idea is about the biggest idea that the labors of democracy have brought forth for a generation or so. Certainly it is democracy's true and resembling child.

The Chautauqua Idea is so called because it originated at a summer gathering of serious minded people in a grove upon the shores of Lake Chautauqua, New York.

Having got itself born, the Idea has refused to die, like the sturdy, common, Nancy Hanks sort of a child it is. It has spread everywhere, and particularly in the Middle West, where Americanism runs truest to type.

Most people conceive of the Chautauqua Idea as the old camp meeting revamped by school teachers, as a summer gathering for country folk, where classes are held and innumerable lectures listened to, and William J. Bryan doth most congregate.

That is part of it. But that is not the gist of it, and has nothing of greatness in it. That element of the Idea wherein the divine fire burns is this:

That it considers the whole population of the nation to be always at school, pursuing a course of study until death; father, mother, and grandparents alongside of the children. And that Idea, it seems to me, is worthy to be called a majestic rose upon the stem of democracy—indeed, the beauty and perfection of democracy.

A nation at school forever! Continuously studying the works and wonders of God and man, lovers "till death do them part" of those high mistresses of the soul, science, literature, history and art! A nation turning from money making, precedence playing, and war waging as fit employment for its matured powers, to the worthier task of seeking beauty and wisdom!

And another element, fit counterpart to what has already been done by the public school idea, is that it means the rending of the veil of the temple of culture, once held to be for only the elect, for gentlemen and their sons, for the college bred, for professional people and for the leisure class, so that all the people can enter in, factory folk with their dinner pails, railroad brakemen, store clerks, street car conductors, chauffeurs, elevator boys, lighthouse keepers, miners, farmhands, cowboys, mothers, and servant girls—all of them—all, the whole God blest people, can come up into the holy of holies of knowledge and partake of its liberating worship.

It means even more than the public school, for it conceives of education not as a preparation for life, but the chief business of life itself.

Than this, I maintain, no more potential idea has been let loose in the world for two generations of men.

I want heartily to recommend to every soul that craves self-improvement, more knowledge, more efficiency, more life, to take up the Chautauqua course of reading. If you can't find companions to study with you you can do it alone.

Take this year's course. The four books of it lie now on my table:

"The German Empire Between Two Wars," by R. H. Fife, and

"France Under the Republic," by J. C. Bracq, will give you sound, sane, readable, and plain English truths worth knowing about the two great peoples now at death struggle in Europe.

## REMARKABLE REMARKS AT CHAUTAUQUA

DEAN SHAILER MATHEWS—I think our nation needs God rather desperately.

B. W. HUEBSCH—Chautauqua is the storm center of talk in the United States.

PROF. EARL BARNES—College bred women are the black legs of the industrial group.

COMMISSIONER JOHN H. FINLEY—I call myself a minister—a minister of education.

MRS. ALICE P. NORTON—There is no physiological law requiring three meals a day.

DR. EDWARD A. STEINER—To be an Irish-American has been equal to a patent of nobility.

COACH A. H. SHARPE, M.D.—Parents do not know as much about their children as they think they do.

HENRY A. WISE WOOD—We should be the first naval power in the Pacific and the second in the Atlantic.

HORACE FLETCHER—History will find economic compensations in the war worth the sacrifices due to it.

PRESIDENT GEORGE E. VINCENT—Woman never had a finer opportunity to neglect her home than at present.

MRS. SCOTT NEARING, PH.D.—Women have civilized the home, it is now up to them to civilize the community.

DEAN SHAILER MATHEWS—A crisis is the moment when accumulated experience suddenly bursts its banks and inundates the future.

PROF. B. L. ULLMAN—I feel that I am justified in an important sense when I say that I believe English is dead and Latin is alive.

SCOTT NEARING—Protection, Prosperity and Preparedness is the morality of the pig-sty where you are fattening porkers for winter hams.

DR. EDWARD A. STEINER—Whenever I hear a college man or woman talk what they call English I find myself in need of a new dictionary.

GOVERNOR CHARLES WHITMAN—The whole preparedness movement to some has been made ugly and even menacing by the terms in which the idea has been presented.

PRESIDENT JOHN G. HIBBEN—The kind of preparedness that we need is not of a day, or of a week, or of a month, or of a year. I believe that what we need is permanent preparedness.

"The Things Men Fight For," by H. H. Powers, will let a deal of light into your thinking about those great problems now perplexing mankind.

And "Belgium, the Land of Art," by W. E. Griffis, will give you what you want to know about that amazing little country that has been called "the cockpit of the world."

These books, and the magazine that goes with them to direct your studies, will cost you but five dollars, little enough surely to pay for being enrolled as a member of the greatest of universities, the University of the People.

If you want further information write to the Chautauqua Association, Chautauqua, N. Y.

To the very many letters sent me asking "What Shall I Read?" this is my best answer.—Copyright, 1916, by Frank Crane. Courtesy "The Associated Newspapers."

## WHAT IS AMERICA?

What is America? It is not a territory, it is not a set of institutions. It is a body of ideals and ideas. It is not a geographic boundary. It is a thought, a concept. How are we to defend these ideas and ideals? We answer we will defend democracy with a fleet, we will defend the United States with an army. We should not do this, because democracy means the broadening of life, increase of life. If we are to progress we must do it by one of two means, competition or coöperation. If it is competition it means rising by means of climbing up on some one else. If coöperation is the means of progress, then we must do it by making all of us richer in order that we may each get richer.—Scott Nearing at Chautauqua.

## SELF-MOBILIZATION

I am wishing that everybody might be conscripted to give some service to the state, under a plan of national constructive preparedness; that every selfish luxury and waste and indulgence be commandeered, every useful skill and science and art and industry be called to the colors periodically, and a general mobilization for the common defense of our ideals be compelled by our vision of an America that has a mission beyond commercial supremacy.

I would make "conscript" a noble word by making it synonymous with "citizen" in a republic with a mission and an ideal worth fighting for. Till that time comes, may every American man do what every Cambridge student has done, conscript himself, and each one offer to his country the best that he has to give. And may American institutions do what Cambridge has done, not await government mobilization, but mobilize themselves.—Dr. John H. Finley at Chautauqua.

THE WARD PORTRAIT

The portrait of Dr. Ward which appears on the cover of The Independent this week was painted by Edwin B. Child, who was commissioned by Mr. George A. Plimpton and other friends of Dr. Ward, who wished to give the portrait to Amherst College as a mark of their respect and admiration for him. Dr. Ward was an Amherst graduate of the class of 1856 and had served as a trustee twenty-five years when the portrait was presented at the 1916 commencement. Professor John M. Tyler, in making the presentation, said:

In behalf of the donors I have the honor to present to the college the portrait of Rev. William Hayes Ward, student, scholar, archeologist, minister, teacher, educator, editor, Doctor of Divinity, and Doctor of Laws by vote of boards of trustees, Doctor of Literature and Doctor of Science by degree and gift of the Almighty; trustee of Amherst College, and source of inspiration to all its teachers who have enjoyed the privilege of his acquaintance.

Mr. Child writes as follows of his painting:

My portrait of Doctor Ward was painted at his home in South Berwick, Maine. It seems natural and logical to paint him in a corner of his study where he was in the habit of sitting, surrounded by some of the evidences and results of his many years of study and investigation of early Babylonian and Assyrian antiquities. The autograph of Nebuchadnezzar on the clay cylinder in his hand, the autographs of Gilgamesh, Eabani, and other almost prehistoric heathen god-kings engraved on the small seal cylinders on his watch chain and lying on the chest beside his chair, and the tiles and reliefs on the wall, each with its own story, gave in my mind a curious contrast and striking setting both artistically and psychologically to the figure in the old high backed chair—a thorough type of the New England doctor of divinity.

I learned to love him in the days we spent in that study and I shall never forget the great pleasure I had as I tried to put on canvas something of what I learned of his crisp, vivid, stalwart mind, with its never failing keen humor, and most of all his big abundant warm heart.

DR. WARD, ORIENTALIST

Dr. John P. Peters, Rector of St. Michael's Church, New York, who was in charge of the University of Pennsylvania expeditions to Babylonia, 1888-1895, writes as follows of Dr. Ward's achievements in Oriental research:

The Nestor of American Orientalists has passed on, full of years, beloved and honored of all. The foundations of his Oriental scholarship were laid in the study of the Bible, first in his home as a child, then in the original tongues, in Andover Seminary. Living thru the years of storm and struggle in Bible study, he was a part of all enterprises of translation, interpretation, and exploration, never afraid of the new, always progressing continually abreast of the leaders, a contributor among his latest works, to the still unborn International Critical Commentary.

Then his Bible studies he early became interested in Biblical archeology, in the study of Bible lands, Bible people, their customs, religion, and language. He was one of the earliest students of the Hittite

inscriptions, and the first American to endeavor to solve the still imperfectly solved riddle of the Hittite language, history and religion. He was the first American to study the Assyrian and Babylonian inscriptions, and was, therefore, the natural and inevitable choice of the American Institute of Archeology to head the first American expedition to Babylonia in 1884 and 1885, rendered possible by the generosity of Miss Catherine Lorillard Wolfe. This was the tentative and preliminary survey, which rendered possible the later expeditions. He surveyed the ground, prepared the data, and trained such men as Haynes and Noorian for the expeditions of excavation which succeeded. At that time, also, he commenced that study and collection of the seals of Hither Asia, and especially of Babylonia, out of which grew his last great monumental work, "The Seal Cylinders of Western Asia." Best known as an Assyriologist, he was the counselor, adviser and friend of all who prosecuted Oriental study. Never seeking his own, always eager for the truth, ready to help others in its search and publication, he was the model of what scholarship should aim to be, and in this also he was a model in that. Besides his various scientific and technical publications in books and learned journals, he knew how to communicate new discoveries and essential facts to a larger public in intelligible and interesting guise, using for this purpose the columns of The Independent.

Mine is the loving tribute of one whom Dr. Ward inspired, cheered and helped along the sometimes rough and thorny paths of Oriental study and research.

DR. WARD, CRITIC

From Paul Elmer More, author of the "Shelburne Essays," who was literary editor of The Independent from 1901 to 1903, comes this tribute:

When I joined the staff of The Independent as literary editor, in 1901, Dr. Ward was already well advanced in years, but his spirit was as young as it ever had been, as young as it remained to the recent day of his death. The union of this unaging spirit with a classically trained intelligence was, I should say, the distinguishing mark of his taste. No one was less disposed than he to reject what was new on account of its novelty, yet his long reading in literature which had attained the suffrage of time gave him a criterion to separate what was new by the admission of current follies from what was original by the increment of truth. And he possessed another trait which was in part the natural accompaniment of this criterion, and in part, perhaps, a limitation of it from the particular structure of his mind. I have heard him declare that verse should be as clear in its ideas as prose; and he would even maintain that any really great passage of poetry could be paraphrased into unmetrical language without losing anything essential to its meaning.

Such a belief saved him from the fantastic vagaries and pretentious emptiness of much romantic writing, but it is a question whether it did not preclude him from the perfect appreciation of the most imaginative lines even in such classical poets as Milton, whom he particularly admired and studied. It is with poetry as with religion. The deepest intuition is never contrary to common-sense, but it may also contain a certain something, an illusive breath, a hint of the incomprehensible, which defies the cold analysis of logic. But if that was a limitation of his imagination, it at least guided him in the direction of sanity and in the service of what has been tried and found good. Dr. Ward was the unyielding lover of the great names of antiquity, a staunch supporter of Greek and Latin education, and the friend also of all those who came to the making of modern literature with pure and unspoiled ambition.

## Steady! It's smoothest—surest—evenest power which the *refined* Twin-six gives the *new* Packard

Air-men travel the most treacherous of all roads.

They must have *dependable* and *continuous* power—with energy-wasting vibrations canceled.

Therefore—the Twin-six type of motor is the dominant equipment of the modern aeroplane.

In sky-flight and track-flight, in peace and war, in the automobile and the aeroplane—this motor is *the modern* and the most efficient power plant.

Man's fiercest tests—in history's great motor epoch—have culminated in the Twin-six. And Packard, ever leading, leads here.

*Eight thousand* of the first model Twin-sixes were too few to satisfy fore-seeing buyers.

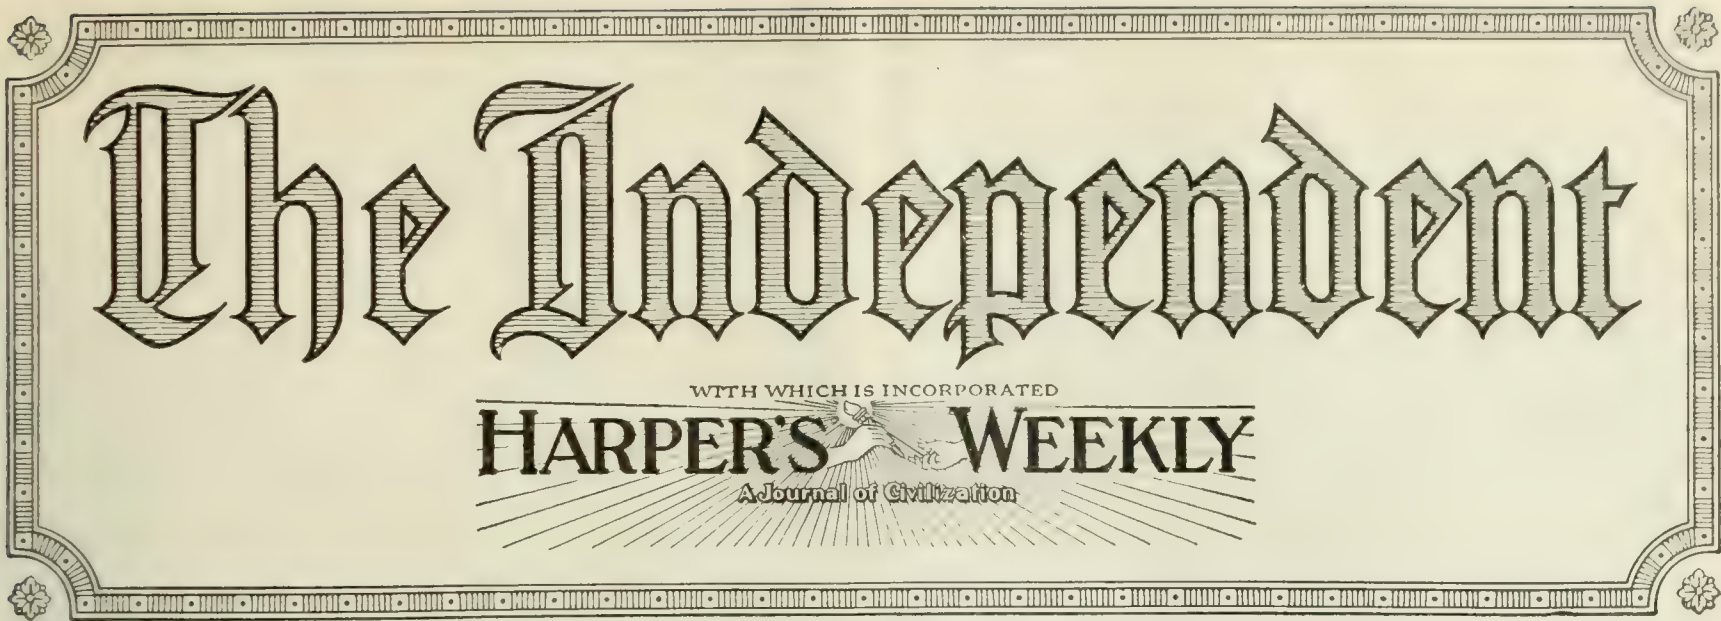

Greater—much greater will be the call for this new model—which makes remarkable use of even low grade gasolines.

An early order will insure an early delivery. Prices, \$2,865—\$3,265, f. o. b. Detroit.

## WILLIAM HAYES WARD

**W**ILLIAM HAYES WARD, D. D., LL. D., Associate Editor of *The Independent* 1868-1870, Superintending Editor 1870-1896, Editor 1896-1913, and Honorary Editor since 1913, died August 28 at his home in South Berwick, Maine, in the eighty-second year of his age. He was in good health up to a year ago, when he was thrown from his carriage. He had been an invalid ever since.

In an editorial written by Dr. Ward when my grandfather, Henry C. Bowen, died in 1898, he said: "What *The Independent* is, is owing to Mr. Bowen's untiring energy and unfailing enterprise." I may now say that what *The Independent* is, is equally owing to Dr. Ward's moral convictions and intellectual leadership and literary taste.

William Hayes Ward was born in Abington, Massachusetts, June 25, 1835. He came of a long and honored line of New England ancestors. His father and grandfather were both ministers. His mother was the daughter of Judge Hayes, whose beautiful old colonial home in the Maine hills Dr. Ward purchased shortly before he retired from the active editorship of *The Independent*.

He was born in "the last years of Homespun, an age of work and duty, of economy and simplicity, of self-control and resourcefulness." It was the age when men were trained "to fear God mightily, and to fear nothing else." The great question then was whether the Union could exist half slave and half free. The men who came into the world at that time received a heritage that those born since the Civil War can never know. Righteousness was the spirit of the times, and Righteousness remained the impulse of their lives.

Dr. Ward's mother died when he was a little boy. The four children were brought up by the father. It was the day of home education. But what shall we think of a boy who read the Bible thru in Hebrew at six, in Latin at nine, and in Greek at twelve, or of a father who required his four children each to read a text from the Bible in a different language at the morning devotions? Dr. Ward is an inspiring example of the precocious child who did not fail in after life.

In the library of the elder Ward were many theological and philosophical works. These his son read in his younger teens. By sixteen he had mastered Edwards, father and son, Hopkins, Bellamy, Emmons, and Dwight, and the whole Scotch school of philosophy. In 1852 he

graduated from Phillips Academy, Andover, and then entered Amherst, where he devoted himself to the sciences as well as the classics. Graduating in 1856 it was the natural thing for him to follow the profession of his father and enter the Congregational ministry. After a course at the Yale Divinity School he went to Andover Theological Seminary and graduated there in 1859.

At first he was undecided whether to adopt science or theology as his life-work, for we find him teaching physics and astronomy in two Wisconsin colleges, Beloit and Ripon, and accepting charges in Kansas. I have heard him tell of those pioneer days in Kansas when he was nearly frozen to death bringing his young bride to their home, when its second story was only scaffolding.

**I**T was at this time that he was called to *The Independent*. The editorial control of the paper was then in the hands of Theodore Tilton, Oliver Johnson, and Wendell Phillips Garrison, who were out of sympathy with the churches and missed no opportunity to satirize the old-fashioned theology. So many complaints came to my grandfather's desk—he was then the publisher—of *The Independent's* failure properly to treat religious questions that he invited Dr. Ward to join the paper in order to "add something to the religious influences within the board." Mrs. Ward was my grandfather's niece.

Dr. Ward was given a desk in the back room with Dr. Leavitt, then Office Editor. At first his duties were to cull the religious news from the papers and write the humble column of "Ministerial Register," which was the record of the ordinations, removals, and deaths of ministers. Curiously enough my first assignment when I came on *The Independent* after my graduation from Yale in 1894 was to this same "Ministerial Register," and I well remember how Dr. Ward would laugh at my exclamations of joy whenever I found among the exchanges the report of the death of a minister, because it helped to fill out my column. Soon, however, Dr. Ward was given the departments of foreign missions, science, Biblical research, and archeology. He continued in such a subordinate capacity until 1870, when the Beecher-Tilton lawsuit occurred, and caused the severance of relations with both editors. Then my grandfather, who by that time had become sole proprietor of the paper, decided he would never again trust the unrestricted control

of *The Independent* in any one else's hands. He assumed the editorship himself, but made Dr. Ward Superintending Editor, which gave him practically the control of editorial policy till Mr. Bowen's death, when Dr. Ward became Editor-in-Chief.

During Dr. Ward's half century of editorial service *The Independent* was always his great interest in life. Other editors came and went. He stayed. He knew personally the five original founders of *The Independent*, the first three editors, Leonard Bacon, Joseph A. Thompson, and Richard S. Storrs, and all the rest down to the present. All the editors have loved and honored him. From the time I came on the paper to the present he was the hope and despair of us all. He was to the very end the youngest man of the staff, and I remember his saying to Dr. Slosson and myself only a few months ago, "You both think you are radical; I am the only real radical on *The Independent*."

I CANNOT here enumerate his interests outside the editorial sanctum. He achieved eminence not only as an editor, but as a scholar, poet, archeologist, minister, preacher, educator, and reformer. He was the foremost American authority in his field of Oriental research. President Eliot once offered him a chair in Assyriology in Harvard. He declined because he thought editorial work offered greater opportunities for service. He was director of the Wolfe Archeological Expedition to Babylonia in 1884-5, and I shall never forget his description of sleeping in his tent one night with a camel swaying its head to and fro over his hammock as it chewed its cud. He was the author of many papers and books on Oriental archeology, chief among which is the large and handsomely illustrated volume on "The Seal Cylinders of Western Asia," published by the Carnegie Institution six years ago. His collection of seals took all his spare money and was finally bought by the late J. P. Morgan as the best collection in the United States. He could correct a Greek accent or translate the Pope's latest encyclical without a moment's hesitation. His Horace was thumbed like a schoolboy's first reader, and it pleases me to recall the enthusiasm with which he read thru a copy of Erasmus published in Latin which I found in an attic while hunting antique furniture and presented to him. He even wrote a signed article about it in *The Independent*.

In English, Milton was his favorite poet and prose writer. He had begun the study of Italian not four weeks ago so as better to appreciate Milton's Italian allusions. Like Milton, too, he was almost blind the last few years. He read aloud every Christmas night "The Hymn to the Nativity." He suggested once that I would have to commit to memory "L'Allegro," "Il Penseroso" and "Lycidas," if I laid any claim to taking poetry seriously. Spenser's "Faerie Queen" was another favorite. Kipling he knew like a young man. I do not remember his ever reading a novel, but he never tired of poetry, old or new. Largely thru his enterprise, most of the great poets of the last five decades have been at one time or another contributors of *The Independent*; many of them he introduced to the public.

He kept up with the advance of modern science. Dr. Gladden says that in all the literature of apologetics no better use has been made of science as an aid to theology than in his book published last year, "What I

Believe and Why." He once caused me to scoff by saying, "They will learn how to fly within the next five years." The Wright brothers did it in four.

Next to Assyriology, botany was his chief recreation, as is stated in the sketch of his life in the English "Who's Who." When he used to visit our family in our Connecticut summer home he would never hesitate to jump out of the carriage before it could stop, to pick or admire some roadside flower. In the summer time he was up every morning with the sun in his New Jersey home working among his flowers and fruits.

In politics he was a Republican, because he believed with an intense passion in the rights of man and the expansion of the nation. Tho he held to the theory of free trade he never could forgive the Democratic party for its record on the slave question. But he did not fall into the common error of some members of "the party of moral ideas" by supposing the worst Republican was better than the best Democrat. He had even a secret liking, if not for the Socialists, at least for socialism. He believed the functions of the state must be extended. But he had no patience with the socialist claim that the poor are growing poorer. "Look about you in any town or city," said he, "and the hundreds of prosperous and decent homes of the workers belie that idea."

In religion Dr. Ward's views were regarded by many as too radical, but they were the result of prolonged study as well as an earnest religious faith. I once asked him what the foundations of belief were and he replied, "The validity of one's mental processes." Tho he was advanced in theology, he spoke in the language of the old time religion. This enabled him usually to pass muster with both the liberals and the conservatives. His knowledge of the Catholic Church in America was exceptionally thoro for a Protestant and often proved disconcerting to his Catholic critics. He was for years the leader in the movement for church federation in this country, and in what I now realize he intended to be his valedictory editorial, which appeared with his name in our issue of June 19, 1916, he wrote:

In no other service in my life do I take so much satisfaction as in the remembrance that I initiated and pushed to conclusion the work of organizing the federation of our American churches and that I wrote the invitation to the denominations which met to organize the Federal Council of Churches, and no disappointment has been so keen as that which followed my failure once, and twice, and a third time, to unite two or more denominations in corporate union.

THE editorial chair gave Dr. Ward the best possible scope for his genius. No man knew more things that were so. No man had deeper convictions on fundamental issues. No one could use words as tools better than he. And yet no one cared less for mere form or literary technic. He could always rise to a great occasion. When the Spanish War broke out, when McKinley was shot, when the doctors in Cuba let the mosquitoes inoculated with typhoid sting them, when the Japanese submarine went down and the heroic commander continued to write his diary until he was suffocated, his eloquence was unmatched by that of any other editor I read at the time. His pen was his personality. It was argumentative, laudatory, condemnatory, gentle or impassioned, as the occasion demanded.

One might not have thought, only from reading his editorials, that he was really the gentlest of men. In

the twenty years I worked with him I never knew him to lose his temper. All sorts of people came to him with their ambitions and needs, their triumphs and trials. He never turned them away. When I first joined the paper he said to me, "Never refuse to do a public service you are asked to do." He gave his time and his name freely to all good causes. He gave his money to the poor.

I think Dr. Ward is the only man I have ever known who seemed to have no faults. He had foibles, to be sure. He was as disorderly as Horace Greeley and wrote nearly as illegibly. He once lost a pair of eyeglasses and found them two years later under some papers on his desk. He would stop in the midst of writing a leading editorial to read anything that happened to be laid upon his chair—the three chairs in his cubby-hole of an office always were piled to the toppling point with books and pamphlets. Dr. Ward believed that to waste time was a mortal sin. Until the last few years of his life he would run down eight flights of stairs rather than wait for the elevator. I should not like to have gone fishing with him. I cannot imagine him going on a vacation and lying on his back dreaming as the clouds floated by. He would more likely be working over cylinders at the Metropolitan Museum or preparing a sermon for next Sunday, or writing the platform of an Indian conference.

It will be hard for those of us who remain to "get out the paper" each week without his inspiration and advice. Ever since he left New York two years ago to dwell in the abode of his ancestors he still took his part in shaping the policy of *The Independent*. Only the other day, when he wrote that at last he would have to give up the writing he so dearly loved, for it wearied him even "to watch the man digging up the weeds in the garden," then we realized the end was near.

As I turned the leaves of the first issue of *The Independent* the other day I discovered that its future course was admirably foretold. For that issue declared it to be the purpose of the paper to be what its name implied, "Not so much to reflect public opinion as to act upon it."

That was the sum and substance of Dr. Ward's purpose during the twoscore and ten years of service as an American editor. He expressed it in his own words when he wrote in our Sixtieth Anniversary Number:

Nothing is so near my heart as that *The Independent* shall always remain true to the Kingdom of Christ whatever banner his loving followers may carry; that it may be more than hospitable to new truth, and that it may seek to bring the Church into closer bonds of union; that it may always defend the wronged and the helpless of whatever race, may assert the widest fellowship of humanity, and that it may ever, in matters of national progress as well as of all righteousness and religion, forget the traditions behind and build new service on the eternal foundations of faith, hope and love, which are also those of liberty, fraternity and equality.

*The Independent* is his monument. It is the duty of us and our successors to see that it shall ever remain true to this high standard.

HAMILTON HOLT

## THE FOURTEENTH BELLIGERENT

THE entrance of Rumania into the war brings the number of countries actively engaged up to ten on one side and four on the other. We are not counting in little Luxemburg and San Marino nor the three other countries which, by right of fighting and being fought over, might be included, Persia, Albania and Greece.

The voluntary accession of a new power with three or four hundred thousand fresh troops will bring to the

Allies both an increase of strength and a renewal of courage. For otherwise the situation was looking pretty gloomy. The Anglo-French drive on the Somme, inaugurated nine weeks ago with a flourish of trumpets as the greatest effort of the greatest army in the world, had slowed down to insignificant advances like the German drive at Verdun. The Russian drive in Galicia had also come to a halt. The Italian effort seemed to have exhausted itself in the capture of Gorizia. The British in Mesopotamia were in a bad fix. The Russians had lost ground in Persia and Armenia. The Arabian revolt proved not to have made the progress expected, or indeed reported of it at first. The Salonica drive was held up by an unexpected Bulgarian offensive. So it began to seem that no decisive action was to be expected this fall, and the London *Times* talked of the preparations being made for the campaigns of 1917 and 1918.

But the advent of Rumania at once puts a new face on things. Her troops are untried but her geographical situation enables her to bring them to bear upon the unprepared frontiers of the weakest members of the Central Powers, Hungary and Bulgaria, at the same time as they are being attacked on the opposite side. Rumania borders on Austria for 450 miles and on Bulgaria for 360 miles, so this means that they must immediately provide troops to defend a new front of over eight hundred miles. But Austria-Hungary has just suffered a loss of three or four hundred thousand men in Galicia and Germany has no more to spare for her. She has also lost a large part of the Galician oil fields, and now, with the Rumanian petroleum shut out, the Central Powers will again run short of gasoline for motor cars and air craft as in the beginning of the war. Besides this the lack of Rumanian wheat will bring Germany nearer to starvation this winter than in the two previous winters.

But if Rumania had brought no material assistance to the Allies the mere fact that she has, after two years of consideration, decided to throw in her lot with the Allies means much to them, for it shows that she has decided that theirs is the winning side. It was no outburst of indignation or chivalrous impulse that moved her, but cold calculation and long bargaining with both parties. She is openly entering upon a war of conquest and makes no bones about it. Her declaration of war is refreshingly frank compared with most of them. She alleges no grievances except the oppression of Rumanians in Hungary, and this, as the note admits, has been going on for more than thirty years, during which time Rumania has been the ally and supporter of the Austro-Hungarian monarchy. The declaration of war states candidly that:

Rumania, from a desire to hasten the end of the conflict and to safeguard her racial interests, sees herself forced to enter into line by the side of those who are able to assure her realization of her national unity.

This means simply that she hopes to take from Austria-Hungary the territory in Bukovina and Transylvania largely inhabited by Rumanians. Probably, also, Russia has promised to restore part, at least, of the Bessarabian territory that she took from Rumania in 1877. Greater Rumania would then have an area larger than England and Wales, and a population of over 12,000,000 on the start, tho this could be readily quadrupled when modern agricultural machinery is employed. It is no wonder that with such a vision of national aggrandizement before her, Rumania takes up arms

This is, in the eyes of the Rumanians a war of liberation. They are fighting for Rumania Irredenta, for Unredeemed Rumania, as Italy is fighting the same foe in the interests of Italia Irredenta. Rumania has, indeed, more reason for resentment than Italy, for the Hungarians have treated the Rumanians within their territory much worse than the Austrians have treated the Italians. It is amusing to look back and remember how America thrilled with enthusiasm when Kossuth came to this country and pled the cause of the down trodden Hungarians. But as soon as the Hungarians got into power they began treading down the Rumanians in lively fashion, depriving them of political rights, restricting their religious freedom and suppressing their language.

But we have no reason to think that the Rumanians would do any better. In fact, we know they would not for they are a most intolerant people. The Rumanian constitution of 1866 prohibited the Jews, who form a larger part of the population than they do of any other country, from becoming citizens or owning land in the country. The Congress of Berlin, in 1878, compelled the Rumanians to abolish this discrimination and treat all religions alike, but Rumania has never kept to this agreement. Theoretically a Jew can now become naturalized, but this requires the passage by the legislature of a separate bill for each individual by a two-thirds vote, and with the anti-Semitic feeling fiercer even than in Russia it is easy to see why the constitutional guarantees of religious freedom are ineffectual. The Austrian oppresses the Hungarian, the Hungarian oppresses the Rumanian, the Rumanian oppresses the Jew and the Jew gets back his own by lending money to them all at high rates. It is a sort of House-that-Jack-Built concatenation; "This is the cow that tossed the dog that worried the cat that killed the rat that ate the malt . . . ."

In the Balkan wars of 1912-1913 Rumania kept out of the fight until all the combatants were exhausted; then she stepped in with her fresh army and got a big share of the spoil. Now it appears she is pursuing the same policy that proved so successful then. Her present plea is racial unity, but we cannot forget that three years ago she conquered and annexed from Bulgaria three thousand square miles of territory mostly inhabited by Turks and Bulgars. We may sympathize with the desires of the four million Rumanians who are living under foreign flags, but we must also sympathize with the fears of two million Germans, Hungarians, Russians, Jews and Moslems who are inextricably mingled with them and would lose their liberties if brought under the Rumanian flag.

#### THE PARTICIPATION OF PORTUGAL

PORTUGAL has been an ally and protégée of England for over a hundred years and when the war broke out was under treaty obligation to provide troops whenever England should need them. England has, one would think, needed them during the last two years, but they have not been forthcoming. From time to time the Portuguese parliament has past a resolution declaring adherence to the cause of the Allies and their determination to fight for it. This was encouraging if not helpful. It seemed that Portugal had what a life insurance agent would call "a non-participating policy."

But now, at the beginning of the third year, comes a

cable telling us that something has at last been done. The President of the Republic has given a reception to officers of the expeditionary force that he proposes—at some time not stated—to send to the front.

#### IF WE LIVED LONGER

IF the years of a man's life were seven hundred to a thousand years instead of three score years and ten, we should not merely live longer; we should live differently. We might or we might not do less "hustling," but in making our plans and in our productive activities we should emphasize less the day by day interests and the immediate return. We should think more painstakingly of the future. We should forecast. We should build substantially, and probably to a greater extent than a short-lived mankind does, we should pay in advance.

These considerations go far to explain the intensity of our individualism, the nebulousness and nervelessness of our publicmindedness. We are selfish, of course. Altruism is of slow growth, and these hindrances to a life of generous citizenship are magnified by the sense of the shortness of our active existence. Every ambitious man knows that the success or failure of his career turns upon the concentration of his business or professional exertions for fifteen or twenty years. Relaxation, attention diverted from profession or business to public service in any form, may mean personal disaster and the ruin of family fortune.

When, therefore, a man like Mr. Elihu Root warns us that after the European war is over publicmindedness and public service will be not merely exemplary but also imperative, we find ourselves asking just how we are to get them. Addressing the American Bar Association as its president, at the annual meeting held in Chicago last week, Mr. Root attributed a defective administration of law in America, which we all deplore, to an unconscious habit that the legal profession has acquired of regarding the administration of justice as something to be done for private benefit instead of primarily as something to be done for public service. This habit, in turn, he attributed to our highly developed individualism, with its respect for the sanctity of individual rights and the correlated conception of government as designed to secure such rights. Inevitably the lawyer, if he is an honorable man, becomes loyally devoted to his client's interests, and little by little he loses sight of the public view of judicial procedure.

Beyond question Mr. Root is right so far, but will he tell us, or will any one tell us how, in the stress of business and professional life, we are to break away from our individualism or subordinate it to a sense of public responsibility if our economic system remains as individualistic in organization and in functioning as it is at present?

The other day we called attention to the function of monarchies and aristocracies in thinking and building for the future, which democracies are not interested in. The individual short-lived man is as little interested in it as is the democratic mass. In the nature of things it is only a long-lived organism that can be interested in it. A kingly dynasty is such an organism. Less perfectly an aristocracy is such an organism. Would a socialistic society be such an organism? Who is wise enough to tell us?

Morris

THE POSTMAN "TWO MORE, SIRE"

# THE STORY OF THE WEEK

**Strike Called for Labor Day** Next to President Wilson himself, the four most powerful and prominent individuals in the United States today are Austin B. Garretson, president of the Order of Railway Conductors; Warren S. Stone, grand chief engineer of the Brotherhood of Locomotive Engineers; W. G. Lee, president of the Brotherhood of Railway Trainmen, and W. S. Carter, president of the Brotherhood of Locomotive Firemen and Enginemmen. They have full power to act on behalf of the 640 labor union delegates who have demanded the eight-hour day, with the single exception that they may not surrender this fundamental demand. The four heads of the great railroad brotherhoods announced that the general strike would be ordered for Labor Day, September 4, unless in the meantime the railroad managers accept the compromise proposals of President Wilson or the President is able to induce Congress to take the matter up and enact the eight-hour day into law. The railroad heads have issued a public statement explaining that they cannot accept the President's proposals, because to do so would be to surrender the principle of arbitration, and that they cannot grant the eight-hour day because it would be ruinously costly. They offer to keep an account of the men's wages on an eight-hour basis under the supervision of the Interstate Commerce Commission and to lay the findings before a special commission of five or more members appointed by the President. They are convinced that such a report would prove the truth of their present contention of the costliness of the eight-hour system. Since the brotherhoods are unwilling to accept any terms which imply the delay necessary for a thorough investigation, the one hope of indus-

trial peace lies in action by Congress. If in spite of every effort to avert it the general railroad strike should occur, it is uncertain whether the employers or the unions would be forced to give in. A sudden walk-out of 350,000 or 400,000 men, including in their number the most highly skilled and indispensable workmen in the railroad business, would certainly tie up the transportation system of the country to an unprecedented degree. The brotherhoods are splendidly organized, confident and unconciliatory; they have apparently not the least doubt of success or the least fear of the future. But the railroad managers and presidents are confident too; indeed many of them have publicly stated that if the railroads should yield now the unions, encouraged by their success, would attempt a strike at some later time to extort yet further concessions and that the inevitable fight might as well be fought and over with as soon as possible. The non-unionists in the railroad trades are all opposed to the strike and many of the older unionists, it is said, will think twice before forfeiting their pensions and all chance of promotion, for the railroads threaten to penalize the strikers even after their reinstatement by refusing them service pensions and by giving preference in promotions to loyal employees.

## Wilson Puts it Up to Congress

Having wholly failed to induce either the employers or the employees to make the concessions that the other party insisted upon, President Wilson resolved to lay before Congress a legislative program which would not only prevent the threatened railroad strike, but insure the nation against similar troubles in the future. On the afternoon of August 29 the President read his address in person

before a joint session of the two houses. He explained the failure of all his efforts to restore industrial peace and suggested as the one remaining possibility of averting the imminent strike that Congress should without delay enact into law the following six recommendations:

First, the immediate passage by the Senate of a bill, which has already passed the House of Representatives, reorganizing the Interstate Commerce Commission and enlarging its powers.

Second, the enactment of an eight-hour day law for all railroad operatives on trains engaged in interstate commerce.

Third, the establishment of a commission, appointed by the President, to investigate and report upon the working of the eight-hour day system.

Fourth, explicit approval by Congress of any increase made in freight rates by the Interstate Commerce Commission which is rendered necessary by the adoption of the eight-hour day law.

Fifth, a provision making illegal any railroad strike or lockout prior to the investigation of the merits of the case.

Sixth, provision for the government to take any necessary action to keep trains running that may be needed for military purposes.

These drastic proposals have naturally created a stir in Congress and the country. Any one of the last five is radical enough to be the paramount issue in a presidential election or to keep Congress busy discussing it for months. The labor leaders profess a willingness to call off the strike if the eight-hour day is made law, but they oppose most bitterly the fifth provision, borrowed from the Canadian law, forbidding a strike or lockout until an investigation of the matters of controversy has been made by some competent and impartial authority. But the

greatest obstacle to President Wilson's program is the opposition of the shippers to any increase in freight rates. The senators and representatives from the Middle West are particularly hostile, for they represent agricultural communities which have every interest in keeping railroad rates as low as possible. An emergency instalment of the President's program has been introduced by W. C. Adamson, of Georgia, chairman of the House Interstate Commerce Committee, in the form of a bill granting the eight-hour day and providing for a commission of three appointees of the President to investigate the working of the new system. On September first it passed the House of Representatives by a vote of 239 to 56. Most of the opposition was from the Republican minority.

**Hughes Stumps the West** On August 26 Mr. Hughes terminated at Denver a western speech-making tour which has taken him into twelve states and enabled him to address more than one hundred and fifty audiences of voters. The influence of his tour was admittedly very great, and it has certainly been the most interesting part of the campaign thus far. The candidate feels that he has earned a respite, and so he will spend several days in the Colorado mountains before he takes up the campaign in the eastern states. The burden of most of his speeches was the need for greater national efficiency than the Democratic administration had given the country. He spoke frequently on the Democratic misuse of their power over appointive offices and promised to consider only merit in his appointments if he should be elected. In Denver he delivered one of his "America first and America efficient" speeches, saying in part:

We cannot afford to be sectional. We must have policies to upbuild the South, as well as the North and East and the West. We have got to have a common prosperity, or we shall have no prosperity. We have got to succeed altogether, or we shall not succeed at all.

Did you ever reflect how the nations

abroad are able to turn the entire force of national energy into a given direction at will? We cannot do that in this country so easily. We have a complicated system of government. We would not forego the complications of that system, for they mean to us local independence in local affairs quite as much as national power and national strength in national affairs. But we must meet this foreign competition with the maximum efficiency at home. In that way alone can we survive.

Both parties are concentrating their energies to win a victory in Maine, where state elections will be held on September 11. Maine is known as a barometer state, and the trend of the early fall elections has usually indicated the result in November for the nation as well as for the state. The present Democratic governor, Oakley C. Curtis, is up for reelection and a Senator and four Representatives will also be elected.

**The Administration on Trial**

Maine, delivered a speech against the Wilson administration in scathing and characteristic fashion. The speech was doubly important because it was the fullest public statement of his political position that Mr. Roosevelt has made since he declined to run against Mr. Hughes and it may therefore be taken as giving the keynote of his fall campaign on behalf of the Republican nominee. He subordinated all domestic questions to the paramount issue of American prestige in foreign affairs, declaring that the timidity and vacillation of the President had brought indelible disgrace upon the country. He said in part:

America as a nation has been kept in a position of timid indifference and cold selfishness. America, which sprang to the succor of Cuba in 1898, has stood a silent spectator of the invasion of Belgium, of the sinking of the "Lusitania," of the continued slaughter of our own citizens by German submarines, and of the reign of anarchy, rapine and murder in Mexico.

At this moment Mr. Wilson's buglemen advance as his greatest claim that "he has kept us out of war." This claim can be seriously made only by individuals who in-

dorse President Wilson's belief that deeds are nothing and words everything.

Under President McKinley we had a war with Spain. Under President Wilson we are assured that we have had "peace" with Mexico. These are the words. Now for the deeds. During the war with Spain fewer Americans were killed by the Spaniards than have been killed by Mexicans during the present "peace" with Mexico. Moreover, when the war with Spain was thru, it was thru. But peace still continues to rage as furiously as ever in Mexico.

The active participation of Mr. Roosevelt in the campaign is expected to have a great influence in keeping his fellow Progressives from straying off the ranch. The breach between Progressives and regular Republicans has been greatest in California, where the attempt of Governor Hiram Johnson to secure the Republican nomination for senator was bitterly contested in the primaries. But Johnson's overwhelming victory, and the telegram of warm congratulation which Mr. Hughes sent him as soon as his success was known, have gone far to unite the warring factions, at least for the duration of the fall campaign.

The "brief for the defense" of the Democratic administration against the charges brought by Mr. Hughes and ex-President Roosevelt is best summarized in the speech of President Wilson at Long Branch, New Jersey, on September 2, in accepting the Democratic renomination. We publish the more important portions of the address on another page of this issue.

Portsmouth, N. H., Mexican Affairs has been selected as the meeting place for the American and Mexican representatives at the coming conference on the Mexican situation. In the meantime, the administration has determined to maintain the present "moral pressure" upon the Mexican Government to approach the conference in a reasonable and conciliatory manner by sending fresh militia regiments to the border. On August 28 Secretary of War Baker ordered the National Guard units of Ohio, Vermont and Kentucky, totaling

12,000 men, to leave their training camps for service on the border. On the other hand, he directed three New York regiments, two regiments each from Illinois, Missouri and New Jersey, and one regiment each from California, Oregon, Washington and Louisiana, to leave the border for their home stations. The policy of the war department is to give the entire National Guard a chance at frontier service by summoning militia regiments in training camps to replace the militiamen who have been for a long time on the Mexican border. The plan is an excellent one in itself, but some surprise has been expressed at the action of the government in shifting large bodies of troops when a general railroad strike was threatened.

The internal troubles of Mexico are not yet over. A band of some three hundred Villistas attacked and captured the town of Satevo, Chihuahua, on August 25. Villa himself was not with the raiders, but letters from Villa of a recent date were captured in a skirmish near Torreon. It is evident, therefore, that Villa is still a factor to be reckoned with in the Mexican situation. The Carranza government is continuing with its rather drastic legislative program. Carranza has revived the severe church law of 1859, which was the work of the radical President Juarez, nationalizing all church property and putting it under the control of the civil authorities. As is the case in France, the clergy will be permitted to use the buildings for all purposes of worship, but only during the pleasure of the government. It is Carranza's anti-clerical policy which has called down such vigorous denunciations upon the Mexican Con-

THE RUMANIAN INVASION OF HUNGARY

Immediately upon the declaration of war the Rumanians seized several of the passes in the Transylvanian Alps, then advancing into Hungary they occupied the city of Kronstadt. On the other side they have crossed the Danube into Bulgaria and taken Ruschuk

stitutionalists and their American supporters, including even President Wilson, during the meetings of the recent Roman Catholic congress.

President Wilson has abandoned, at least so far as the present session of Congress is concerned, the much talked

of Pan-American treaty plan which he urged before the Pan-American Scientific Congress last January. Its aim was to make impossible future wars among American republics by a mutual promise to submit all difficulties to arbitration, to prevent the organization of revolutionary conspiracies in any nation against any other, and to guarantee each other's sovereignty and integrity from foreign invasion. This plan met with opposition from some of the Latin-American republics, but not enough to account for its sudden abandonment by the President. Probably the difficulties of the Mexican situation and the urgency of domestic problems have convinced President Wilson that the present was no time to urge his project.

**Rumania's Declaration of War to Austria-Hungary on August 29.** In the note conveying the Rumanian Government bases its action chiefly upon the example of Italy. The Triple Alliance of Germany, Austria-Hungary and Italy, which Rumania joined in 1883, had, says the note, "only a conservative and defensive character." Since Austria-Hungary entered upon a Balkan war without previous notification to her allies, Rumania, like Italy, regarded herself as released from any obligation to Austria-Hungary. When Italy declared war on Austria-Hungary in the spring of 1915 the Triple Alliance was dissolved. Rumania, however, has remained neutral up to the present in the hope of securing peace and the maintenance of treaty obligations. But, continues the note:

THE RUMANIAN WEDGE

The entrance of Rumania into the war has changed the aspect of the Balkan situation. The Rumanian and what is more the Russian troops in Rumania can now attack Hungary to the north, Serbia to the west and Bulgaria to the south. At the same time the Allied forces in Greece can attack Bulgaria and Serbia to the north.

The neutrality which Rumania imposed upon herself in consequence of a declaration of war made independently of her will, and contrary to her interests, had been adopted as the results of the assurances that Austria-Hungary, in declaring war against Serbia, was not inspired by a spirit of conquest or of territorial gains. These assurances have not been realized.

Today we are confronted by a situation de facto threatening great territorial transformations and political changes of a nature constituting a grave menace to the future of Rumania. The work of peace which Rumania attempted to accomplish, in a spirit of faithfulness to the Triple Alliance, thus was rendered barren by the very powers called upon to defend it.

The note then refers to the discontent of the Rumanians who live under the rule of Austria-Hungary and concludes:

For a period of thirty years the Rumanians of Austria-Hungary not only never saw a reform introduced, but, instead, were treated as an inferior race and condemned to suffer the oppression of a foreign element which constitutes only a minority amid the diverse nationalities constituting the Austro-Hungarian States.

All the injustices our brothers thus were made to suffer maintained between our country and the monarchy a continual state of animosity. At the outbreak of the war Austria-Hungary made no effort to ameliorate these conditions. After two years of the war Austria-Hungary showed herself as prompt to sacrifice her peoples as powerless to defend them. The war in which almost the whole of Europe is partaking raises the gravest problems affecting the national development and very existence of the states.

Rumania, from a desire to hasten the end of the conflict and to safeguard her racial interests, sees herself forced to enter into line by the side of those who are able to assure her realization of her national unity. For these reasons Rumania considers herself, from this moment, in a state of war with Austria-Hungary.

**Rumanians Invade Hungary** The Rumanians, having once decided to enter the war, lost no time in beginning. In fact, according to the official dispatches from Bucharest, the Rumanian troops crossed the Hungarian frontier at several points during the night of August 27, altho Rumania did not declare war until the 29th. Three considerable towns near the border fell into their hands immediately. The army that entered thru the Tomos or Predeal Pass took Kronstadt, the chief city of Transylvania. Another army, entering by the Vulcan Pass, occupied Petrozeng, another industrial center 130 miles west of Kronstadt. Further west, near the famous Iron Gates of the Danube, the Rumanians captured the town of Orsova.

On the southern border the Rumanians, also, it appears, took time by the forelock and captured the Bulgarian city of Ruchuk before war was declared between Bulgaria and Rumania. This is a strong and important city on the banks of the Danube and has long been coveted by the Rumanians. They took it in 1913, but had to relinquish it by the Treaty of Bucharest.

Rumania is about the size of Illinois, but supports a population of over 7,500,000, altho it has no large cities. Bucharest, the capital, with 340,000 inhabitants, is the largest. Three years

ago Rumania put into the field against Bulgaria about 400,000 troops, and since they had no fighting to do then, presumably the same number are now available. If necessary, it would be possible to raise 700,000 or more. Their fighting ability is unknown, for the Rumanians have not been actively engaged in warfare since 1877, when they took the part of the Russians against the Turks and showed good mettle at Plevna. Now they may again encounter their ancient enemy, for it was reported some weeks ago that Turks had been brought from Constantinople into Hungary, a report hard to understand at the time, for there was then no apparent danger threatening Hungary. The Rumanian troops are German trained and armed with Krupp guns. During the two years of the war Rumania has been selling her grain to Germany and getting in exchange arms and ammunition which she is now about to use against their makers.

In breaking over the Transylvania mountain wall of Hungary the Rumanians have come into a region whose population reflects its strange history. Kronstadt and Hermannstadt, the cities they

are after, are obviously not Rumanian names nor Magyar either. The old name of this country, the Siebenbürgen, gives a clew to what was a Saxon colony set down in the midst of Magyars and later overflowed with Rumanians. How the Saxons got there in the first place we cannot stop to explain, and if we did probably the reader would prefer the explanation that he learned in his youth from Browning's "Pied Piper of Hamelin." It is sufficient for our present purpose to know that the Land of the Seven Cities, otherwise Transylvania, now contains about two and a half million population, of whom only a quarter of a million are of

Saxon blood. Those of the Hungarian or Magyar race number about 800,000, while the Rumanians have risen to a million and a half. Various other estimates are obtainable but none is reliable, for the census figures are notoriously manipulated for political purposes, especially to conceal the fact that the Rumanians, being good breeders, are getting far ahead of the more wealthy and aristocratic Saxons and Magyars with their limited families. So Transylvania was being gradually conquered by Rumanians long before the Rumanians came over the Alps to take possession by force of arms. Whether they will be welcomed by their race or not remains to be seen. The Rumanian members of the Austrian parliament at least have declared their loyalty to the Emperor Francis Joseph and denounced Rumania's entrance into the war as a national disaster.

The racial and class divisions of Transylvania are accentuated by religious differences. The Magyars are Roman Catholics or Unitarians, the Saxons Protestants and the Rumanians Greek Catholic. The Magyar minority, realizing that it was losing in the game, has resorted to desperate expedients to suppress the Rumanian language and

ROBERT BACON

As Ambassador to France and Assistant Secretary of State, Mr. Bacon had an unusual training for public office and one that makes him an idealist, for the Senate from New York notable. He is an avowed "unimpaired" and stands shoulder to shoulder with Mr. Roosevelt in his political thinking.

religion. The election districts have been unscrupulously gerrymandered so as to keep down the Rumanian representation in parliament. The Rumanian press has been restricted and their churches and schools interfered with.

The most important city of Transylvania is Kronstadt, tho perhaps now that it has been taken by the Rumanians we should call it Brasov. It has a population of thirty-five to forty thousand, about equally divided between the three races. The next city in size is Hermannstadt, which the Hungarians call Nagy-szeben and the Rumanians Sibiu. This has 26,000, two-thirds of them Saxon. It is the headquarters of the 12th Army Corps of the Austro-Hungarian army and is not likely to be surrendered so readily, altho it appears to be the policy of the Teutonic General Staff to retire from the frontier as the Rumanians advance and establish a line of defense somewhere in the interior of Hungary.

**Greece in Turmoil** The advance of the Bulgars into Macedonia and especially their occupation of the port of Kavala has roused such resentment against the policy of King Constantine as to endanger his crown. By a curious coincidence, the King has been again attacked by the same malady which disabled him last year when the Allies became too pressing, and he has had to submit to another operation on his ribs. This has prevented him from giving the audiences that the French Minister at Athens asked to submit the Allies' demands.

Riotous demonstrations against the King and in favor of Venizelos are reported, and the insurgents have seized control of some towns. In Athens 50,000 Greeks are said to have assem-

HE ENLISTED!

The Recruiting Sergeant: "If I can get him drunk he will surely enlist." The intoxicant is labelled "Imperialism." From *De Notenkraker* of Amsterdam

### THE GREAT WAR

**August 28**—Hindenburg replaces Falkenhayn in command of all the German forces. Bulgars take Drama, Macedonia.

**August 29**—Rumanians take Orsova, near Iron Gates. Bernhardt appointed to command in Kovel section.

**August 30**—Rumanians take Kronstadt, Hungary, and Ruschuk, Bulgaria.

**August 31**—Turkey and Bulgaria declare war against Rumania. Serbs repulse Bulgars in Macedonia.

**September 1**—Rumanians take Petrozseny, Hungary. Russia reports capture of 15,800 men in Galicia.

**September 2**—Anglo-French fleet threatens Athens. Turkish victory over Russians in Caucasus reported; 5000 prisoners taken.

bled in front of the residence of Venizelos, who address them in favor of participation in the war on the side

of the Allies. When Venizelos was Premier last year he arranged with the Allies to take part in the campaign against Constantinople. In compensation for such aid Great Britain offered to cede the island of Cyprus and Greece was also promised territory in Asia Minor when Turkey should be divided up by the Allies. But the King repudiated this arrangement and dismissed Venizelos on the ground that the plan involved the cession of Macedonian territory, probably Kavala, to Bulgaria in order to prevent her from taking the side of the Central Powers.

When the failure of the Gallipoli campaign became apparent it seemed to the Greeks that the King had acted wisely in keeping Greece out of the war, but now it looks different. The Bulgars have got Kavala for themselves, with the connivance of the King. The Allies hold Salonica, and having forced the King to dismiss the army, they have Greece altogether at their mercy and are not disposed to cede Cyprus or any other territory. In fact, nothing would suit the Allies better than a revolution that should dethrone the King and his Hohenzollern Queen, and it is not surprising that his resignation is rumored. An Anglo-French fleet of 23 warships and seven transports has appeared off Piraeus, the port of Athens.

Meantime the Bulgars continue to gain ground on the east of Salonica, altho on the west they have been repulsed by the Serbs with heavy losses. The forts of Drama fell into their hands after some resistance by the small Greek garrison. Seres is surrounded and all the region east of the Struma River is now under Bulgarian control.

### THE MAN WHO BROUGHT RUMANIA IN

Take Jonescu has long been known as the leading statesman of Rumania. He represented his country at London during the conference that tried to put an end to the Balkan war three years ago and he has been a strong advocate of the cause of the Allies from the beginning.

# THE RECORD OF THE DEMOCRATS

## SALIENT POINTS IN PRESIDENT WILSON'S SPEECH OF ACCEPTANCE

**I** DO not doubt that the people of the United States will wish the Democratic party to continue in control of the government.

Alike in the domestic field and in the wide field of the commerce of the world, American business and life and industry have been set free to move as they never moved before.

The tariff has been revised, not on the principle of repelling foreign trade, but upon the principle of encouraging it. . . . and a tariff board has been created whose function it will be to keep the relations of American with foreign business and industry under constant observation, for the guidance alike of our business men and of our Congress. American energies are now directed toward the markets of the world.

The laws against trusts have been clarified by definition, with a view to making it plain that they were not directed against big business, but only against unfair business and the pretense of competition where there was none, and a trade commission has been created with powers of guidance and accommodation which have relieved business men of unfounded fears and set them upon the road of hopeful and confident enterprise.

By the federal reserve act the supply of currency at the disposal of active business has been rendered elastic.

Effective measures have been taken for the recreation of an American merchant marine and the revival of the American carrying trade. . . . For the farmers of the country we have virtually created commercial credit by means of the federal reserve act and the rural credits act. . . . By an intelligent warehouse act we have assisted to make the standard crops available as never before both for systematic marketing and as a security for loans from the banks. . . . The workmen of America have been given a veritable emancipation by the legal recognition of a man's labor as part of his life and not a mere marketable commodity, by exempting labor organizations from processes of the courts which treated their members like fractional parts of mobs and not like accessible and responsible individuals, by releasing our seamen from involuntary servitude by making adequate provision for compensation for industrial accidents, by providing suitable machinery for mediation and conciliation in industrial disputes and by putting the federal department of labor at the disposal of the working man when in search of work.

We have effected the emancipation of the children of the country by releasing them from harmful labor. We have instituted a system of national aid in the building of highroads such as the country has been feeling after for a century. We have sought to equalize taxation by means of an equitable income tax. . . . We have provided for national defense upon a scale never before seriously proposed upon the responsibility of an entire political party. We have driven the

tariff lobby from cover and obliged it to substitute solid argument for private influence.

This extraordinary recital must sound like a platform, a list of sanguine promises, but it is not. It is a record of promises made four years ago and now actually redeemed in constructive legislation. . . .

### FOREIGN RELATIONS

The rights of our own citizens became involved; that was inevitable. Where they did this was our guiding principle—that property rights can be vindicated by claims for damages when

Copyright Paul Thompson

### THE PRESIDENT SPEAKS

the war is over, and no modern nation can decline to arbitrate such claims, but the fundamental rights of humanity cannot be. The loss of life is irreparable. Neither can direct violations of a nation's sovereignty await vindication in suits for damages.

The passions and intrigues of certain active groups and combinations of men among us who were born under foreign flags injected the poison of disloyalty into our own most critical affairs, laid violent hands upon many of our industries and subjected us to the shame of divisions of sentiment and purpose in which America was condemned and forgotten. It is part of the business of this year of reckoning and settlement to speak plainly and act with unmistakable purpose in rebuke of these things, in order that they may be forever hereafter impossible. I am the candidate of a party, but I am above all things else an American citizen. I neither seek the favor nor fear the displeasure of that small alien element among us which puts loyalty to any foreign power before loyalty to the United States. . . .

### LET THE MEXICANS SEEK LIBERTY

The Mexican people are entitled to attempt their liberty. . . . and so long as I have anything to do with the action of our great government I shall do everything in my power to prevent any one standing in their way. . . . The unspeakable Huerta betrayed the very comrades he served, traitorously overthrew the government of which he was a trusted part, impudently spoke for the very forces

that had driven his people to the rebellion with which he had pretended to sympathize. The men who overcame him and drove him out represent at least the fierce passion of reconstruction which lies at the very heart of liberty, and so long as they represent, however imperfectly, such a struggle for deliverance I am ready to serve their ends when I can. . . . Mistakes I have no doubt made in this perplexing business, but not in purpose or object. . . .

### WORLD PEACE

There must be a just and settled peace, and we here in America must contribute the full force of our enthusiasm and of our authority as a nation to the organization of that peace upon world-wide foundations that cannot easily be shaken. No nation should be forced to take sides in any quarrel in which its own honor and integrity and the fortunes of its own people are not involved, but no nation can any longer remain neutral as against any wilful disturbance of the peace of the world. . . .

The nations of the world must unite in joint guarantees that whatever is done to disturb the whole world's life must first be tested in the court of the whole world's opinion before it is attempted. . . .

Besides contributing our ungrudging moral and practical support to the establishment of peace thruout the world, we must actively and intelligently prepare ourselves to do our full service in the trade and industry which are to sustain and

develop the life of the nations in the days to come.

We have already been provident in this great matter and supplied ourselves with the instrumentalities of prompt adjustment. . . . It will only remain for the masters of enterprise among us to act in energetic concert and for the Government of the United States to insist upon the maintenance thruout the world of those conditions of fairness and of even-handed justice in the commercial dealings of the nations with one another upon which, after all, in the last analysis, the peace and ordered life of the world must ultimately depend. . . .

### NO LITTLE AMERICANISM

We believe that the day of little Americanism, with its narrow horizons, when methods of "protection" and industrial nursing were the chief study of our provincial statesmen, are gone and that a day of enterprise has at last dawned for the United States, whose field is the wide world.

We hope to see the stimulus of that new day draw all America, the republics of both continents, on to a new life and energy and initiative in the great affairs of peace. We are Americans for big America and rejoice to look forward to the days in which America shall strive to stir the world without irritating it or drawing it on to new antagonisms. . . . and when all mankind shall look upon our great people with a new sentiment of admiration, friendly rivalry and real affection as upon a people . . . to whom humanity is dearer than profit or selfish power.

# WILLIAM HAYES WARD

BY HIS CO-WORKERS

THE best part of my education—and by far the pleasantest—I got from daily association with Dr. Ward for twelve years. It began, however, long before I knew him,

for I was brought up on *The Independent*, and so imbibed his ideas from infancy. But the first piece of personal instruction I ever had from him was the rejection of a bit of verse, an attempted translation of Sully-Prudhomme's "Star." In returning this Dr. Ward wrote that I "danced about first on one foot, then on t'other, like a French dancing master." I should have taken this as a compliment, since I supposed French dancing masters were the most skilful in the world, if the manuscript had not been enclosed.

Dr. Ward disliked to use printed rejection slips as much as a contributor dislikes to receive them. He usually penned a letter of kindly criticism. If the amateur author brought in his work in person—as he too often does—Dr. Ward would sometimes stop in the midst of an editorial to go over the manuscript in detail. I have known him to spend an hour or more fixing up the meter of a piece of verse that he knew could never be made usable.

Of course, this sort of thing did not pay—him. But many a writer who is now getting top-notch prices for his or her contributions owes the success to Dr. Ward's encouragement and advice. I have heard him tell of the commotion caused in the office by the arrival of Lanier's "Ballad of Trees and the Master." All the editorial force gathered around to hear the poem as it was read and reread and finally the printers came in from the composing room, sticks in hand, to listen to it. In the evening Dr. Ward recited it to the home circle at the dinner table, and afterward said that no other short poem had so touched him on first reading except "Crossing the Bar."

For Kipling's poetry Dr. Ward had a great admiration and I have heard him recite with deep emotion the tribute to Wolcott Balestier, which, it seems to me, might well serve as his own epitaph:

Scarce had he need to cast his pride or slough the dross of earth  
 When as he trod that day to God,  
 He walked he from his birth.

In simpleness and gentleness, and honor  
 and clean mirth.

Beyond the loom of the last lone star thru  
 open darkness hurled  
 Further than rebel comet dared, or living  
 star swarm swirled  
 Sits he with such as praise our God for  
 that they served his world.

But more than all others, Dr. Ward loved Milton. He knew by heart much of his poetry and of his still more neglected prose, and used to quote it in his editorials as often as the rest of us would let him. If Dr. Ward had been teacher in a school of journalism I am sure he would have kept the students on Milton's prose works as a steady diet.

Several years ago Dr. Ward confided to me that he wanted to write three more books before he died. One was to be on Assyriology, one was to give expression to his matured religious opinions, and the third was to be a study of the technic of English verse. Two of these three wishes came to pass; the first in his "Seal Cylinders of Western Asia," a quarto volume with 1500 drawings published by the Carnegie Institution, and the second in his "What I Believe and Why," published

in *The Independent* a year ago and in book form by Scribner's, but the third, the volume on prosody, he did not live to finish.

But few men have come so near accomplishing their life task. His eighty years were full and running over with work. He wasted no time. He put in more hours in the editorial office than any of us younger fellows, for he got down earlier, altho he lived in Newark, and he never stopped for lunch. And between daybreak and the time for taking the train to New York City, he had done what most men would call a hard day's work, poring over Assyrian inscriptions and digging in the garden. We had no need for a nature calendar in the office, for he always brought a bit of the outdoors with him, flowers to drop on the desk of the typewriter girl, or Seckel pears to fill the pockets of the office boy. He often came in wearing a pansy, not in his buttonhole but in his mouth. The portrait on our cover would look more natural to me if there had been a pansy stem between his lips.

No eight-hour law for him and no labor-saving devices, except his devices for saving the labor of others. His desk was never clear, but his mind always was. He violated all the laws of efficiency, yet he could turn out more copy on a great variety of subjects in a shorter time than more systematic men. He disregarded all warnings to slow down, yet somehow he managed to get in over sixty years of incessant activity. Once I remember he came into my office holding out a double handful of pins. He always saved the pins used in the printing office to fasten the copy to the galley proof, regardless of the relative value of time and pins. "See here, Slosson," he said, "see here. Every one of these pins represents eighteen inches of proof and the doctors told me twenty-five years ago that if I read another galley of proof I would ruin my eyesight." And he went off chuckling like a small boy who has eaten green apples and didn't get the threatened stomach ache.

The door of Dr. Ward's office was open to all comers. And all comers came. College presidents and beggars, bishops and heretics, authors and bores—I see my pairs of categories are not mutually exclusive, but never mind. One moment he would be arguing excitedly with a rabbi over the translation of a Hebrew text, and the next conferring with a Chinese over the exclusion

#### DR. WARD'S COPY

This is the first sheet of the last piece of manuscript in Dr. Ward's own formidable handwriting that was received in *The Independent* office. It was an editorial published September 13, 1915. After that Dr. Ward's many editorial contributions were dictated, his paralysis making writing impossible.

laws. He picked his protégées from all races and countries. In a letter from Babylon to *The Independent* in 1885, "A Day at the Tower of Babel," he refers to "our sharp, honest and faithful young servant and interpreter, Daniel, whose facility with languages (he talks Arabic, Turkish, Kurdish, Armenian and English, and has a smattering of as many more languages) is our shame and despair." His encouraging words to this young Armenian, Daniel Noorian, brought him to this country and now he has one of the finest oriental shops on Fifth avenue.

Dr. Ward was alive at more points than any other man I ever saw. I have spoken of his delight at a find in poetry, but I have seen him equally enthusiastic over the discovery of helium and of the code of Hammurabi. Botany and astronomy were his special hobbies. Church federation and simplified spelling were his pets of reforms. Intolerance and pretentiousness were his chief detestations. His pen was sharpened to a dagger's point whenever he discussed a case of race prejudice or the spread of academic ritualism. Most of the reforms for which he labored and suffered obloquy in his younger days, the abolition of slavery, the rights of women, the liberalizing of theology and the decline of sectarianism, were in large measure won before he died. But his face was always set toward the future and he was as much ahead of his time to the last as he was when he went out as a young man to make Kansas a free state. I often asked him to write up his memoirs because he had known so many interesting people and he had been on the inside of so many important movements. But he always refused, for he was concerned with the people and

problems of the present and the future, not those of the past. He had a great dislike of obituaries. That is why I have not written one of him.

EDWIN E. SLOSSON

*Literary Editor of The Independent*

ONE could not know William Hayes Ward long without discovering that his deepest interest was religion and that his approach to religion was primarily along the pathways of thought. He could not have been a religious man unless he had been convinced that religion was rational. His faith in Christianity was the deepest thing in him just because he was convinced that the Christian explanation of life was the most reasonable explanation. All this is made plain in "What I Believe and Why."

When I entered *The Independent* office, Edward Eggleston was the "Superintending Editor" and Ward was the "Office Editor." My title was "Religious Editor." I was expected to write up the important news, to discuss editorially religious events and problems, and to review the religious books. After a few months Eggleston withdrew from the staff and Ward became "Superintending Editor."

Here began, for me, the most intimate intellectual companionship that I have ever known. In all my work Ward was equally interested: and while he never undertook to dictate my policy, I came to value his insight and judgment, and all the great happenings in the realm of religious thought were freely thrashed out in our discussion. The lucidity, justness, integrity and courage of his religious thinking were always an illuminating and inspiring influence. Our discussion often took us down to the fundamental

ideas, and all that reasoning which fills the first part of "What I Believe and Why" seemed quite familiar to me when I read it a year or two ago in *The Independent*. I know that he entertained long ago the hope of putting his belief into a coherent statement. I am glad that he was able to realize his purpose. I doubt if anything more valuable in the way of apologetics has been done for this generation. I found a good many educated men, lawyers, physicians, thoughtful

business men following these discussions thru *The Independent* with keen appreciation.

One source of Ward's strength as a theologian was in the soundness of his moral sense. He knew that bad morality could not be good theology. He believed with Abraham that the Judge of all the earth would do right, and when he found in the Bible or anywhere else the Judge of all the earth represented as doing wrong, he knew that that thought originated in the defective moral sense of the writer. All theologies and all revelations, he clearly saw, must be subjected to the ethical test. Our ethical standards may not be infallible, but they are the best we have, and if we are sure of anything about God it is, as Whittier says, "That nothing can be good in Him, that evil is in me."

Well, old fellow, good-bye. We've had some busy days together; there are more coming, I hope. You've done a good day's work, and I am not talking to you about rest, for with you work is rest. Keep at it.

WASHINGTON GLADDEN

*Religious Editor of The Independent, 1871-1874,  
Pastor Emeritus of First Congregational  
Church, Columbus, Ohio*

WHEN a great man dies we can raise a monument to his memory and forget him, but when a good man passes we do not dismiss him with a memorial. The life he lived, the work he accomplished, becomes a part of our inheritance. Others better fitted will tell of Dr. Ward's achievements as a scholar; those elements of his character which have impressed this writer during a friendship of nearly twenty years were the greatness of the man himself and his sense of other men—which was interpretative but never critical. He was so acclimated in his own virtues that they were not, like most good men's virtues, thorns in other men's sides; he had worn them so long that they fitted him like a kindness. He was so lovingly and invincibly related to man that nothing separated him from God. He did not make the earth to earth and dust to dust distinction between one life and another life which most men do; he was cheerfully and naturally immortal in this present world.

With these qualities of faith and gentleness which distinguish the saint he died poor and left a great estate to this and all generations—the labors of a great scholar so well done that they will never be done again, and the life of a good man well lived.

DR. WARD AT HOME

This photograph, taken by Edwin E. Slosson some ten years ago, shows Dr. Ward in his study with his hand resting upon a wood panel carved with an Assyrian design by his sister.

ALL those associated with the late Dr. William Hayes Ward in editorial work must have been impressed, as I was, by the abundant evidence of his industry and his intelligent interest in all kinds of current news. Widely known as an authority in certain difficult and obscure fields of ancient history—notably in Assyriology and the Oriental art of former times—

he never made any untimely exhibition of his exceptional knowledge of these subjects. Altho he was a learned archeologist—this was shown by his books, his lectures, his collections, and his work as director of the Wolfe expedition to Babylonia—there was always to be seen his desire to be thoroughly acquainted with affairs and movements of the present time; and his ability to discuss them in a competent way was beyond question. Educated for the pulpit, with some experience as a pastor, it was not as a preacher or a clergyman that he sat at his editorial desk, altho his course was in no way at variance with his original profession. Unassuming and unobtrusive, he was always alert and sympathetic with both mind and heart. Those who worked with him deeply regret the loss of a man so strong in mind and character.

FRANK D. ROOT

*Financial and Political Editor of The Independent, 1898-1916*

THE death of William Hayes Ward, like that of James Whitcomb Riley, is to me not so much the removal of a distinguished name from American letters, as the loss of a valued friend.

Early in the nineties, actually in 1890, I believe, I went to New York to accept a position on *The Independent*, at that time still under the active control of its founder, the late Henry C. Bowen. I was to fill the post of office editor, as it was called, then lately left vacant by the death of one of Mr. Bowen's able sons, John Eliot Bowen. As an assistant to Dr. Ward, I was only made to feel that I had come in for a share of that friendship which young Bowen had enjoyed, and all my relations with the staff of *The Independent*, during my two or three years' stay, were of the most cordial and kindly.

It was my business to give a first reading to all contributions, to recommend what I liked to my superior for final decision, to assist in the weekly make-up of the paper, and in the proof-reading. This was my introduction to the editorial business, and was certainly most fortunate.

Dr. Ward was a man of great energy and industry, quick in his decisions, very active in his movements, but withal most indulgent to all who were associated with him, and were often, I fear, far slower than he, for all his years. He was an excellent proof-reader—one of those things for which men, it seems, must have a gift. And it always piqued me that I never could catch all the mistakes on a page. After laboring carefully over the pages, with the utmost pains to have them accurate, I would hand them over to Dr. Ward. He would push his spectacles upon his forehead, give a hurried glance up and down the sheet, make two or three furious dabs with his pen, and—there were my oversights exposed and corrected.

While Dr. Ward liked to allow me a fairly free hand in selecting the poetry and fiction for the paper, I soon came to have a great respect for his judgment, particularly in poetry. Indeed, I used to think that of the editors of that time there were only

two who really knew poetry when they saw it. One of these was Dr. Ward, the other was Richard Watson Gilder, I recall the delight with which Dr. Ward would read a bit of really good verse that might happen to drop out of the mail bag, and the enthusiasm with which he welcomed the work of Emily Dickinson, which appeared at that time.

Two visions of Dr. Ward are imperishable. I see him darting out of his room in a mad haste, to dictate a letter or an editorial note, on the spur of the thought, and then darting back again just as hurriedly. Doubtless he could have called the stenographer in to him. But he could move more quickly than she could. His own impulsive way was the better. What matter if it used up energy? He seemed to have energy to burn.

Again I see him of a winter morning. I had gone to spend the night with him in his Newark home, and when I got up and looked out of the window on a world all covered with deep snow after a storm, there was Dr. Ward shoveling a path out to the road, so that his sister would not have to wet her feet in getting to the car. That was the man; a tireless energetic scholar and a Christian gentleman. He belonged to the old school, which we must see pass away with regret, and I believe few men leave the world having won a kindlier affection from all who met them.

BLISS CARMAN

*Office Editor of The Independent 1890-1892,  
Author of "Pipes of Pan," "April Airs"  
and other verses*

FOR twenty-five years Dr. William Hayes Ward has been a trustee of Amherst College. His equipment for the office could hardly be excelled. A graduate of Amherst College of the Class of 1856, educated for the ministry, experienced as professor in Ripon College, editor of *The Independent*, identified with the different missionary societies for the uplift of mankind, an archeologist of world-wide renown, of broad scholarship, and a believer in the tradi-

*William Hayes Ward*

tions of Amherst College; these were a few of the qualifications which he brought to the college as a trustee in the year 1891. In those days there were sixteen trustees of Amherst, seven of whom were clergymen, including Dr. Ward. He was one of the very first to recognize the modern tendency of education, and the sciences as well as the classics and philosophy always found in him a strong advocate. There was nothing narrow or illiberal in the make-up of Dr. Ward. He knew perfectly well what a college education should be; he knew how this education should be obtained; he knew the kind of men who should teach it; and he never failed to express himself and to fight for his ideals.

No one can exaggerate the influence of this type of a man in a board of trustees, and the position which Amherst holds in the world of recent years is in no small measure due to the influence which Dr. Ward, in his quiet and effective manner, exercised in the board.

GEORGE A. PLIMPTON

*President of the Board of Trustees of Amherst College*

LONG before Dr. Ward gave us his aid in laying the foundations of the Federal Council of the Churches. I had known of his deep interest in the cause of Christian unity. During his

THE DISTRIBUTION OF ENERGY ON THE BASIS OF CLIMATE

THE DISTRIBUTION OF CIVILIZATION

# THE STORM BELT OF CIVILIZATION

BY PRESTON W. SLOSSON

**W**HAT climate is most favorable to civilization? These two maps represent in graphic form the conclusions of the noted geographer and explorer, Ellsworth Huntington, in his recent study of "Civilization and Climate," published by the Yale University Press. His task was to trace the influence of a favorable climate upon the development of the highest civilizations of the world.

Instead of making up a map of the relative civilization of different countries to suit his own views, he entrusted the task to other geographers and travelers of more or less distinction, and accepted the average of their verdicts as final. He divided the land surface of the earth into 185 regions and asked his correspondents to give the rank of each in civilization on a one to ten scale. Fifty-four individuals from fifteen different countries took the trouble to make the requested classification and from their answers the chart of civilization was constructed. Of course the map is based wholly upon opinion, even tho it represents the opinion of many men in many countries. The method of statistical comparison would, as the author admits, have been an infinitely better way of making the map but for the fact that only for a few highly civilized countries do accurate and comparable statistics exist. If conditions in Manchuria and Arabia are to be compared at all, it can only be by recording the opinions of those who are familiar with both regions thru reading or thru travel.

Professor Huntington in his search for ideal climatic conditions relied chiefly upon very detailed records of the work done from day to day by piece workers in several factories in New England and elsewhere. After eliminating every source of error, such as unusual pressure of work at

certain seasons, it was found that a very definite correlation was discovered between energy and weather. Other observations of a similar sort, such as the marks of students in West Point and Annapolis, were collected with results which confirmed the conclusions previously reached. The author has summarized these as follows:

The results are surprising. Changes in the barometer seem to have little effect. Humidity possesses a considerable degree of importance, but the most important element is clearly temperature. The people here considered are physically most active when the average temperature is from 60 to 65 degrees, that is, when the noon temperature rises to 70 degrees or even more. . . . Mental activity reaches a maximum when the outside temperature averages about 38 degrees, that is, when there are mild frosts at night. Another highly important climatic condition is the change of temperature from one day to the next. People do not work well when the temperature remains constant. Great changes are also unfavorable. The ideal conditions are moderate changes, especially a cooling of the air at frequent intervals.

For his map of the degrees of human energy to be expected in different parts of the world, Professor Huntington selects fifty degrees Fahrenheit as the ideal average temperature, since it is half way between the best temperatures for physical and for mental work. But it is the very backbone of his contention that mean temperature is of little significance unless the day-to-day range of temperature is also taken into consideration. His investigations have convinced him that too monotonous a climate is as bad as one too warm or too cool. Therefore his map represents climatic variety (measured by the annual range of temperature and the frequency of storms) as well as mean temperature.

While the correspondence of the two maps is certainly remarkable, it

is open to the objection that civilization has not always been distributed as it is at present. The earliest civilizations of the Old World arose in the valleys of the Nile and the Tigris-Euphrates, both of which are given a very low rank on the map of climatic energy. In the New World the Mayas of Yucatan and Guatemala occupied what is now one of the most unhealthful spots of the globe, and yet the ruins of their civilization are a wonder to the archeologists of today. But Professor Huntington believes that there is an explanation for the shifting centers of civilization in the coincident shifting of climatic zones.

The author admits that his theory seems to lead to pessimistic conclusions. The most favored areas occupy only about a twentieth of the surface of the earth and for the most part they are already well populated. There is apparently little chance for very high civilizations to develop where they do not now exist unless the climatic zones should shift in the future as they have in the past, in which case "races of low mental caliber may be stimulated to most pernicious activity, while those of high capacity may not have energy to withstand their more barbarous neighbors." But he points out that the effect of climate may be modified in at least two ways: by the artificial cooling and moistening of the air in dwelling houses, where it is apt to be too hot and dry, and by frequent changes of residence. Either method would nullify the debilitating effect of a bad climate. "Perhaps," he suggests, "the day will come when only the poorest families will stay in an unfavorable climate more than a few years at a time without going at least for a season to some place where they will receive new stimulus."

New York City

# WHAT ABOUT THE WOMAN'S PARTY?

BY HELEN RING ROBINSON

SENATOR OF THE STATE OF COLORADO

## REPUBLICAN PLATFORM

*The Republican party . . . favors the extension of the suffrage to women, but recognizes the right of each state to settle this question for itself.*

## DEMOCRATIC PLATFORM

*We recommend the extension of the franchise to the women of the country by the states upon the same terms as to men.*

IT is known to all children—and politicians—that a plank makes an excellent see-saw.

It is probable, therefore, that the suffrage planks in the Republican and Democratic platforms were not, in themselves, taken very seriously by the party leaders who put them there. But the danger of not inserting them was taken most seriously. For this reason those two suffrage planks, which declare in effect that the two great national political parties recognize the justice of giving woman the vote—but will not lift a finger to help her—are the greatest tactical gains ever made by the suffrage cause.

Senators Lodge, Penrose, Wadsworth, and representatives of the "interests"—more especially of the breweries, and the big manufacturing interests employing women—stubbornly opposed, as they are, to equal suffrage, could probably have prevented the adoption of the suffrage plank by the Republican convention had they so willed. But their sense of political strategy governed them. They realized that the woman's vote must be considered—almost as if it were the German! James Nugent of New Jersey, Governor Ferguson of Texas, and agents of the whisky interests tried to prevent a suffrage plank being hammered into the Democratic platform. But the great majority of the delegates realized that the time had come when they must give to organized women some of the consideration they allowed to organized labor.

Politically speaking, it is more useful for a woman to be feared than loved!

Two suffrage associations carried on the fight for a suffrage endorsement at Chicago and again at St. Louis: The National Suffrage Association and The Congressional Union. The National Association is laboring to win suffrage either state by state or by a national amendment. It doesn't care which—so long as it gets it. The Congressional Union limits its efforts to securing a national suffrage amendment. Just half the program of the older organization; but it proclaims the half greater than the whole.

The National Association, with its magnificent generalship, got practically what it asked for at the conventions. The Union got what it distinctly did not want. Yet of the two organizations there is little doubt that the Union was the more instrumental in securing the two planks with their high strategic value.

The Congressional Union was extremely practical—for the moment. It did not appeal to the delegates for votes for women; but it shook votes of women in their faces.

There they were. Count them—3,100,000 votes. Or, not to be bigoted over a few figures, let the immitigable declaration of the Congressional Union stand: "Four Million Women Voters!" All in the twelve states: Wyoming, Colorado, Utah, Idaho, California, Washington, Oregon, Arizona, Kansas, Illinois, Nevada and Montana; states representing 91 electoral votes. And remember more than half these voters have been enfranchised since the last presidential election.

Votes enough, surely, to win the respect of any politician if—aye, that's the rub!—if they can be rendered, so to speak, acute. If, in other words, they can affirm solidarity. If they can be mobilized for suffrage purposes.

Can they?

SENATOR ROBINSON

Enter—the Woman's Party, the alias adopted in the equal suffrage states for the Congressional Union. The Woman's Party has been most efficiently advertised these past months. It held its first national convention in Chicago on the Monday of "convention week" and no politician of consequence was allowed to escape the knowledge that it intended mobilizing its forces as a balance of power in the "free states."

There is something hypnotic to the average politician in the repetition of any impressive series of figures—"Four Million" for example. And that is the reason why the two great political parties committed themselves, platonically, to the suffrage cause.

And now, having triumphed in securing what it did not want, what of the future of the Woman's Party?

A few days after the adjournment of the Democratic National Convention a member of the Woman's Party, with the practical knowledge of political aspects which most of its leaders lack, assured me that the Woman's Party was all drest up—but it had no place to go.

"With the two parties 'favoring' or 'recommending' the extension of the franchise to women on practically identical terms," she said, "what is there for a Woman's Party to do? No party was ever established on the difference between Tweedledum and Tweedledee—tho parties may have been kept going on that difference.

"Certainly to ban the Democratic party for not passing the Federal amendment will be equivalent to blessing the Republican party for declaring in its platform, in effect, that it is opposed to a Federal suffrage amendment." She added, "And that would be to convert the party into a campaign joke."

Such was the situation when Mr. Hughes made his declaration in favor of enfranchising women, as speedily as possible, thru a Federal amendment—a declaration not given, however the official status of a place in the Republican candidate's speech of acceptance.

"That settles it!" came a joyous Republican chorus. "The Woman's

Party will declare for Hughes! Four million women voters!"

Wait a bit!

Two years ago when the Congressional Union, for which, as has been shown, the new Woman's Party is an alias, sought the defeat of Democratic senators and congressmen in the equal suffrage states, the leaders answered all protests that these men had long worked for equal suffrage: "It is not a question of individual views. We attack these men because they belong to the party in power that has failed to pass the Federal amendment. The individual is nothing to us; we work with parties!"

So, doubtless impelled by a desire to be consistent, the Woman's Party, at its recent executive conference at Colorado Springs, August 11, contented itself with congratulating Mr. Hughes "on the unequivocal stand which he has taken for human liberty." Then, making no reference to the fact that the Republican party platform expressly states that it has become a states rights party on the suffrage question only, the conference made a declaration of war on the Democratic party because in suffrage, as in other matters, it is a states rights party—more or less!

Whereas, The present administration under President Wilson and the Democratic party have persistently opposed the passage of a national suffrage amendment;

Resolved, That the National Woman's party, so long as the opposition of the Democratic party continues, pledges itself to use its best efforts in the twelve states where women vote for President to defeat the Democratic candidate for President, and in the eleven states where women vote for members of Congress to defeat the candidates of the Democratic party for Congress.

The practical question now is, How many votes can the Woman's Party deliver, as a side partner, to the Republican party? Or, to fit the question to the party policy, how many votes can it divert from the Democratic party?

The profession of the prophet is the most dangerous of all human vocations. But I will risk it. The number will be very small. That is not because women voters are unconcerned about the suffrage issue. We women voters want votes for women in all the states. We want this for the sake of other women and we want it for our own sake, also. We know that no American woman is fully enfranchised till all are enfranchised, since a necessary change of residence across state boundaries

may lose us our status as voting citizens. We realize, moreover, we women who have so long endured it patiently, that we must continue to be targets for the soul-insulting nonsense of the hirelings of anti-suffrage forces until the suffrage question is settled and settled right. Naturally, we are eager to write woman, as well as God, into the constitution of our country.

But such women voters, their intelligence developed and trained thru the exercise of the franchise, realize that the leaders of the Woman's Party confuse the game of politics with mumblety peg.

Take that Colorado Springs declaration. There was the danger, in preparing it, of making one of two blunders.

And of two evils the party leaders chose both.

There was, first, the folly of trying to build up a party, here in America, on purely destructive lines. Such a party might, possibly, be thinkable—for men. But never for women. For women voters are far more practical in their thinking processes than are men.

This fact was aptly expressed the other day, in a published interview,

Drawn for The Independent by W. C. Morris

HE GOT THERE FIRST

by Agnes Riddle, for two terms a member of the lower house of the Colorado General Assembly and now a Republican candidate for the state senate. Mrs. Riddle is a shrewd observer with much political experience and an ardent supporter of Mr. Hughes—but she has no kind words for the Woman's Party propaganda, tho it will, indirectly, help her candidate.

"Spite work won't get you anywhere," she says. "I call it foolish, this business of the women spending their time doing spite work against a party or candidate." And she goes on to describe the "tactics" of the new party as "just plain nagging" and to declare that women, to get anywhere politically, must fight definitely for a party or a policy—not merely destructively.

The second folly was in assuming that the "anti-party" policy, even if successful, could advance the suffrage cause.

A two-thirds vote being necessary, in both houses of Congress, to pass a Federal suffrage amendment, it follows that it is unjust to hold a majority party responsible for the failure of such an amendment—unless it is a two-thirds majority party. No party in the past hundred years has controlled such a majority in Congress. It is a safe estimate that neither party will control such a majority for some years to come.

Even should Mr. Hughes and a Republican Congress be elected—let it be assumed thru the efforts of the Woman's Party—and even should the President succeed in forcing his party in Congress into line for the suffrage amendment (Yes, Senator Weeks and all!) there would still be needed a considerable number of Democratic votes.

Would they be there? Chastened by the anti-party forces but eager to oblige?

Maybe!

But there are those who think it might be too exciting to ask a corpse to oblige with a jig at its own wake—just to please the man who made him a corpse.

However that may be, the suffrage leaders in the "free states" have always opposed the methods now employed by the Congressional Union—alias the Woman's Party. And, tho many Republican women may align themselves, for strategic purposes, with the Woman's Party, and many Independent and Progressive women may vote for Mr. Hughes, for this reason or for that, it is becoming increasingly evident that very few Western women will, next November, play—mumblety peg!

Denver, Colorado

## The Vision of the Blind

*"Thousands at his bidding  
speed,  
And post o'er land and ocean  
without rest;  
They also serve who only stand  
and wait."*

Was the spirit of prophecy upon John Milton when, more than two hundred and fifty years ago, he dictated those words to his daughter?

Did the "blind poet" have a vision of the millions of telephone messages speeding instantly over hundreds and thousands of miles of wire spanning the continent?

"They also serve who only stand and wait." The Bell Telephone is your servant even while it "only stands and waits." The whole system is always prepared and ready for your instant command.

Every wire and switchboard and telephone instrument is kept alive and responsive by an army of telephone workers.

Each one has his special part to do and, because he does it faithfully, countless messages speed throughout the length and breadth of the land, at every minute of the day and night.

# LIVE HISTORY

## A TALK TO HISTORY TEACHERS

BY EDWIN E. SLOSSON

THERE are two ways of approaching a subject, the logical and the psychological. They are rarely the same and usually we have to choose between them. The older pedagogy chose the logical. Modern pedagogy prefers the psychological. In teaching geography it used to be the custom to begin with "the earth is round like a ball" or even further back in the primal *nebulæ*. Now the child begins with his own school room and gradually widens his view to take in the county, the state and the nation. When biology first was introduced it was common to begin with bacteria and diatoms, which the boys could not usually find under the microscope and so drew nice pictures of air-bubbles instead. Now the teacher begins with an animal as near to man as the laws of the state allow. The psychological starting point is always the nearest, the *here* and the *now*.

If the history teacher is to be equally successful he must learn the same lesson as his colleagues in geography and biology. The chronological method of teaching history must be discarded if it prove not to be the psychological. The earliest historians were merely chroniclers and modern historians sometimes show atavistic tendencies of return to the old type. But it may prove to be better to follow up a line of interest than to follow down the calendar.

For to begin with modern history is not to end there. The first lesson the botanist gives to his specimen collectors is "dig up your plant by the roots." The history teacher who uses a periodical as his text-book will give the same injunction. The classicist need have no fear of being neglected. We cannot read the daily paper intelligently without calling him in to help us. When the morning paper told us of the fighting at the Dardanelles we went back to the battle of Aegospotamos, to Xerxes whipping the waves, to the ringing plains of windy Troy. What has Venizelos, the Cretan, to do with Greece? To answer that we must learn what the sea power meant to the Kings of Knosus, we shall hear of the Minotaur, the labyrinth and the double-bladed battle ax. Why did England offer Cyprus to Greece? That leads us to Disraeli, to Famagosta, to Richard Coeur de Lion, to Harum-el-Raschid, to Augustus, to Cambyzes, to Aphrodite rising from the foam of the sea. Why was the King of Greece named Constantine and why did he refuse to join the Allies when he learned that Russia was to get Constantinople? What claim has Italy on Tripoli and why does she aspire to be Queen of the Adriatic? Is Riga a German or a Russian city and why? Why do the Chinese feel the loss of the Shantung province more than they would any other?

If history is studied from books some historian is sure to be neglected, the classicist, the medievalist, the modernist, the economist or the orientalist. But if history is studied from the journal every single one of them will have his innings. And it is the only way of ensuring that the students get a well rounded education. You can not trust a teacher to select the topics. He is too partial to what he happens to know and therefore is most interested in. Anybody can keep up a reputation for wisdom if he is allowed to choose his own ground. But the teacher who lets life dictate the lesson for the day has true courage and shows a confidence in himself which will inspire the confidence of his students. What respect would a teacher of mathematics command if his pupils knew that he never tackled a problem unless he had worked it out beforehand? It is when the teacher of history dares apply his mind and his method to the solution of a problem of which the answer is still on the knees of the gods that he commands the respect which is given to the chemist who analyzes an unknown. And when the student finds out that he too in a humble way can use this new tool of the historical method in analyzing the unknowns which the news of the day presents to him, then for the first time he gets confidence in the value of history and delights in its study. If you have ever seen the change that comes over the spirit of a class in chemistry when they shift from routine experiments to the analysis of unknown substances, you will understand what I mean. It is when they get to determining for themselves the composition of minerals which the professor himself does not know, that they work till the janitor turns them out of the laboratory.

Don't be content with telling your students that history is a valuable study and "will be of great use to you in later life." Remember that every other teacher is saying the same about his subject. What is more, some of them are proving it and you have got to prove it too if you want to attract and hold the bright students.

You know what the study of history has done for you to make life interesting. You know how it has broadened your mind and extended your vision. It has given you the power to penetrate the present; you can see what lies behind the superficial appearance of things. Man is born myopic and before he can see things properly his vision has to be corrected by that operation known as the study of history. When this natural myopic man looks at a newspaper he sees only the words printed on it and they are mostly meaningless to him. But to you the page is

transparent, you look thru it down into the depths of historical perspective.

You read today that the Rumanians are fighting with the Bulgars in the Dobrudja. Do you want to read about this prospective battlefield? You know that it has been described in language quite as vivid as the best war-correspondent can command by a man named Ovid, who was sent, much against his will, to live at Tomi some years ago. The reader who swims on the surface of the news is puzzled to understand why these people of the Danube delta call themselves Romans and follow Italy's lead instead of joining with the surrounding Slavs. But those who remember their Horace and Ovid and those who have seen Trajan's column in Rome, with its 110 yards of Dacians spiraling down it, are not at loss to comprehend why the Rumanians have now allied themselves with the Latins.

To understand the war in Macedonia one must read the book of Acts and Paul's epistles to the Thessalonians. Last week the papers made a great ado over the taking of Kavala by the Bulgars and it seemed that somehow this made a lot of difference in the Salonica situation, all quite confusing until we remember that Paul landed at Kavala, then called Neapolis, on his way to Philippi and Thessalonica. This Balkan puzzle map with its outlandish names is all alive to you. So it should be to your students. In your effort to make history the most vital, interesting and broadening of studies I believe that the journalist can help you. For, after all, you must admit that the journalist is a historian of a sort, altho I do not blame you for reluctance to admit him to your ancient and honorable gild. But the journalist when he works over the crude material of his original sources, the day's telegrams, the official statements, the personal narratives, the maps and photographs, selecting and rejecting, criticizing, comparing and verifying, and in the end combining the essentials of it all in one brief and readable narrative, is following the method of a historian, altho his product comes out in periodical instalments unbound, to be read and forgotten in a day instead of being bound in stately volumes for the library, never to be forgotten and rarely read. The journalist is simply a historian in a hurry.

Now this invaluable training in historical methods you can give to your students by means of the weekly periodical. This is no rash speculation of an outsider. Last year the text book in current history which I am engaged in writing, *The Independent*, was used by two thousand teachers in the classrooms of schools ranging from the grammar grade to the university; so we know now that it works.

## WILLIAM HAYES WARD

(Continued from page 376)

long editorial career his keen eye watched every movement that gave promise to break down sectarian barriers and bring the followers of Christ into close coöperative and federated relations in matters of common concern.

When in 1900 the National Federation of Churches was organized—the forerunner of the Federal Council of Churches—I rejoiced that Dr. Ward's large experience could be utilized in the counsels of its executive committee. He prepared the letter sent out by the committee that exprest the hope that this federation of individuals and local congregations "might be the forerunner of an Official Federation of Churches."

At the annual meeting of the committee at Washington, D. C., in 1902, I exprest my confidence to Dr. Ward that the time had come to take the first steps in realizing his long cherished hope. He made the motion that created the Committee of Correspondence that asked the evangelical Protestant denominations to appoint, thru their highest judicatories, delegates to the great historic Inter-Church Conference on Federation that assembled in Carnegie Hall in November, 1905. As chairman of the Committee on Program, Dr. Ward was indefatigable in labor that was taxing because its details involved the consideration of messages and responsibility on the part of thirty denominations. Just before the meeting I ventured to express my hope that he would be prepared to submit the draft of a constitution, if the conference decided to take steps looking to a permanent organization. The present constitution of the Federal Council of the Churches of Christ in America is substantially a copy of the draft which he penned.

Dr. Ward was a man of unconscious humility of spirit and self-effacement, but he was eager to labor and he spent in behalf of every cause he espoused. Honored and beloved by his associates in the executive committee of the Federal Council of the Churches, his name, by reason of the services I have briefly noted, will always stand high on the roll of the founders of the great fellowship that officially unites the larger part of the Protestant churches of the United States.

E. B. SANFORD, D. D.

Corresponding Secretary of the Federal Council of the Churches of Christ, 1902-1913, now Honorary Secretary

DR. WARD made frequent visits at my father's home in Woodstock. He married, in 1859, Ellen Maria Dickinson, my own cousin, who was a daughter of Rev. Erastus Dickinson, and their son, Herbert Dickinson Ward, became the husband of Elizabeth Stuart Phelps, the novelist. My first recollection as a boy of Dr. Ward was when he took his little boy Herbert by the legs and swung him round his head. Dr. Ward was very fond of exercise and a good walker. As a young

**BELL TAILORS OF NEW YORK, Dept. R, 102 Walker Street, NEW YORK**

man he walked from his home in Abington, Massachusetts, to the White Mountains. Another time, in visiting Woodstock, he walked the five miles from Putnam, the railroad station, to my father's home, altho a carriage was ready to take him. His eighty-one years of life were the result of his strong belief in exercise.

As he prepared me for Yale College, I had the opportunity of observing what a wonderful knowledge of Latin and Greek he had. Owing to his familiarity with the Latin poets, he became a great lover of English verse and inspired all who came in contact with him with a love of poetry. When Alfred Tennyson's poem, "The Charge of the Heavy Brigade," first appeared in London it was received by cable the same day at the office of The Independent and that day happened to be the day the last pages went to press. Dr. Ward received the long cable, made all the corrections with apparent ease and, before going home in the evening, saw that a proof of the poem was sent to the Associated Press. The poem was published not only in The Independent the next day, but in leading journals thruout the United States. There were no mistakes in the poem as printed. A man without knowledge of poetry could not have done what Dr. Ward did.

Dr. Ward was a great admirer of the English language and used it in its simplest form. He had the art of concisely stating a complex proposition. All who were associated in any way with Dr. Ward not only admired his very great qualities but loved him from the bottom of their heart. His wonderful capacity for work inspired all associated with him with a desire to do the very best they could.

I regard Dr. Ward as one of the greatest men of his generation.

CLARENCE W. BOWEN

**W**ITH keenest sorrow I learn that a valued personal friend and a friend of the negro race has passed to the Great Beyond, and I gladly accept the invitation to give a brief appreciation of Dr. William Hayes Ward's work for the negro. He has virtually devoted his life to the interests of the race, to its emancipation, to its education, to its struggles, to its ambitions, to its possible future, without a particle of prejudice. Believing that God made mankind all of one blood and that the negro should have free enjoyment of the rights and privileges of any human being and of any American citizen, Dr. Ward arrayed himself always on that platform and fearlessly fought the battles of a weak and defenseless people.

Proscription, segregation, mob violence, lynchings, denial of vote, all race distinctions, all the thousand and one indignities, persecutions and cruelties and crimes against the negro wherever practised, have found in him one who denounced vigorously and unsparingly all such as unlawful, unjust, unchristian and inhuman. His work did

# New Stomachs for Old

By Arthur True Buswell, M. D.

EUGENE CHRISTIAN

THOUSANDS of people who suffered for years with all sorts of stomach trouble are walking around to-day with entirely remade stomachs. They enjoy their meals and never have a thought of indigestion, constipation or any of the serious illnesses with which they formerly suffered and which are directly traceable to the stomach.

And these surprising results have been produced not by drugs or medicines of any kind, not by foregoing substantial foods, not by eating specially prepared or patented foods of any kind, but by eating the foods we like best *correctly combined!*

These facts were forcibly brought to my mind by Eugene Christian, the eminent Food Scientist who has successfully treated over 23,000 people with foods alone!

In a recent talk with Eugene Christian, he told me of some of his experiences in the treatment of various ailments through food—just a few instances out of the more than 23,000 cases he has on record.

One case which interested me greatly was that of a young business man whose efficiency had been practically wrecked through stomach acidity, fermentation and constipation, resulting in physical sluggishness which was naturally reflected in his ability to use his mind. He was twenty pounds underweight when he first went to see Christian and was so nervous he couldn't sleep. Stomach and intestinal gases were so severe that they caused irregular heart action and often fits of great mental depression. As Christian describes it, he was not 50 per cent efficient either mentally or physically. Yet in a few days, by following Christian's suggestions as to food, his constipation had completely gone, although he had formerly been in the habit of taking large daily doses of a strong cathartic. In five weeks every abnormal symptom had disappeared—his weight having increased 6 lbs. In addition to this, he acquired a store of physical and mental energy so great in comparison with his former self as to almost belie the fact that it was the same man.

Another instance of what proper food combinations can do was that of a man one hundred pounds overweight whose only other discomfort was rheumatism. This man's greatest pleasure in life was eating. Though convinced of the necessity, he hesitated for months to go under treatment, be-

lieving he would be deprived of the pleasures of the table. He finally, however, decided to try it out. Not only did he begin losing weight at once, quickly regaining his normal figure, all signs of rheumatism disappearing, but he found the new diet far more delicious to the taste and afforded a much keener quality of enjoyment than his old method of eating and wrote Christian a letter to that effect.

But perhaps the most interesting case that Christian told me of was that of a multi-millionaire—a man 70 years old, who had been traveling with his doctor for several years in a search for health. He was extremely emaciated, had chronic constipation, lumbago and rheumatism. For over twenty years he had suffered with stomach and intestinal trouble which in reality was superaciduous secretions in the stomach. The first menus given him were designed to remove the causes of acidity, which was accomplished in about thirty days. And after this was done he seemed to undergo a complete rejuvenation. His eyesight, hearing, taste and all of his mental faculties became keener and more alert. He had had no organic trouble—but he was starving to death from malnutrition and decomposition—all caused by the wrong selection and combination of foods. After a few months' treatment this man was as well and strong as he had ever been in his life.

These instances of the efficacy of right eating I have simply chosen at random from perhaps a dozen Eugene Christian told me of, every one of which was fully as interesting and they applied to as many different ailments. Surely this man Christian is doing a great work.

There have been so many inquiries from all parts of the United States from people seeking the benefit of Eugene Christian's advice and whose cases he is unable to handle personally that he has written a little course of lessons which tells you exactly what to eat for health, strength and efficiency. This course is published by The Corrective Eating Society of New York.

These lessons, there are 24 of them, contain actual menus for breakfast, luncheon and dinner, curative, as well as corrective, covering every condition of health and sickness from infancy to old age and for all occupations, climates and seasons.

With these lessons at hand it is just as though you were in personal contact with the great food specialist because every possible point is so thoroughly covered that you can scarcely think of a question which isn't answered. You can start eating the very things that will produce the increased physical and mental energy you are seeking the day you receive the lessons and you will find that you secure results with the first meal.

If you would like to examine these 24 Little Lessons in Corrective Eating simply write The Corrective Eating Society, Department 49, 460 Fourth Avenue, New York City. It is not necessary to enclose any money with your request. Merely ask them to send the lessons on five days' trial with the understanding that you will either return them within that time or remit \$3.00, the small fee asked.

**Please clip out and mail the following form instead of writing a letter, as this is a copy of the blank adopted by the Society and will be honored at once.**

**CORRECTIVE EATING SOCIETY, Dept. 49, 460 Fourth Ave., New York City**

You may send me prepaid a copy of Corrective Eating in 24 Lessons. I will either remail them to you within five days or send you \$3.

## The New Books

### THE BIRTH OF THE NATIONS

In these years of war, when all other virtues have yielded first place to patriotism and all other creeds have adjusted themselves to the imperious claims of the religion of nationalism, we need the historian to remind us that the national state, like other human institutions, had a beginning and is indeed a comparatively recent type of political organization. Professor Rose of Cambridge University performs this service very ably in his recent study of *Nationality in Modern History*. It comes almost with shock to the reader to learn from an historian of exceptional erudition that, apart from the writings of Machiavelli, he had never come across any systematic treatment of the idea of nationality of an earlier date than 1758. The ancient world was municipal or imperial in policy, the middle ages feudal, while the monarchic states which developed prior to the French Revolution rarely corresponded with the limits of a common speech or a common sentiment. The spirit of the cosmopolitan eighteenth century is well illustrated in the words of Lessing, "I have no conception of the love of country; and it seems to me at best a heroic failing, which I am well content to be without." It is almost impossible to imagine a contemporary German dramatist who would be capable of making such a remark and quite impossible to see how he could escape lynching if he did.

Professor Rose tells us how the epic struggles of the French Revolution and the Napoleonic wars converted first France and then the foes of France, particularly the Germans, to a faith in national destiny and a consciousness of common aims that they had never known before. Not blood or speech gave Germany and Italy their national unity in the nineteenth century, for these factors had never sufficed to unify them in the past; it was rather the new popular enthusiasm, incarnated in such leaders of opinion as Fichte and Mazzini, which made possible the constructive statesmanship of Bismarck and Cavour. Professor Rose does not attempt in the brief compass of his book to trace the awakening of the minor nationalities of Europe and of the ancient states of Asia, but contents himself with describing the rise of national consciousness in France, Spain, Germany, Italy and among the Slavs. He regards the spirit of modern Germany as the exaggeration and perversion of the national ideal, but he warns the Allies to respect the patriotic sentiment of their foes and not to impose an alien yoke upon any German community at

the end of the war. Professor Rose is indeed very generous in his appreciation of the nation with which his people are at war, and he is even willing to find a soul of goodness in Prussian militarism itself. "It is significant," he writes, "that the German phrase *Alles in Ordnung*, which corresponds to our 'All right,' conveys a guarantee that all is right. Whereas our phrase 'All right' has come to mean: 'Now, don't bother: I've done all I mean to do.'"

*Nationality in Modern History*, by J. Holland Rose. Macmillan. \$1.25.

#### MAETERLINCK

In this age of commentators and critics it is curious that Maeterlinck has hitherto not received the attention he deserves either by reason of his world-wide popularity or the real importance of his thought. But now we have a large volume by MacDonald Clark evidently based upon a long and loving study. He does full justice to Maeterlinck's philosophy and love of beauty, but rather neglects the scientific side. He does not, for instance, mention Fabre, "the Homer of the insects," without whom we would never have had "The Life of the Bee." He also, like most English authors, ignores America, as when he says that "Mary Magdalene" has been acted only in Berlin. It was put on the New York stage years ago and Maeterlinck's earlier plays, "The Intruder" and "The Interior," received recognition here long before they did in England.

The volume contains no bibliography and but little biography. The author's chief interest is in the analysis of Maeterlinck's philosophy and the development of his thought. With this in view he has worked over the plays and essays with great thoroughness and brings out many interesting relationships.

*Maurice Maeterlinck, Poet and Philosopher*, by MacDonald Clark. Stokes. \$2.50.

#### MOSTLY FICTION

William Haynes has preserved in *Casco Bay Yarns* some of the stories that have gathered around certain localities of the Maine coast. Its pictures and records make the book an informal guide that visitors to the region will enjoy. (New York: Haynes, 3 Park Place, \$1.)

*The Sailor*, an up-from-the-gutter novel by J. C. Smith, who has traveled far since the light-hearted "Principal Girl." Forceful character drawing, especially of the hero, who is so consistently presented as to be reasonably plausible thru a rather melodramatic lot of experiences. (Appleton, \$1.40.)

A bride who disappears within ten minutes after her arrival at a hotel as completely as she had vanished into the Fourth Dimension is the central figure of *The Chief Legatee*, by Anna Katherine Green, who is past mistress of the art of telling mystery stories, but never able to equal "The Leavenworth Case." (Dodd, Mead, \$1.35.)

The spirit of romance and of imperishable youth makes *Tish*, by Mary Roberts Rinehart, more than the mere rollicking novel it appears. Letitia Carberry, enterprising spinster, is so eager for adventure that she appeals to the eternal boy or girl in the reader who follows her motor and other flights with amused interest. (Houghton, Mifflin, \$1.50.)

## Before the Price Goes Up As It Must Soon

—while it is still possible without the slightest inconvenience for you to take advantage of this unique opportunity—you must have for your own the twenty-four beautiful volumes of

### The NEW INTERNATIONAL ENCYCLOPAEDIA SECOND EDITION

Alone among works of its kind, the New International deals with the thrilling times in which you live as well as with the history of the past. It meets with the compelling need of knowledge on the part of every red-blooded American that has arisen since the Great War upset the world of ideas as well as the physical world.

The articles on Mexico for example give you a comprehensive view of that troublous country up to the time when Villa raided Columbus. From Aeronautics to Venizelos there is the same graphic satisfactory treatment of men and affairs—not only that have made—but that are making today the fascinating history of the race.

**80,000 articles.** Think what it means to have in your library 80,000 articles covering the whole range of human activities, written in readable style, impartially yet never coldly.

**Bibliography.** At the end of every article is a complete list of works on the subject, invaluable for any one anxious to read further.

Never before was the need of such a work more evident. It is a present as well as a pressing need for you and there is no better time than today to decide to have the New International for your own. Because it will be necessary to raise the price soon, economy dictates that you mail the attached coupon and mail it NOW. Such an opportunity comes rarely. Don't fail to make the most of it.

**Maps.** The maps are up-to-date, complete and above all else, accurate. Necessarily they are far in advance of the maps in any other encyclopaedia.

**Illustrations.** Of all varieties, in colors, and black and white the selected illustrations are spread profusely through every volume.

**Thin Paper.** The paper is durable, thin and easily handled. A Special Library Edition is printed on regular book paper and bound in Library Buckram after specifications of the American Library Association.

Send me full information regarding your Second Edition of the New International Encyclopaedia, with details of the special price, etc.

### Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.  
Literary Editor of The Independent  
Associate in the School of Journalism  
Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers. Write to W. W. Ferrin, 119 West 40th Street, New York.

### An Income for Life

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 47 would provide an annual income of \$318.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## BROOKFIELD

### The Open Air School for Her

Teaches your daughter how to realize the durable satisfactions of life. The Directors believe that this end is attained through helping the growing girl to establish habits which keep her well, make her think clearly, make her live in right relations to her world.

The aim at Brookfield is to give the girl her fullest power, rather than to cram her mind with a specified quantity of book learning.

Open air sleeping, study and recitations. Open air dining room. Domestic arts, gardening, physical training, summer and winter sports, dancing, story telling, dramatic training, music.

Write personally to Miss Helen Fairman Cooke,  
The Brookfield School, North Brookfield, Mass.

Boyd Cable in *Action Front* follows the plan which he used in "Between the Lines." He takes bits from official dispatches and shows the vivid, personal dramas which lie behind such cold statements as: "At — we recaptured the portion of front line trench lost by us some days ago." (Dutton, \$1.35.)

*The Girl Philippa* is a story of the Great War by Robert W. Chambers, who is at his best when he writes of war and of tangled diplomatic interests. Here and there a memorable phrase falls, as "Germany, the last of the Valkyries," "Death in the summer sunshine is the most terrifying . . ." (Appleton, \$1.40.)

## OVER THE WORLD

*Plain Facts About Mexico*, by George Hagar, is a handy book on the country's physical and industrial features. It deals not at all with the present political situation, but gives (perhaps more fully) such information as would be found in our year books. (Harper, 50 cents.)

A book on a topic that is rather curiously interesting to young people is *Savage Survivals*. This was part of a course of lectures on ethics given to high school students by J. H. Moore, and traces the vestiges of earlier times still appearing in our instincts, ceremonials and play. (Kerr, \$1.)

*The Singing Fires of Erin*, by Eleanor Rogers Cox, is to be counted as an Irish-American response to the impulse which gave the Irish Literary Revival its distinctive group of national singers. Their romantic note, and their spontaneous music, with its sweet and varied cadences, give these lyrics a special appeal. (Lane, \$1.)

*Sandhills Sketches*, by William Haynes, tell of life in Piedmont County, North Carolina, the curious, naïve, half civilized life of the negroes and the mountain whites, with descriptions of old fashioned tar making, of bird hunting, and of canoeing down the Lumber where canoe never went before. (New York: Haynes, 3 Park Place, \$1.)

From the Department of the Interior comes a delightful *National Parks Portfolio*. The series of twenty-four-page folders includes the Yellowstone, Yosemite, Sequoia, Ranier, Crater Lake, Mesa Verde, Glacier and Rocky Mountain Parks, and the Grand Canyon, and the photographs, taken from many sources, are varied and excellent. (Washington, D. C.: Department of the Interior.)

The recent interest in the dance makes a translation of *The Antique Greek Dance*, by Maurice Emmanuel, particularly timely. Less comprehensive than "Dancing, Ancient and Modern," by Ethel L. Urlin, published in 1912, this work is eminently more exhaustive on its special topic. The book owes a heavy debt to Greek painting, from which the author's admirable reconstruction was made. (Lane, \$3.)

Prof. Herbert E. Bolton, of the University of California, has translated and brought together in one volume the chief narrative sources of *Spanish Exploration in the Southwest*. These narratives are annotated throughout and preceded by explanatory introductions. It is curious to see how intimately blended in the minds of the explorers was the hope of finding gold and silver with that of converting the Indians. (Scribner, \$3.)

S. C. Lancaster, consulting engineer of the marvelous two hundred miles of road from Portland thru the Cascade Range, has written of the region, its legends, its history, in a beautiful little book, *The Columbia, America's Great Highway*. This is superbly illustrated both in black and white and by a series of most uncommon photographs in color. The road calls to mind Napoleon's Corniche Drive, and the book tempts one to buy a ticket at once. (S. C. Lancaster, Portland, Oregon, \$2.50.)

## MR. PURINTON'S EFFICIENCY QUESTION BOX

310. Mr. H. H., Washington. "I was formerly a journeyman and master mechanic. I became interested in industrial education thru sympathizing with and helping the apprentice boys in the shop, went to the State Normal; have been teaching shop work since, at a small salary. I feel that I can fill a bigger position and get at least as much pay as I did as a master mechanic. How can I find a market for my services?"

Don't ever look for high pay as a teacher, you won't get it, a teacher's reward is in his heart—not his purse. But you can qualify gradually for an industrial engineer, an efficiency organizer, an expert in scientific management, or a consulting specialist in one of several branches of allied industry.

We suggest that you obtain all available literature from those concerns, and enter the avenue of opportunity that looks most favorable: National Association of Corporation Schools, Irving Place and 15th Street, New York; Efficiency Society, 41 Park Row; Business Course, 261 Broadway; Engineering Magazine, 140 Nassau street; Mechanics Institute, 18 West 44th street; Associated Efficiency Engineers, 233 Broadway; Harrington Emerson Company, 30 Church street; Advance Engineering Corporation, 20 Broad street, New York City, Peerless Engineering Company, 43 West 27th street; International Bureau of Consultation, 125 East 23rd street, all of New York.

311. Mr. J. P. W., New York. "Just before the war I resigned from my position on the faculty of a state university, expecting to get a position in the East. But engineering work, my specialty, is extremely dull, and my only income is from a few engineering articles published occasionally. I belong to the American Society of Civil Engineers, the Efficiency Engineers, the Efficiency Society, etc. What shall I do?"

Look yourself in the face. You had a salary of \$2190 a year—and resigned, "expecting" a job somewhere else. You now have a chance to meditate on your folly. A wise man keeps his job still he has a better one clinched.

You have changed positions nine times in twelve years. Why? That is no way to reach the top of your profession. Your problem is how to make the most of a chance when you have it. You throw enough chances away to get rich on. Waste breeds want.

Ask advice from editors of magazines that printed your articles. Get lists of large building and engineering concerns, from trade papers and your former chiefs, and write each personally. Keep sending articles to engineering magazines. Enroll in teachers' agencies and high-class employment bureaus.

312 Miss C. C., Iowa. "I am only a girl of eighteen, but for years have had a feeling that an important work is lying ready somewhere. My father and grandfather are both lawyers, and I could enjoy making talks in different schools, having an intense desire to speak. Am preparing, meanwhile, to teach. Could I prepare in a better way? Some friends urge me to become an author, some others advise music and art. Please help me to decide."

Follow your own light. No one sees it but you. If Joan of Arc had listened to her friends, the greatest woman crusader in history would have been lost to the world.

Yet your plan should be used with caution. You are not old enough to understand yourself and map out your destiny. Keep your vision, but do the practical thing first.

Why not be a teacher of languages, or of history and geography? Then line up your dream with your day's work. Study back of the world's best country, but literature of national women's organizations, of Christianities, and learn languages of educational progress, and plan ahead. Take a home course in public speaking. Join literary contests. Write for your local paper.

313 Miss M. F., Illinois. "In the Question Box recently Mr. B. B. T., Maine, a graduate in mechanical engineering, asks about chances for

CLARA C. FULLER, Principal

MARTHA J. NARAMORE, Associate Principal

### IRVING SCHOOL for Boys

Tarrytown-on-Hudson, N. Y.

25 miles from New York, in the beautiful historic "Irving" country. 80th year. 25 years under present Head Master. New site and buildings, 1904. Prepares for all colleges and technical schools. Individual as well as class instruction. Equipment includes Athletic Field, Gymnasium and Swimming Pool.

For information, address

J. M. FURMAN, A. M., Head Master, Box 925

advancement in his line of work (No. 221). Here in the Illinois coal field is a need of trained electrical engineers. Mr. Dent Ferrell, chief electrician for a coal mine company, would like Mr. B. B. T. to write to him, address Christopher, Franklin County, Illinois."

We thank you for your kind and thoughtful cooperation; and we hope that by means of it a new and satisfying business relation may be established. One of our ambitions for the scope of the Efficiency Department is to provide an exchange of mutual benefits among our readers. If others will follow your example and write us of local opportunities to meet the needs of Question Box inquiries, we shall thus be enabled to extend our service, and the seeker and the sought will find each other more quickly than would otherwise be possible.

314. Mrs. J. P. F., Alabama. "Having read certain books on diet, I would become converted to vegetarianism, and find health and energy increasing. But our men folks insist that they must have meat once or even twice a day, tho one of them has rheumatism and another a tendency to kidney complaint. Are not these troubles aggravated by meat? How can I persuade the family to adopt a meatless diet?"

Never try to reason with a man's palate, on pain of your life. His palate and his brain are not on speaking terms: putting them together means a family feud. Of course rheumatism and kidney trouble are aggravated by a steady meat diet, but if you don't humor the men they may auto-suggest themselves into worse ailments.

Your job is (1) to grow radiantly beautiful, rarely sweet and riotously healthy on vegetarianism; (2) to make your non-flesh meals so attractive they taste better than meat; and (3) to study food values thoroly and provide the true equivalent for meat, in a form easily digestible. Have you the meatless menus of Kellogg, Christian, Lust, Lindlahr, Towne, Gillmore? See page 348 of my book "Efficient Living" for a discussion of vegetarianism.

315. Mr. D. P., Tennessee. "I should like to know (a) how to reduce 110 volts to 35 thru resistant lamps without a transformer; and (b) if 35 volts reduced from direct current is the same as 35 reduced from alternating?"

The Efficiency Service does not attempt to solve purely technical problems requiring the advice of an expert in that field of investigation. Your electrical problems should be submitted to the editor, or the question-and-answer department, of an electrical journal, such as *Electrical Engineering Experimenter*, 233 Fulton street, or *Electrical Record*, 114 Liberty street, New York. Obtain copies of these magazines, subscribe for the one you consider best, and mail your questions there.

316. Prof. W. L. M., California. "As a high school teacher, I have been using in my classes much of the material found in your articles. Your recent article on "Office Efficiency" prompts two questions: (a) Where can I obtain a typewriting manual explaining the new method of fingering said to double the output of the typist; and (b) where can I obtain the system of cutting stenographic costs and facilitating stenographic work, evolved by a leading typewriter company."

(a) Write The Tulloss School of Typewriting, College Hill, Springfield, Ohio.

(b) Write Remington Typewriter Company, 327 Broadway, New York.

Will you not write us, in 150 to 300 words, just what methods you follow in class teaching of efficiency, and what results you have had? We shall be glad to publish your suggestions, and many teachers will be grateful.

317. Mr. J. F. H., Virginia. "In your article on "Office Efficiency" a distinction was drawn between time recording machines for penalty use and time recording stamp for reward of merit. From my knowledge of both time recording clocks and time recording stamps, I am unable to distinguish the point of difference, and would be particularly interested in your explanation."

The difference is mainly psychological. A time clock that registers a man's arrival at shop or factory, and penalizes him for a moment's tardiness, violates his natural instinct as a free agent, and puts him in the machine-class, along with the clock. But a time record of actual work done—not of hours spent on the job, is a continual spur to more and better work, if handled properly; and does not offend the normal desire of a man to be treated like a man. The time clock is a prophecy of the workers' emancipation from the sense of drudgery, which alone is drudgery.

# Insurance

Conducted by

W. E. UNDERWOOD

## FIGHTING SHINGLE ROOFS

There was a period in the history of American fire insurance when the companies accepted risks just as they were and did not concern themselves about remediable physical defects, provided the premiums charged were compensatory. Time has slowly made a radical alteration in underwriting practise. As nearly as has been possible, the physical hazard has been closely analyzed, divided and subdivided into numerous distinct entities, each one carrying its own charge. It is now within the ability of every state, municipality and property owner to raise or lower rates. As each defect is eliminated, the amount charged against it is removed.

For more than a generation the companies, thru their organizations, have been working to reduce the fire waste. By segregating each element of hazard in each risk and penalizing its continuance, they have achieved much in the line of bringing inflammable values up to a better standard of fire resistance. This work proceeds in the face of public and private apathy, on one hand, and various commercial interests on the other. None of the latter is more uncompromising in its opposition than that engaged in the manufacture of lumber. Wood as a top covering for houses has long been recognized by fire underwriters as a heavy contribution to the waste by fire, and for more than a year past an active campaign has been waged against shingle roofs. Early this year the city of Paris, Texas, became the victim of a conflagration the aggregate property loss in which approximated \$3,000,000. Thru the investigation which succeeded, it was abundantly proven that the fire could have been confined to narrow limits but for the wooden roofs.

Aided by the lumber interests, some of the people of Birmingham, Alabama, are making powerful efforts for the repeal of an ordinance enacted several months ago forbidding shingles for roofing within certain boundaries. Arguments against wood in buildings would seem to be superfluous. The inflammability of the material is obvious. The duty of municipalities to reduce its use to a minimum should be equally obvious. Every attempt in this direction is met by the opposition of lumber manufacturers and builders, who go even to the length of asserting that wooden buildings are slower burning than those of brick or stone.

Just now the fight is concentrated against shingle roofs. It will continue, and the time will come when that material as a spark-arrester will have totally disappeared.

# Constructive Studies

ESTABLISHED IN 1901 BY WILLIAM RAINEY HARPER

BIBLICAL GROUP, ETHICAL GROUP

ERNEST DEWITT BURTON

SHAILER MATHEWS

THEODORE GERALD SOARES

THE UNIVERSITY OF CHICAGO PRESS, Publishers

Chicago, Illinois

To Ministers, Superintendents, Teachers:

Workers in religious education this autumn more than ever before are thinking about their teaching in terms of CONSTRUCTIVE STUDIES. Pastors and superintendents are noting strong courses for their Sunday schools; principals and day-school teachers are finding courses they have long sought for their classes. Now is the time to examine, to discuss, and to decide definitely what you will teach this year.

Only a few of the main courses of study in this notable series are indicated below, but some of these will surely interest you. Will you not tear off this blank and check those items that concern you, asking us thereby to send them to you, either with bill or for examination with the privilege of return or payment? Do this now so that you can have ample time to make your plans for realizing the best in your educational ideal in the coming months.

The University of Chicago Press,

Chicago, Illinois.

GENTLEMEN:

I am interested in graded lesson material for my Sunday-school work. I have noted this page in The Independent. I wish to know more about the items checked below and shall be glad to have the courses sent me as indicated:

With For

Bill Exam.

Kindergarten and Grammar Grades

- ☐ The Sunday Kindergarten (ages 3-6)  
☐ Child Religion (ages 6-9)  
☐ Introduction to the Bible (ages 9-10)  
☐ Life of Jesus (ages 10-11)  
☐ Paul of Tarsus (ages 11-12)  
☐ Old Testament Story (ages 12-13)  
☐ Heroes of Israel (ages 13-14)  
☐ Studies in Mark (ages 13-14)  
☐ Studies in First Samuel (ages 13-14)

With For

Bill Exam.

High-School and Adult Classes

- ☐ Problems of Boyhood (for boys)  
☐ Lives Worth Living (for girls)  
☐ Life of Christ  
☐ The Hebrew Prophets  
☐ The Apostolic Age  
☐ Christian Faith for Men of Today  
☐ Social Duties From the Christian Point of View  
☐ Religious Education in the Family  
☐ The Message of Jesus to Our Modern Life

## RHODE ISLAND

### MOSES BROWN SCHOOL

Upper School: Unique record for entrance preparation and for success in graduate work. Studies, manual training, athletics, etc. Lower School: Special home care and training of younger boys. Catalog: Free. 55TH K. CIFFORD, Ph. D., Principal, Providence, R. I.

## VIRGINIA

### Mary Baldwin Seminary for Young Ladies

Established 1832. Term begins Sept. 10th. In the beautiful and historic Shenandoah Valley of Virginia. Unsurpassed climate, scenic grandeur, 250 acres of college grounds. College of 4 years. Preparation 14 years with certain privileges. Music, Art and Domestic Science. Catalog: Free. 1141 ALBANY, VA.

## INSTRUCTORS

of English, History, Economics and Civics should not miss reading

### The Editor as Schoolmaster

Furnished free. Drop a postal card to The Independent, Educational Dept., 119 W. 40th St., New York.

## ROANOKE COLLEGE

64th Year

For Men. Courses for Degree, also Commercial Course. Library 25,000 volumes. Mountain location. Six Churches; no bar rooms. Expenses small. Catalogue free. Address: The President, Salem, Va.

## Randolph-Macon Woman's College, Lynchburg, Va.

One of the leading colleges for women in the United States, offering courses for A.B. and A.M.; also Music and Art. Four laboratories, library, astronomical observatory, modern residence hall. Scientific course in physical development. 300,000 gymnasium with swimming pool, large athletic field. Forty acres in college grounds. Healthful climate free from extremes of temperature. Endowment, recently increased by \$250,000. Expenses moderate. Officers and instructors, 60; students, 624, from 40 states and foreign countries. For catalogue and book of views illustrating student life, address WILLIAM A. WEBB, President, Box A.

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health or business; the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the **BERTHA RUFFNER HOTEL BUREAU**, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to **INFORMATION**, The Independent, New York.

## The GLEN SPRINGS

**WATKINS, N. Y.  
ON SENECA LAKE**  
Wm. E. Löffingwell, Pres.  
OPEN ALL THE YEAR

A Mineral Springs **HEALTH RESORT and HOTEL**, known as **THE AMERICAN NAUHEIM**. In Private Park with miles of graded walks for Oertel hill climbing. On the Southern Tier Highway, all macadam. Attractive and well-kept Golf Course, Miniature Golf, Clock Golf, Tennis, Motoring.

**THE ONLY PLACE IN AMERICA WHERE THE NAUHEIM BATHS ARE GIVEN WITH A NATURAL BRINE**

## THE BATHS

are directly connected with the Hotel and complete in all appointments for **Hydrotherapy, Electrotherapy and Mechanotherapy.**

**FOUR MINERAL SPRINGS.** The Bathing Springs are similar to the waters of Bad Nauheim, in the proportions of Calcium Chloride and Sodium Chloride, but are about five times as strong. The Radium Emanation from Brine Spring No. 1 averages 68 Mache Units per liter of water and is due to Radium Salts in solution.

Unsurpassed advantages for the treatment of Heart, Circulatory, Kidney, Nutritional and Nervous Disorders; Rheumatism, Gout and Obesity.

Illustrated Booklets and Latest Reports on Mineral Springs Mailed on Request

## AMERICAN EXPRESS

**TICKETS AND TOURS**  
**AN INTERNATIONAL TRAVEL AGENCY**  
**TRAVEL under ESCORT**

**SOUTH AMERICA:** Tours to the Continent of Opportunity. Sail in November or February.

**JAPAN-CHINA:** The Chrysanthemums of the Fall or the Cherry Blossoms of the Spring. Sail in October or January.

Send for booklets.

66 Broadway, New York City.  
Philadelphia, Boston, Chicago, San Francisco.  
Inquire at any American Express Office.

Self-selling Woodstock the latest great seller. Write for terms and territory. Act now.

# The Market Place

## WHEAT AND COTTON

Unfavorable news about the crops has caused a sharp advance of prices. There was an upward movement in wheat before the publication of the government's August report, which showed a reduction to 654,000,000 bushels from the July estimate of 759,000,000. It will be recalled that last year's crop was 1,012,000,000. As 620,000,000 are needed for home consumption, only 34,000,000 from this year's harvest could be exported. But 160,000,000 bushels have been carried over. It was estimated that a reasonable allowance for reserves would permit the sale of about 150,000,000 bushels to Europe, whose purchases from us were 250,000,000 in the year that ended with June, and 338,000,000 in the year immediately preceding.

Later reports, however, pointed to a greater shortage. Experts whose opinions command respect said that this year's yield would not exceed 596,000,000 bushels, and the *American Agriculturist's* estimate was 598,000,000. It appears, therefore, that the crop is not sufficient for our own needs, and that not more than about 90,000,000 bushels can be exported before next year's harvest. In Canada the crop is less than last year's by 100,000,000 or 125,000,000 bushels.

Authorities on the other side of the Atlantic say that Europe will look to the United States and Canada for 240,000,000. Crops are short there. In England and Italy the quality is poor, and the harvest in France will show a reduction of 100,000,000 bushels. Drought has cut down estimates in Argentina. It can be seen that crop conditions thruout the world warranted such an upward movement as was reported in the Chicago market, where in a short time the price rose from about \$1.25 to \$1.53 per bushel. When even higher prices appeared to be at hand there came a reaction, due to war news.

Prices declined 11 cents on the 28th, when it became known that Rumania had gone into the war. Many expected that her action would in the near future release Russia's exportable surplus of wheat, tied up for two years. No estimate makes this surplus less than 200,000,000 bushels, and the guesses go as high as 450,000,000. If the Dardanelles should be opened, much of it would come out. If Rumania should be successful, a circuitous railroad route could be used, but it must be borne in

## The Boss Is Sizing You Up

• Whether you know it or not, he's on the lookout all the time for men he can promote. He's ready and anxious to give YOU bigger work with bigger pay once you prove you can handle it.

If you want to get ahead, if you want to be somebody, to climb into a position of responsibility and good money—

### Get Ready—Your Chance Will Surely Come

Choose the position you want in the work you like best—then train for it. You can do it in spare time in your own home through the International Correspondence Schools.

More than 130,000 men right now are putting themselves in line for promotion through the study of I. C. S. Courses. This way to success is always open. All the I. C. S. ask is the chance to tell you about it. No cost to find out. Just mark and mail this coupon now.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4524, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

mind that Russia's railroads, whose service was inadequate before the war, are now busily engaged in connection with military operations. It is by no means clear that the world's wheat markets are soon to be affected directly by a release of Russia's surplus. But the possibility of release will affect prices.

Two or three weeks ago a London newspaper asserted that the advance at Chicago was the result of a conspiracy by which German-Americans there sought to embarrass the Allies. On the 27th a prominent paper in Berlin suggested that Germans should make "corners" by manipulation "in the grain markets of Chicago and New York." There is no evidence that prices have been controlled by German-American or other conspirators. Crop conditions and war news account for the movement.

The cotton crop also is a small one. By the government's report of August 25 it is reduced to 11,800,000 bales, which shows a loss of 1,116,000 in one month. There was a good beginning in the cotton fields, where a recovery of prices had led the planters to increase the area by 3,887,000 acres, or 12 per cent. A crop of 14,266,000 bales was indicated by the report in June. But only 12,916,000 bales were expected when the July report was published, and now the quantity has been cut down to 11,800,000. There has been too much rain in some places, and not enough in others. In one month condition has declined from 72.3 to 61.2, which is very low. The price of cotton, of course, has been going up. It had risen on the 31st, for October deliveries, to 16 1/4 cents a pound, from 13 1/2 at the beginning of the month. Even higher figures are expected. Here, as in the wheat market, there is obedience to the old law of supply and demand.

## FOREIGN TRADE IN JULY

Exports in July were \$446,000,000 and imports \$183,000,000. The excess of exports, \$263,000,000, was the greatest ever reported for a month. Before July the \$244,000,000 credited to May had been the summit. The increase of excess was due to a reduction of imports, which fell from \$229,000,000 in May, and \$215,000,000 in June, to only \$183,000,000. Exports rose to \$400,000,000 for the first time in February, and the highest total, \$473,000,000, was reached in May.

Many details in the reports for the fiscal year that ended with June are now available. Shipments of explosives and firearms had a value of \$485,000,000. A list which contains nearly all the chief war supplies shows a total of \$972,000,000. Shipments valued at \$14,000,000 were sent to Russia last week from the port of New York. This may suggest inquiry as to the growth of our trade with that country. Exports to Russia last year were \$313,515,000, against only \$60,800,000 in 1915, and \$21,300,000 one year earlier. In two years they have been multiplied by ten.

## DIVIDENDS

### AMERICAN CAR AND FOUNDRY COMPANY New York, August 31, 1916. PREFERRED CAPITAL STOCK DIVIDEND NO. 70

A dividend of one and three-quarters percent (1 3/4%) on the Preferred Stock of this Company has this day been declared, payable Monday, October 2, 1916, to stockholders of record at the close of business Monday, September 11, 1916.

Checks will be mailed by the Guaranty Trust Company of New York.  
H. C. WICK, Sec'y. S. S. DE LANO, Treas.

T. T. ANDERSON, Treasurer.

## How to Use The Independent in the Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is a special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extensive Reading and Oral Expression. It is free. Sending for it will not place you under any obligation. Address: W. W. Ferris, The Independent, 100 West 40th St., New York.

# The Independent

## MOTOR SERVICE

**T**HE INDEPENDENT will inaugurate next week a new department of Motor Service. It will be the aim of this department to place a definite, whole-hearted service at the disposal of The Independent's readers. To this end the department will exist in two forms: first, news articles published in the magazine; second, an inquiry bureau through which readers may seek and obtain accurate motor information by mail, without expense.

Some seven hundred thousand American motor cars were made and sold during the first six months of 1916. This number represents an increase of practically fifty per cent over the production of the previous year. It has been estimated that in this country there is one car owner to every thirty-odd inhabitants. And next year there will be more. The majority of American motor owners are intensely interested not only in their own machines, but in the general progress of the motor industry. By giving these owners reliable advice regarding the former and accurate information regarding the latter, The Independent will satisfy a definitely existing need.

To you who are already acquainted with The Independent's special services for its readers, it seems hardly necessary to state that the new Motor Service will be conducted with a single object in view—to serve, not only thoroughly and intelligently, but impartially, every owner or prospective owner of a motor car.

John Chapman Hilder, the Motor Editor, brings to The Independent not alone a knowledge of motors and motordom, but experience in the building of successful service departments in class publications. He is editor of a prominent motoring magazine. He is a keen motorist. And above all, he has a happy way of making what he writes interesting.

An important step in developing any kind of service is to win the attention of the people to be served. If you wish to help someone you must begin by interesting him in the form of help which you can offer. Mr. Hilder's motor articles will be written with the purpose of stimulating the motor owner's desire for help. They will deal with all phases of the operation, maintenance and equipment of motor cars, laying stress on economy, and devoting attention to useful accessories.

### *Motor Progress*

**T**HIS department, appearing at least once a month, will constitute a forward-looking commentary on the progress of the motor industry. Mr. Hilder will discuss in plain, non-technical language, the new developments in motor car design as they affect the motorist, and the latest inventions which are of benefit to the motorist. He will show ways of decreasing the upkeep cost and give advice on driving, and many of the thousand-odd details incident to motoring. Motor Progress will be illustrated as occasion warrants, with photographs and diagrams.

Motorists and small boys are alike in at least one respect: their passion for asking questions. An im-

portant feature of the Motor Service will be the Question Box. No question will be too complex, none too simple, to elicit a prompt, courteous and accurate personal reply. In every issue of The Independent will appear the following invitation: "Ask the Motor Editor anything you want to know concerning motor cars, accessories or their makers." There will be no charge for this service.

While the Motor Editor cannot undertake to give an opinion as to the relative merits of various makes of cars or accessories, he will always be ready to give full and impartial information about any individual product.

### *Motor Trucks*

**I**N conjunction with its articles and its inquiry service for owners of pleasure cars, The Independent will also deal with the commercial motor in its various forms.

That the horseless transportation of merchandise is a phase of our business life which needs to be developed, is shown by the fact that only one per cent of the logical users of commercial motor cars in this country are actual users.

It is well known by men in the industry that it is much harder to sell a man his first truck than to sell him his first pleasure car. He needs no convincing as regards the desirability of owning the latter. But in purchasing a truck or a delivery car he usually has to be shown, in figures, exactly what it will do for him, in addition to requiring explanations of specific models.

Standing as it does for business efficiency, The In-

dependent, through its Motor Service, will endeavor to carry the gospel of the commercial motor car to many thousands of business men who may not yet fully appreciate its advantages.

There will be published instructive articles showing how men in various lines of business have motorized their delivery systems and have gained thereby. The Motor Editor will discuss, for the benefit of industrial concerns, such problems as haulage, loading, maintenance, expense, selection of drivers, construction and location of the garage and the like, with a view to illuminating in an accurate and practical way the whole motor truck idea.

The fact will be emphasized that there is a special type of commercial vehicle adapted to every purpose and will gladly give his attention to individual problems through the medium of the mails.

## ELLIS PARK

Little park that I pass thru?  
I carry off a piece of you  
Every morning hurrying down  
To my work-day in the town;  
Carry you for country there  
To make the city ways more fair.  
I take your trees  
And your breeze,  
Your greenness,  
Your cleanness,  
Some of your shade, some of your sky,  
Some of your calm as I go by;  
Your flowers to trim  
The pavements grim;  
Your space for room in the jostled street  
And grass for carpet to my feet.  
Your fountains take and sweet bird calls  
To sing me from my office walls.  
All that I can see  
I carry off with me.  
But you never miss my theft,  
So much treasure you have left.  
As I find you, fresh at morning,  
So I find you, home returning—  
Nothing lacking from your grace.  
All your riches wait in place  
For me to borrow  
On the morrow.  
Do you hear this praise of you,  
Little park that I pass thru?  
—Helen Hoyt, in *Poetry*.

## JUST A WORD

Fred Dana Marsh, from whose painting, "The City," we take our cover this week, has found his field in painting American industry in its most vigorous and most picturesque phases. Independent readers had a special introduction to his work in the number for April 6, 1914, when we reproduced three of his spirited studies of iron and steel workers. One of these, by the way, appealed so strongly to Samuel Gompers that he asked for a copy to hang on the walls of the American Federation of Labor pavilion at the San Francisco Exposition.

=====

The verses which we quote on the cover we found in a poem by Edwin Davies Schoonmaker, published under the title of "New York," in *Smart Set* for January, 1914, and we quote them by the kind permission of the editor of that magazine.

=====

Thursday evening, August 3, the Exchange and Training School for the Blind, 110 Livingston street, Brooklyn, New York, was totally destroyed by fire. Many blind people of Brooklyn have received financial benefit from this agency. The darkness which

has fallen upon the blind youth and the blind man has not obliterated the eagerness for self-support.

The blind workers must have another workshop. Making a living is not an easy thing for any young person. To any one who has found the way especially hard, the fight of the sightless for self-support must make a strong appeal.

Contributions may be sent to the Brooklyn Association for Improving the Condition of the Poor, 104 Livingston street, under the auspices of which association the workshop is maintained.

## REMARKABLE REMARKS

ADMIRAL DEWEY—I am not a militarist.

JUDGE E. H. GARY—Treat your men right.

EMPEROR WILLIAM—We live with the Lord.

PRESIDENT WILSON—We are Americans for big America.

CHARLES E. HUGHES—I am a strong organization man.

PROF. M. M. METCALF—The gospel of eugenics is Christian.

MRS. CHARLES E. HUGHES—I am interested in suffrage vitally.

SECRETARY DANIELS—My duty is to build and not to boast.

WILLIAM ARCHER—Play-goers seem to have no power of selection.

ADMIRAL FISKE—There is great danger in neglecting the arts of war.

THEOSOPHIST WARRINGTON—Mr. Roosevelt may be the Cæsar of old.

MANAGER MCGRAW—A baseball team is no stronger than its substitutes.

CHAMP CLARK—Mr. Hughes has shot his bolt, but failed to hit the bull's-eye.

COL. GEORGE HARVEY—That incomparable driver, William Jennings Bryan.

PRINCESS TROUBETZKOY—Young people at eighteen or twenty-five are not developed.

SAMUEL UNTERMAYER—Our profession has been conservative to the point of reaction.

LORD CHARLES BERESFORD—I declare it to be a victory for us, hard-earned, but a victory.

ANNETTE KELLERMANN—You must first become acquainted with water before trying to float.

WILLIAM F. MCCOMBS—Mark Hanna couldn't run a campaign today and keep out of jail.

EMPEROR WILLIAM—The burden of thinking, deciding and leading has been hard upon me.

BILLY SUNDAY—Don't covet your neighbor's limousine; if he has a Packard or a "tin Lizzie" forget it.

GERALD STANLEY LEE—A motor car is really a self-running and rather realistic moving-picture machine.

PRESIDENT HADLEY—Self-control rather than public control is the power on which we must rely for achieving results.

H. B. VAN CLEVE—There seems to be no reason why dispensers of drinks should not supply paper cups instead of tumblers.

SOCIALIST CANDIDATE BROWN—What do you care whether the Chief of the Geodetic Survey is a scientist or a horse doctor?

GENERAL WOOD—It is the duty of all mothers to instil in their sons' minds a thorough appreciation of the fact that they owe service to their country.

FOOD DIRECTOR BATOCKI—Any one who consumes a litre of milk or a quarter of a pound of butter, or even an egg more than is absolutely necessary, sins against the Fatherland.

# Enters a new business at \$100,000 a year

The Board of Directors of a gigantic wholesale grocery concern had gathered to select a new president.

A keen, broad-minded director arose and said: "I know the man we want." He named the president of a great National Bank.

"What!" cried one astonished director, "what does a banker know about *our business*?"

"This man knows more than just banking," was the answer. "Banking, like wholesaling, is only one phase of business. This man is not limited to any one field. He knows all the departments of business—finance, economics, organization, selling, accounting." They discussed the matter from all standpoints. Finally they agreed unanimously to get him if they could.

The banker accepted the presidency of the wholesale grocery concern at a salary of \$100,000.

In a surprisingly short time he had completely reorganized the whole concern.

New, well-planned office short cuts replaced the old, round-about methods.

The former sluggish sales force was snapped into a wide awake, powerful organization with a capacity to handle enormous business.

The inspiring success of this banker, in a business totally new to him, was the result of his broad business training. His greatness lay in his knowledge of business fundamentals. Each move, each decision he made, was backed up by a clear, intelligent grasp

of the *why* and the *how* of the problems he had to solve.

The problems this man had to face were far more complicated than those listed below. Yet some of these comparatively simple problems are rocks upon which business careers are smashed. Sooner or later, you, too, will meet these questions. How will you answer them?

Do you know why most inexperienced promoters fail trying to raise money for a new business, and how to avoid their mistakes .....

When you hire a man do you know what questions to ask and what to leave unasked in order to get a line on the applicant's character without his realizing it.....?

Can you pick from a bookkeeper's trial balance or balance sheet the essential facts the manager of a business should know .....

Do you know the vital difference to a business man between "getting a loan" and "discounting his note," and when each is necessary .....

What are the six things a business man should watch for and satisfy himself on before he signs his name to a business paper .....

Can you analyze the market of a proposition so as to tell accurately whether it will be cheaper to sell direct by mail, or thru usual trade channels.....?

## The knowledge that carries men thru

You cannot give any one answer to these broad questions. Circumstances vary. But the big underlying principles always remain the same. It is the knowledge of the basic principles that carries men thru to success.

This broad grasp of the fundamental principles of business is what the Alexander Hamilton Institute is giving to more than 40,000 business men today.

The Modern Business Course and Service of the Alexander Hamilton Institute gives you a logical foundation on which to build your future business knowledge and experience. All departments of business are covered and presented to you in interesting, practical form.

## The kind of men enrolled

Presidents of big corporations are often enrolled for this Course and Service along with ambitious young clerks in their employ. Among the 40,000 subscribers are such men as: Alfred I. DuPont, of the DuPont Powder Companies, capitalized at \$120,000,000; Melville W. Mix, President of the Dodge Mfg. Co., a \$1,500,000 corporation; Geo. M. Verity, President of the American Rolling Mills, a \$5,000,000 corporation; Wm. H. Ingersoll, Marketing Manager of the biggest watch company in the world; N. A. Hawkins, General Sales Manager of the Ford Motor Car Co.—and scores of others equally prominent.

## Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Alexander Hamilton Institute. This Council includes Frank A. Vanderlip, President of the National City Bank; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the famous engineer; Joseph French Johnson, Dean of the New York University School of Commerce, and Jeremiah W. Jenks, the statistician and economist.

## "Forging Ahead in Business"

A careful reading of this 128-page book, "Forging Ahead in Business," copy of which we will send you free, will repay you many times over. It will help measure what you know—what you don't know, and what you should know—to make success *sure*. If you feel uncertain of yourself, if you long for bigger responsibilities, power, influence, money—this Course and Service will fit you to grasp the opportunities that are bound to come to those who are prepared.

## THE PRESIDENT AND CONGRESS KNUCKLE UNDER

**I**T is not a dignified spectacle that the President and the Congress of the United States have made in their breathless scramble to pass the railway eight-hour law. It does not offer reassurance as to the immunity of our national law-making agency from stampede by coercion and threat. The action of the President and Congress has been praised by partizan defenders on the ground that it saved the nation from "something worse than civil war." In so doing have they not committed the nation to something that is worse yet?

Let us look at the case dispassionately. Four great brotherhoods of railway operatives, including engineers, firemen, conductors and trainmen, demanded from the railways of the country an eight-hour day. They resolutely declined every proposal for arbitration, conciliation or mediation. They stood firm on their demand and refused to consider any modification of it. Their ultimatum, "eight-hour day or nation-wide strike," even the President of the United States was unable to mitigate.

The railway operators were ready for arbitration. But the workers would have none of it. "Nothing on earth," they said, could avert a strike on Labor Day except the granting of their demand.

The operators would not yield. So Congress hastily passed a law that forced them to yield, and the President signed it. The country was saved from the loss and suffering that a great railway strike would inevitably have caused—and committed to the principle that a special group of citizens, if it is powerful enough, can force Congress and the President to grant their demands with slight regard to what the President, congressmen, senators and the people believe as to their justice. We have seen legislation by coercion substituted for legislation by deliberation and common consent. We have beheld our national government compelled to stand and deliver.

The merits of the demand for an eight-hour day are quite another matter. The President, in his emergency address to Congress, expressed his belief that "the whole spirit of the time and the preponderant evidence of recent economic experience spoke for the eight hour day." He declared, further, that "it has been adjudged by the thought and experience of recent years a thing upon which society is justified in insisting as in the interest of health, efficiency, contentment, and a general increase of economic vigor."

We agree with Mr. Wilson. We know that men and women have been and in many cases still are compelled, by economic conditions if not by more immediate coercion, to work more hours a day than is good for them or for society. We welcome, in the interests not only of the individual workers but of the whole community, the movement, which is steadily gathering momentum, for shortening the working day. The eight-hour day looks like a good goal at which to aim. The division of the twenty-four hours into three equal periods devoted respectively to work, to sleep, and to the other pursuits of life, seems a neat arrangement which ought to be logical even if it isn't.

But in the case of the railway workers this difficulty arises. The movement for the eight-hour day is not primarily a movement to relieve the worker from excessive hours of labor, but a movement to increase his wages. The railway workday is not a period before and after which the worker does not work. The impossibility of running trains thruout the twenty-four hours with the workers beginning and stopping work when the whistle blows is manifest. The railway day is a yardstick for measuring the worker's pay. After the first of next January, in accordance with the law just passed, the railway operative will receive as much for eight hours' work as he now receives for ten. We do not see anything in the situation which will ensure his working a lesser number of hours than he does now.

So that the arguments advanced by the President on behalf of the eight-hour day seem to us to miss the mark. He is talking of a factory or workshop working day; the railway working day is quite another thing.

**W**HETHER the railway workers ought to have the increase of wages involved in the adoption of the eight-hour day we frankly do not know. Nor, we believe, do the President and Congress. It is as intricate and puzzling a matter to determine as the question whether the railroads should have an increase of freight rates. It ought to be determined in precisely the same way, that is, by expert investigation and quasi-judicial determination.

This is especially true since the two matters are so intimately interrelated. The President recognized this fact when he urged the railroads to grant the eight-hour day experimentally and assured them "that no obstacle of law would be suffered to stand in the way of their increasing their revenues to meet the expense

sulting from the change so far as the development of their business and of their administrative efficiency did not prove adequate to meet them."

It is a grave question whether the railroads can afford to pay the increased operating expenses demanded by the eight-hour day unless they are permitted to charge higher freight rates. Will the Interstate Commerce Commission grant the needed increase? The President at least would seem to be committed to an attempt to induce the Commission to do so. Will he make the attempt? Will Congress do anything to influence the Commission in this direction? Or will both the President and Congress rest content with their achievement in saving the country from "something worse than civil war"? Will they let the railroads shift for themselves?

Mr. Wilson and his congressional associates have got themselves into a muddle. They have done in feverish haste and under compulsion what ought not to have been done at all unless after painstaking deliberation and exhaustive investigation, and in response to an informed and convinced public demand. They have committed the legislative absurdity of decreeing that a thing shall be done first and investigated afterward.

Incidentally the whole affair gives a new impetus to the movement for government-owned railroads. If the railroad operators can charge only the rates decreed by government, and must pay the wages ordained by government—at the ruthless dictation of the workers themselves—it will probably be the logical outcome that the operators shall be replaced by government.

### THE WORLD DOES MOVE

AT the Church of Our Lady of Lourdes in Brooklyn the other day the Rev. Ferdinand Guicheteau repeated the famous experiment by which Foucault, in 1851, at the Panthéon, in Paris, demonstrated the mobility of the earth by means of a long pendulum, the weight of which, in the course of 24 hours, describes a circle. Eight years ago Father Guicheteau performed the same experiment in the same Brooklyn church.

"It does move," Galileo said by way of private comment when the Roman Catholic Church compelled him officially to deny the astronomical truth. It moves, and it is round. The world of human interests, no less than the physical planet, is moving in an orbit of its own. There are institutions that move so slowly that it is as difficult to detect their progress as it is to see the advance of an hour hand on the clock: but when time enough has gone by the change of position is apparent, and the distance traversed can be measured.

The earth has more than one motion, however, and some of its motions are faster than others. Even more conspicuously true is this of the progress of human ideas, collective activities, and institutions. There is something almost weird in the association of the Foucault experiment with a church called "Our Lady of Lourdes," the name of a shrine of miraculous healing. Priests of the Roman Catholic Church have attained distinction not only in astronomy, physics, and chemistry, but also in biology, which today is founded upon the law of heredity discovered by the Austrian priest, Mendel; but the Church is not yet ready to demonstrate to its people the truths of biological causation, including the biological conditions and limitations of disease and healing.

At the Roman Catholic Congress held in this city, if we may trust the newspaper reports, some severe things were uttered against the "materialistic scientists" and the universities that shelter them. These denunciations had the pure ecclesiastical flavor of the age of Galileo. As long as it can, the Church will teach belief in a realm where things happen and are done not in conformity to law but by miracle; and unhappily this realm is one in which refusal to accept the results of scientific investigation has consequences of physical misery and unnecessarily high death rates.

Nevertheless, the long fight between science and supernaturalism has been won by science, and every church in the world, Catholic, Protestant, Mohammedan, Buddhist or Pagan, will have to surrender with such grace as it can muster. It was not won when the English evolutionists, including controversial writers like Huxley, were confident that the danger line had been passed. Science was then, as for centuries it had been, the possession of a class. It was not safe until it was democratized. It is democratized now. The electric light and trolley car, the automobile, the serums for deadly diseases, the methods of horticulturists and breeders, and the immensely important work of the agricultural experiment stations, have made every normally intellectual family in the civilized world, to some extent, acquainted with mechanism and mechanical principles, and aware of the possibilities of human wellbeing that lie in the principles of chemistry and biology. This knowledge cannot be taken from the people now. It will increase and become more accurate. And one of the good results that will grow out of the devastation and desolation of the European war will be an unshakable conviction in the minds of men from this time forth that whatever has to be done in a big and successful way, whether work of destruction or construction, must be done by scientific knowledge and by scientific methods.

This tremendous fact has a bigger significance than merely practical men have seen. It is not only practical, it is also religious. It is the Rock of Ages of the religion of the future. The churches will have to adapt themselves to it as best they can.

### THE WORST OF WAR

WHAT seems most horrible to the onlooker is not the killing and wounding, for even in peace all must die and many must suffer, but the engendering of a spirit of delight at the infliction of pain and death. Who could have imagined three years ago that a million men, women and children would cheer and sing at the sight of a score of men burning to death in midair and struggle to get hold of falling fragments of the charred remains! This is the way one eyewitness describes the scene when a Zeppelin was brought down near London:

As soon as it was realized that it was a Zeppelin in flames there was pandemonium. Every one was shouting, hands were being clapped, steamers were using their sirens incessantly, and a few railway engines that were about were cock-a-doodling with steam whistles until the uproar resembled nothing so much as the advent of a new year in the shipping area.

Gradually the glowing mass was lost behind the outlines of houses, but the sky for some time was lit up brilliantly. Then we talked excitedly, we wrung each other's hands and acted like children, till suddenly, in sweet contralto tones, were heard the opening bars of the national anthem, and there we stood, men, women and children, singing "God Save the King" while the gathering light was heralding the approach of another Sabbath day.

It would not be becoming in us who live four thousand miles away from the heat of conflict to blame the British for thus rejoicing at the fall of their most dreaded enemy or the Germans for rejoicing at the return of a Zeppelin after its murderous raid. It is human—all too human. But it is possible even in war time to maintain a more Christian spirit, such as was shown by Captain Philip of the "Texas," who, when Cervera's ships had been driven ashore at Santiago, and the "Oquendo" was burning upon the beach, said to his crew: "Don't cheer, boys. The poor devils are dying."

### THE PASSING OF THE AGE OF STEAM

THE revolution effected by the invention of the steam locomotive a hundred years ago was by no means so swift and startling as that which has taken place under our own eyes in the introduction of a motor five times as efficient. With the aid of this new engine man has conquered two new elements. He has left the land to soar into the air and dive into the sea. The locomotive, slow, awkward and heavy, tho it be, will doubtless not become extinct in our time. It will be retained for rough work and remote places, like an old fashioned farm horse, but for pleasure and swift business the steamless engine like the horseless carriage will be preferred.

Strange custom, this of ours, defining things at first by their missing quality, as tho man takes no note of things save by their loss: wireless telegraphy and telephony, fireless cookers, hammerless guns, smokeless powder, unsalted butter, non-leaking pens and caffeine-free coffee. This is perhaps because progress consists largely in elimination, in the removal of restrictions, the reduction of superfluities, the enlargement of liberty. It is the trackless vehicle that is transforming our social system. For a hundred years motor vehicles were bound to the iron rails and forced to run in this strait and narrow path. Now they have gained the freedom of the great highway and how they skim and scurry and kick up their wheels!

Motor vehicles were in the first place made for the road, not for the railroad, but they were forced off by popular prejudice, enforced as it usually is by the power of the law. The attitude of the law toward anything new is the same as that of the rustic: "E's a furriner. 'Eave arf a brick at 'im." Whenever any one tries to introduce a new brand of bread, a cheaper kind of butter, a taller building, a five-cent line of buses, a novel form of entertainment, or a strange religion, the mob yells "stop him!" and the policeman tries to stop him, tho he only succeeds in holding him back for a while. It is hard enough for the innovator to combat the innate neophobia of human nature, but since this is usually backed by the power of the state under the control of vested interests, it is no wonder that progress is slow and painful.

As soon as motor vehicles began to appear on the highway a law was passed in England compelling every self-propelling vehicle from a traction engine to a bicycle to carry at least three mechanics, and have a man walk in front with a red flag, and prohibiting them from running over four miles an hour or making an unpleasant noise. Such legislation as this held back the advent of the automobile for at least fifty years, greatly to the inconvenience of the public. Now that motor cabs and buses have been introduced into London, it is recognized that this is the only possible way to reduce the conges-

tion of traffic, for increasing the average speed of vehicles by five miles an hour is equivalent to doubling the width of the street.

A teacher of sociology in one of the university summer schools asked his students to write down what had been, according to their observation, the social influence of the introduction of the automobile. There was a curious contrast between the reports from the eastern and western parts of the United States. The former said that there had been an accentuation of the distinction between classes; that those who had to go on foot envied and hated the automobile owners, and that many people bought machines who could not afford them, in order to keep up with the fashion. But some of the western students told a different story, that where they came from the automobile was a democratizing agency; formerly there was a sharp distinction between those who were rich enough to keep a carriage and those who could not, but now when nearly everybody owned an automobile this class distinction had disappeared. Evidently the reason for the difference lay in the fact that in the West the automobile first came into common use and so it had passed thru the aristocratic stage into the democratic, like other novelties such as shoes, forks and handkerchiefs in their time. It is because we recognize that motor vehicles have become a permanent and important factor in the life of the people that we have this week started a department for the discussion of their problems.

### WOMEN SILENT IN THE ENGLISH CHURCHES

THE war has done wonders in removing anti-feminist prejudice in England. It has been discovered that women are useful as well as ornamental, and that the nation needs them. Premier Asquith, formerly a pronounced opponent of equal suffrage, has declared that the women must have recognition in the new electoral bill. The trade unions, once so ungenerous toward the weaker sex, have at last allowed them to enter the workshops.

But there is one stanch bulwark against woman's invasion and that is, as we should expect, the Established Church. A National Mission was decided upon—what we in America would call a series of revival services—and one of the principles which it was designed to emphasize was, in the words of the Council of the Mission, "the equality of men and women in the sight of God—equality in privilege, equality in calling, equality in opportunity of service." This sounds harmless enough to American ears, in fact, rather trite, but the High Church wing of the Established Church rose in wrath and denounced it as "pestilential heresy," "very mischievous nonsense" and calculated to make "the Church a laugh-stock thruout Christendom."

Most of the bishops refused to allow the women to speak in the churches under any circumstances, but the Bishop of London rashly consented to permit them to address congregations of women and girls only, providing that they did not speak from the pulpit, the lectern or the chancel steps. Rebecca West makes the pertinent and impertinent suggestion that the good bishop expected the women speakers to stand on a soap box. But slight as this concession was the Bishop of London was obliged to retract it because the High Churchmen threatened to strike and not take any part in the mission

unless the women wore silencers. The Bishop of Chelmsford, who was at first disposed to permit the women some slight share in the work of the mission which they largely support, was also forced to withdraw permission in the interests of harmony, and announces with sad sarcasm: "I have, therefore, decided that during the mission I shall not sanction any woman telling her sisters of the Savior's love in any church in the diocese of Chelmsford."

The High Churchmen, of course, appealed to the authority of Paul, but their opponents pointed out that the literal following of Paul's injunctions would oblige them to refuse chicken at the table, which is a thing no preacher likes to do. It was also called to their attention, tho equally without effect, that the Roman and Eastern Churches, to which they appeal for precedent, had ordained deaconesses and authorized nuns to take part in church services, instruct others and exercise ecclesiastical jurisdiction, and that the ruler of their own church was a woman in Queen Victoria's reign.

The Bishop of London says that the opposition to his proposal to allow the women to speak in the churches is instigated by the devil to destroy the effectiveness of the National Mission. We suspect that the devil is using one of his most effective weapons, the same by which he impelled the goldsmiths of Ephesus to rouse the mob against Paul's preaching, the cry that "our craft is in danger." It is the same spirit that shuts women out of other professions and the better paid trades. But the women of England are now admitted to medicine, the close corporation of the bar is beginning to yield and it will not be long before they are allowed to speak from the pulpit as well as the floor of the churches.

But the British clergy need not be alarmed at that. In America we have many women ministers, and they are above the average of the men ministers, not, we presume, because of the superior ability of the feminine sex as preachers but rather the contrary, because only women of unusual capacity and conscientiousness feel called to that vocation. This is as it should be and no American preacher shakes in his pulpit in fear of feminine competition. All opponents of the extension of woman's opportunity should read the ancient fable of Bluebeard, for they would learn that women are never so eager to enter an open door as they are to open a closed one.

### THE FILM IN POLITICS

LET me make the films of a nation and I care not who makes its laws; this is the twentieth century form of the old aphorism. In this country we see the dominant issues of the day debated on the screen more effectively than on the platform. Preparedness is preached by Hudson Maxim in "The Battle Cry of Peace" and by Thomas Dixon in "The Fall of the Nation," while in "Civilization" Thomas H. Ince advocates disarmament and universal peace. But since all three try to make their point by depicting the horrors of war, several thousand feet of the film might be interchanged without interfering with the argument.

As an international language the motion picture beats Esperanto or any other that can be invented, for it carries its message to the illiterate as well as the educated of all races. This is already causing some international disturbances. Australia and Canada have pro-

tested against the corruption of their national ideals thru the influence of American-made films, and if what we read in *The New Witness* of London is correct the same silent agency is undermining British rule in India. When an embargo was placed upon the exportation of British films during the war a curious protest was raised:

We have to remember that the influence of moving pictures on Oriental peoples is very marked, and that they are likely to receive their impression of current events from the cinema. While the supply was in British hands the East saw European events thru British eyes; once the film trade in the East passes into the hands of the States, that influence is lost.

So much for what may happen during the war. The prospects for the industry on the conclusion of peace are even more gloomy, for, taking advantage of the markets America has already gained, Germany, co-operating with these hyphenated German-Americans who will have got a footing in the cinemas of India, will flood our Eastern Empire with films of an anti-British bias. Thus we shall lose not only commercially but morally on this prohibition.

The British administration in India has been for some years concerned over the number of young Hindus who prefer to go to America for study instead of England, but these are few compared with the millions who may be infected with Americanism thru the film. Apparently the time will come when it may be said that the hand that turns the cinema rules the world.

### THE MACEDONIAN PHALANX

SALONICA has seen many strange sights since Alexander's time, but never such a situation as now. The armies of twelve nations have been brought here to fight over neutral territory which belongs to none of them and to which none of them lays claim. Here Bulgars and Serbs are contesting for ground which four years ago they jointly conquered from the Turks and gave to the Greeks. Russians and British are on one side and Bulgars and Turks on the other. The line-up of this international contest is as follows:

ALLIED POWERS	CENTRAL POWERS
French	Bulgars
British	Austrians
Serbs	Hungarians
Italians	Germans
Russians	Turks
Montenegrins	
Albanians	
Greeks	

We must include the Greeks among the belligerents because, tho officially neutral, they have been doing as hard fighting as anybody. The Greek garrisons on the Struma disobeyed the orders of their government to surrender their forts to the Bulgars and instead put up a resistance that reminds the Greek journalists—they are readily reminded—of the heroism of their ancestors in the defense of Thermopylæ.

So far the innocent bystanders, the people of Salonica, have had the best of it. Half of its population of 160,000 is Hebrew, of the Sephardim branch of the race, descendants of those who were driven from Spain—worse luck to it—in the sixteenth century, and speaking Ladin, which is to Spanish as Yiddish is to German. The other half of Salonica is mostly Greek, and it has always been a question which is keener for the coin, the Greek or the Jew of Salonica. Think, then, of their delight at having camped in their vicinity 500,000 British and French soldiers who had nothing to do all winter except to spend their money. The Salonicans must have reaped a harvest greater than their famous tobacco crop

# THE STORY OF THE WEEK

## Railway Strike Averted

The Adamson eight-hour day bill, which passed the House of Representatives on September 1 by a vote of 239 to fifty-six, passed the Senate on the following day by a vote of forty-three to twenty-eight. Immediately after the final vote in the Senate the four chiefs of the railroad brotherhoods telegraphed to the local unions that the strike had been called off. President Wilson signed the bill on September 3, and again two days later, fearing that some question might arise as to the constitutional validity of a law signed on a Sunday. The prompt action of Congress put an end to the railway crisis for the present, but there is some reason to fear that the settlement will not be a permanent one. Some at least of the railroad heads are certain to seize the first opportunity to test the constitutionality of the eight-hour law before the federal courts, and many lawyers believe that the measure is vulnerable in more than one respect.

Certainly it would be difficult to find a precedent either for the law itself or for the manner of its passage. It not only establishes the basic eight-hour day for all employees of railroads engaged in interstate traffic, but forbids any reduction in wages until a commission of three appointees of the President has reported upon the working of the new system. This puts Congress in the position of regulating the wages of persons in private employment.

But the chief complaint that was made by the opponents of the Adamson bill was not the drastic character of its provisions, but the unseemly haste with which legislation of such vital moment was forced thru Con-

gress. Debate was rigidly restricted and all amendments were voted down in order that nothing might impede the final passage of the bill before the strike began as announced on Labor Day. The recommendations of President Wilson for the grant of an increase in freight rates to compensate the railroads for their loss by the new wages schedule of the present ten hours' pay for eight hours' work, and for the Canadian arbitration law forbidding the calling of a strike or lock-out until after an investigation of the causes of dispute, have not been acted upon by Congress. They will undoubtedly form part of the legislative program of the administration when Congress reassembles.

Several attempts were made in the Senate to amend the Adamson bill, and it is possible that some of the suggested amendments might have been approved if there had been time enough to get the consent of the House of Representatives to the amended bill before Labor Day. Senator Underwood of Alabama proposed an amendment empowering the Interstate Commerce Commission to fix wages and hours of labor for all railroad employees; Senator Newlands of Nevada, chairman of the committee on interstate commerce, moved an amendment making it a criminal offense to obstruct or retard the movement of trains; Senator La Follette of Wisconsin moved an amendment that nothing in the new act should be construed as repealing previous legislation fixing an absolute limit to the hours of work upon railroads engaged in interstate commerce, as the Adamson bill only forbade employment beyond eight hours a day without payment for overtime labor.

The Republican members of the Senate criticized the action of Congress for passing legislation at the dictation of labor union leaders, and, with the single exception of Senator La Follette, no Republican supported the bill. On the other hand, Clarke of Arkansas and Hardwick of Georgia were the only Democratic Senators to vote with the Republicans against it, and thus the Adamson bill entered the campaign as a party measure and a party issue.

## Senate Ratifies Danish Islands Treaty

One of the last acts of the Senate before adjournment was to ratify the treaty providing for the sale of the Danish West Indies to the United States for \$25,000,000. On the evening of September 7 the Senate acted favorably upon the treaty with less than half a dozen votes in opposition.

The treaty for the transfer of the islands still awaits final action in the Danish Landsting, which corresponds to our Senate. There the treaty cannot be considered wholly on its merits since it is inextricably entangled with party politics. For several weeks the King and his advisers have tried to arrange for the formation of a coalition government in order that the treaty might be ratified without the necessity of a general election. Every effort to organize a coalition ministry failed and the ratification of the treaty may have to await the popular verdict of an election several weeks hence. All parties dread an election while the great powers of Europe are at war and a small nation such as Denmark must use every effort to keep out of it and avoid political struggle which might divide the country or endanger its neutrality.

THE RAILWAY BROTHERHOODS HOLD UP CONGRESS

### Congress Adjourns at Last

On September 8, the sixty-fourth Congress adjourned after a prolonged session and an almost unparalleled record of important legislation. It was by a wide margin the most expensive Congress in American history. The current appropriations and the authorizations for future expenditure total \$1,858,384,185, exceeding the total for the last fiscal year by more than three-quarters of a billion dollars. The largest item of increase was the huge cost of reorganizing the army and navy in response to the popular demand for more adequate "preparedness." The Mexican crisis which necessitated an expedition of a part of the regular army into Mexican territory and the mobilization of the National Guard on the American border was second only to the preparedness appropriations in swelling the total of national expenditure.

Among the more important laws passed by Congress were the measure granting a basic eight-hour day with no reduction of pay to employees of railroads engaged in interstate commerce; the shipping bill which appropriated \$50,000,000 for the purchase and operation of ships by the government; the child labor bill, denying the right of interstate trade to products of mines or quarries employing children under sixteen and of factories employing children under fourteen;

and the emergency revenue law increasing the federal income tax and levying a federal inheritance tax and a profit tax on the manufacture of munitions of war. Very heavy appropriations were made for local improvements, especially for the construction of highways. Important treaties were concluded during the session, the convention with Nicaragua providing for the acquisition of a canal route and naval station rights in the Bay of Fonseca, the treaty for the purchase of the Danish West Indies, and the treaty providing for an American financial protectorate over the Republic of Hayti. The session was interesting, not only on account of its legislative record, but also because of several dramatic political conflicts, such as the debate on the McLeMORE and Gore resolutions warning Americans not to travel on armed merchantmen of belligerent countries, and the long struggle in the Senate to prevent the confirmation of Mr. Brandeis as an associate justice of the Supreme Court.

A very striking feature of the revenue legislation of Congress was the attempt to strengthen the hands of the government against foreign interference with American trade and industry. To meet the probable "dumping" of foreign goods after the war, tariff increases have been authorized, notably upon dyestuffs, and a tariff commission has been created. As a measure of

reprisal against the blacklist of the Entente Allies, a provision was added to the revenue bill empowering the President to withhold clearance from vessels that discriminate against any American citizen or firm, or any description of goods or the vessels of any nation restricting the commerce of American ships. Another amendment, providing that the subjects of any nation interfering with American mails may at the pleasure of the President be debarred from the use of the United States mails, telegraphs, cables, wireless and express service, was finally eliminated from the bill as too drastic and apt to lead to international complications.

### Mexican Conference Meets

The American-Mexican Joint Commission, appointed by the two countries to arrange for the withdrawal of the American army from Mexico and to provide for the future security of our border, met at New London, Connecticut, on September 6 as guests of the American Government. Secretary of State Lansing welcomed the Mexican commissioners in a cordial speech, in the course of which he emphasized the duty of the commissioners to find a permanent solution of the internal difficulties of Mexico as well as of the points at issue between Mexico and the United States. It is believed that the

A WINNER FROM THE EAST AGAIN

The success of R. Norris Williams, 2d, of Philadelphia, at the Forest Hills tournament, brings back the tennis championship to the East. He won it in 1914 from one Californian, McLoughlin, but lost it last year to another, W. M. Johnston.

"MORRIE," WHO LOST OUT

Maurice E. McLoughlin, who snatched the championship in 1912, after W. A. Larned had held it five years running, by dazzling speed on the courts, won again in 1913 and was runner-up last year; was put out in the fourth round, to the grief of his many Eastern friends.

Mexican commissioners will meet the American claims of damages for loss of life and property of American citizens in Mexico by counter claims based on the alleged killing of Mexicans resident in the United States and on the sending of American soldiers into Mexico without the consent of the Mexican Government.

In the meantime, the Carranza government is having difficulties at home. Villa, at the head of a thousand men, is said to be preparing for an advance toward the border. The American military authorities believe that Villa is actively in the field in Chihuahua and may be expected to make another raid in the near future. Bandits attacked and wrecked a train on August 31 between San Luis and Tampico. Nevertheless, the Mexican commissioners say that the Carranza government has attained complete ascendancy in northern Mexico and will be able for the future to protect all Americans in the country without the aid of our army.

**The Woman Suffrage Convention** On September 6 a convention of woman suffragists from every part of the United States met at Atlantic City to discuss the position which women, particularly women voters, should take in regard to the presidential campaign. Many of the delegates believed that the proposed constitutional amendment making woman suffrage universal throughout the nation could be pushed thru Congress if the women would use their present voting power to punish any administration that refused to work for the federal amendment. This would mean in practice that Mr. Hughes would receive all of the votes that the suffrage organizations were able to control, since he is a strong advocate of federal action to secure woman suffrage, while his chief opponent, President Wilson, altho an equally ardent suffrage advocate, believes that the franchise is a state concern. But the opponents of this policy point out that to amend the constitution would require a vote of two-thirds of both houses of Congress and the subsequent endorsement of three-fourths of the states, and that no party has or is likely to have in the future sufficient strength to put thru an amendment to the constitution unless it is also supported by many of the opposing party. Therefore they hold that suffragists should maintain their traditional non-partizanship and work for suffrage without alienating either the Democrats or the Republicans.

President Wilson addressed the convention on September 8. He refused to promise to make the federal amendment a part of the administration's program, but he declared himself emphatically in favor of woman suffrage and predicted a certain and speedy triumph for the cause. On the following day Herbert Parsons, the Republican political leader, spoke to the women on behalf of his party. He

Because you can't hit him anyway. Protective screens used on the subway trains during New York's traction strike last week.

tion. The convention adopted resolutions favoring a concentration of effort upon the federal amendment, but refusing to abandon the policy of non-partizanship. The national board was re-elected with few changes and Mrs. Carrie Chapman Catt will continue to be the president.

#### The Car Strike in New York

The settlement of the strike on the surface car lines of New York City a few weeks ago has not proved permanent. Both the employers and the unions charged that the agreement which had been reached was not being faithfully observed, the employees complaining particularly that many union men had been discharged after the strike was over. Meanwhile the Interborough elevated and subway lines were in difficulty over the issuance of individual contracts, since the unions insisted upon collective bargaining and recognition of the union. A general strike on the elevated and subway lines of Manhattan and the Bronx and on the surface car lines of the New York Railways company was the result of these disputes and misunderstandings. Oscar S. Straus, chairman of the Public Service Commission, who had done much toward ending the earlier strike, immediately summoned to consultation representatives of the employers and of the unions.

The strike was not very successful in stopping traffic on the subway and elevated lines, for many employees remained at work in spite of the orders of the labor union chiefs. But the striking car men called for support upon other labor unions on the ground that the cause of union labor everywhere was at stake. A sympathetic strike was called on other surface car lines, not directly involved, not only in Manhattan but in Yonkers, Mount Vernon and New Rochelle. Union men have been advised to boycott all the transportation lines which are run by strike-breakers, and a general industrial strike of all organized labor in New York has been threatened. If the threat should be carried out the country will have almost as serious a problem upon its hands as was the recently averted railroad strike. There are said to be 750,000 union workers of all trades in Greater New York.

#### Rumanians Invade Serbia

Rumanian forces have crossed the border at five points. The army that crossed the Transylvanian Alps thru the Gyines Pass, has penetrated some thirty miles into Hungary and the Austro-Hungarian forces are retiring before it. The army that entered by the Predeal (or Tömös) Pass, captured the city of Kronstadt. The army that entered by the Rotertum (or Red Tower) Pass, captured the city of Hermannstadt. None of these met with serious opposition, but the Austrians made desperate attempts to hold the Pass of the Iron Gates, where the Danube makes its way between rocks and cliffs. But the Rumanians also forced an entrance here and captured the city of Orsova, as well as the Bache

THE DOUBLE INVASION

While the Rumanians have invaded Hungary and taken Kronstadt, Hermannstadt and Orsova, the Bulgars have invaded the Dobrudja and taken Turtukai and Bazardjik. Here the Russians from Bessarabia encountered them and regained Bazardjik. The arrows show the points of attack.

of Hercules, a fashionable watering-place to the north of it.

South of Orsova the Rumanian and Serbian frontiers join for a length of some fifty miles and here the Rumanians have also crossed the frontier following the railroad that leads southward to Nish. If they should succeed in reaching this point or any other on the railroad leading from Belgrade to Sofia, the great combination of the Central Powers would be broken into two, Germany and Austria-Hungary on one side and Bulgaria and Turkey on the other. So separated the latter at least would soon fall victims to the Allies, and all of the Austrian and German forces south of the Danube might be taken. It is to prevent such a catastrophe that the Austrians and Hungarians are using all their efforts to hold the Rumanians in check on the western frontier, while the Germans and Bulgars are making a counter-attack on the southern frontier.

#### The Struggle for the Dobrudja

While the Rumanians cross their northern frontier into Transylvania the Bulgars and Germans cross the southern frontier of Rumania into the Dobrudja. The Dobrudja, consisting of the strip of low land lying between the Danube and the Black Sea, has long been in dispute between the adjacent nations. The natural boundary of Rumania is the Danube and the population of the Dobrudja district south of it consists mostly of Turks and Bulgars. But in the war against Turkey of 1877 in which Russia and Rumania acted to-

gether Rumania was awarded a part of the Dobrudja in partial compensation for Russia's seizure of Bessarabia. That is to say Russia took away from Rumania territory on the north inhabited by Rumanians and gave her instead Bulgarian territory on the south. Three years ago, when Bulgaria was engaged in war with Greece, Montenegro, Serbia and Turkey all at once, Rumania took advantage of her embarrassment to wrest from her another slice of the Dobrudja.

The territory thus acquired contained the towns of Turtukai (since called Tutrakan) and Bazardjik (since called Dobric), both of which the Bulgars recaptured last week. Turtukai is a strong point occupying the angle south of the Danube and north of the Bulgarian frontier. It is called "the gateway to Bucharest" because it commands the best crossing of the Danube less than forty miles from the Rumanian capital. The Berlin despatch says that 20,000 men and more than a hundred cannon were taken when Turtukai was captured by storm, but London claims that there are not so many Rumanian troops in the whole district as this.

It seems that the Rumanians, when they entered upon the invasion of Hungary, left the defense of the Dobrudja to the Russians, but they were too slow in reaching the Bulgarian border. Now, however, the Russians seem to have arrived in sufficient force to drive back the invading army which is composed of Germans, Bulgars and Turks. Bazardjik and the coast towns which they had captured are reported to be now in the hands of the Russians; but, on the

other hand, the Bulgars have advanced thirty miles further down the Danube and taken the Rumanian fortress of Silistria.

**The Fall of Halicz** For a month past the Russian advance toward Lemberg was held in check by the Austrian, German and Turkish forces behind the Zlota Lipa River, but last week they broke the line in a bloody battle and forced the defenders to a precipitate retreat to the next of the moat rivers, twenty miles westward, the Gnila Lipa. In this action the Russians captured some 20,000 Austrians, 4000 Germans and 1000 Turks. General von Bothmer's army was so broken that he was unable to make a stand even on the Gnila River, so the Russians, advancing up the northern bank of the Dniester River, reached the railroad station opposite Halicz and began cannonading that city. Since Halicz was also threatened by a Russian force coming up from Stanislau on the south, no attempt was made to hold it. The Austrian garrison demolished the ring of forts surrounding Halicz and then crossing the Dniester blew up the big bridge and joined the rest of the troops that were falling back upon Lemberg.

Two years ago, when the Russians were conducting the same campaign on the same terrain, the fall of Halicz was quickly followed by the occupation of Lemberg by the Russians. This time probably the defenses of the Galician capital are better prepared and the Russians may have to fight harder for it. So far General von Bothmer has been able to keep his army as a whole intact by withdrawing it each time just as the jaws of the Russian nippers were about to close upon it. But he has been losing heavily for three months, and it is doubtful if he can get reinforcements either from Germany or Austria-Hungary now that the Allies are pressing in on all sides at once.

**Greece Succumbs to Allies** The appearance of an Allied fleet of forty warships and seven transports off the Piræus, the port of Athens, put an end to the

#### THE GREAT WAR

September 3—Thirteen Zeppelins raid England, one brought down. British take Guilleumont.

September 4—Allies take control of Greece. French capture Soyecourt.

September 5—French gain at Verdun. Allies take 8000 prisoners in three days on the Somme.

September 6—Brussels bombarded by fifteen Allied aeroplanes. Russian victory on the Zlota Lipa River.

September 7—Germans and Bulgars take Turtukai. Rumanians take Louze Wood, near Guichy.

September 8—Rumanians defeat Austrians at Orsova. Austrians evacuate Halicz.

September 9—British take Guichy. Rumanians invade Serbia.

September 10—Bulgars take fortress of Silistria in Rumania.

semblance of neutrality and independence that Greece has hitherto endeavored to maintain. The French and British forces landed at the Piræus, promptly assumed control of the mail, telegraph, telephone and wireless systems of the whole country, and searched the houses for Germans and Greeks suspected of pro-German proclivities. The German minister at Athens, Count Mirbach, escaped by night in his motor car, but Baron von Schenk was arrested. The four German and three Austrian vessels in the harbor of Piræus were seized by British and French marines. Martial law has been proclaimed in Athens and other Greek cities. No Greek males between the ages of 15 and 55 are permitted to leave the country. Five hundred reservists who had been released from the army and had embarked for returning to America were held up and retained.

Premier Zaimis has dissolved parliament, postponed new elections and virtually assumed the powers of a dictator. He is receiving the support of ex-Premier Venizelos, presumably with the expectation that he will soon declare war and add the Greek forces to the armies of the eight nationalities now assembled in Macedonia awaiting the order to attack Bulgaria.

Many of the Greeks have not waited for any authorization, but contrary to the orders of their king have taken up arms against the Bulgars. Colonel Christodoulos, the Greek commander at Seres, not only opposed a stout resistance to the Bulgarian invasion of Macedonia, but has organized a volunteer army of three thousand to recapture the Kavala forts.

**Allies Gain on the Somme** A vigorous offensive started on Sunday and continued for several days advanced the French and British lines a half mile or more along six miles of the eastern front. The British took the villages of Guillemont and Ginchy. By storming the woods that lie northwest and south of Combles they have enveloped this town on three sides.

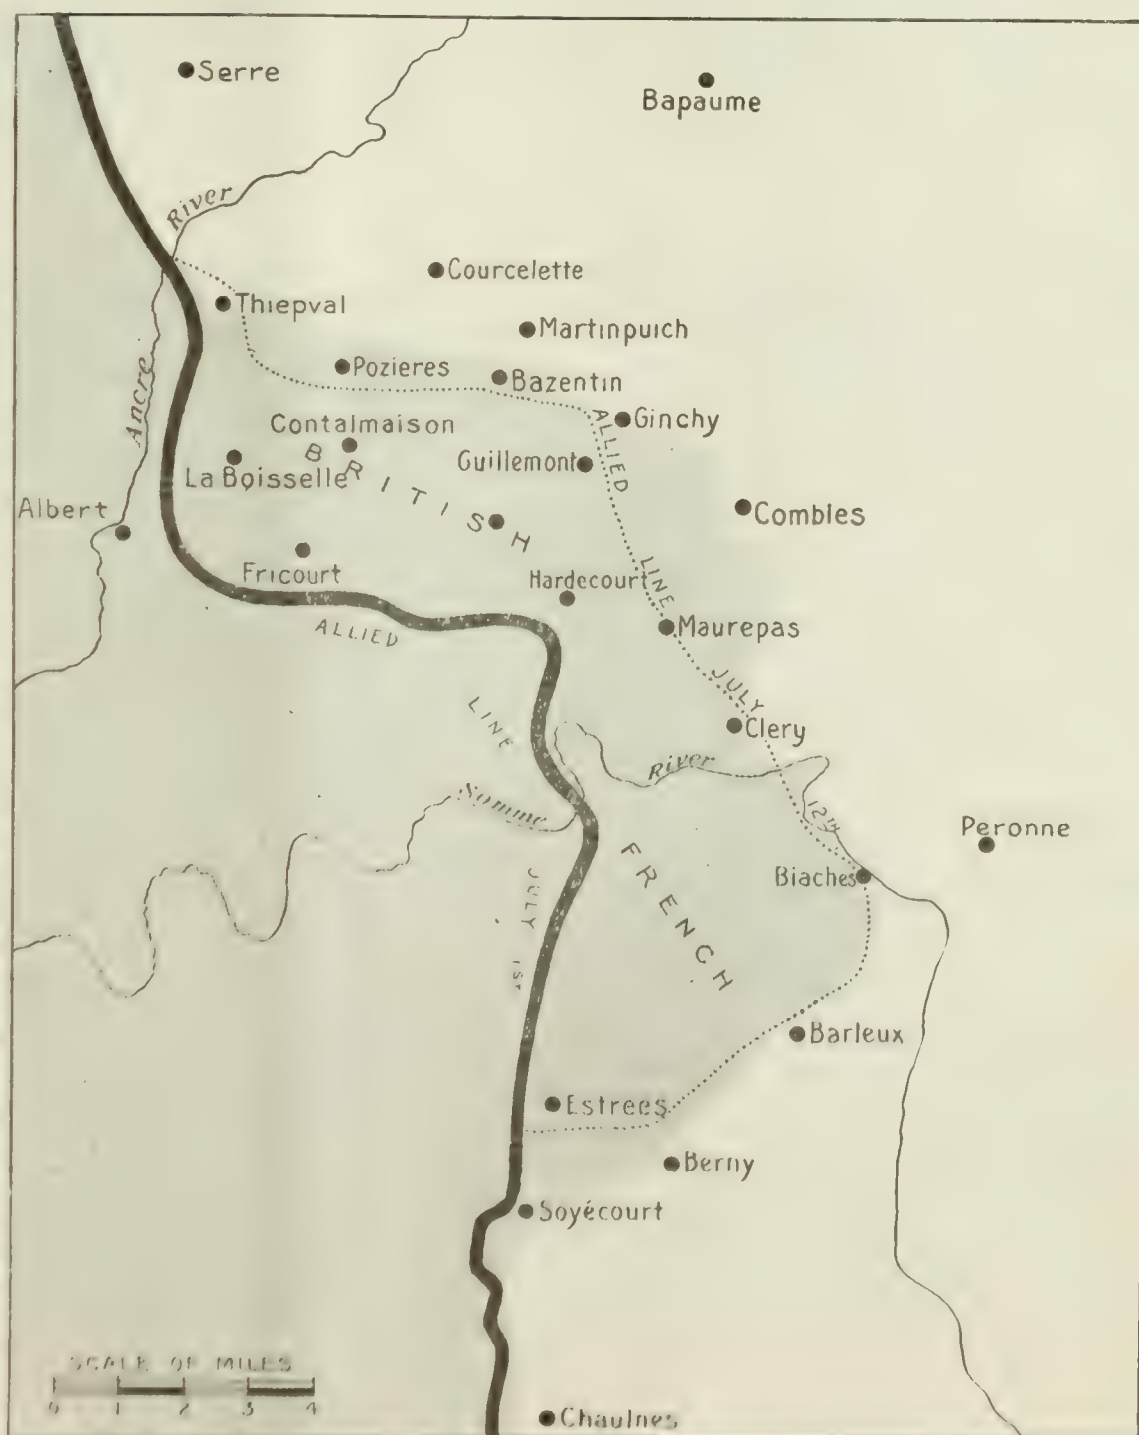

The French have cleared the Germans completely out of the bend northwest of Péronne, but their chief efforts have been engaged in extending their lines to the south. Here they have taken Soyécourt and advanced almost to Berny and Barleux. They are also directing an attack toward the important railroad town of Chaulnes, altho the Germans still hold to a salient south of Soyécourt. The French pushed on so rapidly that they reached the heavy guns in the rear of the front before these could be withdrawn. Within two days the French took 6550 prisoners and 36 guns, including 28 heavy howitzers, as well as a captive balloon, and a large number of machine guns and shells. The British took more than a thousand prisoners.

According to their official report the British have captured 256 officers and 11,263 men during July and August as well as 26 guns and 160 machine

guns. The Germans estimate that the French have twenty-three divisions and the British thirty-seven divisions engaged in the battle of the Somme. This, then, is not so many as the French used in the defense of Verdun, if the Germans are right in believing that there were sixty-six French divisions engaged there between February 21 and July 20. The strength of a division is between 15,000 and 20,000 men. So it is evident that if the British have raised an army of over four millions they are not yet employing their full strength in the present offensive. This has given rise to the rumor that the Somme drive was intended more as a feint than an offensive and that the real attack will be delivered on quite another sector of the German line. The British losses are officially reported as 7084 officers and 52,591 men for the month of July and 4711 officers and 123,234 men for August. Since there has been little fighting elsewhere this means that the British have lost over 180,000 men so far in the battle of the Somme. The French and German losses, tho not reported, are probably much less.

### Zeppelin Brought Down in England

On the night of September 2 a squadron of thirteen Zeppelins made an attack on England and one of the three that reached the outskirts of London was burned up. The aviator who accomplished this feat was Lieutenant Leete Robinson, who is only twenty-one years old and has been in the Royal Flying Corps about a year. He sighted the giant airship north of London at two o'clock in the morning at an altitude of ten thousand feet, and made straight for her in spite of the fire from her guns and from the British guns below. Dodging the searchlights as well as he could he flew around, over and under the Zeppelin until he had set her on fire. In his last attack he sailed so near that his leather jacket was singed. As soon as the forward petrol tank caught fire the flames spread thru the balloons and the Zeppelin fell headlong to the earth. Robinson was so elated that he looped the loop several times out of pure joy and then flew back to camp and went to bed. He has been awarded the Victoria Cross for his feat.

THE BATTLE OF THE SOMME

In the last two months the British and French have gained the ground where the shading extends beyond the line of July 12. The British have now taken Ginchy and have Combles nearly surrounded.

# GETTING TOGETHER AT NEW LONDON

CORRESPONDENCE FROM THE INTERNATIONAL CONFERENCE ON MEXICAN AFFAIRS

BY HAMILTON HOLT

THE American-Mexican Joint Commission which began its deliberations at New London, Connecticut, last Wednesday has before it the most delicate and difficult problem that has confronted the last two administrations, one that has all but plunged Mexico and the United States into war. Every loyal citizen of both republics should realize that the next few weeks are likely to be momentous in the history of North America, for if this commission succeeds a new era of peace and prosperity will dawn in Mexico, whereas if it fails it is difficult to see what remains but intervention.

When I visited New London last week the first thing that impressed itself upon me was the intimacy in which the two delegations were living and the cordial esteem and friendship that seemed already to exist between them. The mistakes that were made at the Niagara Falls Mediation Conference two years ago were evidently not to be repeated this time. Then I found the A B C Mediators, the Mexican delegation and all the "peace correspondents" luxuriating in the magnificent Clifton House on the Canadian side of the Falls, while the American delegation—thanks, it is said, to Mr. Bryan's desire to foster home industries—were living alone in a comfortable but modest hotel on a side street on the American side. Poor Mr. Lehmann, I remember, had to go across the International Bridge every night and wander about the Clifton lobby in order to keep in touch with what was really going on.

Now both delegations are ensconced in one hotel—and a more beautiful, more commodious, and I may add more expensive one it might be difficult to find. The entire fourth floor is given over to their offices and suites. Two armed marines stand guard in the hall in front of the conference room. The six principal delegates have reserved a private dining room for themselves and their families, and thus enjoy every meal together as one happy family.

When the delegates came to New London from New York they did not go by rail or motor, but in the President's private yacht, the "Mayflower," which indicates that Mr. Wilson is as canny as he is hospitable, for who does not recall from his own experience that a sea voyage is the quickest way of breaking the ice among strangers?

The Griswold Hotel is an enormous structure at the mouth of the Thames River on Long Island Sound. It is about two miles below New London, on the other side of the river. The old whaling center of the United States has become of late years "the yachting playground of America," and from the broad piazzas of the hotel a continuous stream of large and small craft of all description can be seen plying up and down the Thames or along the Sound. I noticed that the guests of the hotel comprized the usual complement of brave women and fair men that one finds in such places. A little way up the river I could see an American submarine tied to the Naval Station dock and the rowing course where my Alma Mater, Yale, does not now, I am sorry to say, "lick the Harvards" as she used to do in my time.

The delegates are men of a decidedly different type from those who represented both republics at the Niagara Falls Conference. Then the Mexicans were Huerta appointees and were naturally of the Cientifico or Catholic and Conservative party. Two of the three were old men. The present Mexican Commissioners are all young men and all staunch Carranzistas. They are liberal and anticlerical. The American delegates are greatly impressed with their frank spirit. They look upon them as enlightened, broad-minded, and above all practical. They say it is going to be a pleasure to work with them, and as all the Mexicans speak perfect English, two of them having been educated in the United States, some of the difficulties that usually confront mixed international commissions have been done away with at the start.

Luis Cabrera, the chairman of the Mexican group, has for years been known as the leader of the Mexican Bar. He has been in the thick of the Carranza rebellion, and admirably combines the ardor of the propagandist with the poise of the statesman.

Alberto Pani is a man of scholarly attainment and is president of the Mexican National Railways—some 10,000 miles of which out of a possible 15,000 miles are now under normal operation.

Ignacio Bonillas is a graduate of the Massachusetts Institute of Technology. He has married an American wife and is a perfect type

of the highly educated, traveled, and polished Mexican. An engineer by profession, he was sub-secretary in the Department of Communications at the time of his present appointment.

The American delegation constitute an exceptionally strong team. At Niagara Falls the United States was represented by the late Justice Lamar, of the U. S. Supreme Court, and Mr. Frederick E. Lehmann, ex-president of the American Bar Association. The Commissioners were eminent from the standpoint of law, but had no experience in the statesmanship of diplomacy and no first hand knowledge of Mexico. The present American Commission has in Judge Gray a man who possesses the technical and legal learning of Judge Lamar and Mr. Lehmann, but in addition has had wide experience in national affairs as United States Senator and in international affairs as a member of many previous international commissions.

Secretary Lane, the chairman of the American Commission, is said to be President Wilson's closest adviser in the cabinet on Mexican problems. Before he became a member of the present Administration, he was for many years the attorney for a company in the Middle West which operated large concessions in Mexico and since he has been in the Cabinet he has visited Mexico as Secretary of the Interior in connection with certain irrigation projects which called him across the border.

John R. Mott is the most significant appointment. This is evidently a recognition on the part of the President that Mexico is not only a military, political, and commercial problem, but fundamentally a problem of humanity and brotherhood. For John R. Mott is a great Christian statesman. Indeed, some people have thought that he needed only a Colonel Harvey to sing his praises for a few years to make him a presidential probability. Dr. Mott's great interest will be in helping Mexico solve the remoter problems of democracy, education and civilization which confront her, and which after all are fundamental to all real progress.

Professor Leo S. Rowe, the Secretary of the American Commission, has perhaps devoted more time and energy to fostering better relations between the United States and Latin

# THE EFFICIENT SALESMAN

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**S**ALESMANSHIP is the science of service; the knack of knowing people's wants; the art of turning money into friendship; the business of making the world better and getting paid for doing it.

The good salesman is the great civilizer—whether we buy neater shoes or sweeter pianos, we are indebted to the salesman for another slice of civilization. No matter what we resolve to do, have or be, there are invaluable aids that we must first buy.

Every successful man is a salesman. The doctor sells prescriptions, the teacher sells instructions, the lawyer sells consultations, the banker sells credits, the farmer sells crops, the preacher sells sermons, the inventor sells ideas. Anybody old enough to be a citizen must be either a salesman or a tramp.

More than half the population of any country is engaged in selling something. There are about 60,000,000 people in the United States who try to exchange a commodity or a service for money or its equivalent—and probably less than 100,000 really know scientific salesmanship; the rest bungle their job. Every college and high school should teach the student how to do his best work, then how to sell it for the best price. Learning void of earning is spurious education, and no institution of learning deserves the name until it shows every graduate how to find a good market for his life product.

We are not interested in money-making, apart from something more valuable. If the main object in salesmanship were money-making, it would not be discussed here. But salesmanship is the master-key to a large success in any trade or profession. And the very people who need most to grasp it are the ones who never consider it—the faithful, conscientious philanthropic workers who give good service and starve on poor pay. The teacher able to fill a better place but not to find it; the doctor skilled and devoted, but modest and uncommercial; the preacher too old to be a pastor, but just old enough to be a counselor and guide; the inventor, philosopher, poet or musician radiant with lustrous ideas, but too rare and fine to seek the suffocating shambles; the tireless, uncomplaining housewife and mother doing the work of three men and deprived of the salary of one—these are a few of the splendid altruists

who for the sake of justice and decency ought to learn how to command better pay! Salvation to the unselfish lies in salesmanship. You can't be fair to the other fellow without being fair to yourself.

In so brief an article we are limited to the sphere of the professional salesman. But most of the principles here suggested apply to your work, whatever it may be; and by adopting these truths wisely, you should increase your income whether salary, fees or profits. To reach your maximum of prosperity and usefulness, you must be an expert salesman, or be allied with an expert salesman.

There are ten basic factors in scientific salesmanship: the man, the motive, the method, the product, the price, the maker, the buyer, the sale, the service, the future. Anybody who sells a commodity or a service should study these ten fundamentals fairly and fully.

## THE MAN

**H**E must have both instinct and training for the work. One of my numerous objections to poets is their lofty assumption that they, forsooth, are "born, not made." Every good workman is both born and made—born to his *kind* of work—then made to his *quality*. The ordinary clerk in a store is neither born nor bred for his job—and the store-keeper wonders why times are so hard. Among the natural qualifications of the good salesman are these: Health, tact, courtesy, reliability, loyalty, enthusiasm, helpfulness, alertness, judgment, foresight, courage, confidence, persistence, accuracy, patience, good humor, sympathy, neatness, economy, regularity, sincerity, game-ness, pleasing voice, conversational power, attractive appearance, friendly but deferential manner—enjoyment of work, tireless industry. Among the vocational acquirements of the good salesman are these: Knowledge of human nature, knowledge of the market, knowledge of the goods, pride in the product, scientific team-work, familiarity with modern merchandising methods, acquaintance with new developments in advertising and selling, care of stock, handling of customers, frequent conferences, tabulation and comparison of reports, improvement the daily watchword, greater profit the final result but better service the first aim of all endeavor. About one man in every hundred

may become a good salesman; if you are an employer of salesmen, how do you eliminate the other ninety-nine? How, moreover, do you find and train the one? Almost any business could increase its profits thirty per cent or more by adopting a scientific system of employing, training and managing the salesforce.

## THE MOTIVE

**W**HY sell anything? To make money? No. You are a failure if you don't make money, but a worse failure if that is all you do. The ultimate reason for every commercial transaction is to give *something worth more than money*, that money cannot buy. Every customer is a good friend or a poor customer. Gain his friendship and his purse will open itself. An authority on selling declares you need not expect to make a sale while you have the money-thought in your mind. You can always sell to the man who knows you will *serve* him, and you should not sell to any other man. Recently the head of a great insurance company died. His daughter, hardly more than a girl, with no business experience, took his place—and the foolish wiseacres foretold quick ruin! The girl not only held the business together, she largely increased the profits in the first year. She gives her principal rule of success: "I always try to benefit the customer, without regard to my fee." Enthusiasm for the quality of your product, the reputation of your company, the satisfaction to the customer from the sale, the service to the customer on the side, and finally a just and generous money award to yourself; here is the true motive in salesmanship.

## THE METHOD

**T**HIS may be by advertisement, by appointment, by special introduction, by letter, by telephone, by telegraph, or by one of several other means of approach. Time and place are as crucial as method—when is your prospective customer in the best humor, when has he the most time and money, where would he be likely to be seen? The varieties of method must be learned both theoretically and practically—every clerk in a business should buy and study one or more books on merchandising, advertising, speaking, business psychology, commercial correspondence; and should take a mail course in modern salesmanship from an expert or institution of recognized authority.

THE PRODUCT

IS it guaranteed? Is it the best of its kind? Has it ever failed to give satisfaction? If so, why? And how are you preventing a recurrence of complaint? When rival products meet it in a fair field, does yours always win out? Would you sell it in preference to any other, even if the other brought a larger commission or salary? Does it meet a universal need? Is it advertised properly, so your work of introducing its character is reduced to the minimum? Do you know every step in its manufacture? Have you studied and disproved the claims of all your competitors? A few score of questions like these, analyzing your product and your relation to it, should augment your influence and extend your sales.

THE PRICE

NEVER be satisfied to charge exactly what your competitor does for the same article or service. Always give (a) better quality, or (b) larger quantity, or (c) lower price, or (d) supplemental value. A standard price on a standard product may always be *apparently* reduced to the customer by offering more for his money thru a supplemental value whose actual cost may be trifling.

Examples of a supplemental value: A national seedman gives to the customer a booklet showing new ways of selecting and cooking vegetables; a great life insurance company gives a perennial subscription to a health magazine; a commercial school gives a text blank enabling the prospective student to judge the worth of any school in that line; a periodical for mothers gives an invitation to consult without charge a corps of experts on all problems relating to motherhood, and the home; a high school gives a series of talks on vocational guidance, wherein the pupils are told by successful men how to reach the top of a trade or profession. A sale or a service is really incomplete without an occasional extra value, that the customer does not pay for, and was not looking for. The good effect is even more of psychology than of economy.

THE MAKER

IN a factory or office building you may frequently observe a sign like this: "No Pedlers, Tramps or Beggars allowed." Most people wear a sign like this in their *mind*, they flash it on the unknown salesman, they put him in their mental catalog with tramps and beggars. One of the quickest ways to rout this hostile

feeling is to represent a firm nationally known, liked and trusted. I would rather sell shoestrings for a man whose name is a household word than sell automobiles for a man whose name is a moral cipher. When the unknown salesman of an unknown house comes to my office, he gets no further than the door; but if he represents a famous concern—no matter what he sells—I feel morally bound, by the moral standing of his company, to give the man at least a hearing. An old salesman may succeed with a young concern, but a young salesman should sell for an old concern. Has the institution whose product you sell the highest reputation of any of the kind in your community? Both your salesheet and your self-respect wait for the answer.

THE BUYER

HE should be studied, like a chess-board or a battlefield. He should be humored, like a child or a crazy person. He should be followed, challenged, outwitted, overcome. Yet, strange to tell and impossible to perform, he should be respected, consulted, obeyed, esteemed and helped with your deepest feeling toward him friendly and your every move honest. The majority of lost

EFFICIENT SALESMAN TEST

FOR DETERMINING THE SKILL AND PROGRESS OF ANY MAN OR WOMAN PROFESSIONALLY ENGAGED IN SELLING GOODS OR SERVICES

DIRECTIONS. Read first Mr. Purinton's article. Then grade yourself honestly—too low rather than too high; if any point is not clear, or you have a special need or problem in your work, send question to Mr. Purinton, care of The Independent Efficiency Service, 119 West Fortieth Street, New York. When answer to test query is Yes, write 5 in space opposite. When answer is No, leave space blank. Find your approximate grade by adding numerals.

- 1. Are you a "born" salesman or saleswoman, by vocational guidance tests? .....
- 2. Did you go into your work because you liked it better than any other? .....
- 3. Would you stay in it if you had an independent fortune left you suddenly? .....
- 4. Are your sales more, and profits greater, each year? .....
- 5. Do you make it a rule to please every customer at any cost? .....
- 6. Have you analyzed, in your case, the ten factors of salesmanship (see article)? .....
- 7. Are you a graduate of a modern school of scientific salesmanship? .....
- 8. Do you read two or more trade journals, for new ideas and methods? .....
- 9. Have you a shelf of books on your specialty, its manufacture, sale and use? .....
- 10. Are you such an expert that your employer or superior often asks your advice? .....
- 11. When you lose a sale, are you just as cordial and friendly to the customer? .....
- 12. Does each customer soon regard you as a personal friend? .....
- 13. Do you consider service a part of every sale? .....
- 14. Are you familiar with at least five ways of selling your product? .....
- 15. Is the house you work for the best in your line? .....
- 16. Do you track customers and associates by character analysis methods? .....
- 17. If you lost your position, could you make your clientele a future asset? .....
- 18. Can you "close" the sale in five out of every six possible cases? .....
- 19. Would your employer give you more money, to keep you from another concern? .....
- 20. Do you hold your selling mission as true as that of the teacher or preacher? .....

Total equals your percentage (approximated) in  
knowledge and use of the science of salesmanship.

sales are a psychological reflex from an offense, usually unconscious, by the seller against the consumer. Not one salesman in fifty knows how to impress the customer favorably, *apart from the sale*. Your dress, your manner, your walk, your facial expression, your tone of voice, your subconscious feeling, your choice of words, your evident mastery of the science of selling, your tact and courtesy joined with truth and sincerity—all these and many more factors, understood and applied, predispose the customer in your favor without regard to what you sell. The dean of traveling men in America is eighty-nine years old—and still on the job; has been a salesman for seventy years and has sold 57,000 windmills in thirty-two years—a world's record. He attributes most of his success to the fact that he never offends a buyer, but always tries to be as thoro a gentleman as if entertaining the buyer in his own home. Is the man you try to sell to always sorry when he can't buy—sorry because he likes and respects you so much? If not, you are a poor salesman; find what's wrong with you.

#### THE SALE

THE preparation, conduct and completion of the sale must be learned from experts, in books or courses on salesmanship. Treatment of the sale needs a volume to itself. The rash clerk who supposes that salesmanship is merely handing out and talking up goods to a customer grievously errs. The progress of the sale depends on (a) character of the goods; (b) knowledge of the goods; (c) analysis and description of the goods; (d) fitness of the salesman to sell the goods; (e) location of the buyer; (f) introduction to the buyer; (g) knowledge of the nature, habits and needs of the buyer; (h) approach to the buyer; (i) presentation to the buyer; (j) anticipation of questions, interruptions or objections; (k) completion of the sale, by cash or signature of the buyer; (l) satisfaction of the buyer, both immediate and ultimate. Besides these major points, there are scores of lesser items and subheadings for the good salesman to reckon with. Suppose, for example, under caption (d) you want to sell something big, where the service and the profit are worth while, and you don't know whether to choose pianos or threshing-machines. If you love music, if you wear fine raiment with delight and distinction, if your best friends are women, if your brain-center of inhabitiveness is large, if your sentiment is stronger than your logic—sell pianos. But if you were brought up on a farm

and know how much a farmer needs good machinery, if you possess mechanical skill, and a liking for the whirr of the wheels, if you are a "man's man," sell threshing-machines. Failure to sell is primarily failure to be interested in what you have to sell. Another cardinal point is knowledge of the buyer, which only a scientific study of character analysis will provide. What motive will prompt him when he buys? What reason, or what emotion, will he follow? I have in mind two rich men; the first likes to be known as a plunger and a "good sport"; the second is proud of his reputation for caution, closeness and conservatism;—appeal to the gambler in the first, but to the miser in the second, and you make a sale; reverse the method and you make two cordial enemies, with every chance of a sale now or hereafter gone to Mexico. The sequence in every sale is uniform, with five steps: *attention, attraction, deliberation, conviction, action*. But the way in which these five steps are taken differs with each buyer; and in lieu of twenty or thirty years of actual knowledge of buyers, the only substitute is a thoro training in the art of salesmanship by a corps of experts in manufacture, psychology, advertising, trade, merchandising, efficiency and finance.

#### THE SERVICE

A FUNDAMENTAL desire to please, accommodate and help is the life of real salesmanship. The other day I went shopping for a suitcase. I knew exactly what I wanted. The clerk in the first store said he didn't have it, grunted, looked sour, left me to depart in a state of much relief at escaping his presence. The clerk in the second store said he had something just as good, tried to sell me a cheap counterfeit, and put a harrowing strain on my nerves, as I wanted violently to seize him and eject him from the store-business. The clerk in the third store said he knew just what I wanted, would soon have a limited bargain sale on the very suitcase I described, and would telephone me as soon as the goods arrived, so I could have first choice! In that one sentence he revealed, or concealed, five kinds of special consideration or service. Furthermore, in the conversation he discovered that I wanted certain facts on a different line of goods altogether; whereupon he took the trouble to get the facts and give them to me. What happened? I was sure I could find my suitcase by walking a few blocks further; but this salesman, having only a promise to sell, got such a grip on me that I went home and waited days and days for that telephone message. And

the suitcase *was* just what I wanted. First law of salesmanship: Offer a service apart from the sale, and if possible before the sale. The man who hires the clerks for a chain of a thousand stores—the largest corporation of its kind in the world, and the mightiest ever known, says this: "Every clerk of ours has got to build up a personal following, to make record sales." And you build up a personal following by studying how to render a personal service to each customer wherever possible.

#### THE FUTURE

OF course you want "repeat" orders—tho I don't like the word, it sounds commercial, flippant and unfriendly, along with the words "prospect" and "selling talk" and "size him up" and "tie him down" and other slang terms of pseudo-salesmanship. Now future business goes back to a system of *right relationship* between the buyer and the seller, the seller and the employer, the employer and the manufacturer, the manufacturer and the dealer in raw materials. Do you know that the cost of your product or service has been cut to the lowest notch, without lowering the quality? Are all the employers contented? Is provision made for the steady advancement of each, and more pay for better work? Will the demand for what you sell be greater, a year from now, then years from now, or can something else take its place? Have you studied out all possible ways of increasing profits, to the manufacturer or your employer, and to yourself? Could you sell to your regular customers anything they needed, simply on the basis of their confidence in you? Are you so well known to leading members of your trade or profession that if you lost your present job, others would be offered you by successful institutions? Have you set a figure on the ultimate value of your time and work, about five times what you now receive, and are you steadily climbing toward it?

What do you sell? How can you make it better, sell it faster, sell it to more people, sell it for a higher price? Next to being a good workman, being a good salesman counts most in every-day life. Whoever you are, whatever you do, however you aspire, you need salesmanship. Your ideas or inventions or poems or sermons or dreams, they must be *sold*, not put away to wither and rot. From dreams to deeds, from deeds to dollars to demonstrations—find this path. The purpose in salesmanship is service, and the power in service is salesmanship. Each completes the other; and whichever knowledge you lack, go forth and get it.

## BOTH SIDES OF THE PRESIDENTIAL CAMPAIGN

Copy  
NOTIFY  
WILSON  
NOMIN-  
TOR  
SPEAK  
PEOPLE

**O**UR President is showing by his deeds, in critical emergencies, whether he is the kind of a leader the American people could

wisely throw over amidst dangerous rapids. Those Republicans who are wisest do not expect to defeat him. The Roosevelt group do not even care to defeat him. They are for 1920. Only the *Old Guard* is sincere behind Mr. Hughes.

Can any impartial voter fail to trust the President who made the record modestly but boldly put forth in the speech of acceptance on September 2? Where in our history is there so complete a fulfillment of what has been promised? Could there be a clearer and bolder indication of the course that he means to follow for four years more? How it stands out against the mixture of cowardice and malice that yelps against him, as he goes calmly forward, the country's burdens on his back. In one way it recalls his campaign of 1912, for then also he told what he would do, leaving the small personal bickering to his opponents. Now again he charts his own path, never mentioning Mr. Hughes or Mr. Roosevelt, so occupied with big acts and true thoughts that he cannot stoop to hostile chatter. The manner in which he met his latest emergency, the threatened tie-up of the railroads, will be discussed in my next article.

### T. R.'S ATTITUDE

It is reported in inner circles that the Colonel thus, in substance, addressed earnest Moosers: "You adore me. I am it. We could not put me over on the Republican party this time, but listen. His honorable whiskers is defeated. Wilson has a cinch. If you go Democratic, you can't help me back to leadership, and hence the Re-

## THE FLAGRANT ISSUES

BY NORMAN HAPGOOD

publican party back to virtue. If you vote for Hughes this time, you can help me control the Republican party after he is defeated, and help me run the universe, for its good, after 1920. Are you with me?" The completely faithful stood for this. Hope springs eternal in the Teddy breast. Also Teddy's dagger knows no brother. It is hard to believe that the Colonel expects Hughes to be helped by such vulgar absurdities as T. R.'s likeness of Pontius Pilate to Wilson.

Also, what do the Jews think of this dragging in of Pontius Pilate? The Colonel has been rather desperate since he lost the job he liked so much and is not playing the game as well as he used to play it. He drags out the Catholic issue in Mexico, although he well knows that Carranza is a Catholic and is merely acting on the principle, which we have supposed the United States stood for, of separation between the functions of the state and those of the Church. T. R. goes against all recognized patriotic principles in making the conduct of foreign affairs as hard for the President as he possibly can, and now he caps the climax with accusing Wilson of treating Belgium as Pilate treated Jesus when he turned him over to the Jews. The thing is beyond argument and deserves merely to be left to the consideration of the voters, Gentiles as well as Jews.

As to the invasion of Belgium, can any child fall for such bait? Not even the French strategists knew Belgium was to be invaded. England didn't know it, and her threats, with

all her measureless power, were not enough to prevent Germany. How T. R. must despise his people, to expect them to forget what he wrote before his partizan plans were so acute. You can find it entire in the *Outlook* for September 22, 1914, or the relevant parts in *Harper's Weekly* for April 22, 1916. Here samples must suffice.

I hope I have rendered it plain that I am not now criticising, that I am not now passing judgment one way or the other upon Germany's action. . . . When a nation feels that the issue of a contest in which, from whatever reason, it finds itself engaged, will be national life or death, it is inevitable that it should act so as to save itself from death. . . . The rights and wrongs of these cases where nations violate the rules of abstract morality in order to meet their own vital needs can be precisely determined only when all the facts are known and when men's blood is cool. . . . It is certainly eminently desirable that we should remain entirely neutral.

Shades of Pontius Pilate! The Colonel goes on:

Very possibly nothing that we could have done would have helped Belgium. We have not the smallest responsibility for what has befallen her.

Now listen:

Every public man, every writer who speaks with wanton offensiveness of a foreign power or of a foreign people, whether he attacks England or France or Germany . . . is doing an injury to the whole body politic.

Can you believe it?

Teddy seems fated to deal with judges. He was lucky enough to have one run against him, so he had a

## BOTH SIDES OF THE PRESIDENTIAL CAMPAIGN

# TESTED BY A CRISIS

BY JACOB GOULD SCHURMAN

IF President Wilson in his speech of acceptance leaves anything of good we have in our national legislation or administration unclaimed for himself and the Democratic party I have not observed it. If in the boundless future he hopes for any good for America outside the Democratic party he does not disclose it. The "new purposes and new ideas" which are needed to meet the new age on which we are entering must, it seems, come exclusively from the party which is dominated by a single section of the country, reinforced by Tammany Hall, and controlled at present by an adroit, if somewhat unsteady, leader whom President Wilson is too modest to indicate. He does, however, declare flatly that "the Republican party is just the party that cannot meet the new conditions of a new age."

### TESTING THE PRESIDENT'S CLAIMS

IS there any way of bringing to the test of actual practise the extravagant claims which President Wilson so complacently makes for himself and his party? There is. Even while he delivered his speech of acceptance the experimental demonstration was taking place. At that hour a crisis had come to try his edge. What he did in that crisis is the true test and measure of all he said in his speech of acceptance. His action is a psychological flash-light revealing to public gaze the soul of the man and the spirit of the party that accepted his leadership. In comparison with that one deed the thousands of words of

the speech are a mere irrelevant background.

President Wilson allowed himself to be held up by the railroad brotherhoods. They coerced him and they compelled him to coerce Congress. At the President's dictation the eight-hour bill was passed in breathless haste and in dense ignorance on the part of the legislators. Congress was intimidated. The most fundamental principles of American government and civilization were abandoned. Justice to all, not favors to some; deliberation before action, investigation before legislation, arbitration, not compulsion: all these time-honored maxims the President has thrown to the winds.

And he has established a most dangerous precedent for the future. If one group of citizens can hold up the President and Congress today, so may another tomorrow. So far as President Wilson could do it he has established the rule that society should submit when any body of men call on society to stand and deliver. As Professor Taussig of Harvard has so well said: "If we submit to the threat of ruin now, we may be certain that the same threat under the same essential conditions will be enforced again and again."

It is not a question of the merits of the bill. Nobody knows what they are. That is precisely why deliberate and impartial investigation was needed in advance of legislation on the subject. All right-minded men sympathize with the eight-hour movement wherever the eight-hour day is

economically feasible. That is not the issue in the case before us. In fact the law provides, not for a maximum eight-hours' workday, but for a minimum eight-hours' payday; it does not reduce the hours of toil, it increases the rate of wages. But all that is at present immaterial. The essential question is: Shall government by intimidation take the place of government by discussion and deliberation? Shall the rule of force supersede investigation and arbitration in industrial disputes?

### NOT FRIGHTENED

THE Democratic party does not like Mr. Hughes's very effective criticism of President Wilson's abandonment of arbitration in the threatened railway strike. Chairman McCormick even attacks him for not "telling what he would have done under similar circumstances."

What Mr. Hughes would have done is a matter of record in the state of New York. As Governor he was subjected to the same test as President Wilson. And it would be impossible to get a truer picture of the inmost mental, moral, and political principles and motives of the two candidates than in their respective reactions and policies in the presence of the grave emergencies which confronted them.

The ordeal of Governor Hughes also came in connection with the railroads. It was the year 1907. In the state of New York there was deep dissatisfaction with existing railway conditions. Over the country as a whole a wave of resentment against the railways was sweeping. The legislature of New York passed a two-cent railroad fare bill. Other states had passed such measures. The two-cent passenger act had come to be regarded

ed as a test of loyalty to the cause of the people, and no governor anywhere, whatever his views, had been strong enough to resist the overwhelming pressure. Under these circumstances Governor Hughes sat down and wrote an able and dispassionate message in which, on grounds of justice, public policy and practical expediency, he vetoed the bill. Here are some of the grounds on which he based his action:

"The bill represents a policy seriously mistaken and pregnant with disaster. It is of the utmost importance that the management of our railroad corporations should be subject to strict supervision by the state, and that regulations compelling the observance of the law and proper and adequate service should be rigidly enforced. It is the duty of these corporations to provide transportation of passengers and goods at reasonable rates and the state should compel the performance of this obligation."

"It is of the greatest importance not only that railroad corporations should be compelled to respect their public obligations, but also that they should be permitted to operate under conditions which will give a fair return for their service. Upon this depends

not simply the security of investors, but the security of their employees and the protection of every form of industry and commerce thru the maintenance and extension of necessary transportation facilities. Nothing could be more opposed to the interests of the community as a whole than to cripple transportation corporations by arbitrary reduction of earnings."

#### THE WRONG WAY TO DO IT

"I DO not mean to be understood as saying that a maximum two-cent passenger rate would be unreasonably low. It might be high enough in many cases. Possibly it would be high enough in all cases. I fully appreciate the fact that those who have promoted this bill believe that such a rate would be fair. But I deem it most important that the policy of dealing with matters of this sort arbitrarily, by legislative rule of general application without reference to the demands of justice in particular cases, should be condemned. Every workingman, every tradesman, and every citizen believing himself to have aught at stake in the prosperity of the country should determinedly oppose it. For it not only threatens the stability of business enterprise

which makes our prosperity possible, but it substitutes unreason for sound judgment, the ill-considered demands of resentment for the spirit of fair play, and makes impossible patient and honorable effort to correct abuses."

Having vetoed the bill, Governor Hughes pointed out there was "a better way" of dealing with the evils it was proposed to remedy. On his recommendation the Public Service Commissions had just been established. What the legislature in the two-cent bill had attempted with haste, without information, and possibly with injustice, the commissions could undertake with deliberation, with full knowledge, and with perfect impartiality. When their inquiry is complete, "if a passenger rate of two cents a mile is just and reasonable, it can be fixed; if it is not just and reasonable, it should not be fixed." True, the work of the commissions would require time and investigation, but democracy, said Governor Hughes, must learn the lessons of patience and deliberate inquiry before action.

That is how a strong, just, wise and statesmanlike Chief Executive meets an emergency.

## THE FLAGRANT ISSUES

(Continued from page 416)

walkaway in the Parker campaign. He selected one for himself in Taft, and told a then adoring country that Taft was hand-picked by him and therefore would make a perfect President.

He is now recommending another judge for the presidency. The omen is a bad one.

#### MEXICO

THE longer the campaign continues, the clearer it becomes that the majority of the American people have no sympathy with the pro-war and pro-Huerta bluster. They care little about academic criticism of this detail or that. They will keep their eyes on the main question: Should we intervene, on one pretext or another, to stamp on the Mexican effort toward self-government? Here are a few facts:

Mexico's merchandise exports in the last fiscal year surpassed all previous records.

The state revenues under Carranza, measured in gold, are in better condition today by about five million dollars than they were in Diaz's palmiest days; and the revenue is increasing more rapidly than ever in the history of Mexico.

The public school system has been greatly extended.

The land-ownership question is to a large extent settled.

Practically every big interest in Mexico (except the railroads, which are controlled in New York) has accepted the Carranza régime.

Today there are not 2,000 men under arms against Carranza.

In the pacified portions of the country there is more satisfaction than there has ever been.

The Mexican policy is inseparable from the Pan-American policy.

On February 1, 1914, in an interview in the St. Louis Post Dispatch, Dr. Jacob Gould Schurman, the distinguished President of Cornell University, said:

He has made it clear that he will not recognize Huerta, partly because of the crimes with which he is charged, but mainly because he has not been fairly elected. . . . The President's policy is a high one. If he achieves his purpose, an epoch will be marked in our relations with Latin-American nations.

Do you, reader of the Independent, care to re-open this question?

The big and specially favored interests have always their spokesmen in the legislatures. Mr. Hughes

has said that he agreed with every word in the Republican platform. Senator Gallinger, dean of the Republicans in the Senate, made some choice remarks a few days before the Senate adjourned. The speech explains that the Dingley tariff was the basis of our prosperity. Lamenting the passing of Joe Cannon it speaks of "this man, who had so earnestly and ably, so long and so successfully defended the best interests of our country." Of his twin benefactor, Senator Aldrich, it says, "His clear view enabled him to penetrate the beyond." A foolish country rejected Cannon and Aldrich, but—listen, ye independents—"You see now," says the aged Senator, "a united Republican party going forth under the banner of protection to win back the country from the political fate that befell it."

Read it all in the Congressional Record for August 25th. You will find that even the Payne-Aldrich act is too moderate. This is the true, underlying issue of the campaign, the one on which the standpatters mean to go to the mat with. Do you want a Gallinger tariff fight to upset the country?

# The New Books

## MR. JUSTICE HUGHES

Judge Ransom has prepared in *Charles E. Hughes* an uncommon "campaign document." From important or indicative cases before the Supreme Court are shown Justice Hughes's views on many topics of national moment. The State Rate cases are considered at length. Anti-trust legislation, immigration, trades unions, regulation of employment are some of the matters before the court during his time of service. Tho of especial interest to lawyers, the layman, by the description of the causes and excerpts from decisions, may gain a clear idea of the questions at issue.

In the instances—not many—in which he was one of the dissenting judges, as in the Frank, and the Food and Drug cases, he shows himself keenly alive to the human side of the problems, and determined to cut thru what seem to him needless technicalities to reach justice.

He expresses the true lawyer's sense of the responsibility of a court when he writes:

I like to think of the courts as in the truest sense the expert agents of democracy, expressing deliberate judgment under conditions essential to stability. . . . Justice in our minor courts—the only courts that millions of our people know—administered without favoritism by men conspicuous for wisdom and probity, is the best assurance of respect for our institutions.

*Charles E. Hughes*, by W. L. Ransom. Dutton, \$1.50.

## FOR FARM AND FARM SCHOOL

The new agricultural movement in the school and on the farm is developing a literature of its own, remarkable in quality and extent. *The Principles of Agronomy* deals with the field of crop production in four sections—the plant, the soil, field crops and field management. *Soils and Plant Life* covers much the same ground in condensed form and lays more stress upon methods of teaching. It is intended for "rural, grade, and high schools." *Land Drainage* shows the remedy for those areas which are now more or less failures for lack of proper care. There is a good chapter on drainage laws. *Fertilizers* is a revised edition of a long popular text discussing the various needs requiring natural, home-made and manufactured means of enrichment. The eighth edition of *Principles of Plant Culture* contains a tribute to the scientific work of the original author in anticipating by seventeen years the rediscovery of Mendel's Law. Especial stress is laid upon adaptation, unfavorable conditions to be overcome and methods of

**"I can't pay that bill today"**

"The last cent of my bank balance has just been wiped out by a RAISED CHECK."

He had promised to pay if the creditor wouldn't sue—had managed to scrape the money together, and put it in the bank; and now this check-raising has put him in a most embarrassing position.

How about the protection of *your* checks? Those checks for small amounts you drew this morning. What do you know of the honesty of every man into whose hands they may go?

Safety lies in writing and protecting every check with the

### WITH THE ENGLISH ARMY

A breathless succession of personal war incidents, ranging from broad farce to grim tragedy, is the less novel element in *From Mons to Ypres*, by Frederic Coleman. What is new in this volume is a portrait of the British cavalry officer. The British cavalry officer is frequently a member of the aristocracy, and must possess a considerable private income to maintain an expensive position. In peace time he is high society's favorite; in war, the possessor of a traditionally calm indifference to his end. He forms almost a separate military caste within the British army. As leader of a brilliant charge or forlorn hope, he is an inspiring figure but, when in supreme command, "some one blundered" is written over conspicuously on his record. This American driver of a staff motor car catches the British cavalry officer's attitude so faithfully that one feels disappointed his photograph does not disclose the cavalry officer's inevitable monocle. His praise for all arms of the British service, however, is impartially distributed.

By way of contrast, we turn to *With My Regiment in Flanders*, by A Platoon Commander. Here is the narrative of an ordinary British infantry officer, describing his part in scenes similar to those presented by Mr. Coleman. Nowhere in these pages does one gather that the business in hand is a grand sporting adventure. His trench is no place for the display of gallant sang-froid. He frankly states the less conspicuous an infantry officer is, the better, and has sense enough to perceive that by throwing away his life he is merely serving the object of the enemy.

Captain Ernest Hamilton has written in *The First Seven Divisions* an admirable British military record of events from the Battle of Mons up to the firm grip on Ypres. He sums up the Battle of Mons as a British re-

## YOU HAVE A RIGHT TO INDEPENDENCE

W. A. SHRYER, Pres., AMERICAN COLLECTION SERVICE, 625 State St., Detroit, Mich.

You have a right to independence, but you must have an honest purpose to earn it. Many have purpose, ambition and energy, but thorough direction and intelligent help must be supplied. My instruction supplies the first, and our Co-operation Bureau fulfills the second. Large numbers have availed themselves of both, succeeding to a remarkable degree. Investigate without prejudice, this opportunity to

### LEARN THE COLLECTION BUSINESS

and escape salary drudgery for life. If you have an idea that the collection business as I teach it is not safe, sure and dignified as a bank, or any other profitable business, you are mistaken and I will prove it, if you earnestly desire to get ahead. No essential branch of business is so healthy, or less crowded. No business may be built so large without investment of capital. I will gladly send you for the asking

#### "POINTERS ON THE COLLECTION BUSINESS"

It may mean comfort for life, if not a great deal more. Write for it now.

## CAT'S PAW CUSHION RUBBER HEELS

Men of affairs were the first to use these rubber heels for they applied the same principles they used in business—the elimination of useless jars—in the search for efficiency. There is not only efficiency, but comfort, safety and economy in Cat's Paw Cushion Rubber Heels—they wear longer than the ordinary kind—have no holes to fill up with mud and dirt—and the Foster Friction Plug grips and holds any kind of surface, preventing slipping. Cat's Paw heels are the most popular and most widely used rubber heels made—ask for them by name. They cost no more than the ordinary kind.

S.C. Black White & Tan  
For Men, Women & Children

**Foster Rubber Co.**  
105 Federal Street - Boston, Mass.

*Original and Patentees of the Foster Friction Plug which prevents slipping.*

treat. He would have been within a just approximate in designating it a retirement in force upon a prepared strategic position. When the great retreat upon the Marne actually began after Le Cateau, Captain Hamilton fairly distributes praise for the splendid morale of the British troops without overlooking blunders committed. He nowhere abuses a courageous enemy, and goes further by acquitting the Germans in two instances of treachery. For students of this part of the Great War, this book is invaluable.

For the first time in 2000 years a Jewish corps of Arabian and other refugees from Turkey was formed as a unit in Egypt. This joined the British and French forces at Gallipoli. In *With the Zionists at Gallipoli*, Lieut.-Col. Patterson narrates their exploits, and gives them full credit for possessing the ancient courage of the race. If, as he also describes, blunder after blunder marked that unlucky campaign, he was a singularly fortunate choice for commander of the Zion Mule Corps. As a boy he had been an appreciative reader of the Old Testament, and conceived admiration for the strategy of General Judas Maccabæus. It was doubtless this sympathy between the British commanding officer and his Jewish soldiers which assisted greatly in producing a record of which any corps might feel proud. Their badge, the Shield of David, shines with a new luster. Colonel Patterson had fought in several campaigns, but this one, as the climax of war horror, moves him to the plan of putting "all foreign ministers, diplomats and newspaper proprietors in the forefront of every battle for which they were in any way responsible."

*From Mons to Ypres*, by Frederic Coleman. Dodd, Mead. \$1.50. *With My Regiment*, by A Platoon Commander. Lippincott. \$1. *The First Seven Divisions*, by Ernest Hamilton. Dutton. \$1.50. *With The Zionists at Gallipoli*, by J. H. Patterson. Doran. \$2.

### CRIME AND ITS TREATMENT

An important addition to the important Modern Criminal Science Series is a translation of *Criminality and Economic Conditions*, by William Adrian Bonger, of Amsterdam. This work is characterized by a formidable thoroughness, a comprehensiveness almost pedantic. But it is of value in that it counteracts the superficial and fragmentary so common in writings on crime. Bonger begins with a critical analysis of the literature dealing with the relation between crime and economic conditions, dividing his authors roughly—and arbitrarily, he admits—into several schools. The authors preceding the modern scientific methods, from Thomas More to Friedrich Engels, and those who attempted to gather important generalizations from statistics of crime are first discussed. The Italian school, "of the individual," and the French school, "of the environment," have their views brought together in a higher synthesis by the bio-sociological school, and the later distinctly socialistic writers.

The second part of the book begins

### Earn \$2,500 to \$10,000 a Year BE A TRAVELING SALESMAN

They are the "BIG GUNS" of Commerce—the Highest Salaried body of men in the world. Everywhere there is an unlimited demand for Trained Salesmen. You can be one. You can learn at home in your spare time and have an opportunity to EARN BIG PAY while you learn. ### HOW TO USE

## The Independent — IN THE — Teaching of English

This brochure prepared by Dr. Frederick Houk Law, Head of the English Department of the Stuyvesant High School, where nearly FIVE THOUSAND boys attend, is of special help to teachers of Oral Composition, Supplementary Reading, Public Speaking, Rhetoric, Journalism, Extempore Speaking and Oral Expression. It is free. Sending for it will not place you under any obligation. Address W. W. Ferrin, The Independent, 119 W. 40th St., New York.

# OFFICE EFFICIENCY

Plan and Purchase Department of The Independent-Harper's Weekly Efficiency Service

THE Independent invites its readers and all members of the National Institute of Efficiency to consult its new Plan and Purchase Department with regard to the selection and purchase of any equipment that may be desirable to attain the highest degree of efficiency in offices or business buildings.

This new department is an expansion of the Efficiency Service and Question Box which The Independent has maintained for more than a year under the management of its Director of Efficiency, Edward Earle Purinton.

This department will be conducted in association with the National Institute of Efficiency, which recently chose The Independent as its official organ. It will be the privilege of this department to enjoy the coöperation and counsel of the Institute's Committee on Office Efficiency, of which the President of the Efficiency Society, Melvil Dewey, is chairman, and of the Institute's Committee on Marketing, of which E. St. Elmo Lewis is chairman.

For a limited time this complete efficiency service will be supplied to any reader of The Independent, or any member of the National Institute of

Efficiency, without any charge whatever.

Upon receipt of each request for information, the individual or business house will be supplied with a requisition chart in which may be indicated the equipment problem of the business in any department.

Upon receipt of each chart, the Plan and Purchase Department, assisted by the National Institute of Efficiency, will suggest the most approved appliances for arriving at a high degree of efficiency in the office, reducing labor costs, increasing output and generally speeding up production.

It is the aim of The Independent in inaugurating this Plan and Purchase Department to make The Independent-Harper's Weekly Efficiency Service still more efficient and helpful in a practical way; to make The Independent a clearing-house for everything that contributes to greater efficiency in business; to make The Independent not only the interpreting-house of modern efficiency ideas but also a free and unprejudiced aid to the purchase of equipment that leads to higher efficiency.

The attached coupon will receive prompt attention. Mail it to-day.

with an analysis of the economic system of the present time, and of the consequences of the economic organization upon the various classes in society. There are chapters on alcoholism and militarism, on political crimes and on crimes arising from pathological conditions within the individual. The author is firmly convinced that economic conditions play the preponderant rôle. The present economic order, he argues, tends to weaken the social feelings. The principal means of production are in the hands of a few, and upon these the vast majority are virtually dependent for the right to live. This relationship results in domination and servility, in indifference to suffering and in envy. The opportunities for education are not equitably distributed and certainly not according to needs.

Another valuable contribution to the study of crime is *A History of Continental Criminal Law*, by Carl Ludwig von Bar, the sixth volume in the Continental Legal History Series. The first part of the book contains a general history of the criminal law, divided into periods and then according to the countries, with references to original sources, and discussions of the factors that led to changes, etc. The second part is devoted to an historical study of the philosophy or theory of criminal law, which is critical throughout. As an appendix, von Bar's own critique of the theory of criminal law is given. He considers the reformation theory of treating criminals quite as untenable as the retribution theory, since both fix the attention upon the criminal instead of upon society, which is the chief issue. His theory of social disapprobation, or reprobation, looks upon punishment not as *penalty* but as a means of disapproval, of ostracism from the society of decent folks. The translation is excellent.

*Criminality and Economic Conditions*, by William Adrian Bonger. Boston, Little, Brown. \$5.50. *A History of Continental Criminal Law*, by Carl Ludwig von Bar. Boston, Little, Brown. \$4.

### TWO ENCYCLOPEDIAS

Dr. James Hastings is truly the greatest maker of dictionaries on religion of this or any other generation. Altho ably assisted by a brilliant corps of helpers in Europe and America, he has given an individual stamp to the great encyclopedic works that have been issued under his direction during the last twenty years. The Great War has doubtless hindered and complicated his tasks, but has not stopped the progress of his extensive undertakings. The new volume of the *Encyclopaedia of Religion and Ethics*, No. VIII, includes most of L and M.

At the same time Dr. Hastings has projected and issued the first volume of a new work entitled, *Dictionary of the Apostolic Church*. This follows the same general plan as his previous volumes on "Christ and the Gospels," and, together with this work, will give a complete encyclopedia of the origin and development of Christianity during the first hundred years or more of its history. It covers the field of both

canonical and uncanonical literature. A goodly number of the contributors are from the German and Dutch universities, and America is represented by such writers as Professors Beckwith, Case and Shailer Mathews.

No religious library can be complete without these able and useful volumes.

*Encyclopaedia of Religion and Ethics*, Vol. VIII. *Dictionary of the Apostolic Church*, Vol. I, ed. by James Hastings. Scribner. \$7. \$6.

#### A STRAIGHTFORWARD POET

While one may not quite say of Carl Sandburg: "Here is another Walt Whitman speaking to us in *Chicago Poems*," there is a certain basis for such a comparison. He gets his poetry from brick-yards, railroads, Kansas wheat fields,—

"When wind and ranks of thunder drive swift processions of rain."

In methods of observation and manner of expression he is intrinsically a poet, tho as to technique and substance he often angers us. Such poems as the two socialist verses, *Choose and Kin*, for instance, achieve more of real impression in their thirteen lines each than could thirteen uninspired tomes; and here is just an impression, sparing of capitals, but apt and charming.

The fog comes  
on little cat feet.  
It sits looking  
over harbor and city  
on silent haunches  
and then moves on.

*Chicago Poems*, by Carl Sandburg. Holt. \$1.25.

#### SAVING STRENGTH

When Professor Hoxie made his investigation of scientific management for the Federal Commission in Industrial Relations (reviewed in *The Independent*, April 24, 1916) he could not find a single shop in which scientific study of fatigue problems was systematically carried on, tho in some of the shops investigated efforts toward fatigue elimination were being made. The work done in one or two of these has been described, not as a scientific study, but as a manual of practical suggestions for the guidance of managers who are not interested in theory, but are interested in results. *Fatigue Study*, by Frank B. and Lillian M. Gilbreth, lays special emphasis on providing suitable chairs for work, as well as for rest; the elimination of mental obstacles to work, such as worries due to known dangers, to economic or health conditions; and the study of suitable alternation of work and rest periods.

*Fatigue Study*, by F. B. and L. M. Gilbreth. Sturgis and Walton. \$1.50.

#### DOCTOR AND PATIENT

Dr. E. L. Coolidge makes many helpful suggestions in *Home Care of Sick Children*. The value of the detailed instruction regarding specific diseases is especially valuable for the care they will induce before the coming of the doctor and their emphasis on the gravity of certain conditions often overlooked. (Appleton, \$1.)

*Food Values, What They Are and How to Calculate Them*, by Margaret McKillop, will answer the questions of those who wish to understand and use the modern theories of balanced diet. The made dishes,

### DO YOURS LOOK LIKE THESE?

Brown-faced, vigorous, healthy youngsters—sickness never troubles them.

Do yours look like these?

Or does constipation, the chief foe to a healthy childhood, handicap them and make them the prey of the many ills that less sturdy little folk are heir to?

NUJOL is particularly valuable for relieving constipation in children, as well as in grown-ups because it doesn't upset the stomach, cause diarrhoea or form a habit. It acts as a simple internal lubricant, encouraging and facilitating the natural activity of the bowels.

Your druggist has NUJOL. Avoid substitutes and imitations. Sold in pint bottles only.

**Write Today**

now while we are making a special reduced price offer.

American Correspondence School of Law  
 2486 Manhattan Bldg. Chicago, Illinois

analyzed, are English, but the results can be easily adapted to similar dishes of this side the water. (Dutton, 60 cents.)

*The Memoirs of a Physician.* A Russian doctor, Vikenty Veressayen, is to the layman a startling and enlightening book, leaving one with understanding and sympathy for the doctor's life, and with the conviction that no one who has not had long practice under experienced men should ever be licensed to private work. (Knopf, \$1.50.)

Luigi Conaro, back in the fifteenth century, found himself an invalid at forty. By strict diet he regained his health, and lived sixty more active years. His quaint and earnest *Discourses on the Sober Life*, telling how he cured himself and won his century, are as wise and practical and worth reading today as they were three hundred years ago. (Crowell, 25 cents.)

Dr. Lawrason Brown, of Saranac Lake, has written a clear and wholly helpful book of *Rules for Recovery from Tuberculosis*, according to the modern theory of the disease and its treatment. The book demands of the patient constant reference to a physician, but explains causes and effects to the layman without being terrifying. (Philadelphia: Lea and Febiger, \$1.25.)

In *Hay Fever, Its Prevention and Cure*, Dr. W. C. Hollopeter describes many methods now being tried here and abroad, and one that he himself in a long and wide experience has found measurably successful. This is a treatment mainly prophylactic, which any one willing to be thoro and persevering could carry out for himself. (Funk and Wagnalls, \$1.25.)

## ON LAND AND SEA

Among addresses mostly on school topics by Thomas H. McBride, of Iowa University, are several on curiosities of plant life, and one very interesting account of the scenery and the growing things of the Alamogordo Desert. (Gordon Press, Cedar Rapids, Iowa, \$1.25.)

While the descriptions in the *American Boy's Book of Bugs, Butterflies and Beetles*, by Daniel C. Beard, now in its second edition, are more scientific than in most juvenile or popular nature books, the illustrations, giving caterpillar, cocoon and perfected insect together, will make verification easy. (Philadelphia: Lippincott, \$2.)

*The Cruise of the Thomas Barrera* is the fruit of a naturalist's journey to Cuba and the Colorado Reefs. John B. Henderson is better known for diplomatic and international law services than for this further specialty, his holiday business of studying marine mollusks. The book has uncommonly attractive illustrations. (Putnam, \$2.50.)

Roy Chapman Andrews, student and collector of cetaceans for the American Museum of Natural History, writes entertainingly of *Whale Hunting with Gun and Camera*. He tells of the present day survival of shore whaling, and of the changes in whale catching that have taken place since the days of the New Bedford fleets. (Appleton, \$2.50.)

Uniform with the excellent fieldbooks of flowers and birds, J. S. Matthews has prepared a *Fieldbook of American Trees and Shrubs*. The arrangement is according to family and very readily comprehended. The illustrations are attractive, clear and most useful. Charts of distribution of species are added and an illustrated guide for the recognition of trees by the bark. (Putnam, \$2.)

The hight of efficiency in nature study has been attained in four leather-bound volumes—*Nature Pocket Books*—of introduction to the birds, the butterflies, the flowers and the trees one most often meets in the fields or woods. Here are the facts and description in compact wording with a picture of each variety printed in nature's full colors. The four volumes together take up about the space of a Brownie camera. (Doubleday, Page, \$4.50 for set.)

## TOWN MEETING IN THE BIGGEST CITY

New York City has revived the old-fashioned New England town-meeting, using the schoolhouses as centers for general discussion and setting up in them neighborhood clearing houses for official plans and popular suggestions.

The plan was first developed by the Borough President of Manhattan, Marcus M. Marks, working thru an advisory committee of two hundred representative men chosen equally from all the sixteen neighborhood communities into which the borough was divided. Each neighborhood contains about 150,000 people, and each has its own more or less distinct community characteristics—Fifth Avenue, Greenwich Village, Harlem and the East Side, for example, differ materially in their viewpoints on various questions.

A commission of twelve representative people from each section was appointed to organize the workers for civic welfare regardless of party lines. Business men, manufacturers, builders, engineers, educators, settlement workers, mechanics and clerks are all included.

The members of the commissions agreed "to study the interests and needs of their respective localities and to advise the Borough President as to improvements that should be undertaken or economies effected." And the president in turn consults the commissions in order to get full and unbiased information as to the wishes of the people. For instance, when it becomes necessary to repave a street the people living on it are asked to cooperate with the city by making any proposed sub-surface connections, such as steam, gas or electricity, before the new pavement is laid. They are also given a chance to tell the city what kind of pavement they think ought to be used.

This chance to actually have "some say" in civic plans was just what the people needed to stimulate their interest in government. Given the opportunity of a "free for all" town meeting, New Yorkers are proving their possession of good old-fashioned neighborhood pride.

Barber (entertaining his customer as usual)—Your hair is getting very gray, sir.

Customer—I'm not surprized. Hurry up. —*New York Times.*

"These shoes are too narrow and too pointed," complained the stout man who was having trouble in being fitted.

"But," explained the salesman blandly, "you know they are wearing narrow, pointed shoes this season."

"That may be," said the stout one with dangerous calm; "but I am wearing my last season's feet." —*Ladies' Home Journal.*

A colored preacher in the South tells of his visit to a certain household in a town in Georgia, where, quite early one morning, he was awakened by the tone of a contralto voice singing, "Abide With Me." As the preacher lay in bed he meditated upon the piety which his hostess must possess which enabled her to proceed about her task early in the morning singing such a noble hymn.

At breakfast he spoke to her about it, and told her how pleased he was.

"Lawdy!" she replied, "that's de hymn I boils eggs by; three verses for soft and five for hard." —*Harper's Magazine.*

## Salt Mackerel CODFISH, FRESH LOBSTER

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS., by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT-LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the 110 Central Wharf coupon for it now.

FRANK E. DAVIS CO. Please send me your latest Fish Price List.

# MOTOR PROGRESS

*Conducted by John Chapman Hilder*

WHAT car shall I buy? This question is, today, one of the most perplexing that the man of average means has to answer. If the millionaire buys a motor and finds he has made a mistake, the discovery is not likely to prostrate him. He can readily buy another. The poor man's choice is limited to two or three makes. But the man of average means, who is able to spend from \$600 to \$1800 for a car, is confronted by about a hundred makes selling between these price limits; and if he were to judge them solely on their makers' claims he would be still further at sea regarding their relative merits. The advice of friends is seldom of much assistance, because it is seldom without bias. So what is a man to do?

A little arithmetic will tell the average man a great deal more about the real worth of motor cars than you would imagine. In order to understand this, consider for a moment the most important phase of motor progress, namely, the general reduction in the prices of American cars which has taken place during the past few years. Manufacturers who, before the war, were selling their automobiles for approximately \$1000, are now selling them nearer the \$600 mark. Makers who sold cars at \$2000 and over are now quoting them at from \$1200 to \$1500, or only little more than that. Many of them are offering at the lower price a machine far superior to their former, more expensive product—superior mechanically and in point of equipment. Other manufacturers, however, while they succeed in meeting the prevailing low prices, and in making a car which is superficially the equal of those just mentioned, are also succeeding in teaching the public several new meanings for the word "trouble." Their cars fail to stand up. What is the reason? How can you tell the difference between two cars that cost the same, before you buy? This is where arithmetic steps in.

Before proceeding to explain this in closer detail, I should like it to be definitely understood that what I am about to say does not apply to cars in the high-price class. There are a few factories in this country wherein is made a limited number of machines each year. These cars are virtually hand made; they are built slowly, finished to order and sold at a figure commensurate with the high cost of producing them. Since their makers desire the admiration of the populace, rather than its patronage, they have not been influenced by the widespread demand for motor cars of small cost. In fact, they have of late shown a tendency to raise their prices, instead of lowering them.

Knowing something of modern manufacturing practise; you might say, off hand, that the production of a good,

moderately priced car is made possible by improved factory methods which enable the maker to turn out cars quicker and therefore more cheaply. In this you would be right, but you would only be telling part of the story.

In order to produce great numbers of cars—a thousand a week, say, or a thousand a day—the manufacturer must have machines, hundreds of them, some costing thousands of dollars apiece. He must have buildings. He must have men. He must be able to buy raw materials, parts and accessories in vast quantities. For all these he needs money. And it must be cash, or he will be forced to buy at a disadvantage.

The manufacturer's money—once he has passed the first stages—comes from sales. It isn't the number of cars he produces that brings him a revenue. It's the number of cars he sells. By making thousands of cars, his overhead cost per car is reduced. By selling thousands of cars, he is able to take a smaller profit per car and still make a great deal of money. Reducing the manufacturing and selling costs and taking smaller profits on individual cars are the only features of modern manufacturing that make good low-priced cars possible.

The man who makes and sells a small number of low-priced cars and claims to give you a car equal to that put out by the quantity producer at the same price is either fooling himself or fooling you. Take an imaginary case:

Brown makes 60,000 cars a year, selling at \$600 apiece. If he contents himself with a net profit per car of \$50, his total net profit will be \$3,000,000.

Green makes 6,000 cars a year, and to compete with Brown he sells them also at \$600 apiece. If he were to take a net profit of \$50 on his car he would make only \$300,000—a negligible sum when you are in the market for raw materials at their present prices. Obviously Green has to make a bigger profit on each car. And since his overhead costs on each car are higher than those on Brown's, the extra profit has to come out of the car itself. Consequently Green uses poor material, cheap accessories and skimps on workmanship.

This is all painfully true. If, in order to avoid raising their prices, many of the biggest and most powerful manufacturers in the industry have found it

necessary to join forces so as to increase their buying power and control accessory markets, what chance has the small manufacturer of competing with them on a price basis?

Before you buy a car find out a few things regarding the company which produces it. Inquire as to the completeness of the plant, the number of employees, the number of cars built per day, the number sold last year, the output planned for next year. Find out the company's financial status. Get the stockholders' annual report if you can, and study the figures.

You can learn more about the probable serviceability of a car thru this investigation, than you can by riding in it. For nowadays all cars run, and there is not much difference between any two of a class during the first few hundred miles.

A FRIEND of mine greeted me with unusual elation the other day. He was excited about his first experience as a motor owner. With much enthusiasm he told how he had received his car on a Saturday morning and had driven it, that afternoon, almost a hundred miles in a little less than three hours. He had averaged upwards of thirty miles an hour, and was intensely proud of the feat.

Imagine his chagrin, therefore, when I said frankly that he was the kind of person who didn't deserve to own a good car. After the first shock of my remark had begun to die away, he asked me what I meant. This is what I told him:

A new car should not be driven fast in the first month of its use. Any one who runs a new car over twenty miles an hour before it has covered at least five hundred miles at that speed or less is laying up future troubles for himself. When a car comes out of the factory it is stiff. All its parts are tightly in place, and theoretically they are all properly adjusted. In practise, however, it has been shown again and again that the various parts of a new car are not in harmonious alignment when the car is delivered. They do not work in perfect unity. A new car may be compared with a baseball player—a pitcher, say—at the beginning of the training season. Early in February the pitcher has just as many muscles as in June, and these muscles are in the same relative positions as they always were. In February the pitcher may have just as much strength as he will have later, yet no manager will allow him to use speed, or curves, until he has worked the stiffness out of his joints, muscles and sinews. To do so would be disastrous.

Think of a new car as a human being. Don't attempt to use its maximum power until you have given its parts a chance to "work in." And when you get a spare moment, read Kipling's story, "The Ship That Found Herself."

*Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.*

## PEBBLES

One advantage a baseball player has over a railroad man is that it takes three strikes to put him out.—*Washington Post*.

"Preparedness" is in the air. Frinstance, the Indianapolis telephone directory carries a line: "In case of fire call fire department."—*Boston Herald*.

"Why didn't you interfere when the cook chased the waiter with a cleaver and the waitress yelled murder?"

"I thought it was an ordinary cabaret feature."—*Kansas City Journal*.

There are so many campaign issues that Mr. Hughes deserves great credit for going unerringly to the heart of things and charging that Mr. Wilson has been giving the Republicans' jobs to the Democrats.—*Grand Rapids Press*.

The rather pathetic thing about it is that the candidate never seems to realize that he could say substantially the same things about his own party that he does about the other and have them just as truthful.—*Columbus, Ohio, State Journal*.

Uncle Tobey was a hospitable soul. He wanted no guest in his house to be stinted. "Have some, have some," he invited cordially at the supper table, sending around the platter for the third time; "we're going to give it to the pigs anyway."—*Ladies' Home Journal*.

A Washington writer says that the White House lawn and grounds are in better kept condition than they have been before in years. It is refreshing to find one thing on which the administration apparently is not open to criticism.—*Minneapolis Tribune*.

In western Georgia a jury recently met to inquire into a case of suicide. After sitting thru the evidence, the twelve men retired, and, after deliberating, returned with the following verdict:

"The jury are all of one mind—temporarily insane."—*Tid-Bits*.

Little Johnny, who had been studying history but a short time, thought he would give his grandfather a try-out on the subject, and asked:

"Say, Gramp, what great war broke out in 1850?"

The old gentleman laid down his paper and looked thoughtfully at the boy for a moment, and then a sudden light dawned upon him.

"Why," he said, "that was the year I married your grandmother."—*Harper's Magazine*.

A new story is being told about a certain London club, famed internationally for both its exclusiveness and its dullness.

In one of the rooms a rule of silence is stringently enforced. The other day occupants of the room were startled to see a member press a bell button with evident annoyance, and when the waiter appeared to hear him exclaim, pointing to a neighbor in a chair:

"Waiter, remove that member."

The man in the chair had been dead three days.—*New York Times*.

Young Mr. Hallowell was not much of a preacher, but much to his own surprise and everybody else's, he was appointed Chaplain on a battleship. He desired to amuse as well as instruct his men, and to that end he arranged a magic lantern lecture on Bible scenes and incidents.

A sailor who possessed a gramophone was secured to discourse appropriate music between the slides. The first picture shown was Adam and Eve in the Garden of Eden. The sailor nudged his brains and ran thru his repertoire, but he could think of no piece exactly appropriate.

"Play up, play up," whispered the Chaplain.

Suddenly an inspiration struck the sailor, and to the consternation of the Chaplain and the delight of the audience the gramophone squawked out:

"There is only one girl in this world for me."—*New York Times*.

# THE MARKET PLACE

## A REVIEW OF FINANCE AND TRADE

### THE PROSPEROUS THIRD QUARTER OF 1916

**T**HUS far in the third quarter of the year there has been no change for the worse in the conditions, industrial, commercial and financial, which exerted a very favorable influence during the year's first half, if the disappointing crop reports be excepted. Our exports have been increased. For the fiscal year that ended with June our entire foreign trade exceeded \$6,500,000,000, and the balance in our favor, \$2,135,000,000 (the excess of exports over imports) may be compared with a balance of only \$1,094,000,000 in the fiscal year immediately preceding. The year's net gain of gold was \$404,000,000, and this includes only a part of the notable shipments from Canada for Great Britain, which began in the first week of May. Railroad earnings, both gross and net, continue to be large, but the prices of railroad securities have not advanced. They have been restrained by the wages controversy and by sales of shares heretofore owned abroad. The building industry in 160 cities, for seven months, shows a gain of more than 30 per cent.

The monthly output of pig iron is still at the rate of nearly 40,000,000 tons a year. Steel mills are working to the limit of their capacity, and the leading company shows earnings without precedent. The Allies are still buying war supplies, altho there has been some change in the character of their purchases. They are taking very large shells, with raw material to be used in

their own factories for small projectiles. New loans to Great Britain and France have increased to \$1,600,000,000, the sum which foreign nations have borrowed here since the beginning of the war. But unfavorable weather has so reduced our crops that the yield of wheat is only about 600,000,000 bushels, against last year's 1,012,000,000, and we are to have less than 12,000,000 bales of cotton. On account of these shortages, the price of wheat at Chicago has risen to a little more than \$1.50 a bushel, and sales of cotton were made last week in New York at 16 cents a pound.

Owing mainly to the great de-

#### FOREIGN TRADE

Exports in February for the first time exceeded \$100,000,000. In May they rose to \$173,000,000. Imports have recently declined. The fiscal year's trade shows the extraordinary total of \$6,530,000,000, with a balance of \$2,135,000,000 in our favor. At the beginning of the war, the balance was against us.

	Exports	Imports	Excess of Exports
January .....	\$330,636,410	\$184,350,942	\$145,683,468
February .....	401,783,974	193,933,117	207,848,857
March .....	410,742,634	213,589,785	197,153,249
April .....	399,861,157	218,236,397	181,624,760
May .....	473,498,526	229,188,957	244,309,509
June .....	464,824,057	245,896,770	218,927,287
July .....	445,561,910	182,722,938	262,838,872
Fiscal year ending with June.	\$4,333,658,865	\$2,197,883,510	\$2,135,775,355

#### COURSE OF RAILROAD STOCKS

In the first part of the present year the price gains of the latter part of 1915, due to a large increase of earnings beginning in September, were not retained. Many of the first quarter's losses were reduced in the second, but afterward there was a decline, mainly on account of the wages controversy with employees. Continuous selling of American securities by the British Government tended to prevent any advance.

mand for steel to be used in making munitions, the monthly output of pig iron continues to indicate a total of nearly 40,000,000 tons for the year. Italy recently bought 40,000 tons. The steel mills have found it difficult to fill their orders. Prices are still rising. The most notable recent purchases by the Allies relate to rolls or bars which will serve as raw material in foreign munition factories. Orders for 750,000 tons of this shell steel have been placed, but 250,000 go to our own factories, which are making shells of the large sizes. Russia has ordered 350,000 tons of rails, 165,000 tons of barbed wire, nearly 1000 locomotives, 50,000 car wheels and 28,000 axles; France 100,000 tons of rails, and Japan 10,000 tons of ship plates.

The Steel Corporation's net earnings, which rose from only \$12,500,000 in the first quarter of 1915 to \$81,000,000 in the first quarter of the present year, were \$81,000,000 in the second. These figures showed a surplus which would permit a dividend of nearly 12 per cent on the common stock for the quarter. An extra dividend of 1 per cent was declared and shares have since been sold above par.

#### OFFICERS

Joseph Huber, President; John W. Weber,  
Vice-President; William S. Irish, Vice-President and  
Cashier; Alfred P. Yerby, Assistant Cashier.

While the exports of May, \$473,500,000, have not been equaled in the following months, the remarkable outward movement has not been checked, and July's excess of exports over imports was the largest known. The imports, which declined sharply in July, have included great quantities of raw material for use in the manufacture of goods to be exported, rubber being a notable example of the products thus obtained. The official figures for the fiscal year (shown in the tables) are of an extraordinary character, especially those giving the value of exports and the balance of more than two billions in favor of the United States.

For a time there was a prevailing belief that very few additional orders for munitions would be given by the Allies. Shares of war order companies were affected in the stock market by this belief that their profits must soon be cut down. But there came a "second wave" of orders, and public opinion was changed. While the foreign output of cartridges and small shells appears to be sufficient, the Allies are coming to us for the large shells (from 8 to 12 inches) and for steel used in the manufacture of their domestic supply.

#### LOANS

A loan of \$100,000,000 to France was made in July, and this has been followed by a loan of \$250,000,000 to Great Britain. For the French loan a novel method was used. A new corporation, the American Foreign Securities Company, was formed here. Taking from France a sufficient quantity of foreign bonds it loaned the required sum and sold in this country its own 5 per cent three-year bonds or notes to cover the amount.

In the case of the British loan, which was arranged by a powerful syndicate, 5 per cent two-year notes were offered to the public at 99, and these were secured by \$300,000,000 worth of securities deposited in New York by the British Government, with an understanding that a sure margin of 20 per cent above the loan should be maintained. As the agreement provided that \$100,000,000 of the securities should be American, this caused

#### OUTPUT OF PIG IRON, TONS

Owing to the great demand for steel, to be used in the manufacture of munitions here and in Europe, the monthly output of pig iron, which in October last for the first time exceeded 3,000,000 tons, has been very large, and the total for the year will be nearly 40,000,000 tons.

Cotton, bales ..	11,800,000	11,191,820

some relief in our stock market, where there was a belief that it would check the continuous sale of such securities by Great Britain, which has tended to depress prices. France has obtained a new commercial credit of \$25,000,000 by an arrangement between banks of Paris and those of New York. Our loans to foreign nations since the beginning of the war amount now to \$1,600,000,000. This total includes the following: Great Britain and France, \$1,020,000,000; Canadian Government, provinces and cities, \$235,000,000; Russia, \$117,000,000; Italy, \$41,000,000; South America, \$105,000,000.

THE CROPS

Crop estimates have been reduced by one official report after another. In this way the yield of wheat has been cut down from 759,000,000 bushels to 715,000,000, and then to 654,000,000. Rust has quite seriously affected spring wheat both in this country and in Canada. Since the estimate of 654,000,000 was made known, the reports of experts have indicated that the crop will not exceed 600,000,000 bushels, against last year's 1,012,000,000. As we need 620,000,000 for ourselves, and have carried over 160,000,000, probably the quantity that can be exported will not be more than 90,000,000. But Europe bought from us 250,000,000 last year, and 338,000,000 the year before. There is a shortage there this year, and the grain is of poor quality. The price at Chicago has risen to \$1.52 per bushel from \$1.03 at the beginning of July. There was a sharp fall of 11 cents on August 28, because Rumania had gone into the war. Many thought this action might lead soon to a release of Russia's large accumulated surplus, which she has not been able to export. But the price loss has since been recovered.

Successive official cotton estimates, falling from 14,266,000 bales to 12,916,000 and then to 11,800,000, in a report showing very low condition, have caused the price at New York to advance from 13 to 16 cents a pound.

RAILROAD STOCKS

Railroad shares in the stock market have lost in the third quarter the small gains shown in the second, and the net change since the beginning of the year has been a decline ranging from 3 to 9 points. Earnings have continued to be large, but such an advance as they might warrant has been prevented by the wages dispute, disappointing crop reports and continuous selling by the British Government. When the strike was averted a more hopeful feeling prevailed, but it was tempered by a conviction that the terms of temporary settlement must reduce net earnings.

**No Time Like the Present**

TO make permanent provision for dependents,  
securing to them a monthly income for life.

In order to acquire the protection which life insurance affords, it must be taken when you can secure it. When you become uninsurable you will feel the need of it—but it will be too late.

## AT NEW LONDON

(Continued from page 408.)

America than any living American. He has been a member of many Pan-American Commissions and has traveled extensively in Mexico and South America.

When I attended the Second Hague Conference in 1907 and the Niagara Falls Conference in 1914, I noticed that they divided themselves into four main periods:

1. Organization.
2. Introduction of topics and propositions for discussion.
3. Discussion and acceptance or rejection of the propositions.
4. Welding the accepted propositions with final form and adopting them.

The New London Conference is between the first and second stages. The Commission is already organized. Señor Cabrera and Secretary Lane preside alternately. They are now engaged in studying the voluminous documents forwarded by the two state departments. By the time these lines are read, no doubt both sides will be making concrete proposals which will not only have to be considered carefully by the other side but also in most instances referred to Washington and Mexico City for ultimate advice and approval. In the main it may be said that Carranza's chief interest is in these three things: First, The withdrawal of the American troops from Mexican territory; second, the negotiation of a protocol covering future border operations; third, an investigation of the interests supposed to be behind the border raids.

The United States wants the work of the Commission to be much broader in scope. Both Secretary Lansing and Secretary Lane have stressed the prime necessity of the Commission's taking measures not only to make American life and property but all foreign life and property hereafter safe in Mexico. This implies in turn the question of how to make Carranza or the de facto government more stable. For if he cannot be helped eventually to restore order and maintain the peace, Mexico must ever live in the shadow of armed intervention. As one of the Commissioners said to me, "The path ahead is staked out with barbed wire entanglements."

As far as I am able to learn, there are only three things outside the inherent difficulty of the problem that may possibly interfere with the success of the Conference. These are: First, the great moneyed interests who want intervention with eventual American annexation. Second, the Roman Catholic Church, which would like above all else to see Carranza defeated. Third, the presidential election, which may drag the Conference into party politics.

But if the American and Mexican people will give the Commission time and not embarrass it as it proceeds, those on the spot are confident that it will more than likely accomplish all the results for which it was created.

## ATLANTIC MUTUAL INSURANCE COMPANY

New York, January 26, 1916.

The Trustees, in conformity with the Charter of the Company, submit the following statement of its affairs on the 31st of December, 1915.

The Company's business has been confined to marine and inland transportation insurance.

# THE INSURANCE WORLD

CONDUCTED BY W. E. UNDERWOOD

## UNEMPLOYED ADVANTAGES OF LIFE INSURANCE

**A**S the great majority of adult men and women either meet an untimely death or survive to an unprovided old age, it is plain that the use of any scheme which serves to ameliorate the rigors of both is an indispensable element of the duty they owe society. Life insurance is the only system which in any measure renders this service.

It is here described as one of amelioration rather than of restoration, because there are few instances in which the losers can be fully indemnified. This is particularly true of the pecuniary losses due to the death of a productive human being. Generally, the value of a man's life to his dependents and society at large greatly exceeds the amount that he is financially able to pay premiums on. The number of persons who can undertake and carry this enterprise to completion is very small. The misfortune is emphasized by the fact that the loss is constantly impending and eventually inevitable. Death cannot be evaded.

A man may insure his burnable property against fire; himself against sickness and accidents; his movable valuables against burglary and theft; his assets against claims for damages inflicted on others; and never have occasion to call on any of these insurers for a cent. He may never have a fire, never meet with personal injury, never be sick, nor have his house robbed, nor become liable in damages to others. But he will surely die. And if he does not die in his productive period, he will most probably face the hardships incident to old age.

Observation teaches us that a comparatively insignificant fraction of the whole adult population, either thru abundant or good fortune, or the exercise of uncommon wisdom, succeed in maintaining themselves to the end above the need of the defense afforded by life insurance. They are so few as to become wholly negligible in the general account. There are thousands of persons at this moment above the necessity of this provision who are warranted in reason in believing that they and their dependents are permanently secure against eventual adversity; and yet experience shows that many of them, perhaps as many as eight-tenths, will be in a defenseless position in a score or so of years. It follows, then, that those whose means thruout their lives will be circumscribed and who know it need life insurance because, estimating in the terms of death, they and theirs are poor; while a very large proportion of those who are now abundantly supplied with means will become quite as poor before they die or reach

old age. We may justly conclude after considering all these facts that those of limited means—and they comprize perhaps ninety per cent of the adult population—are in sore need of life insurance, and that the other ten per cent will need it just as badly before they close their accounts.

Now, there is one feature peculiar to and inseparable from life insurance: it must be secured on its own terms at the time when it is least needed if its maximum benefits are to be finally reaped.

There is no price at which it can be bought by the physically impaired. Men who have neglected it in their vigor, strive for it persistently when their fleshly equipment shows signs of deterioration. Youth is the period of health, strength and confidence; the vista of the years stretch far. Youth feels no need for insurance. The price is low—the lowest—and it is an unchanging price, no matter how long life may last. I said it was unchanging, which is not strictly accurate, for the cost will decrease each year until it finally ceases. So much of it as we do not accept, advances in cost each year until we find ourselves at 35 paying 44 per cent more than it would have cost at 21; about 150 per cent more at 50; and about 300 per cent more at 60. Stated in terms of insurance, this means that a man aged 21 can buy \$1440 at the price \$1000 costs a man of 35; he can get \$2550 at what \$1000 costs a man of 50; and \$4000 at what a man of 60 must pay for \$1000.

It follows, therefore, that youth, capable physically, virtually unencumbered, resourceful and with all the productive powers in progressive development, is the favored buyer; and it is presumably due to youth's conscious potentialities that it slights the opportunities offered. As a man's years increase,

these advantages imperceptibly, but surely, lessen.

In one respect society is guilty of an error of omission in its failure to utilize life insurance as a part of the equipment of children; and in saying this I do not mean the funeral benefits provided by industrial life insurance which, altho very valuable as such, should be but the primary grade of work in training children into an appreciation of the larger instrumentality in the battle for existence. A hasty mental calculation made in round numbers prompts me to say that the total amount of life insurance outstanding today on the American people shows at about \$33,600,000,000. Of this, about \$22,000,000,000 is carried in old line legal reserve companies, and about \$11,000,000,000 is in fraternal societies, assessment companies and associations. Of the amount in old line companies something like \$5,000,000,000 is industrial. So that we have in force about \$28,000,000,000 of what we may be permitted to call regular life insurance. Assuming the continental population at a round 100,000,000, the value of the life insurance in force is about \$280 per capita. These figures are approximately correct.

Using this average, we find that a family of three children and their widowed mother would receive on the death of the husband and father \$1120 from the life insurance fund. While this is totally insufficient to meet the growing needs of the beneficiaries, it is a substantial temporary relief. But there are tens of thousands of families which receive nothing, as we must know.

We are reputed to be, in the matter of protective provision against the effect of death, the most heavily insured people in the world. Without stopping to confirm this by statistical authority, I am inclined to accept it as a fact on the strength of the extraordinary efforts made by our life companies to secure new business. In no other country are the agency forces so highly and so efficiently organized, nor are the people of any other country so closely canvassed and so persistently preached to. As we see in the gigantic figures representing the amount of outstanding insurance—a sum equal to about one-fifth of the national wealth—the harvest has been plenteous. All this has been achieved within the lifetime of The Independent, or virtually so, the total insurance in force in 1848 not exceeding about \$10,000,000.

In spite of our tremendous superiority in the matter of life insurance carried, it is plain from previously stated facts that we are grievously under-insured, our means of doing

*This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.*

better considered. I do not assert that many of us are capable of bearing the expense incident to the maintenance of full insurance on our lives; in fact, perhaps not more than 10 per cent are so qualified. None, however—omitting the extreme wealthy and a comparatively few people whose income is middle class—are carrying as much as one half the amount they can comfortably pay for. Instead of an average of \$280 per person, I believe it should be an average of \$1000, or about \$4000 per family.

It may be inquired what is meant by the term full insurance in connection with life insurance. I am using it in this sense: A man is at present in receipt of an income of \$2000 a year; his personal expenses are, say, \$200; he uses the remainder on his home and family, including necessities and luxuries, things of use and things useless. That family is living on what we will call an \$1800 plane. If its head dies leaving an amount of insurance less than a sum which, invested at 5 per cent interest, will produce \$1800 a year, he is under-insured. That sum would be \$36,000. But it is obviously impossible on an income of \$2000 a year to carry that amount, which, on the Ordinary Life plan, would cost at age 35 about \$900. That is one extreme of the matter; the other lies in the actual fact that the man is probably carrying very much less than he can comfortably pay for. My personal experience as a solicitor tempts me to assert that very few men receiving a salary of \$2000 a year maintain as much as \$5000 insurance on their lives; my general experience as a man of family warrants me in holding that he not only can, but should, devote at least 10 per cent of his income to that purpose. At age 35 an Ordinary Life policy of \$8000 can be bought for \$200 a year, to say nothing of the dividends.

If, as I believe, the great majority of the insurable population do not carry as much life insurance as they can, the fault lies in the failure of the generation preceding them to educate them into a proper appreciation of the aid it would be to them in the battle of life. In a way, this is a sociological question. The more life insurance money that can be distributed among the people, the closer we approach the solution of the problem involving the equalization of wealth. We have it in our power to improve in this respect on the work of our predecessors by encouraging our sons and daughters to make the life insurance policy one of the forms of savings. Fathers, especially, should start their sixteen-year old boys off with a policy of \$1000, and urge them to add to it as early and as often as their means will permit. At the same time, the fathers would do well to go over their accounts and see if it is not possible to increase their own estates in the same way. On this fact they may bet without risk of losing; they cannot leave too much of it at death, nor have too much for use in old age.

## A New Life Insurance Policy

affording unexcelled insurance service; a combination of low cost, high values, and a new and original total disability feature, providing in the event of total and permanent disablement from any cause:

1. Waiver of future premiums.
2. A monthly income to policyholders throughout life.
3. Payment to beneficiary of full sum at death of insured.

## Get the Saving Habit

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an Annuity or an Old Age Income Policy as issued by the Home Life Insurance Company of New York. The Annuity will yield a much larger income than can be obtained from any other absolutely secured investment. The Old Age Income commences at age 60, but in case of prior death the monthly income immediately accrues to the beneficiary. For a sample policy write to

## FOUR SCORE YEARS AND TEN

THE PENNSYLVANIA FIRE INSURANCE COMPANY was organized January 20, 1820, and from that day to this has been continuously in business at the same location facing Independence Square in Philadelphia.

Permanence and stability are qualities highly valued in any business, but preeminently so in an Insurance Company whose whole purpose and function is to make sure, to afford relief and repair losses after ordinary safeguards have failed.

Nothing demonstrates those qualities quite so well as the actual record of a long term of years. Such a record, 40 years, with ample assets and modern service is the basis of confidence afforded its Agents and the public by

**THE PENNSYLVANIA FIRE INSURANCE COMPANY**  
PHILADELPHIA, PA.

## News of Efficiency

### MOVIES AND THE HOME

Even politicians have begun to realize the potency of the "movies" in the realm of ideas. In fact, few people with a case to state can ignore the educational value of the cinematograph. Journalists, as well as bricklayers—to mention but two of many callings—are being taught to do better work with the aid of the cinema, but until recently such assistance has been more or less specialized and adapted to the needs of varying occupations. Mr. Frank Gilbreth, of Providence, has provided some of the most conspicuous examples of the vocational use of the movies, along the line of motion-study, and a good many technical processes stand indebted for recent improvement to work of the kind that Mr. Gilbreth has been doing. Very soon will come the chance, however, of the housewife, who may not consider hers a technical vocation, but who has shown a desire to be more efficient which the movies may do much to meet. Mrs. Christine Frederick, of the Applecroft Experiment Station, Greenlawn, Long Island, an authority on domestic efficiency, and one who has some remarkable practical results to her credit, has produced a household "movie" that represents some years of patient study of the every day problems of the American home. It is planned to rent the film at low cost to women's clubs, colleges, domestic science schools and similar organizations, and the progress of the innovation will be watched with great interest.

### UNIVERSITY EFFICIENCY

Registration for the winter session of Columbia University begins September 27th, and there is likely to be good response to the remarkable provision that has been made, thru the School of Business, for linking up scholastic achievement with the practical requirements of modern business. There are taught, as a kind of superstructure on the foundation of general economics, business organization and administration, practical advertising (wherein psychology now plays such an important part), accounting, corporation law and finance, marketing, agricultural economics, railway transportation, banking, insurance, and even salesmanship, among a good many other things having immediate relation to modern life. The training is designed to lead to the degrees of both Bachelor and Master of Science, and as it proceeds over a course of either four or five years' duration, advantage will be taken of the location of the school to bring students into close contact with actual business practice in the large enterprises of the city of New York.

## Investor's Service

¶ The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds.

¶ We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

¶ Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor.

¶ All information given will be held in strict confidence. Read the "Market Place Talks" by the Investment Editor in the first issue of The Independent each month.

## THE NEW PLAYS

A rare combination of good acting, good plot and good fun is *Mr. Lazarus*, the comedy in which Henry Dixey returns to Broadway. (Shubert.)

*Pierrot the Prodigal*. Pantomime cleverly musicked and charmingly staged, acted with a surprizing degree of sincerity and effectiveness. (Booth.)

The scenery, designed by Urban, is the best thing about *Flora Bella*—a musical comedy with passable music and not more than three funny lines. Lina Abarbanell dances well. (Casino.)

*A Pair of Queens*. It is rarely that one sees nowadays a farce so free from vulgarity and so well played all around. Maude Eburne as the maid is a whole show in herself. (Longacre.)

"The Home of the Melodrama" opens with one of the worst, *The Hour of Temptation*, introduced in a soliloquy by the devil and ended by the heroine's last gasp of the Lord's Prayer. (Daly's.)

There's no use talking, Anna Pavlowa has got to learn to skate. This year as last the ice ballet is the chief attraction of *The Big Show*, and even Pavlowa looks awkward by comparison. (Hippodrome.)

George Arliss is a consummate character actor. In *Paganini* he presents a masterful portrayal of the eccentricities of genius. Unfortunately the play is flimsy makeshift. Arliss deserves a better fate. (Criterion.)

*The Man Who Came Back*. An adaptation by Jules Eckert Goodman of John Flemings Wilson's story depicting the return and regeneration of a modern Broadway Prodigal Son. Theatric, disagreeable and strong. (Playhouse.)

Take voodoo, bananas, hurricane, "deserving Democrats," machetes, petroleum, sun-worship (under ground), American flag (pocketed), tom-tom, mother-in-law mix, throw in chunks of local color. Result *The Flame*, political melodrama. (Lyric.)

Several of last season's successes continue. In *Sybil* (Empire) Julia and Donald dance better than ever, and Joseph has numerous new jokes; *The Boomerang* (Belasco) has come back with increased popularity; Dittrichstein is still playing *The Great Lover* (C. and H.); and *Fair and Warmer* (Harris), like any other weather forecast, may be a laughing matter for some time to come.

## IN THE PUBLIC INTEREST

An invitation to members of the New York Fire Department to coöperate personally in its improvement has not only shown the live interest which the men take in their work, but has also produced a number of valuable suggestions making for greater efficiency in both the prevention and extinguishing of fires. Among the ideas brought forward was that of motion pictures—prompted by the frequently demonstrated ignorance of thousands of people on this point showing how to turn in an alarm. In the same connection a plan was outlined by another fireman for having the cards giving the location and method of using alarm boxes printed in various languages. A medical kit for drivers and the provision of special instruction as to the treatment of horses injured in service was another suggested direction of improvement; a fourth was a map system at engine houses by which the quickest route to any point in the district could be readily ascertained. Two of the men tendered devices for theater seats that would facilitate exit in case of fire,

while C. J. Damarest is specially mentioned for improvements in a pumping station at Blackwell's Island which effect an increase from 500 gallons of water to 3000 a minute. The Administration Medal, given yearly, was won by Battalion Chief G. J. Kuss, whose idea is to have all the firemen in the city attend the lectures previously given only to officers at the Fire College.

## REMARKABLE REMARKS

SENATOR LODGE—Villa is still alive.

GERTRUDE ATHERTON—I hate the Germans.

ROBERT BACON—I am an avowed unneutral.

CHARLES E. HUGHES—I have no panacea.

GENERAL JOFFRE—The debate is coming for the enemy.

PRINCESS TROUBETZKOY—Jealousy is an insult to a woman.

PRINCE LEOPOLD—The Rumanians will get their whacks.

E. W. HELMS—If you've nothing to say talk about yourself.

CHARLES E. HUGHES—I don't see how we can lose now.

DAVID LLOYD-GEORGE—Germany has missed her chance.

DR. ANNA H. SHAW—America is not a soup kitchen.

CARDINAL MERCIER—The hour of our deliverance approaches.

SENATOR PENROSE—I'm a plain humble worker in the vineyard.

SENATOR ASHURST—The Senator has sweetbreads for brains.

EMPEROR WILLIAM—Germany knows she is fighting for her existence.

REV. HERBERT S. BIGELOW—Nobody likes to pay for a dead horse.

WOODROW WILSON—Nothing permanent is ever accomplished by force.

SECRETARY DANIELS—The only thing that counts in this world is results.

CARRIE CHAPMAN CATT—I'd rather be under the rule of a king than a boss.

M. HANOTAUX—It is not merely a new army which has arisen. It is really the new world.

SAMUEL GOMPERS—The eight-hour principle has been universally accepted by society.

ANNETTE KELLERMANN—If you follow my directions you will be able to float in one lesson.

HERBERT CAVANESS—Kansas was not born to languish in the monotony of flaccid mediocrity.

MEXICAN COMMISSIONER CABREA—Watchful waiting has probably saved the life of my nation.

BILLY SUNDAY—It is just as easy to count the mercies of God as it is the office seekers after election.

ADMIRAL DEWEY—The attacks that have been made on our navy are as false as many of them are shameless.

SENATOR STONE—I have never known such a motley group of discredited bosses and nondescripts as are gathered about Hughes.

VICE-PRESIDENT MARSHALL—For three years it has been my fortune or misfortune to hear the speeches made in the United States Senate.

THEODORE DRIESER—If my name were Drieserhefsky and I came from Warsaw I'd have no trouble. But I came from Indiana, so good night.

PRESIDENT HADLEY—The slow influence of example rather than the quick compulsion of law is the means by which the real regeneration of society is achieved.

## TOWARDS GOVERNMENT OWNERSHIP

**T**HE great railroad strike—that was saved from coming off only by the hurried yielding of Congress and the President—and the renewed conflict on the traction lines of New York City put searching questions to us as a people.

What do we propose to do about it? Can we permit the employers and the workers in the transportation services, local and national, to go on settling their differences by force and arms over our prostrate selves? Since we obviously cannot permit it, what other method of solution of their controversies have we to offer—and to compel them to take?

Strikes, like war, have two fatal disabilities. They cause an intolerable amount of suffering, to the innocent bystanders as well as to the participants; and there is no certainty that the decisions they bring about will be just. It is a tiresome truism that the use of force never determines who is right, but only who is the stronger; but it is one of those truisms, like the multiplication table, that must be reiterated until everybody accepts them without question.

Strikes, like war, must pass. They must pass because men are, at least potentially, reasoning beings, and war, both international and industrial, is unreasonable. But there is much that must be done before their passing will be in any considerable degree accomplished.

**J**UST at the moment we are concerned in this country with a special phase of this problem of industrial conflict. It has to do with disputes between employer and worker in public service enterprises. This is a particularly interesting phase of the industrial problem because in it the elements stand out with peculiar distinctness. We shall some day realize that all industry is a matter of public service, to which the community has a real and vital relation; but in this day of the world the impression still widely persists that there is such a thing as "private business," the human relations within which are matters subject only to personal arrangement unhampered by community action.

But in the public service enterprises it is increasingly clear to any but the feudal-minded that there are three parties at interest—those who provide the capital and manage the business, those who perform the labor, and the community at large. The community has an indisputable part in this trio because the business is founded on a privilege granted by the community thru a franchise; and because the convenience and comfort of the

community are affected with the most complete directness by the conditions under which the business is carried on.

**I**N a public service enterprise the third party in interest, the public, has the ultimate authority and the ultimate responsibility. The community must not only see to it that the railroads accord justice to the public; it must not only make certain that the railroads receive justice from the public. It must insist that the railroad managers and the railroad workers maintain the balance of justice between themselves. It is not conducive to the common good that a trolley line should not render efficient service to the people; nor that the people should compel a trolley line to operate under unfair and oppressive conditions; nor that the motormen and conductors on the trolley line should be overworked or underpaid; nor that the managers of the trolley should be bullied by a powerful labor union.

The representatives of the community in New York City during the recent traction strike recognized this responsibility of theirs, and attempted to bring about justice and peace between employers and workers thru the medium of conference and counsel and compromise. The representatives of the nation recognized it in the threatened railroad strike and, under the influence of the organized power of the workers, compelled by legislation the employers to grant their demands.

No question is settled until it is settled right. The New York traction agreement has already been broken, and each side throws the blame upon the other. The railroads threaten to attack the constitutionality of the railroad eight-hour law in the courts; and in any case the fact that the law was passed as it was, frankly to avert a cessation of railroad operation thru a strike and not because Congress was convinced of the justice of the workers' demands, raises the irritating doubt whether, after all, that question was settled right. At least it was not settled in the right way.

All these considerations point, as we said in a recent editorial, toward another way of resolving and avoiding disputes between employers and workers in public service enterprises. If we were to combine two of the elements in the trio into one we should simplify the problem and accelerate the solution. We can do it by making the community the employer, by establishing government ownership and operation of railroads, traction lines and other public services.

We should then have only two interests at stake—the public interest, as owner of the enterprise and beneficiary of the service, and the interest of the workers. More and more, as humanity becomes more enlightened—and more human—is it coming to be realized that the interest of the workers is not a private interest but an intensely public one. The past generation, and particularly the past decade, has seen this recognition taking shape in legislative, administrative and judicial process. The interest of the workers is the interest of all. So with government ownership of public services we should have the present apparent division into three unrelated interests replaced by amalgamation into one universal interest. The problem before the government representatives of the people would then be to afford public service at the lowest rates compatible with the most enlightened conditions of work and generously just standards of compensation to the workers.

There is one other element that is making for government ownership. If the operations of the railroads are to be regulated by government at both ends of the line, thru the fixing of railroad rates by commission and the decreeing of wages and hours of labor by Congress, it may soon be difficult to induce private capital to invest in railway extensions and improvements.

The natural risk of investment may be too largely increased to make such investments sufficiently attractive. Our railroads must be continually extended and improved. If private capital will not, public capital must.

It is probably true that government operation, under existing conditions of political development, does not mean the most economically sound operation. Any of our great railroads, for instance, is better organized and managed from the dual point of view of efficiency and economy, than our postal service. To say this is to cast no reflection upon individual postal officials and employees; it is to reflect rather upon Congress and the people back of Congress. But whosoever the fault, the condition flagrantly persists.

Nevertheless, there comes a point where the economic loss thru political management may be offset by the social gain. Freedom from interruptions in the service thru labor disputes would be a condition worth a high price. The assurance of the best working conditions and thoroly adequate pay for all workers would be a social advantage worth making sacrifice for.

This is the theoretical logic of the question. It is rapidly becoming the practical logic of the situation. Government ownership of the public services looms large on the horizon.

#### AS MAINE GOES —

THE results of the state election in Maine are diversely interpreted in the rival political camps. To Republicans they mean the election in November of Mr. Hughes; to Democrats the success of Mr. Wilson. Or so they say.

The truth is, nobody knows. In most presidential years, as Maine went, so went the nation. But in 1892 the nation absolutely repudiated the Pine Tree State as a guide and elected Cleveland after a substantial Republican victory in Maine in September.

But one deduction is probably sound. In states like Maine, where most of the Progressives were originally Republicans, they are returning to their old allegiance.

This is the natural thing to expect; and Maine seems to indicate that it is happening.

There are other states further west, however, where many Progressives came from the Democratic party. It is natural to expect them, on the whole, to go back whence they came.

If we only knew how many of the 4,000,000 Roosevelt voters of 1912 were erstwhile Republicans and how many erstwhile Democrats, we would dare to draw from the Maine election a fairly confident prediction of the result in November. But we do not know; tho we believe most of them were Republicans.

However, after hearing from the State o' Maine, we are prepared to prophesy that Mr. Wilson will not be any too easily reelected.

#### TAKE JONESCU

THE credit for bringing Rumania into the war on the side of the Allies must go chiefly to Mr. Ionescu, for he has labored as long and earnestly for it as Venizelos has labored, so far in vain, to induce Greece to take the same action.

Both these ex-premiers, tho out of office, have exercised a greater influence over national policy than those who are nominally at the head of the government. In a very remarkable address delivered by Take Ionescu as leader of the opposition and minority party in the Rumanian Chamber of Deputies, December 16 and 18, 1915, and recently published in English by Causton, London, under the title of "The Policy of National Instinct," he tells of the efforts he made to have little Rumania prove herself great by declaring war on Austria-Hungary two years ago. He has always been an ardent expansionist and in 1894 when Mr. Stourdza declared that "Nobody in this kingdom thinks of the conquest of Transylvania" because if successful it would destroy Austria-Hungary and involve all Europe, Take Ionescu boldly challenged the right of any Rumanian statesman to fix the frontiers of the country for all time. As he now says this consideration for the feelings of Rumania's ally, Austria-Hungary, "implied a mental reservation" and was

a provisional attitude destined to last just so long as the European situation which prevented us from realizing our national ideal. For our ultimate object, which was cherished in the minds of us all and made all our hearts beat, has always been the same—our unification within the boundaries traced for us by Trajan—I mean, astride the Carpathians and pushing out to right and left with all our power.

Ionescu frankly avowed these ambitions even to those most concerned to thwart them. Twenty years ago when he was put out of office in 1895 because he was accused of supporting the national movement beyond the Carpathians, he had a talk with Baron Banffy, Prime Minister of Hungary:

The first word of the Hungarian statesman was, "Never tell me, M. Ionescu, that you don't want to take Transylvania!" I replied, "No, I can't tell you that, because, if I did, you would think me either a liar or a cur. I do want to take Transylvania, but I cannot."

When my turn came I said to him: "Neither will you tell me that you don't want to get to the Black Sea!"

And he answered, "I do want to, but I cannot."

And we consulted together to see if we could discover a *modus vivendi*.

In this speech also Take Ionescu reveals the secret of Rumania's action in 1913 when she suddenly and without provocation took up arms against Bulgaria and annexed an additional section of the Dobrudja to which she had no ethnic claim. This bold move aroused consid-

erable comment at the time, for Austria-Hungary, with whom Rumania had been allied ever since 1883, was the secret instigator of Bulgaria's attack upon Serbia and Greece. But according to Jonescu Rumania did not cross the Danube into Bulgaria until it had been ascertained that this action would be regarded with favor by the Triple Entente, thru which Rumania hoped to realize her national unity. Evidently then the events we are now witnessing are but following out the understanding between Rumania and the Entente Allies at least three years ago.

### THE IRISH MUDDLE

ACCORDING to all reports the situation in Ireland is worse than ever. Tho the Dublin rebellion was crushed the Sinn Fein has more sympathizers than before the outbreak. The execution of the rebel leaders and Sir Roger Casement, justifiable tho it was under military law, has caused widespread resentment among the Irish at home and abroad. On the other hand, the opponents of Home Rule regard the rising at Dublin as justifying their distrust of the Nationalists, and they are more determined than ever that the measure shall never go into effect. After thirty years of struggle, in which many more important issues were set aside and the power of the Lords curtailed for the purpose, the Liberals and Nationalists succeeded in passing the Home Rule bill three times thru Parliament and getting it signed by the King, yet they cannot carry it out, altho they still command a majority in the House of Commons. The compromise arranged by Lloyd George received the assent of John Redmond for the Nationalists and Sir Edward Carson for the Ulsterites, but after both parties had agreed to it the cabinet altered it, so now the question is again in the air. The net result is that Redmond has lost confidence in the cabinet and the Irish people have lost confidence in Redmond. The compromise was in itself a violation of the principle for which the Ulsterites contended, since it arbitrarily excluded from the scope of Home Rule districts in which the Home Rulers are in the majority and included districts in which there are over 300,000 Protestants.

Meanwhile the south of Ireland is kept in order by the presence of sixty thousand British soldiers under the command of Sir John French, who resigned his commission four months before the war because he sympathized with the five hundred British officers who refused to keep order in the north of Ireland. Sir Roger Casement has been hanged because he went to Berlin to solicit the aid of the German Emperor in behalf of the Irish Nationalists. But Sir Edward Carson, who went to Berlin before the war to solicit the aid of the German Emperor in 1913 was made a member of the cabinet and will be a member of the Irish Parliament if Home Rule goes into effect. Before the war the Carson organ, the *Morning Post*, said: "The rule of Germany is to be preferred to that of John Redmond" and the *Irish Churchman* said: "We have the offer of aid from a constitutional monarch who, if Home Rule is forced on the Protestants of Ireland, is prepared to send an army over to attach Ireland to his dominions. Protestants of Ireland will welcome their deliverance." The rebels of Dublin were courtmartialled and shot for importing arms from Germany to use against the King's troops, but the rebels of Belfast who less than three years ago imported arms from Germany to use against the King's

troops were not put to the slightest personal inconvenience then and now they occupy high positions in the government and the army. Over such a situation nobody can rejoice but the Germans.

### THE SUPERSTITION OF FRESH AIR

THE popular idea that there is something peculiarly beneficial or invigorating about outdoor air has been effectually dispelled by the experiments carried on during the past few years under the auspices of the New York State Commission on Ventilation. The latest results of this investigation given in *School and Society* for May 6 and August 12, 1916, show that the children in a school room provided with a liberal supply of outdoor air do no better work and make no more progress than those in a room where the air is partly recirculated. The experiments ran for three months at a time, the teachers exchanged rooms, and a very elaborate system of mental tests devised by Professor Thorndike of Teachers' College was used to test accuracy, speed, memory and improvement. The results in the fresh air room came out practically the same as in the recirculated air room, what little difference there was being mostly in favor of the latter.

It appears then that if air is kept to the proper temperature, humidity and composition it may be breathed again and again without deleterious effects. The matter of composition, which used to absorb the attention of sanitarians, is the least important of the three, for it has been found by experiment that a considerable increase in the percentage of carbon dioxide or decrease in oxygen makes comparatively little difference.

In accordance with this theory some of the most modern and best constructed gymnasiums, that of the International Y. M. C. A. College of Springfield, for instance, have no open windows. The air is continually being drawn thru an apparatus that washes, cools or warms it and gives it the amount of moisture proper to its temperature. Of course, without such purification and rectification the air of a closed room would soon become intolerable, so those of us who live in houses not provided with a circulatory system of this type had best keep our windows open.

### NEW ERA OF INDUSTRIAL ORGANIZATION

WHEN the Kaiser sent his brother, Prince Henry, Grand Admiral of the German Navy, as a commercial envoy to the United States in 1902 the address of welcome at the Boston banquet was given by Ex-Secretary Olney. In reference to the entrance of America into the international competition for the world's markets, Mr. Olney spoke with remarkable frankness and almost prophetic insight:

We are now entering upon a contest for industrial supremacy, the most intense and arduous the world has ever seen. Fortunate will it be if this contest does not, like so many others, degenerate into grim-visaged war with all its unutterable brutalities and horrors! The errand here of your Royal Highness, with the hearty welcome tendered and the favorable impression produced, should do much to preclude so dire a result. Under its influence the two countries are recognizing each other as generous and worthy rivals are joining in a sort of handshake as a courteous but significant preliminary to the combat before them—and are thus in a way pledging themselves that, whatever the stress of the contest, it shall not transgress the rightful rules of the game nor overstep the limits which Christianized and civilized peoples ought to observe under whatever provocation.

Mr. Olney's fears have been realized in a more terrible way than he could have imagined. The struggle for the commercial supremacy among the European powers increased in intensity until it culminated in a war that has involved almost the whole world with the exception of the American republics. And after the war is over there is every indication that the commercial rivalry will be resumed with greater earnestness and more bitter feeling than ever before. All of the warring nations have learned lessons of economy and self-sufficiency, and they are now organizing in two great groups with the object of trade warfare. Germany and Austria-Hungary are considering the possibility of combining their interests in a *Mitteuropa*, an economic unit of Central Europe. On the other hand, the eight Allied Powers represented at the Paris conference in June, 1916, adopted a policy of mutual support and of antagonism to the Central Powers that is to continue for an indefinite period after peace is declared. According to this agreement all trade with Germany and her allies and with their subjects resident in neutral countries is prohibited during the war and they will not be allowed after the war to receive the treatment accorded to the "most favored nation." German products are either to be excluded altogether from the markets of the Allies or to be subjected to special restrictions.

An authoritative explanation of the meaning of these measures is to be found in the speech of Walter Runciman, president of the British Board of Trade, before the House of Commons, in which he said:

We are, in fact, mobilizing for Imperial purposes and for the purposes of the Allies the whole economic strength of the British Empire. . . . Never again shall subsidized foreign liners be permitted to run into British ports as freely as British ships. . . . We must see to it that, having ended this war victoriously, we do not give Germany a chance for reconstructing her economic machinery. . . . Commercially, Germany is a beaten nation. . . . The real trouble is that, when the war comes to an end, having been beaten at sea and, we hope, on shore also, Germany will wish to embark on a new economic campaign. It will be necessary for us in making peace to see to it that Germany does not again raise her head.

The most important clause in the decisions of the Paris Economic Conference is its "declaration of independence" which reads as follows:

The Allies decide to take the necessary steps without delay to render themselves independent of the enemy countries in so far as regards the raw materials and manufactured articles essential to the normal development of their economic activities. These measures should be directed to assuring the independence of the Allies not only so far as concerns their sources of supply, but also as regards their financial, commercial, and maritime organization.

This economic independence which the Allies are now planning for has been accomplished for Germany by force of the Allies blockade. Never before was a great commercial nation put to such a strain. In Germany were some sixty-six million people of whom about a fifth were supported by foreign commerce and fed by foreign food. Suddenly and without time for readjustment they were cut off from the outside world together with Austria-Hungary and compelled to rely upon their own resources. For more than two years the interned nations have proved capable of supporting themselves and carrying on a war against superior numbers attacking on all sides. Having proved the possibility of self-sufficiency, as much probably to the surprise of themselves as to that of their enemies, they are now considering the possibility of continuing the policy after the war and

never again becoming dependent for their existence and prosperity upon the outside world.

The most definite and concrete exposition of this policy is to be found in Naumann's *Mitteuropa*, which has had an immense sale in Germany and has just been translated into English. Dr. Friedrich Naumann is an original genius, a political party all by himself. While a Protestant pastor he became interested in the constructive side of socialism, developed a system of Christian socialism of his own and founded the radical weekly *Die Hilfe* ("The Help"). His ideal is the union of Germany, Austria-Hungary and perhaps Bulgaria, or other states to form an independent economic unit. This mid-Europe or Central Europe or Centralia, or whatever it may be called, would include a great variety of races and religions and almost all of the natural resources necessary for industry. It could utilize for the common good the best elements of its constituents.

Naumann finds that the unique strength of Germany lies mainly in the following factors: an incorruptible and efficient body of administrators, the Prussian bureaucracy; well organized and disciplined army of workmen, the Social Democracy; an unequalled number of scientists and technicians; and an exceptionally able group of financiers and organizers of large scale industry, such as the Essen steel works and the Hamburg-American steamship line. Now the war has shown that these elements, formerly antagonistic, can work together for the common good and he proposes that they continue after the war, giving the German genius for organization greater scope than it has ever had. Germany should learn from all of her great men. The educators for the new epoch, he says, should be "Frederick II, Kant, Bebel, Legien, Kirdorf and Ballin" all combined. Naumann cares little for dynasties or political divisions. These would sink naturally into insignificance in the face of such a union of industrial forces. In his "Central Europe" there would be no waste and no want; there would be no one idle or out of work, no one lacking food.

This is the vision of a poet and a reformer; but Germany had gone a good way toward realizing his ideal before the war and still farther since, so it is safe to prophesy continued advance in this direction. The ambitions of the Allies have not yet been put in so concrete a form as this volume, but the resolutions of the Paris conference point toward a similar development. Evidently, then, there will be after the war two great antagonistic groups of commercial powers in both of which the means of production and distribution will be more efficiently organized than ever before. The United States will be outside either group and will have to meet their competition alone unless it unites with the southern republics or other neutral nations to form a third trade group. But what chance will the United States stand against nations organized for efficiency if it sticks to its present policy of breaking up business into warring units, keeping trade unions separate, allowing railroad employers and employees to settle their disputes by seeing which is in a position to hurt the public most, and leaving every man to find a job if he can and get what he can out of it? In the internal organization of offices and factories Americans have done wonders, but the relations between different offices and factories are left to chance and greed. A disorganized America will be no match for an organized Europe either in peace or war.

# THE STORY OF THE WEEK

## The New London Conference

The second week of the American-Mexican joint conference at New London did not bring the main questions with which the two sides respectively are most deeply concerned officially before the conference. But considerable progress was made in laying the groundwork for a consideration of these perplexing subjects. The Mexican conferees are palpably—and not unnaturally—interested almost exclusively in one thing: getting the American troops out of Mexico. The American conferees go deeper in their inquiries. They are concerned with the more fundamental questions of the extent of the actual control by the de facto government over conditions in Mexico, of the plans and purposes of Señor Carranza and his associates for the rehabilitation of the country, of the ability of their government to fulfil the obligations incumbent upon it.

Señor Cabrera and his fellow conferees have made several efforts to bring the question of withdrawal definitely into the foreground; but Secretary Lane and the American representatives have been equally insistent upon postponing that question until they know more about what can be expected in the way of security and good order from the Carranza government itself.

Meanwhile, the American conferees have been learning a good deal about Mexican conditions and problems. Early in the week Señor Cabrera made a comprehensive statement on the present situation in Mexico which tended to show the growing ability of the de facto government to deal with internal disorders and to protect life and property. The course of the revolution was set forth from its beginning until it controlled the coast lines and the greater part of the interior of the country. "This accomplished," said Señor Cabrera, "General Carranza immediately address himself to the problem of organizing civil government in the states under his control. His purpose has been to accustom the people as soon as possible to the orderly procedure of civil rule and to limit to as great an extent as possible the more arbitrary methods of military government. At the present moment civil governors have been installed in ten states, and in the territory of lower California." The Mexican chairman further outlined the plans which Señor Carranza has for the speedy civil reorganization of the country. These include as their most important element the revision of the Mexican constitution by a convention.

Confirmation was given to this statement later in the week by news from Mexico that General Carranza had issued a call for the election of delegates to such a constitutional convention. The call refers back to the Plan of Guade-

loupe, promulgated in 1913 before the downfall of Huerta and elaborated the next year at Vera Cruz. It declares that it has always been the intention of the First Chief to carry out this program, and that various measures have already been adopted to provide government of and for the people, to improve the economic situation of the working classes and to insure a correct application of republican principles as embodied in the constitution. It has been found necessary, however, in order to make these reforms effective, to make changes in the constitution to remove the danger of the tyrannous absorption of power by the executive and to correct other inadequacies. Therefore a Constitutional Assembly is to be provided, its members elected on October 15 and the assembly meeting on December 1, and lasting two months, "thru which the whole country will be able to express clearly its sovereign will."

Last week also, President Wilson received the Mexican conferees on the "Mayflower" and later returned their call at their hotel. He assured them of his sympathy with the aims of the revolutionists in Mexico, and indicated his comprehension of the great problems, political, economic and social, which Mexico is facing. He declared that regeneration for Mexico must come from within, and that development must be parallel on all three lines. He sought to impress on the Mexican delegates the necessity for the protection of life and property in Mexico, and urged that a democracy could not be established successfully until conditions for the safety of life and property were secured.

Señor Cabrera in his reply referred to the United States as leader of the movement for free government and as the tutor to which Mexico must look in striving for the type of government its people sought.

### THE "DEUTSCHLAND" BOOK

It was typically German to clip from American newspapers every word of comment on the successful voyage of the pioneer submarine merchantman and bind the clippings in this huge book—as big as a grand piano—which will be installed in the Royal Library at Berlin.

## New York's Traction Strike

The second traction strike in New York City made during the past week little progress in either direction. Subway and elevated continued to give practically full service. The surface lines involved slowly improved their service and increased the number of cars they were able to run. Threats were widespread of sympathetic strikes in trades connected closely or remotely with the operation of the traction lines, and even of a general strike thruout the city, but the threatened results did not materialize. Mayor Mitchel and the Public Service Commission have made a careful investigation of the second strike in its relation to the agreement which terminated the first and have set forth their findings. The statement first refers to the agreement of August 6 and its applicability in principle to the subway and elevated lines, which were not involved in the earlier strike:

The agreement of August 6 was made with deliberation and care. It constitutes a statement of rights and principles. At the earnest solicitation of both sides the Mayor of the city and the chairman of the commission underwrote that agreement, which meant that they would use their best efforts and their official power to secure full compliance. To safeguard both sides, but more particularly the interests of the public, a complete method of arbitration was provided, in place of the strike and the lockout. For this purpose the agreement definitely provided that:

"All disputes that may arise between the company and the employes in the future on which they cannot mutually agree shall be submitted to arbitration as herein provided."

The various witnesses who appeared before us . . . concur in the opinion that the agreement of August 6 was a fair, reasonable and workable agreement provided it was observed in letter and in spirit.

On August 10, when the commission filed its memorandum, there was no agreement covering the subway and the elevated. On August 30, it appears from the testimony before us, the Interborough Rapid Transit Company received a committee of its men, members of the Amalgamated Association, attended by the same advisers and spokesmen who appeared before us in the matter of the other railways. After discussion, Mr. Hedley informed Mr. Fitzgerald and his associates that, as the same men governed the policies of the Interborough as governed the policies of the railways company, they might proceed upon the assumption that the principles and policies embodied in the railways agreement of August 6 would be regarded as controlling in the case of the Interborough. It was definitely agreed to by both that the principle of freedom to organize, the principle of freedom from intimidation or coercion, and the principle of arbitration should govern. Altho this agreement was not reduced to writing and signed by the parties, it was approved by President Shonts and was relied upon by both sides in their respective negotiations.

The statement then relates that the officers of the Interborough—the subway and elevated company—advised their men not to join the Amalgamated Union, but to organize a union of their own. A large majority of the men followed this advice, formed a new

THE QUEBEC BRIDGE AS IT WAS TO HAVE LOOKED

The great structure was to be 3,239 feet long, connecting Quebec with the opposite shore of the St. Lawrence. Eight railroads were to use it to shorten the transcontinental rail journey by 200 miles. In 1907 another cantilever bridge at this crossing collapsed in the process of construction with the loss of seventy lives

brotherhood, and individually signed two-year agreements with the Interborough covering wages and conditions of work. It is claimed by the Amalgamated Association that such a form of contract was in violation of the agreement of August 6 and 30, and that these contracts thus signed by the men were secured thru fraud, misrepresentation, coercion and intimidation.

An attempt was made by the union officials to have a clause inserted in the individual agreements which would have expressly permitted any signer of them to join any other union—e. g. the Amalgamated—and to take part in any movement toward the betterment of working conditions or increase of wages. But before their efforts were successful both parties became suspicious of each other. The Amalgamated officials believed that the company was seeking to “exterminate their union”; the company officials believed the men were seeking to “paralyze” the entire New York transit system in order to force the withdrawal of the individual agreements. Both sides were unwilling to treat the present dispute as falling under the agreement of August 6, and refused to submit the questions involved to arbitration. The mayor and the commission finally declared that the agreement had not been destroyed, but merely violated; but that the moral obligation to maintain it still continues. They made the following recommendations:

(1) That the question whether the distribution of the individual contracts constituted a violation of the agreements be referred to arbitration in the manner provided in the agreement.

(2) That the charge that the company sought to secure acceptance of the individual contracts by fraud, misrepresentation, coercion, or intimidation be referred in the same way.

(3) That the parties proceed with the conferences where they left off, and that, in order that friction may be avoided, they agree upon some impartial person to preside, or if they cannot agree, that they permit the Mayor and the chairman of the commission to name such impartial person, to have no authority to decide, but merely to preserve the parties from further misunderstandings and disagreements, and, further, that such conferences be held in public.

(4) That the strike should be declared off immediately.

But their recommendations were of

no avail. The strike went on, with slow but steady loss of advantage to the strikers and the Amalgamated Association.

#### The Maine Election

The State o' Maine has the interesting habit of holding its state election in September, even when it is to vote for President in November. This year the voters had to elect a governor, legislature, and two United States senators. At the election last week the Republicans were thoroly successful. They elected their candidate for governor, displacing a Democrat; their candidates for United States senator, displacing one Democrat; a full congressional delegation of five, again displacing a Democrat; and secured control of both houses of the Legislature, whereas at the last session they controlled but one.

The whole vote cast was in size without precedent at a Maine state election. Approximately 152,000 votes were cast, a figure which has not been approached since 1880, when the total was 4000 less. The plurality of the Republican candidate for Governor, Carl E. Milliken, was 13,800 votes. The pluralities of the successful candidates for United States senator, Colonel Frederick H. Hale—the son of Maine's long famous senator—and Bert M. Fernald were several thousand less.

It is an old saying that “As goes Maine, so goes the Union.” The only trouble with it is that it is not so. In 1892 a Republican Governor was elected in Maine in September and Grover Cleveland swept the country in November. The managers of both parties this year had their eyes firmly fixed on Maine, and both declare themselves well satisfied with the result. The Republican managers appeal to the old tradition, ignoring the incident of 1892; while the Democrats put forward that exception as rendering the traditional rule worthless.

Both parties had worked hard in Maine, sending their best speakers over the state. For the Democrats several Cabinet officers took part in the campaign, and for the Republicans Mr. Hughes and Mr. Roosevelt made vigorous speeches.

The great question this year is, of

course, What will the Progressives do? Maine was looked to for evidence on this point. Republicans believe the result shows that most of the Progressives have gone back to the Republican party and will line up for Hughes. Democrats assert that Maine demonstrated that enough Progressives have shifted to Wilson to turn the scale his way. However, the rejoicing in the Republican camp over the Maine result seems more whole-hearted and sincere than the enthusiasm across the street.

#### Two Southern Primary Elections

Down below Mason and Dixon's line Democratic state primaries are equivalent to elections—for there is no Republican party strong enough to make a real contest. In two states last week gubernatorial primaries were held, and one state arrogated to itself the stigma which the other had callously borne for several years.

In South Carolina, Cole M. Blease was defeated for the nomination for Governor by the present Governor, Richard I. Manning. The defeat of Blease, who has twice been Governor, shows that South Carolina has recovered from its disheartening condition of political indifference and callousness. Blease as Governor was notorious for his wholesale pardoning of criminals for none but political reasons, his virulent stirring up of race antagonism, his lawless and vulgar language on public occasions. South Carolina has done well at last to awake from the unaccountable spell cast over its voters by this man.

Georgia, on the other hand, has nominated for Governor Hugh M. Dorsey, the man who prosecuted Leo Frank and secured his conviction. Dorsey violently protested against the commutation of the death sentence in the Frank case by Governor Slaton. Practically the only newspaper support which Dorsey received in his campaign came from the paper edited by Thomas Watson, one time Populist candidate for President and bitter antagonist of Jew and Catholic. Watson kept the Frank case to the fore during the campaign, altho Dorsey declared that he was appealing for support, not on the Frank case, but on a platform

#### THE MOST STARTLING ENGINEERING DISASTER OF THE CENTURY

A photograph taken at the instant when the center span of the Quebec bridge, the largest bridge span in the world, collapsed and fell as it was being raised into place, killing twelve workmen. A holiday crowd of fifty thousand people, gathered to watch the span being put in place, saw the accident, which recalls sharply the disaster of 1907

of law enforcement. The result indicates that in so far as the Frank case is concerned, Georgia is still unrepentant.

**Belligerents and Neutrals** Much indignation has been roused in Holland by the recent British order forbidding the shipment of certain classes of goods from the United States, on the ground that Holland has already imported more of these goods than was normally imported in time of peace and that the presumption was that the surplus was being sent to Germany. In consequence of these orders, American trade in prohibited commodities with Holland will be stopped absolutely, while the regular transportation companies carrying goods from the United States to the Scandinavian countries will not take cargoes without assurance of their innocent destination by the British authorities. The precedent for the new regulation is the refusal of the British Government to issue further licenses to British exporters to trade with neutral countries suspected of reselling goods to Germany. The present action extends the prohibition from the British exporters to the Netherlands Oversea Trust. It is understood that the Government of the Netherlands has requested the United States to do what is possible to secure a modification of the British order.

The British have modified their "blacklist" policy by permitting British marine insurance companies to underwrite insurance on the property of blacklisted American firms. Lloyd George has also endeavored to allay American irritation by explaining that when letters from American business men were examined by the British authorities, and their contents communicated by the censor, only information of military value was ever passed on to other departments of the government, and that in no instance had American trade secrets been placed by the censor at the disposal of British manufacturers or traders.

Questions of relief are still engaging the attention of American diplomacy. The Kaiser has sent a personal note, the contents of which were not made public, to President Wilson, explaining the German position in regard to the

question of Polish relief. The Turkish Government, after a long period of obstinate refusal, has at last issued orders permitting American relief in Syria. The permission does not extend to Armenia.

The American Government has inquired as to the extent of the Japanese demands on China by way of reparation for the recent mobbing of Japanese troops at Cheng Chiatun. The Japanese Government replied that there was nothing in them that in any way impaired the sovereignty of China or entrenched upon the treaty rights of the United States. The demands include the appointment of Japanese police in towns where many Japanese reside, the appointment of Japanese military instructors and also of Japanese advisers with Chinese garrisons in Manchuria. The Japanese naval department has just completed its seven-year naval program, calling for an expenditure of about \$125,000,000 for construction.

**Russian Advance Checked** Progress continues to be slow on the Galician front. This may be due simply to the strength of the Austro-German resistance or it may be an incident in the necessary reorganization of the Russian forces to take full advantage of the entrance of Rumania into the war on the Russian side. Many

troops have been sent into the Dobrudja and there are rumors of a coming giant offensive of Russians and Rumanians to occupy Bulgaria and thus isolate Germany and Austria-Hungary once more from Turkey, thus restoring the conditions that existed before Serbia was overrun by the armies of the central powers and when Bulgaria was still neutral. Whatever the explanation, no further advance of importance was made in the drive to capture Lemberg. In the Carpathians the campaign was more active. The Russians stormed the Austrian position at Kapul Mountain on September 12 and gained some initial success. The main position remained uncaptured, however, and the lost ground was soon regained. The Russians have also been engaged in a fierce struggle with the Turks in the Caucasus region. The Turks claim to have repelled all attacks.

**The Dobrudja Invasion** Owing to the peculiar conformation of Rumania and to the fact

that both Austria-Hungary and Bulgaria are now her enemies, Rumania has perhaps the longest frontier to defend, in proportion to her size and military resources, of any of the belligerent powers. Rumania must carry on the war on two extensive fronts, the Transylvania frontier and the Bulgarian. Neither front, however, is vulnerable along its entire extent. Transylvania is separated from Rumania by a high mountain wall, the Transylvanian Alps. This barrier may be crossed only by a few mountain passes and thru these Rumania has sent the greater part of her army in a vigorous drive to force the Hungarians and their allies to evacuate the country. On this front the Rumanians still hold the offensive, altho they have been unable to continue the extensive gains that marked their first entrance into the war. General Pflanzer-Baltin, who was in charge of the Austro-Hungarian army in Transylvania, has resigned, nominally on account of ill health, but possibly because of his failure to stop the Rumanian advance.

The southern frontier of Rumania is protected by the course of the Danube, except at its eastern extremity. The Dobrudja region, lying between the Danube and the Black Sea, has been

#### THE GREAT WAR

*September 11*—British occupy Macedonian villages beyond the Struma. Rumanians advance in Transylvania.

*September 12*—French take trenches north of the Somme. Russians attack Kapul Mountain in the Carpathians.

*September 13*—French occupy Bouchavron. Italian airships raid Trieste.

*September 14*—French close in south of Comble. Italians take trenches on Corno plateau.

*September 15*—Rumanians retreat in the Dobrudja. British take Martinpuich and Courcellette.

*September 16*—Belgians take Taborn in German East Africa. Bulgarians fall back on Monastir.

*September 17*—British capture trenches on mile front in Somme sector.

selected by the Bulgarians as the best place for an invasion, not only because it lies open to attack, but also because a victory in this region might cut off the rest of Rumania from access to the sea. In spite of the presence of Russian and Serbian troops in aid of the Rumanian defensive, the Bulgarians have continued their advance northward, until they now threaten the railroad line which runs from the Danube to the Black Sea at Constanza. The Bulgarians are aided by German munitions and German generalship, and it is said that many troops have been withdrawn from Macedonia to strengthen the new offensive. The Germans claim that the Bulgarian army has advanced sixty miles from the frontier and has occupied more territory than Bulgaria ceded to Rumania after the second Balkan War.

The war in the Dobrudja has unhappily revived all the atrocity rumors that were current during the Balkan wars of the past. The Bulgarians claim that as the Russians and Rumanians retreated they cleared the country by burning villages and putting the inhabitants to the sword, because it was feared that as many of them were Bulgarian by race they would welcome the invaders. On the other hand, the Rumanians assert that the capture of Tutraikan was followed by massacres.

**The War in Macedonia** While the Entente allies are naturally much concerned over the Bulgarian successes in the Dobrudja, they are confident that Bulgaria must soon check the advance to the north to prevent an invasion from the south by the composite army of French, British, Russians, Serbians and Italians now operating in Macedonia. The combined force of the coalition is estimated at 700,000 men under the leadership of General Sarraill, and it is believed that in order to oppose an equivalent force the cen-

#### AT RUMANIA'S BACK DOOR

The Bulgar offensive in the Dobrudja has taken on considerable proportions while Rumanians have been marching thru Transylvania. In Macedonia the greatest successes have been won by the Serbs, who have pushed the left wing of the allied line across their own frontier. The shaded territory is held by the Central Powers

tral powers must recall the troops that they have sent to the Rumanian front. The British crossed the Struma River in northeastern Greece on September 10 and have since pushed eastward, altho it is probable that the main offensive of the allied powers will be further west in the Vardar valley. The French and Serbians have advanced considerably on the sector of the Mesopotamian front spanning the Vardar and to the west near Monastir. On September 13 Italian troops for the first time came into conflict with the Bulgarians.

The most interesting incident in the

Macedonian campaign was the deportation of the Greek troops from Kavala. When the Germans and Bulgarians occupied the city they ordered the entire Fourth Greek Army Corps transported to Germany, not as prisoners of war but as interned neutrals who will be allowed to retain all their military equipment. The amazing, probably unprecedented, action of the central powers in kidnapping twenty-five or thirty thousand neutral soldiers is variously interpreted. The Germans say that the Kavala troops requested to be transported to Germany in order to save them from

THE DEPARTMENT OF HUNGER

Minister of the Interior ad interim. A grim comment from *De Notenkruiker* of Amsterdam on Germany's food dictatorship

DEUTSCHLAND UBER ALLES

A savage piece of irony from an Italian journal. The Italian cartoons are particularly given to frightfulness

being forced to fight if the Entente allies should induce or compel the Greek Government to enter the war. Of course, the enemies of Germany regard the deportation of the Greek troops as a unique outrage against a neutral country instigated by fear that the Greeks would voluntarily join the Macedonian campaign of the Entente allies.

**Grecian Difficulties** With one of the most important campaigns of the war being fought on her territory, Greece is having the greatest difficulty in maintaining her neutrality. The difficulty is twofold; the pressure upon Greece by outside powers to force her to declare her position, and the conflict of sentiment among the Greeks themselves. At present the faction which favors entering the war on the side of the Entente allies is in the ascendant and it is probable that the ministry is only waiting to secure the best possible terms from the allied powers. On September 11, Premier Zaimis tendered his resignation to King Constantine. The King refused to accept it immediately, however, because it was difficult to find a statesman who would command the support of the people and the court, and not displease the Entente allies. M. Demitracopulos was offered the premiership, but he declared that if the position were to be his he must insist upon being the final judge as to whether Greece should or should not enter the war. Finally Nikolas Kalogeropoulos, a friend of ex-Prime Minister Venizelos, accepted the premiership. He is understood to favor a war policy and, altho he is not so unreservedly on the side of the Entente allies as Venizelos, his appointment is regarded as a proof that King Constantine has at last decided to sacrifice his dynastic sympathies to national considerations.

**The Somme Offensive** Even more than in previous weeks, interest is centered on that small sector of the western battle line which lies across the valley of the Somme from Thiepval south to Soyécourt. The French and British have both made important gains, but the actual distance covered is of less importance than the apparent inability of the Germans to stop the drive at any point. The phrase applied by the British to the Russian armies, the steam roller, might with greater propriety be applied to the present Franco-British drive, for the Russians have more than once in the course of the war overrun vast areas in a short time and have been forced to abandon their conquests with equal rapidity, whereas the western allies are now advancing slowly but with irresistible weight.

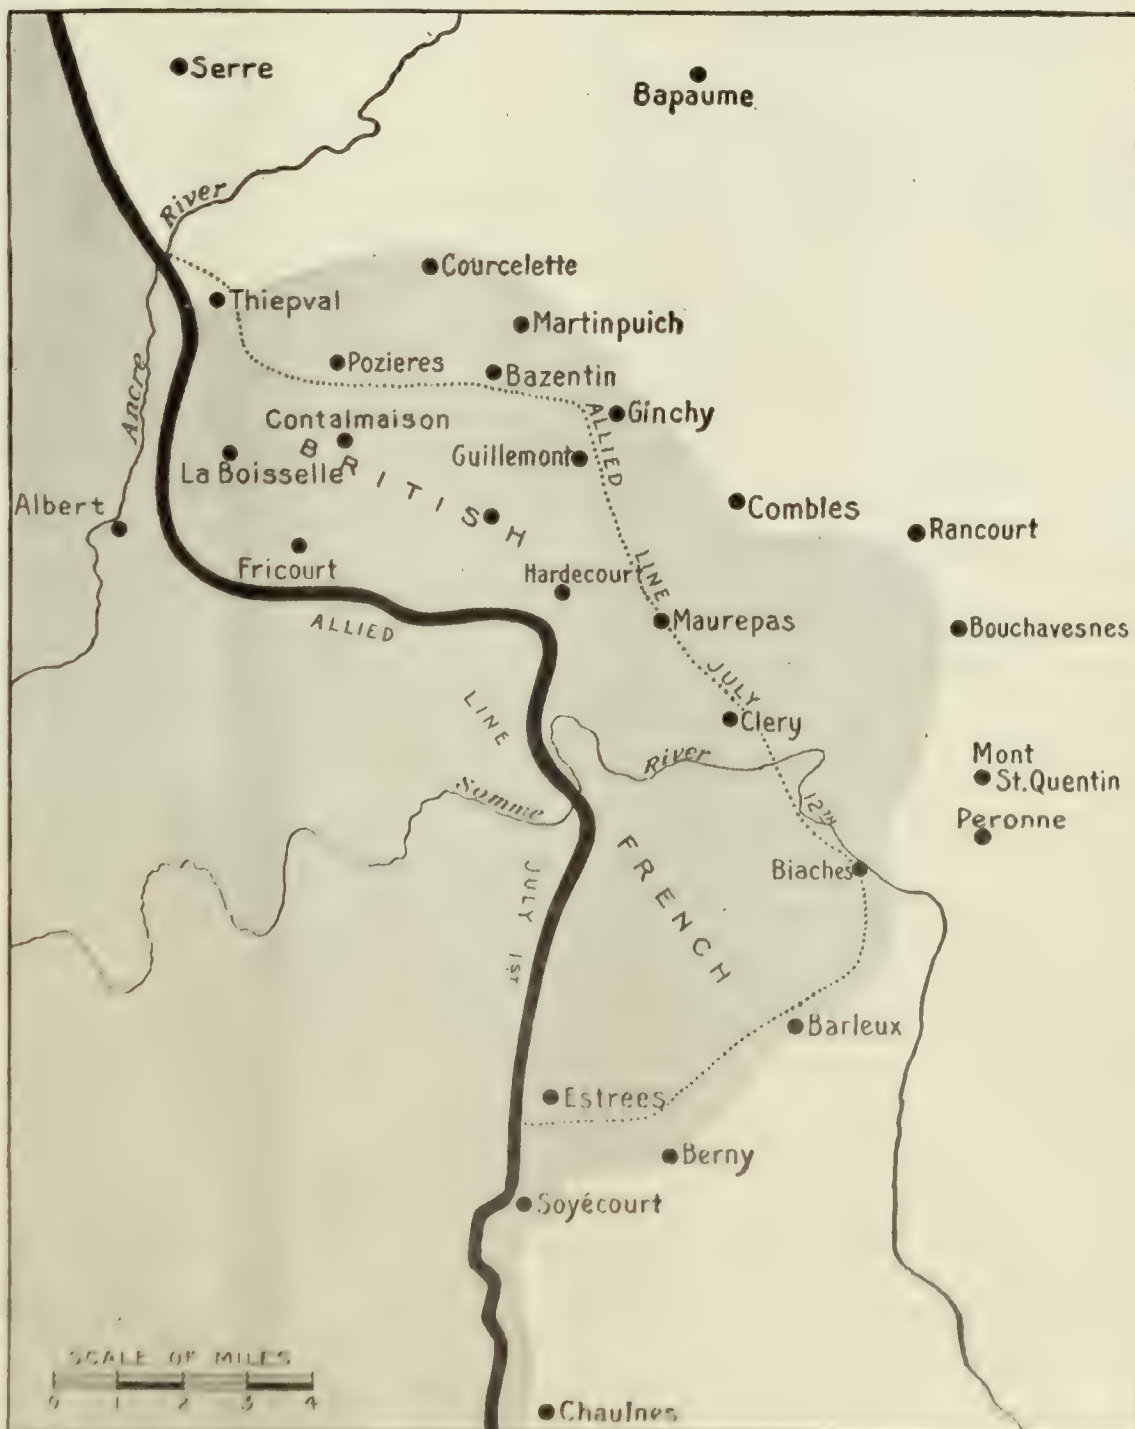

On September 12 the French forces captured a whole system of trenches on a front of nearly four miles south of Combles and north of the Somme. This important action brought them as far as the road connecting Peronne and Bapaume. On the following day the French passed beyond Bouchavesnes, which they had captured during the night. By so doing they accom-

plished two things, one of great material and one of great moral importance. The practical gain of the advance was the seizure of a broad stretch of the only road directly connecting Peronne with Bapaume. The moral gain lies in the fact that this is the first instance since the great deadlock in the west began two years ago that the allies have forced their way completely thru the system of prepared trenches constructed by the Germans. This fact has little direct strategic importance, however, since the Germans have dug new trenches in the rear of those which have been taken.

Having captured the trenches south of Combles the French consolidated their newly won positions and awaited an advance by their allies to the north of Combles in order to bring the city under fire from three directions before a direct attack was attempted. On September 15 the British did their share by occupying all the high ground between Combles and the road from Bapaume to Albert. The villages of Martinpuich, Courcellette and Flers fell into the hands of the British. In two days' attack the British captured 4000 German prisoners. A striking and

picturesque feature of the British attack was the use of armored automobiles in open battle. Such machines have frequently been used to transport troops and munitions, but hitherto it has been assumed that a battleground would be too rough to permit of their employment. But these modern war chariots crawled over trenches and even shell holes without being overturned and their armor proved immune to rifle bullets and machine guns.

By their recent successes the British and the French have succeeded in "pocketing" three towns of considerable strategic importance. Thiepval, at the northern extremity of the drive, has been almost surrounded by the British; Combles lies between British forces on the north and French forces on the south like a nut held securely between the jaws of a pair of nut-crackers; Peronne, the most important of all, is cut off from the north by the capture of the road to Bapaume and the French are advancing their lines to the south as well. The present task of the allies is to complete the capture of these three towns and thus compel the retirement of the German army to new positions.

THE SOMME STEAM ROLLER

The French and British have both pushed forward their lines during the week, as indicated by the shaded area, and now have pocketed Combles closely in their advance toward Peronne and Bapaume.

# THE ALLIES' TERMS OF PEACE

BY PAUL MILYUKOV

*The following statement of the Allies' terms of peace, as understood by Russian statesmen, is reported by the Rev. C. F. Aked, D.D., LL.D., of San Francisco, who was in Stockholm as chairman of the American delegation of the Ford Conference. It was obtained at first hand from Mr. Milyukov, the leader of the Constitutional Democratic Party in the Russian Duma.*

*No Russian statesman is so well known in this country as Pavel Nikolaievich Milyukov. He has three times visited the United States. He speaks perfect English, and his addresses in New York and other cities have given him a wide circle of admirers.*

*He was born in 1859. He became known while professor of history in the University of Moscow, and quickly established a reputation as a brilliant writer upon historical subjects. He has long been recognized as an authority upon all Balkan questions. He has more than once been in conflict with the Russian Government. He spent six months in prison in 1901. In 1905, in connection with the revolutionary movement, he was again arrested. His influence in Russia has been steadily growing since the days of the first Duma. It is known that he has more than once refused the portfolio of a Cabinet Minister, and it is believed in Europe that Mr. Milyukov*

*is in line for the Premiership in the next Russian Government.*

*Mr. Milyukov, as leader of the Constitutional Democratic Party, took part in the Conference of the Allies in London last June. On his way back from London to Petrograd he consented to make this frank statement with regard to the demands of Russia. Apart from the weight which attaches to any utterance made by Mr. Milyukov, this article has special significance in view of the fact that he came fresh from his conference with Viscount (then Sir Edward) Grey, and elated with the success of his mission to the British Government.—THE EDITOR.*

**W**E are to have Constantinople. Nothing else is possible. A formal agreement has been reached. Whatever may be the outcome of the war the future of Turkey must be definitely settled. Russia must have the Straits, both sides of the Straits, and therefore Constantinople itself.

The Straits cannot be internationalized. Neither can we consider an international administration of Constantinople.

European Turkey ends. The Turkish Empire remains as an Asiatic Power.

Asia Minor must be divided into different spheres of influence, corresponding in a measure to ethnographic groupings. The western coast belongs ethnographically to Greece. On the other side of the mountains comes the Turkish portion. Part of Armenia is ethnographically Armenian. Greater Armenia will become a Russian province.

The Armenians want Greater and Lesser Armenia joined. I am afraid this can hardly be done, though perhaps Armenia may be organized in accord with the French Government.

Italy claims the southern portion of Asia Minor.

Mesopotamia will become an Arabian caliphate under British influence. Bagdad will be in the British sphere of influence.

It is quite possible to regard this as annexation, and it may be that the neutral world will not at first see the justification of it. But this dismembering of the Turkish Empire is justified by ethnographic considerations.

There will be no conflict with Great Britain over this settlement. Russia and Great Britain are in complete accord.

Poland must be reunited within ethnographic limits. It must be an autonomous state within the Russian Empire. A viceroy may be appointed by Petrograd; the Diet and the whole administration will be Polish. The Poles will have representation in the Russian Duma. All matters touching the army, the most important financial questions, and foreign affairs, will be in the hands of the Imperial Government, but there will be Polish members in the Duma.

It is not entirely clear what the Poles themselves want. Some wish to remain within the Russian Empire; but there is doubt as to the amount of self-government they demand. Between the moderates among the Poles and the Russian party which I represent there is little difference of purpose. There is, to be sure, a more extreme party in Poland which seeks entire independence. Nationalist considerations, historical and sentimental, are not the only factors which have to be taken into account; the economic controversies play considerable part. There is a party which desires to

retain the Russian markets, and another which is willing to sacrifice the markets for the sake of political independence.

It can be definitely stated that Russia cannot tolerate the idea of an independent Poland, even as a buffer state between Russia and Germany. Such a plan, if carried out, would not make for the peace of Europe. Poland has ancient, historic claims on portions of Russian territory east of the ethnographic limits of Poland. If Poland were independent Germany would foster those claims and thus foment a new war. The new autonomous Poland must include the old Kingdom of Poland except the Lithuanian-speaking parts and two or three Russian-speaking sections. The real difficulty centers about a small section in the north, which is ethnographically German. No solution of this difficulty has yet been found.

The Jewish question in Poland must be regarded as a matter of internal politics. The Jews may have liberty and equality, but they cannot be considered a nation within a nation. The Poles cannot permit them to use their own language in the schools nor in public life.

Palestine must come under some form of international government. I do not believe that Palestine has been promised to France.

There is much undecided in the Balkan situation. Rumanian questions are to be left largely to the decision of Rumania. There is no objection on the part of Russia to the acquisition by Rumania of the Rumanian part of Austro-Hungary. But the Balkan question as a whole may be expected to clear before peace is made. I have myself hoped and worked for some sort of federation of the south Slav states. In 1912 the chances of a Balkan League seemed promising. Now everything is again confused. The federation, if it develops, should leave the present dynasties as they are.

After the war Finland will obtain its old rights and be governed in accordance with its old constitution.

Italy must come down the eastern coast of the Adriatic. Strategic reasons demand that Italy shall be able to prevent any other power establishing a strong naval base in the Adriatic. Italy must have the coast down to Fiume, and the islands in that section, thus bottling up Fiume. Further south Italy is to have both islands and coast from Zara to Sebenico. Other portions of the coast may go to an internal state, either Slav or Slav and Hungarian.

I may admit that such a division of territory takes little account of the wishes of the population. It is not probable that a plebiscite would approve. In this matter, however, strategic and military considerations prevail.

Stockholm

#### WHAT THE WAR WILL DO TO PARTS OF THE MAP OF EUROPE

M. Milyukov confines his attention to eastern Europe. The gray boundaries are those he suggests. Poland—the ancient kingdom of Poland *minus* its Lithuanian parts—is to be semi-autonomous. It would include Posen and Western Galicia, but the fate of East Prussia—where the question mark is placed—is still in doubt, according to M. Milyukov. Rumania would get the Rumanian parts of Austria-Hungary, Italy certain strategic sections of the east coast of the Adriatic, and Russia Constantinople

#### THE PARTITION OF WESTERN ASIA

The all these boundaries are purely conjectural, the map shows approximately the results of the program M. Milyukov outlines. R—Russian, G—Greek, T—Turkish, I—Italian, F—French, B—British. Syria is here given to France in accordance with a long recognized French ambition, the M. Milyukov does not endorse this expectation. Lesser Armenia might be autonomous. We have divided Persia between Russia and Great Britain as the country has already been partitioned into spheres of influence.

# WHICH SIDE AND WHY?

INDEPENDENT READERS ARGUE ON ALL FOUR SIDES OF THE CAMPAIGN

HE folks who decide and do things in this world are usually those who can keep their thoughts in order and say what they think without wasting

words. So when, in *The Independent* for August 28, we asked our readers who had made up their minds politically to tell the rest of us whom they had chosen to vote for and why they had chosen him, and not to take more than a hundred words in doing it, we were really taking a small but select straw vote.

The letters are in—from forty-two states, and all but two from voters. Here's the poll. Wilson leads with 146 votes—64 per cent of the total. Hughes has only 61. Hanly, the Prohibitionist, Benson, Socialist, and several disgusted voters who don't state their choice make up the total of 229 letters.

The votes came in all sorts of shapes, in letters and on postcards, labeled "Which Side and Why" and, primely, "For Whom and Why" and "Who Are You For and Why?"—a title for which we must disclaim responsibility with some ostentation, lest Mr. F. P. A. in the *New York Tribune* pounce upon us in the course of his crusade against pronominal atrocities.

But we ourselves must be concise and pointed, and proceed.

## THE MAJORITY SPEAKS

PRESIDENT WILSON'S biggest bid for reelection, in the minds of Independent readers, is the legislative record of his party. "They have given us in three years more than the G. O. P. gave us in forty years," writes S. M. Stafford of Fitzgerald, Georgia. Forty per cent of all the Wilson voters put that among their reasons. A number of them also pay tribute to the President's power as a leader of his party, and contrast it with the danger of a reactionary Republican congress which Hughes could not control.

I shall vote for Wilson because he has demonstrated his ability to secure important reform legislation over a Democratic congress that does not dare oppose him even when it is out of sympathy with his purposes. The Republican leaders, with the established view that the President must have no policy distinct from that of his party in Congress, have never yet been successfully led by a man with progressive ideas, and I am afraid to trust even Hughes with the job; for many of the Old Guard will be in both houses in the event of a Republican victory. MAX SOUTY  
Memphis, Tennessee

Wilson's firmness, once he has decided on a course of action, in the face of criticism and opposition, seems to gratify his adherents particularly.

"He kept us out of war," the slogan that captured the St. Louis Convention, is echoed by nearly thirty per cent of the writers. Many of them add—and emphasize—"with honor," and declare their satisfaction with the statesman-like course which they believe the President has followed. It is a woman voter who puts the peace argument most energetically:

In accordance with your suggestion, I will state in three sentences why President Wilson should be reelected. Here they are: He kept us out of war. He kept us out of War! HE KEPT US OUT OF WAR!!

MRS. A. C. HINDMAN

Boise, Idaho

It is interesting to see how general is the response to the Wilson philosophy both of domestic government and foreign relations. Almost one in three of the Wilson letters call attention to his independence of partizanship, his personal uprightness, his international idealism, or his fidelity to democracy with a little "d." "I think his heart beats for labor," writes Mrs. Rella Moran of Winfield, Kansas. "Wilson, like the Allies, is fighting for human rights, but without spilling blood," says Alfred E. Green of Duxbury, Massachusetts. "I would rather trust the mistakes of a man having a warm sympathy for the oppressed like the poor Mexican deprived of his land than an iceberg trained in technicalities of the law," declares J. C. George of Walla Walla, Washington.

I am supporting President Wilson for his great humanitarianism and proven ability. He is laying the foundation for permanent prosperity for all of the people all of the time. He has been as nearly non-partisan as it is possible for a President to be. I consider him a practical idealist, and if given four years more he will have taught our people that there are other things more worth while than money, and

have set such a high standard of public service that the benefits will be felt for generations.

G. N. PRENTISS

Grand Rapids, Wisconsin

"Wilson's first message on Mexico is the greatest utterance of idealistic internationalism since Gladstone's reply

HE KEPT US OUT OF WAR

to Palmerston," is the opinion of Frank Seay of Dallas, Texas. And an interesting comment on the success of the Mexican policy comes from Edwin R. Bentley, superintendent of schools in Alpine, which is near Boquillas in the Big Bend country of Texas, which has once been raided by Mexican bandits:

Mr. Wilson has put the complicated border situation under control without a costly war, which the jingoes wanted. Without consideration of his unexcelled legislative record, we can not believe that the country will exchange a president of proven and workable foreign policy for an untried man while the conflagrations in Mexico and Europe continue.

Julian F. Hayward, of Paonia, Colorado, adds that the President is an efficient idealist:

I vote and hope for the President's reelection because I endorse emphatically his constructive radicalism, practical American idealism and appropriate appointments, such as Whitlock, Lansing and Brandeis.

Because of his marked ability to lead and yet not to be too far in the lead; to reconcile the doers and dreamers; to resist reactionaries and the importunities of the mammonistic and gadarene herds.

The praise of Wilson's appointments to public office is echoed by a number of correspondents.

About a fifth of them repeat the well-worn but always servicable maxim about swapping horses.

It cannot be denied that this is one of the most critical periods in the world's history. Neither can it be denied that the United States has never been so prosperous or so powerful. I should feel myself an ingrate and a fool if I failed to sustain an administration that had brought us so safely thru such perilous days.

DAVID HUNTER MILLER

New York City

And the Rev. R. P. Gibson of Croton Falls, New York, points out that Wilson's own attitude makes this particularly true:

His openmindedness and readiness to learn from the experience of his first term will certainly qualify him for a yet stronger, wiser and better administration both in home and foreign affairs, during the years of almost unparalleled opportunity ahead.

We ought to quote all these letters

Cartoons drawn for *The Independent* by W. C. Morris  
CLIMBING ALL THE TIME

in full, but we can't. Here are a few crisp summaries *in toto*:

Wilson for mine!

1. Because his administration has been constructive.

2. Because he is honest in thought and act.

3. Because he has solved the problems presented to him with as few errors as is humanly possible.

P. S. Nominally I am a Republican.

FRED MONSUR

Los Angeles, California

TO THE HIGHEST BIDDER

I am for President Wilson.

1. Because he refused to wage war against a weaker nation—Mexico—upon the least pretext.

2. Because of the warless victory he won over Germany in the submarine issue.

3. Because of the progressive legislation which the Democratic Congress passed.

4. Because he placed a progressive man upon the Supreme Court bench.

5. Because he vetoed the Immigration bill.

A. H. L.

New York City

I am for Woodrow Wilson because he moved the capital of the United States from Wall Street back to Washington, and then successfully forestalled its transfer to Berlin. Also because the seat of government has not been permitted to shift to Rome. The Catholic Church has been treated with courtesy and fairness, but that did not prevent the recognition of Carranza.

We shall not buy "a pig in a poke." Even the detested "vacillation" may prove less dangerous than a certain attitude of standpat obscurantism.

WILLIAM Y. WARD, M.D.

Ivanhoe, Texas

The decision of the Woman's Party to support Hughes and fight Wilson does not seem to worry our women voters. Nearly three-fifths of them vote for Wilson whether or no, and Mrs. Dora Kerschner of Winfield, Kansas, voices their sentiments when she writes: "I am an ardent suffragist, but no Woman's Party can get my vote away from Wilson."

As for the avowed Progressives who want Wilson—and there are a number of them—they run the gamut from the disgruntled tone of this letter:

There is little choice between rotten apples, but I'll vote the Democratic ticket. The best party the Progressive was temporarily defeated.

B. F. REA, JR.

Lafayette, Alabama

to the well-satisfied tenor of this:

I was a Progressive four years ago; am for progressive principles and measures always; therefore am for Wilson for a second term. Wilson has ability as a statesman, is a man of conviction, of courage, and is devoted to the interests of the people. The progressive legislation enacted under him is of the greatest value, and—he has preserved peace with honor.

D. H. FINE

Canonsburg, Pennsylvania

The most thoughtful of the Progressive letter-writers puts his case thus:

This is the letter of a voter who belonged to the National Progressive party while

there was one and who cares nothing for the traditional differences between the Republicans and Democrats. My vote will go, therefore, to whichever candidate "bids highest" in the direction of the radical policies in which I am interested. Wilson bids high, and I would vote for him if the election came today. The reasons are: 1. Because he isn't ashamed to show an interest in the progress of liberty and the interests of humanity outside the borders of his own country. He may be overscrupulous, but that is a refreshing change from the underscrupulous diplomacy which has ruined Europe. 2. Because he vetoed the selfish immigration bill. 3. Because he prevented an act of national dishonor in the matter of the Panama Canal tolls exemption. 4. Because he carried thru the child labor bill. 5. Because he appointed Brandeis to the Supreme Court. 6. Because his revenue policy rests upon direct rather than indirect taxation. 7. Because he is willing to buy the Danish Islands. 8. Because he has been able to boss a rapacious and idiotic Congress.

I had two other items on my list, Wilson's support of woman suffrage and his endorsement of the League to Enforce Peace, but Mr. Hughes has matched those bids by coming out for both. Before the end of the campaign Hughes may broaden his program to include still more things that I favor and in that case he may get my vote. It all depends, as I said before, on who bids highest. And there are thousands of ex-Progressives who feel about as I do.

BULL MOOSE

Less than a fifth of the Wilson voters speak especially of their disappointment in Hughes or their distrust of him, but there are some vigorous condemnations of his campaign speeches. Says Eugene D. Hale of Nutley, New Jersey:

The most glaring example of timidity, vacillation and ineptitude I have ever seen is the Hughes campaign.

From Los Gatos, California, S. W. Etheredge disposes of the matter epigrammatically:

I am for Wilson.

Hughes talks much and says little.

Wilson talks little and does much.

Eugene Bouton of Bloomfield, New Jersey, goes one step further:

Most of the things Hughes says ought to be done Wilson has done, most of the rest ought not to be done.

Wilson has had more and better experience as an executive than Hughes. He

PUSSYFOOTING

has done as nearly right as any President could, and most people think so. Hughes's meaningless platitudes, overstatements, "querulous quibbles," and suffrage court-ing show too small a caliber for the presidency.

But of all the blows showered on the "hundred per cent candidate" this is perhaps the bitterest:

Wilson's constructive work, lack of a Republican program and the very undignified manner of Mr. and Mrs. Hughes being

photographed in the mines and factories of the country with their forced smiles should give Wilson every state in the Union.

EDGAR B. WALTERS

Garden City, New York

Will Mr. Hughes's campaign managers please ask him to unforce his smile?

#### THE HUGHES VOTE

WILSON has failed; Hughes will make good. That is the argument of the Independent readers who will vote for Hughes. Nearly two-thirds of them emphasize either one half or the

HE MEASURES UP

other or the whole of this proposition. Confidence in the Republican party comes first among the reasons given by a fifth of these voters, while less than a sixth stress their preference for concrete Hughes policies.

When the Independent laboratories have finished their analysis, the "100 per cent candidate" looks something like this:

Personality and record .....	33%
Down with Wilson .....	32%
G. O. P. ....	20%
Policies .....	15%
	100%

But most of the voters give several reasons for their choice. Here is a concise summary of the case for Hughes, which touches all four points:

1. I like Republican party government better than Democratic.

2. Wilson's conduct of affairs, tho conscientious and well-intentioned, lacks vigor, decisiveness and consistency.

3. I believe Hughes has these qualities of vigor, decisiveness and consistency which Wilson lacks.

4. Wilson's action in forcing Congress to pass a law at the demand of the laboring men to avoid a strike is a veritable opening of Pandora's box. It means trouble ahead.

CLIFFORD H. SMITH

Burlington, Vermont

The dissatisfaction with President Wilson's record is based partly on his handling of our foreign affairs:

Wilson's Mexican stand is the most disgraceful in the history of American diplomacy. His "forte" is writing diplomatic notes for home consumption but doing nothing.

He preaches humanity but condones every shade of inhumanity in Mexico, Belgium, Poland, Ireland, etc., with his imbecile and deceitful slogans of "watchful waiting," "strict neutrality," "non-interference," "hyphenated Americans," "Americanism," etc.

A. MICHEL

Ireland, Indiana

Regardless of justice or national honor, out of every difficulty he seems always to seek the route of least resistance, and had his blunders in dealing with Germany or Mexico led to war, a stronger man would

have undoubtedly been required to save us from national humiliation.

J. A. PEARSON

Sedro Woolley, Washington

Mr. Wilson's "woeful wabbling" comes in for especially frequent comment. Here is the tersest statement:

I am for Mr. Hughes for president because I believe Mr. Wilson has no policy other than the day may bring forth, and I fear the ultimate results of such a lack of policy.

J. G. LUCAS

Madrid, Iowa

And here is the most specific:

The nation suffers seriously from woeful wabbling. The Democratic platform of 1912 pledged the nominee to one term, to free canal tolls, to the guarantee of protection to our citizens in person and property at home and abroad. Mr. Wilson repudiated all. He opposed preparedness as hysteria till Roosevelt awoke the nation, then he called for the greatest navy on earth, thus out-hysteriaing hysteria. He opposed a tariff commission, later favored it. He said no one while he was president should interfere with blood-letting in Mexico. Afterward he invaded that country and after the death of our soldiers and Mexicans he scuttled with nothing accomplished and conditions worse and growing worse. Such a state of mind is far from reassuring, and four more years of it would spell disaster. Mr. Hughes's record as citizen, as attorney, as governor, as justice, is the antithesis of woeful wabbling. Therefore elect Hughes.

WILLIAM WILLARD

Carrollton, Mississippi

The Democratic appetite for spoils gets such frequent condemnation that it is evident that Mr. Hughes struck home in his early campaign speeches.

Pocketbooks count pretty largely in every election. A voter who signs himself a "laborer" writes thus:

Mr. Wilson promised lower tariff and lower cost of living. Result: Higher cost of living—a remarkable guess. Will give Mr. Hughes a chance.

Hughes, the man, stands pretty firmly on his record as governor. Henry A. Reed, of Elmira, New York, wants him because he is the next best to Roosevelt whom we cannot have and because he promises to be better than Wilson, of whom we have had enough,

but most of the letters are more direct in their admiration. "The sound of his voice is to me as inspiring as the commands of my generals were on the fields of Chickamauga and Nashville," says A. J. Goff, of Denver. S. H. Miller, of South Manchester, Connecticut, thinks "he is practical as opposed to the theoretical, impractical Wilson" and "a better judge of men."

Here are several clean-cut characterizations:

I think him the equal in personal character and in intellectual ability of President Wilson (which is saying a great deal for him), and his superior in administration or executive ability. His record as governor shows that he has the courage as well as the ability to grapple with governmental abuses and carry out needed reforms—qualities peculiarly needed in the present stage of our national life.

J. H. G.

I am for Hughes because his record shows that he is a man who, in a crisis, will follow a decisive course of action. I dislike Wilson's failure to formulate and follow one definite policy. It is because I believe Hughes will formulate and carry out some definite policy that I favor his election.

CORWINE D. EDWARDS

Columbia, Missouri

And here is another from the president of the Florida Agricultural and

Mechanical College for Negroes, Tallahassee, Florida:

I am for Hughes for President, because his mind is free from prejudice—social or racial. He has correct economic views, and a strong sense of justice. His is not a "single track mind of the narrow gauge variety." Hence, I am for Hughes.

THE OAK OR THE REED?

Mrs. H. O. Garvey, of Topeka, believes in the G. O. P.:

I will cast my first presidential vote for Mr. Charles E. Hughes because of the history of the Republican party in national affairs, and because the record of Mr. Hughes's private life and public service makes him a worthy standard bearer.

But we have also the other extreme:

I am going to vote for Hughes altho up to the time of the "Lusitania" disgrace I was a warm supporter of Wilson. I hate and fear the Republican Old Guard as much as I did in 1912 but I see they have developed some sense of caution and respect for decency. I grasp at the straw of hope that Hughes will develop a quality of leadership which our statesmanship needs.

ELECTRICAL ENGINEER

And this, perhaps, is a fair sample of the average Republican:

1. I regard the policy of protective tariff, in normal times of peace, as vital and indispensable to our material prosperity.

2. I am persuaded that the interests and welfare of the United States are in more capable hands when under Republican than under Democratic rule.

L. D. STECKEL

Greensburg, Pennsylvania

When it comes to Hughes's policies the woman suffrage plank gets little attention. One enthusiast makes the simple and all-sufficient statement, "I am for Hughes because he favors the Federal amendment for woman suffrage," but as she is unfortunately disfranchized the vote can hardly be quoted at par. Among bona fide voters the issue gets scant attention. It is protection for industry and protection for life, efficiency, and fidelity to the principles of

FOR GOOD REASONS

the civil service that count most heavily. Here is a typical summary:

1. He stands for a protective tariff as against the free trade policy of the present administration.

2. His record shows he refused to surrender essential principles of honest and wisely administered government, for political expediency.

3. He believes in an honest administration of the Civil Service Law.

4. He stands for plain American rights, at home and abroad, as constructed with the weak and ever-changing attitude of the present administration, with respect to our foreign relations, especially Mexico.

5. He is conscientiously opposed to government extravagance.

6. He will not surround himself with inexperienced, weak and visionary advisers.

CHARLES B. DEEVER

### THIRD PARTY MEN

BESIDE the voters who are sure of their allegiance to either Wilson or Hughes there are a few who are completely disgusted with one or the other, but—in their letters, at least—do not commit themselves to any other candidate. Then the Socialists and Prohibitionists constitute about seven per cent of the total number of voters in our letter-ballot box, splitting the delegation almost equally. We shall let the Rev. Charles M. Sheldon, of Topeka, speak for the Prohibitionist group:

I am for Hanly and Landrith because:

1. They are, personally, of the highest character, capable, if elected, of statesman-like administration.

2. The Prohibition party they represent has in its platform every essential for the welfare of the Republic that the other party platforms contain.

3. They stand for the greatest moral issue before the people, national prohibition. There is no such issue in the other parties.

The Socialist voters are of several sorts: the protestants against things as they are, those who believe in the socialistic economy, and, especially this year, those who believe that socialism is the most effective agency for world peace. The best summary is this:

I believe Allan L. Benson should be elected President, because:

He represents the only party which believes in abolishing war by abolishing its cause. His is the only party which believes war can be abolished.

He represents the only party which believes undeserved poverty should and can be abolished.

He represents the only party which has a definite set of principles and policies and stands by them.

He represents the only party in which the issues are not "hazy" nor "party lines loosely drawn."

He is the only candidate who represents a democratic, a republican and a progressive party.

And, finally, he is the only candidate who represents his party at all.

FREDERIC W. RAPER

Camp Hill, Alabama

There. We have presented both sides—and both in this case means four sides. Shall we conclude that Wilson will have a walk-over? Or that the "ins" are more outspoken than the "outs"? Or that the G. O. P. voters among our readers are lying low? Or that they are hesitant because Hughes has been a bit disappointing? Or shall we not conclude at all? Perhaps that would be safest—but here is the end of our space.

# *The Independent-Harper's Weekly* NEWS-PICTORIAL

*Four photographs from American Press*

*One round of a bomb fight in the trenches in France—the Germans are bombing and the Highlanders are lying low.*

*The defenders answer by firing one of their little trench mortars. The missile is just sailing out over No Man's Land.*

*The bomb bursts over the German trench with a spreading cloud of gas and smoke. The killers begin to look for results.*

*Struck home! The observer at the periscope makes the other Tommies chuckle at his report of the Boches' discomfiture.*

"Sleeping fink." The strikebreaker's lot is not a happy one even if he is not molested by strikers or their friends. He is given a bed and food, but hardly of the best, and is often cheated and roughly handled if he tries to protest.

© International Film

Here is a "fink" in the rough—without the white cap and coat that helped the new Subway guards to look the part—working an Elevated train. As few of the motormen struck, raw hands gave little trouble.

© Underwood & Underwood

The parade is a universally recognized way of getting public support. Eight thousand strikers and sympathizers marched thru New York on September 14—with never a band—to prove how serious they were.

The golf "gallery" is unique. Neither baseball, nor football, nor tennis, nor hockey, nor track, nor rowing gives spectators a chance to wander thus over green fields.

Lerick

Charles Evans, Jr.—"Chick"—of Chicago, climbed last week to the topmost pinnacle of American golf by adding the national amateur title to the open championship.

Lerick

"Bob" Gardner, last year's champion and runner-up to Evans, playing out of the rough on the way to the tenth, at Merion.

# THE WAKEFUL HUSBAND

BY CHRISTOPHER MORLEY

How blue the moonlight and how still the night.  
Silent I ramble thru the whole dear house  
Setting aright in happy ownership  
Whatever may lie out of its due place.  
Books in the living room I rearrange,  
Then in the dining room my pewter mugs,  
And put her little brown nasturtium bowl  
Where she can see it when she telephones.  
Up in my den the papers are a-sprawl  
And litter up my desk: these too I sort  
Thinking, tomorrow I will rise betimes  
And do my work neglected. . . Tiptoe then  
I pass into the Shrine. She is asleep,  
Dark hair across the moon-blanced pillow slip.  
Her eyes are sealed with peace, but as I touch  
The girlish cheek, her lips are tremulous  
With secret knowing smiles. In her boudoir  
(Her "sulking room" I call it: did you know  
It means that?) I wind up the tiny clock  
And stand at her Prayer Window where the fields  
Lie listening to the crickets and the stars. . .

Alas, I only hear the throb of pain  
That echoes from the moonlit fields of France.

Into our kitchen, too, I love to go,  
Straighten the spoons against our break of fast,  
Share secrets with our dog, the drowsy-eyed,  
Surprize the kitten with some midnight milk.  
The pantry cupboard, full of pleasant things,  
Attracts me: there I love to place in line  
The packages of cereals, or fill up  
The breakfast sugar bowl; and empty out  
The icebox pan into the singing night.

Then, as I fixed the cushions on the porch,  
I wondered whether God, while wandering  
Thru his big house the World, householderwise,  
Does also quietly set things aright,  
Gives sleep to sleepless wives in Germany  
And gently smooths the battlefields of France?  
Dear Father God, the children in their play  
Have tossed their toys in saddest disarray—  
Wilt Thou not, like a kindly nurse at dusk  
Pass thru the playroom, make it neat again?

## ESKIMO ON THE TALKING MACHINE

**T**HIRTY tons of specimens—zoölogical, geological, ethnological—have turned up at Nome, Alaska, together with six members of Stefánsson's expedition which has been exploring the western Arctic Ocean for the last three years. This is the first time in two years that authentic word has come from these men, the southern branch of the party of fifteen scientists who were sent out by the Canadian government in 1913 to find out all there was to know about the waters and hypothetical lands lying north of Alaska and western Canada.

Stefánsson himself, the head of the expedition, is still at work in the far North, and may stay another year. Dr. R. M. Anderson, a graduate of the University of Iowa, is in charge of the party which has just reached Nome. He is a mammalogist, and he had with him a geographer, Kenneth G. Chipman; a geologist, John J. O'Neill; an ethnologist, Diamond Jenness; a topographer, John R. Cox; a naturalist, Frits Johansen; and a photographer, George H. Wilkins, who had the unusual experience of taking war pictures in the Balkan Wars before he penetrated the solitudes of the north.

Dr. Anderson sets forth the results of his scientific work briefly enough in his report. He says nothing at all about the exciting experiences he had; but his letters tell

parts of the stories. For instance, he and one companion tried to take the winter's mail from the party five hundred miles to Fort Norman by dog team. The trip lay thru a rough, barren and uninhabited country, with neither trail nor guide. A huge white wolf attacked his companion, lacerating the muscles of his arm.

The going was very, very bad. For instance:

We entered upon river travel again on February 16, and found that our troubles were just beginning. For 12 miles the river ice was exceedingly rough for the entire width of the river, 400 or 500 yards, so that in hardly any place could a toboggan have been taken across without stoving the bottom on the jagged ice ridges. The banks were so steep and rugged as to be impassable with sled or toboggan, so we were obliged to follow closely along the base of the steep boulder bank of the river, just inside the rougher ice. The snow was very soft and hip-deep, so that we were not able to make a good trail even with snowshoes, because of the loose boulders and ice cakes. We were compelled to pack the snow first with snowshoes, and then the rough edges of the ice cakes would have to be trimmed off with our ax. It was slow work.

The dogs refused to pull very hard, as they kept continually losing their footing and stumbling into holes, concealed by the soft snow. Whenever a sled was stopped, we would have to start it ourselves before the dogs would pull. After about half a mile of this sort of thing we were obliged to drop half our load and bring it ahead by a second trip. We made only 2 miles on this day, February 17.

He goes on to tell how they often were compelled to travel five miles in order to make one mile in a straight line; how it was repeatedly necessary for them to thaw out their frost-bitten faces with bare hands hastily snatched from warm mittens; how their dogs absolutely refused to work when they were half way between Fort Norman and their base camp—250 miles from either; and how the two men harnessed themselves to the toboggan, and after having been 59 days on the trail managed to return to their camp.

The most interesting scientific work was done with the phonograph among the "blond" Eskimos discovered by Stefánsson in 1910. Jenness, with an Eskimo companion and guide, followed the Barren Ground caribou as they migrated inland on Victoria Island to the home of these Eskimos, and settled down to study them in their own environment for several months. He lived their life, ate their food, shared in their games and ceremonies. He came away with phonograph records of songs and spoken words, with careful translations and transcriptions. He played his fifty records to the mystified natives often enough to be sure that his text was letter perfect. A pretty collection for any one's talking machine!

While this and other ethnological work was going on members of the party made a number of photographs.

#### ONE OF THE NORTHERNMOST OF NORTH AMERICANS

AMONG THE ESKIMOS OF NORTHERN ALASKA AND CANADA DR. ANDERSON AND STEVENSON HAVE LIVED ALMOST CONTINUOUSLY SINCE 1908. DR. ANDERSON, BACK AT SEATTLE, DECLARES THE NATIVES BIG AND FIERCE MORE THAN WHEN HE FIRST VISITED THEM.

# MY HOME

BY A NEW YORK STREET-CAR STRIKER

**O**F course you can't get much into three rooms, anyway, can you?

As you see, these aren't very nice rooms and the furnishings are simple—bed, bureau, baby's bed and a few more necessary things. But I don't think we could have got together that much. Most of these things are gifts. The tenement rents here (305 East 100th Street) are about the average. I pay \$12 for the three rooms. I've got a good record with the Third Avenue surface line, where I've been a motorman nearly two years, after having been a conductor for three on the Second Avenue line, ending with a clean record there—if I hadn't, I couldn't have got a job on any other city line. Well, you can see right here all I've got out of it. You see everything I own except three dollars. I've got twenty due tomorrow. My wife and I figure that by stalling off the landlord we can live twenty days on that, and if the strike isn't over by that time she says we'll borrow. I say I'll get another job, but take it from me it won't be railroading here. I guess you can see why I say that a man who's railroading here in New York oughtn't to marry.

He can't afford to, that's one reason—he can't live a normal life even if he hasn't any children. And raising children these days I figure is pretty much a matter of having money.

And then a fellow can't have any time with his family. I never have a Sunday off, and of course no man who hasn't been with one of the companies for ten or twelve years and stands well with the starter ever expects to get a holiday like Labor Day off. There isn't any use of making an application even if you can afford to miss a day, because if your application is first it may get considered last—there isn't any system. It's about the same with all the companies; we fellows that have worked on more than one think the same people control them all—things are that much alike. I never see my little girl at all except in the morning when I say "Good-bye, Jeannette." I don't get in at night until long after she's asleep.

My wife is what I consider a very economical woman. She never goes to shows or buys fancy dresses, and we eat plain food. I don't see how we could spend any less. And I don't drink a thing. I suppose it seems strange to you to see a motorman that doesn't drink? Well, I understand now why they drink. I'll try to tell

*New York, in the midst of its second street car strike in a month, is inclined to dismiss both managers and men with disgust at their failure to keep their agreement to arbitrate. But public sympathy was undoubtedly with the men in the first strike and perhaps leans in that direction in the second, and apparently for good reason, as this article indicates. We asked Donald Wilhelm, who has already contributed several times to these pages, to put the story of a striker before Independent readers. Here it is, just as the motorman told it.—THE EDITOR.*

you about that later. I wish the public could understand, but nobody understands, I guess, except the policemen, and most of them have been motormen. I'd be a policeman myself if I hadn't flattened my insteps working along the running boards of summer cars.

**W**ELL, one minute I'm buying uniforms. There's something about this uniform business we fellows don't understand. We have to buy all our uniforms, on both lines, and others, I guess, from the same store. And we have to give a receipt for every purchase to the boss. That's funny, isn't it? A man comes from the store to inspect us and he tells us when we've got to buy new uniforms. Once on the Second Avenue line while I was on the extra list I couldn't scrape up enough money to get a new uniform, tho I wasn't married, and I petitioned the boss. He said I could have three weeks more in which to get it.

Well, one week you're buying uniforms. A new man gets his winter uniform in January, say. Three or four months later he has to get a summer uniform. It's uniform one week, and the next week you're laid off, perhaps because you put in a sick note on Saturday, which is the busy day, and you lose a lot of time reporting to the boss at 11 o'clock to explain accidents—well, by the end of the year you're lucky if you have twenty dollars to your name. And you know all the time that about three years of railroading spoils you for every other job there is.

It's this uncertainty that makes life hard for you if you've got a family—I'm never sure of getting a full week's pay, but my wife stretches the good weeks over the bad ones and we stick it out. I think the average probably is around fifteen dollars for the younger men. The older men

get a few cents more an hour. When I was on the extra list I have drawn as low as \$9.50 a week. We get twenty-six cents an hour the first year—they raised it from twenty-five just before the first strike because they couldn't get men; you get twenty-nine the second year, but you only get thirty after five years. They know if they can keep a man five years he can't do anything else. A full week's pay for a man who has served more than a year is \$20.30—that means seventy hours of actual work, ten hours a day, but it means much more than that away from your home.

It takes seven days to break you in if you are a conductor—you spend them learning, in the school and on the cars, and you receive no pay. If you're a motorman you spend twenty-five days. After I had worked twenty-five days without pay I was asked to lay down a deposit on my badge and buttons and to buy a new uniform. That amounted to something over twenty-five dollars, and I thought it would be a fine job until my enthusiasm got a shock when I went down to get my uniform. The clerk in the store was very polite until I told him I wanted a uniform. Then he shoved me off to the uniform department and a clerk just threw the uniform at me. Then I got put on the extra list.

**I** REPORTED at five every morning and either got sent home or waited on the bench until eight, once in a while getting a car. Then I reported at eleven and stayed till one, and then at four and stayed till six, sometimes being held on reserve until eight or after being three hours on reserve being told to come back at ten to finish out a run. If I was late at any of these hours my record was marked with a "lost car," just as if there had been a car waiting for me, and I had to go on the carpet and explain. After eight months of this I received a steady car.

I received a car that averaged eight and a half hours a day. That means I was paid for eight and a half hours for which I had to be on call fifteen. This car was what we call a tripper—I was out from six till eight, from eleven till two, and from five till about nine—that's fifteen hours altogether that I had to be away from my wife and my little girl. And if I had an accident on the morning's run I lost three hours at noon reporting to the boss. Ten hours is a full day's work, but you seldom average ten hours at work. That's why we are willing to take the long runs. I've been ten hours on a platform with

out a meal and without getting off except to change ends. You get home perhaps at midnight and you eat your supper and go to bed.

Now, what I want to make clear is that all this gets in on you. You come home surly and rough. I can understand why motormen drink when they're thru working. Why, I've even given a short answer to a stranger to the city that asks me a decent question. The people that understand what we're in for are the poor people that see a motorman going up the line at six o'clock, say, coming down to pick 'em up at eight and still on the job at nine in the evening.

Now, we're trusted by the public to carry them safely thru crowded streets. We know that the public blames us for everything, and we know that there are inspectors and "shoo-flies" watching us all the time.

[DON'T think the public understands—bookkeepers and clerks and fellows such as that, who work in better conditions—they don't know that when a man goes to work rail-roading in New York City he's assumed to be a crook. You get to feel like a hunted dog. If you're a motorman you may know all about your car—you can tell just what's the matter with a car from the way its motor is kicking or its switches are blowing, why the wheels won't revolve when the power's on—but if an inspector says you're wrong, you're wrong. At the corner of Lexington avenue one day, because it is hard to judge how much of a swing a big car makes on a curve, I threw in the brakes to save an automobile. My car stalled—hit a breaker, which is the place where the plow is freed from the channel rail. It took just a minute for another car to push me off and I explained to the inspector, but he turned me in and I lost my noon run explaining. The inspector didn't understand—he didn't know anything about a car.

They get their jobs by favoritism—there isn't any system. Most of 'em have been "shoo-flies" in uniform, carrying tales to the boss. I know one who got sold by inviting men to a saloon for a glass of beer when they were off duty but had their uniforms on, then turning 'em in. The company says you got to go home and change clothes if you want to go into a saloon. I know another one that came over from the Second Avenue line and found eight or nine men who had been discharged there for offenses varying from smoking on an empty to falling to count fares. He reported them to the boss and they all got fired and he was made an inspector.

## He Reigns Over Millions of Tables, Almost from Pole to Pole

This Quaker figure denotes a rare grade of oat-food, which dominates all the world over.

Even in the home of Scotch oats.

In some distant places this brand is expensive. Other oat foods may cost half. But if connoisseurs live there they send here to get it.

With true oat lovers, nothing can take its place.

Your nearest store has these same luscious oat flakes. You have only to ask to get them. And they cost you no extra price.

Are you serving an oat food less fragrant and flavory—a far less inviting dish?

If so, don't you think you should change?

## Quaker Oats

### The Luxury Vim-Flakes

The extra quality of Quaker Oats is due to the following facts:

This brand is flaked from queen oats only—just the big, plump grains. We get but ten pounds from a bushel. No puny, stunted oats, insipid in flavor, ever go into Quaker.

So that wonderful flavor which Nature gives oats is here in supreme degree. And this well-loved vim-food—the world's premier breakfast—is found at its best in this dish.

Serve it tomorrow morning.

10c and 25c per package

Except in Far West and South

## A \$2.50 Aluminum Cooker

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us our trademark—the picture of the Quaker—cut from the fronts of five Quaker Oats packages, or an affidavit showing the purchase of five packages of Quaker Oats. Send \$1.00 with the trademark or affidavit, and this ideal cooker will be sent to you by parcel post prepaid. We require the trademark or affidavit as assurance that you are a user of Quaker Oats. The trademarks have no redemption value. This offer applies to United States and Canada. We supply only one cooker to a family.

(1399)

Address The Quaker Oats Company 1708 Railway Exchange, Chicago

Some one is hanging around all the time in the barns and on the lines listening to everything you say, and you're taken to be guilty every time. I'll explain how this works on your nerves after awhile.

You see you know you're always in the wrong and that there isn't any appeal. Say you're a conductor. Well, a woman with a small dog gets on the car. You tell her politely that there is a company rule that says no dogs on cars. You got to tell her, because the chances are there is a spotter on the car or that an inspector will see the dog, and then you'll be turned in. So you tell her. Then a common scold—you don't know how many there are until you've railroaded—breaks in and says you're—well, he calls you some rotten name and you have to keep still. And she says you're "fresh" and she goes off and reports you as "fresh." Well, you're suspended on her complaint. That's all that's needed. You're suspended until you go and find her, even if she's gone to Kentucky, and apologize and get her written forgiveness. If you can't get it, you're liable to be laid off permanently or be sent to school without pay for a couple of weeks. No, no enemy is mean enough to report you like that.

School means that you sit in a room studying the rule book without speaking to any one, like a bad boy with his face to the wall. You can't read a newspaper even. The New York Railways Company have made big, healthy men write a thousand times in a book "I did not turn my ventilators," "I did not turn my ventilators," etc. There isn't any prescribed punishment—everything depends upon the mood of the boss. Perhaps you'll be set to scrubbing the room. You can't appeal, that's the worst part.

**Y**OU'RE haunted all the time by this injustice. It gets in on your work. You know that your word doesn't count. Well, you have an accident. You lose three hours seeing the boss at noon. Then you're reported for not turning in enough witnesses. If you're a conductor you're supposed to get the names of witnesses. People don't like to give their names. And an inspector comes along and says "go ahead." You think you can get names on the car. You do get them, but some of them are false names. Well, you're suspended. I know of one case where a woman was in a car alone. She fell. The inspector said the conductor ought to have got witnesses from the outside of that moving car. It isn't fair, that's what frets you. You go home late at night and you look at the bills coming in

and you think of the time you've lost and the uncertainty gets you—it spoils your peace and is reflected in your home. You can't help it.

Suppose you're a motorman. On my last run if a wagon was standing at the curb there wasn't room for your fist between the wagon and the car, but you're supposed to pass at full speed tho you don't know but there'll be some children waiting to see how close in front of the car they can run. It's a terrible thing to grind up a little girl like your own. But you got to get in on time—if a driver keeps to the rails with his truck in front of you and delays you and gets you nettled you've got to speed up, danger or no danger. And if you don't, then you're haled up, and the boss says, "Be careful, my man; you'll get fired next time."

**I**T'S hard to know what to do. If you obey all the rules in the rule book then you offend the public and they report you or swear at you. If you serve the company faithfully the public goes after you. If you serve the public then the company goes after you. They get you coming and going.

You feel insecure all the time—you know the company doesn't love its men. My wife telephoned down, at the advice of our doctor, for me to come right home because my little girl was very ill. The message was delivered to the starter in front of the barns before I passed him going down, but he let me go down to South Ferry and then let me pass him going up. You see it isn't only that you don't make enough money to live like a human being; it isn't so much that you're just an animal, working, eating when you can, sleeping, working; it's the feeling that you're suspected all the time. You wonder why you aren't paid more—out in Cleveland, Ohio, they pay the men thirty-three cents an hour and it's a three-cent fare. But you could stand that. What you can't stand is all the other restrictions that make your work so much harder, and most of them aren't necessary.

You won't believe me, perhaps, but I tell you on my honor that not long ago one of the men asked for leave to go to an aunt's funeral. He explained that he was the only relative of the aunt in America. They wouldn't let him go. I bet she turned over in her coffin.

If my sister was to get married on a Saturday I couldn't go. I couldn't go to her wedding even if she was to be married on a Sunday, even if I got my application in first. I never have any time of my own. I never see any friends—you can't in this game. It isn't because you're

needed that you're kept; it's because the starter wants to exert his authority. He won't let you forget he's in charge, and the boss won't, either, tho he's been pretty fair to me. It's this use of authority that hurts you.

I wouldn't mind working at the rates as they stand if things were run fairly. But they're not, and the only defense we have is to stick together. You can see what chance one man has against the boss and all his spotters and inspectors.

When I was an extra man one week I had only three hours' pay, and I had fifteen cents deducted from my pay as usual for association dues. We pay fifteen cents a week into an association that is run by the company. We have nothing to do with it—we do not know who the treasurer is. But we're supposed to get benefits in the form of pool tables and shower baths.

And every month we pay fifty cents for insurance. The company posted a notice that we weren't allowed to ask any questions about it without getting in wrong. It said, "in compliance with the rules of the state compensation act we have arranged"—well, something like that to the effect that the company was insuring us against death or accident. So we pay in the fifty cents. If I get hurt or killed the most I can get is a thousand dollars, and as far as we know that lets the company out. I understand that companies that really have the welfare of their men at heart don't take the burden off their own shoulders like that and they supply hospitals and visiting nurses.

**A**S I said, I'd work for the rates as they stand, if we got treated like white people. I'd be satisfied if I could just take out my eighteen dollars a week, or even fifteen, as I did when I was a sign painter when younger. You can see what kind of a family life we have. For three months last year, when they had me transferred to the Grand street route, I didn't get home till two in the morning, and I had to leave before ten. I didn't see much of my family—I had just time to say "Good-bye, Jeanette," and run.

That's no life for a married man, you can see. And they don't give you much time even to get married—I got married one afternoon on a swing between runs. I got excused from the second run, but I was back at work at six next morning.

Well, I'm married now and I've got a little girl. We're all pretty happy when we're together.

But you can see we're hardly ever together.

*New York City*

## The New Books

### CHINA TODAY

The extraordinary conditions created by the Great War and our own international entanglements in Europe and Mexico have so fully occupied American thought that the important changes and upheavals in China have not received adequate consideration. The insight of the late John Hay was clearly attested when he wrote of China: "Whoever understands that mighty empire—socially, politically, economically, religiously—has the key to world politics for the next five centuries." It is difficult for us to appreciate the swift transition that is taking place, and the new elements that are being wrought into the institutional life of the Far East in these troublous times. Two volumes, just published, give us first-hand studies of the situation that has developed since the Revolution of 1911. The authors view China from quite different standpoints, yet their accounts agree substantially in regard to the condition of the country, the forces that are operating, the needs of the people, and the important interests of America that are involved if not jeopardized by the present course of events.

Bishop James W. Bashford has been at the very center of Chinese life and movement for the last twelve years. In *China, An Interpretation*, he relates the story of the recent political machinations in China, the downfall of the Manchus, the institution of the Republic, and the stormy career of Yuan Shih-Kai. Of especial interest are the chapters on the relationships of China and Japan, China and the United States, and China and the world.

"The narrative of a nation's advance," by Mr. Gardner L. Harding, the journalist, is a thrilling and stirring picture of China in the birth throes of a new political and social existence. The author shows us what the republic has meant to China, how newly awakened social forces are making themselves felt, and how the very radicalism of the noblest and most unselfish leaders has frequently defeated itself. He describes briefly the work of the women, the efforts of social reformers to utilize Western methods, and the intrigues which have surrounded the attempt to stifle the young republic and bring back the monarchy. The republic is more a spirit and an attitude of mind in *Present Day China* than an effective form of government.

Both writers agree that Japan has sought to gain an unfair advantage over China while the attention of the rest of world was centered on the

## Autumn Dress Fabrics at McCutcheon's

New assortments of all Wool Challis, Viyella Flannels, English Taffeta Flannels, Japanese Crepes, Gingham and Imported Dress Linens for Autumn and Winter wear.

**New Challis**—(all wool) in a range of exclusive designs, 28 inches wide at 75c a yard.

**Cotton Challis**—(Imported) small floral effects, light and dark grounds, 30 inches wide, at 25c a yard.

**Kindergarten Cloth**—plain shades, stripes and checks, 30 inches wide at 25c a yard.

**Japanese Crepe**—Hand woven, White and solid colors, 30 inches wide at 25c a yard.

**D. & J. Anderson's Gingham**—in plain colors, stripes, checks and plain effects, 31 inches wide at 50c a yard.

**New Fall Shirtings**—Percales, Madras, Cheviots, Silk and Cotton, and all Silk Fabrics, 32 inches wide, 30c to \$2.25 a yard.

**Viyella Flannel**—unshrinkable, in a wide assortment of new and novel designs, 31 inches wide at 75c a yard.

**English Taffeta Flannel**—in upwards of 30 new styles, white grounds with Silk stripes, in various colors, 30 inches wide, \$1.50 a yard.

White and Cream White all Wool Flannels in the various weights, carried in stock at moderate prices.

## EFFICIENCY SERVICE

You are invited to consult the new Plan and Purchase Department with regard to the selection and purchase of any equipment that may be desirable to attain the highest degree of efficiency in your office, your factory or your business building. This department is conducted by The Independent-Harper's Weekly Efficiency Service, of which Edward Earle Purinton is the Director, and in association with the National Institute of Efficiency. This department enjoys the cooperation and counsel of The Institute's Committee on Office Efficiency, of which the President of the Efficiency Society, Melvil Dewey, is chairman, and of the Institute's Committee on Marketing, of which E. St. Elmo Lewis is chairman.

For a limited time this complete efficiency service will be supplied to any reader of The Independent or any member of the National Institute of Efficiency without any charge whatever.

# Concerning New Doran Books

What do you read? After all, a large share of your reading is fiction—library returns and booksellers' reports confirm the fact that like it or not as we may choose the reading world today is gratified largely by the novelist. Then it becomes a matter of selection. It has been our endeavor to make our imprint synonymous with a really worth-the-reading book. Ask your bookseller for the Doran books, among which you will find as recently issued these:

<b>THE DARK FOREST</b>	
Hugh Walpole	\$1.35
<b>OLD JUDGE PRIEST</b>	
Irvin S. Cobb	\$1.25
<b>THREE SONS &amp; A MOTHER</b>	
Gilbert Cannan	\$1.50
<b>THESE LYNNEKERS</b>	
J. D. Beresford	\$1.50
<b>DAVID BLAIZE</b>	
E. F. Benson	\$1.35
<b>GOOD OLD ANNA</b>	
Mrs. Belloc Lowndes	\$1.35
<b>A WESTERN WARWICK</b>	
Samuel G. Blythe	\$1.35
<b>GOSSAMER</b>	
G. A. Birmingham	\$1.25
<b>THE BELOVED TRAITOR</b>	
Frank L. Packard	\$1.25

The greatest event of the world's history is the war of the fifteen nations. After two years there has come a real literature dealing with the war, its causes and effects—actual stories of big men writing from the trenches—America's problem in the matter of defence.

We have been singularly fortunate in securing informing and authoritative books on the war.

Can you afford to overlook volumes as important as these?—**MY HOME IN THE FIELD OF HONOUR**

Frances Wilson Huard	\$1.35

<b>THE RED HORIZON</b>	
Patrick MacGill	\$1.25
<b>KINGS, QUEENS and PAWNS</b>	
Mary Roberts Rinehart	\$1.50
<b>I ACCUSE</b>	\$1.50
<b>PATHS OF GLORY</b>	
Irvin S. Cobb	\$1.50

There are two books, by authors who have made their places secure—but never so secure as since the writing of these:

## THE DARK FOREST

By Hugh Walpole

In this extraordinary novel the author of *Fortitude*, etc., has succeeded in re-thinking the Russian novel in terms of his own knowledge of life and character. Mystical, poetical, spiritual, the charm of this book is the triumph of the soul over disaster. \$1.35

## THESE LYNNEKERS

By J. D. Beresford

A novel of life and love—an absorbing analytical social study which never for a moment drags throughout its nearly 500 pages—a character creation of permanent significance. \$1.50

We might quote pages of complimentary reviews—yet we prefer the simple statement that these are books which have had the definite approval, not only of the professional reader, but of such folk as you would number among your distinguished friends.

PUBLISHERS IN AMERICA FOR HODDER & STOUGHTON

## A BARGAIN

Have you ever been to Hackensack, New Jersey? Ask someone who lives there, or goes to the Hackensack Country Club or the Arcola Country Club to play golf, what kind of a suburb it is to live in. Ask him what he thinks of the house and grounds at 287 Anderson Street, in the heart of the best residence section.

Ask him what he thinks of getting this house at only \$65 per month rental which I am now willing to accept. You may have seen the house already as you motored by. If so I do not need to tell you that it is a bargain at the price I now ask.

The house is substantially built, handsomely finished and has 12 large rooms and bath. The grounds have 1 1/2 feet frontage.

All I ask is that you see the house for yourself. The present tenant, who has lived in the house for 8 years, has kindly offered to show it to anyone who calls for that purpose.

MRS. ANNIE M. TOMPKINS  
Maple Avenue Hollis, Long Island

## PATENTS

SECURED OR FEE RETURNED.  
Actual search free. Send sketch or model. 90-page, 1916 Edition Patent Book free.

**YOU CAN HAVE**

this wholly visible (12 key) single shift, standard of standards, for your own and commission besides, if you will choose your friends wherein it excels other \$100 typewriters, and explain to them our most liberal offer ever made on a strictly modern, single shift typewriter and a Woodstock at that. By post card or letter simply say, "Mail Part 5000."

**WOODSTOCK TYPEWRITER CO., Dept. 8638, Chicago, Ill.**

**AGENTS** establishing everywhere. Many sales easily made. Sell Woodstock the latest great seller. Write for terms and territory. Act now.

European war. The Japanese have simply carried the grasping methods of the Western nations one step further in seeking to throttle the giant of the East before he shall be fully awake to his power and possibilities. Both authors believe also that America has a supreme duty to perform in this hour of China's peril for the sake of our own interests as well as the future interests of China and the whole civilized world.

*China, An Interpretation*, by Bishop James W. Bashford. Abingdon Press. \$2.50. *Present Day China*, by Gardner L. Harding. Century. \$1.

## AUBURN AND SING SING

If any one has feared Mr. Osborne as a sentimentalist who would ruin a good idea by applying it in season and out of season, let him read the Yale Lectures on *Society and Prisons* which discuss fully the reforms begun at Auburn and now being tried out at Sing Sing. All who think seriously of the defects of all present prison systems hope that these experiments in self government are the beginning of radical and permanent improvement.

Since good and thoughtful men and women have been at work on the prison problem for a century, no one, least of all Mr. Osborne, thinks that we have now arrived at the goal, and it is in this that Mr. Osborne's book is especially to be commended. He treats charitably the sadly unsuccessful work of earlier penologists, and in his analysis of points at which the law fails, the reasons for its failure, and the effect on the law breaker, he does not lose sight of the legal side of the problem, which the reformer in his indignation at mistakes and stupidities and wrongs is prone to overlook. Continually he emphasizes responsibility as the imperative feature of the new plan for making prisoners into good citizens.

*Society and Prisons*, by T. M. Osborne, Yale Univ. Press, \$1.35.

## INTERNATIONAL LAW

In these days when international law is so needful; when it is so vaguely understood; when even its existence is extravagantly doubted by a prescient few, it is well that there should come a book from which the layman can gather generously and that the student too will welcome—a book showing international law in action. In some sixty phases of the relations of nations at peace, Professors Stowell and Munro show by important and typical examples the rights and duties of ambassadors and other national agents; how they conduct their business; how treaties are made and applied; what substantive international law is recognized by nations as binding. Nearly all the cases or examples are doubly valuable because from American history, and most of them are condensations or extracts from the works of Professor John Bassett Moore, our greatest authority. Much of the book deals with arbitrations, including nearly all those of The Hague, but omitting that at Geneva, in which the United States

and Great Britain gave the world its great example. A companion volume on war and neutrality will shortly appear.

A group of books of limited circulation, no doubt, but of real moment in these days is sent us by the Carnegie Endowment. First among them is a new edition of Ladd's *Congress of Nations*. Tho it contains the genus of most of the present schemes to promote international understanding and friendship it has not till now been reprinted since its appearance in 1840.

Another is a new translation of Grotius's *Freedom of the Seas*, by R. Van D. Magriffin. The translation is careful and smooth and faces the originals page by page. This has the value of a living classic.

The other three volumes are *Instructions of the American Delegates to the Hague Peace Conferences and Their Reports*, *An International Court of Justice* and *The Status of the International Court of Justice*, these last two by James Brown Scott. These show the cause strong and hopeful. It may not be generally known that an International Court of Justice was, in the summer of 1914, actually on the verge of establishment by agreement of Great Britain, Germany, France, Austria, Japan, Russia, the Netherlands, Italy and the United States, when the guns blazed forth at Liège.

*International Cases*, Vol. I, *Peace*, by E. C. Stowell and H. F. Munro. Houghton Mifflin. \$2.50. *Congress of Nations*, W. Ladd. *Freedom of the Seas*, by Grotius. *Hague Peace Conferences Reports*, *An International Court of Justice*, by J. B. Scott. *Status of the International Court of Justice*, by J. B. Scott. 5 Vols. Oxford Press. \$1 each.

## FARMS, MORTGAGES, MARKETS

Herbert Myrick has given in small compass a simple exposition of the *Federal Farm Loan System* inaugurated by the recently passed Farm Loan Act. This sets forth clearly the methods of forming the Farm Loan Associations; the precise liabilities of members; the very important feature of lessening a loan yearly; the advantages to the borrower over the old mortgage system; and the value to the investor of the new Federal Loan Bonds.

A practical study of the *Marketing of Perishable Farm Products* has been made by Arthur B. Adams in the Columbia University Economics Studies. His solution of the present waste of at least a third of the truck farmer's effort lies mainly in the improvement of facilities for wholesale trade in the towns; standardizing of packages; prompt spreading of market news; and, in some regions, cooperative selling by the farmers and chain stores or some form of cooperative retailing. The decried middleman must exist, in some shape or other, since the complexities of distribution make direct contact between grower and consumer not generally possible. A solution of the problem must be sought in an improvement of the methods that distances and great cities have proven necessary.

*The Federal Farm Loan System*, by Herbert Myrick. George Ladd. 31. *Marketing Perishable Farm Products*, by A. B. Adams. Longmans, Green. 31.55.

An Advertisement by  
**THE PULLMAN COMPANY**

**Safety** is an important element in the service

afforded by the Pullman Company, and includes not only the safeguarding against loss of life, or injury through railway disaster, but the protection of health against contagious diseases.

All cars used by the Pullman Company are built in its own shops and represent the experience of fifty consecutive years of car construction.

Built of the most enduring materials, designed to resist the most violent shocks and to withstand every conceivable strain, the Pullman car affords the traveling public the greatest assurance of safety.

Not only is the Pullman car designed for strength, but no effort or expense is spared to make each car as completely sanitary as possible.

Smooth painted surfaces, sanitary floors, the avoidance of heavy hangings and superfluous upholstery, scientific ventilation and adequate screening eliminate as far as possible the dust and dirt of railway travel.

Systematic mechanical cleaning combined with frequent thorough chemical fumigation, maintain each car in a constant state of cleanliness and sanitation.

## MANUSCRIPT

# Bible Study Text Books

For College Curriculum  
Classes

PUBLISHED

## New Testament History

By Harris Franklin Rall,  
Ph.D., *Garrett Biblical In-  
stitute*, Evanston, Illinois.

A Study of the Beginnings  
of Christianity.

## The Bible as Literature: An Introduction

By Irving Francis Wood,  
Ph.D., *Smith College*, and  
Elihu Grant, Ph.D., *Smith  
College*.

It does not take the place of  
the Bible for study, but is so  
arranged that the Bible must  
be used with it.

## Old Testament History

By Ismar J. Peritz, Ph.D.  
(Harvard), *Syracuse Uni-  
versity*.

The History of the Hebrew  
People from the Beginnings  
to the Christian Era, with  
special view to its prepara-  
tion for Christianity.

## The Social Institutions and Ideals of the Bible

By Theodore G. Soares,  
Ph.D., D.D., *The University  
of Chicago*.

A Study of the Elements of  
Hebrew Life in their Devel-  
opment from the Beginnings  
to the Time of Christ, and of  
the Social Teachings of the  
Prophets, of the Sages, and  
of Jesus.

## MR. PURINTON'S EFFICIENCY QUESTION BOX

318. Mrs. B. S. W., Maine. "Our family physi-  
cian is growing old and somewhat careless. He  
has made several mistakes, I believe, in handling  
serious cases of illness in the family. A life was  
lost, we fear, because of his negligence or dim-  
inution of skill. We have had him treat us for  
more than thirty years, and fear hard feeling  
and social friction from our changing doctors.  
Can you help us out of our dilemma?"

There is only one answer—change your doctor.  
Your friendship for the doctor's family has no  
bearing on the question.

But can you not seek a younger physician on  
the ground of relieving your old friend of ex-  
cessive work, that you feel is overtaxing his  
strength? Or, why not still consult him on minor  
troubles, but call a more alert man in crises?  
The proper sphere of an elderly physician is  
office practise—not emergency cases.

319. Miss L. R. C., California. "I wish to se-  
cure a copy of the list of mental qualities and  
powers with key for their location and com-  
parison, to which you refer in a late number  
of *The Independent*."

See page 257 of my book "Efficient Living,"  
where a diagrammatic list appears, for self-meas-  
urement of brain faculties. You will probably  
want some of the books of these well-known  
psychologists: Fowler, Muensterberg, Parsons,  
Haddock, Towne, Blackford, Gates, Dubois, Mar-  
den, James, Atkinson. Write Efficiency Publish-  
ing Company, Woolworth Bldg., New York, ex-  
plaining your needs in full.

320. Miss M. C., Pennsylvania. "I am a school  
teacher of middle age. For years I have felt dis-  
honest in attending the church of our family, and  
have generally stayed home on Sunday. I do not  
believe in most of the church dogmas, and con-  
sider the methods wrong to a large extent. Now  
I am taking a larger position in a new com-  
munity, where my example will be watched by  
hundreds of young people in my classes and  
circle of influence. What shall I do? If I unite  
with the church, I shall be acting a lie. But if  
I do not, I shall certainly weaken my hold on  
the young people."

You may be surprised to learn that many of  
the leading church officials, in various denomina-  
tions, are as much heretics as non-churchgoers  
often seem. The church of to-day is broad  
enough to recognize difference of opinion, but  
to emphasize unity of purpose and ideal. Yes-  
terday's religion was creeds—to-day's religion is  
deeds. You probably measure the church by your  
own recollections of childhood, an unfair pro-  
cedure.

Wherever you live, you can certainly find a  
church whose pastor will respect your individual  
belief—which should be frankly stated in a per-  
sonal talk, and whose articles of faith will ad-  
mit of your sanction on the cardinal points. Why  
not join the church—then stand up in meeting  
and protest when things go wrong? The church  
needs firebrands. Suppose you be one.

321. Miss A. M. P., Minnesota. "Can you sug-  
gest a book for an amateur printer, that gives  
forms and kinds of type, and other points? Also  
information necessary for a proof-reader?"

The large type manufacturers, such as Ameri-  
can Type Founders Co., 200 William Street, New  
York, issue catalogs of type faces and point-  
ers, adopted to your needs. The "Handbook of  
Advertising" (price 50.) from International  
Correspondence Schools, Scranton, Pennsylvania,  
would be valuable; also copies of trade journals  
such as *Printers' Ink*, 12 West 31st Street; *The  
Fourth Estate*, 232 West 59th Street; *Inland  
Printer*, 151 Nassau Street; all of New York.  
Proof-sheet corrections are found in a standard  
encyclopedia, and in books and courses on ad-  
vertising.

322. Mr. H. R. J., New Jersey. "May I ask  
how the private reader can make his magazines  
most valuable? (a) Do you think it worth while  
for one to do his own card indexing rather than  
wait and depend on those published? So often  
the published index omits the thing you want.  
(b) How can one best preserve magazines in

## The Boss Is Sizing You Up

Whether you know it or not, he's on  
the lookout all the time for men he can  
promote. He's ready and anxious to give  
YOU bigger work with bigger pay once  
you prove you can handle it.

If you *want* to get ahead, if you want  
to *be* somebody, to climb into a position  
of responsibility and good money—

## Get Ready—Your Chance Will Surely Come

Choose the position you want in the  
work you like best—then train for it.  
You can do it in spare time in your own  
home through the International Corre-  
spondence Schools.

More than 130,000 men *right now* are  
putting themselves in line for pro-  
motion through the study of I. C. S.  
Courses. This way to success is always  
open. All the I. C. S. ask is the chance  
to tell you about it. No cost to find out.  
Just mark and mail this coupon now.

## INTERNATIONAL CORRESPONDENCE SCHOOLS

## A Really Great Book

"Woodrow Wilson as President"

By Prof. E. C. Brooks, Durham, N. C.

A stirring story of: 1. Christian Statesmanship, 2. Platform Progress, 3. Public Service, 4. Personal Accomplishments, 5. Principles, 6. Political Faith, 7. Our American Policy Enlarged.

"I wish every elector in America could read it"—A. A. Burleson, Postmaster General.  
Cover Cloth stamped in Gold, 324 pages, 2000 copies from your Book Dealer, or from Publishers: ROW, PETERSON & COMPANY, Chicago - New York

permanent binding, or loose leaf binder, or paper box with the numbers loose?"

(a) Do your own card indexing of the special items and articles you will probably need later, then add the published index for general use. It would hardly be worth your time to catalog everything, certainly not to duplicate the magazine's own index.

(b) Most standard periodicals furnish a special binder, at moderate cost, for their own back files. Avoid loose numbers of old magazines—classify by dates or topics, and either put in book form, bound or clasped, or in loose leaf patent binders if particular numbers will be needed often. Go to a large public library, and consult the librarian for details of methods there used. Write *Library Journal*, 241 West 37; and Library Bureau; 316 Broadway; both New York.

323. Mr. S. A. L. "I would like to be informed as to what opportunities the Dominion of Canada offers men of the teaching profession or the educated class? With whom should I correspond, to get a detailed explanation?"

Write these officials of the Dominion of Canada: Hon. Sir George E. Foster, Minister of Trade and Commerce; Hon. Robert Rogers, Minister of Public Works; Hon. William J. Roche, Minister of the Interior; address Ottawa, Canada, in each case.

You might also apply to several of the leading colleges for local data—McGill University, Montreal; Queen's University, Kingston; University of Manitoba, Winnipeg; Victoria McGill University College, Vancouver.

324. Mr. N. I. D., New Jersey. "I am twenty-nine years old, graduate of Pierce Business School, in bookkeeping and shorthand, have been assistant to the president of a large concern. Was compelled to leave on account of health. I like farming, am the son of a farmer, but lack the capital to proceed. (a) Is it possible to get connected with the movement for farm coöperation? If so, how? (b) Would the study of law at home accomplish anything? (c) Can you suggest some other course probably more beneficial?"

(a) Write the U. S. Department of Agriculture at Washington, also the College of Agriculture of nearby states, beginning with your own; also the editors of farm journals, with which you are doubtless familiar; also, Prof. L. H. Bailey, Ithaca, New York; also the Farm Efficiency Bureau in New York whose names recently appeared in these columns. You might become editor or manager of an agricultural journal—and your wife could help, as you say she is a college graduate. Or you might become a "farm manager" or trained farm operator, or farm efficiency expert. Or you might work with a college of agriculture as an extension specialist or a county agent, or as a teacher and demonstrator.

(b) Very little.  
(c) Better devote your spare time and money to getting a position where your business knowledge will support you while you train for larger work.

325. Miss E. E. J., New Jersey. "I was very much interested in your article on *The Efficient Housewife*. Will you kindly inform me concerning summer schools that give courses in domestic science?"

We do not consider a course of six to nine weeks in domestic science at all adequate, unless for one or two single branches of the subject. A mail course is usually better, and cheaper. Since receiving your letter we have mentioned names of prominent schools in these columns.

Teachers' College, Columbia University, New York and many of the agricultural colleges and state universities offer summer courses in home economics. A list of higher institutions of learning may be found in the *World Almanac* for 1916, published by the Press Publishing Company, Pulitzer Building, New York.

326. Mr. G. O. M., New York City. "I thank you for your superb article on *The Efficient Housewife*. I am desirous of knowing where to buy a barrel of apples or a crate of oranges at the wholesale rate. I have found dealers invariably unwilling to give such prices except to dealers."

You should apply not to the jobber or dealer, but to the grower and packer of fruit on the tree. Owners of apple orchards in the West, notably Oregon, and of orange groves in California or Florida, usually advertise their products, in season, thru the pages of the food journals and magazines. If you still have difficulty, ask for advice from the Housekeepers' Alliance of Washington, or the Housewives' League, or Consumers' League, both of New York.

## Salt Mackerel CODFISH, FRESH LOBSTER

FOR THE  
CONSUMER

NOT THE  
DEALER

FOR YOUR OWN TABLE

FAMILIES who are fond of FISH can be supplied DIRECT from GLOUCESTER, MASS., by the FRANK E. DAVIS COMPANY, with newly caught, KEEPABLE OCEAN FISH, choicer than any inland dealer could possibly furnish.

We sell ONLY TO THE CONSUMER DIRECT sending by EXPRESS RIGHT TO YOUR HOME. We PREPAY express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want YOU to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in PARCHMENT-LINED CANS. They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, SHRIMP to cream on toast, CRABMEAT for Newburg or deviled, SALMON ready to serve, SARDINES of all kinds, TUNNY for salad, SANDWICH FILLINGS and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send BOOK OF RECIPES for preparing all our products. Write for it. Our list tells how each kind of fish is put up, with the delivered price, so you can choose just what you will enjoy most. Send the coupon for it now.

## For Swollen Veins

**Absorbine Jr.**  
THE ANTISEPTIC LINIMENT

That Absorbine, Jr., would relieve Varicose Veins was discovered by an old gentleman who had suffered with swollen veins for nearly fifty years. He had made many unsuccessful efforts to get relief and finally tried Absorbine, Jr., knowing its value in reducing swellings, aches, pains and soreness.

Absorbine, Jr., relieved him, and after he had applied it regularly for a few weeks he told us that his legs were as smooth as when he was a boy and all the pain and soreness had ceased.

Thousands have since used this antiseptic liniment for this purpose with remarkably good results.

Absorbine, Jr., is made of oils and extracts from pure herbs and when rubbed upon the skin is quickly taken up by the pores; the blood circulation in surrounding parts is thereby stimulated and healing helped.

\$1.00 a Bottle at Drug Store or Postpaid

A LIBERAL TRIAL BOTTLE will be mailed to your address for 10c in stamps. Booklet free.

# BUSINESS AFTER THE GREAT WAR

BY EDWARD D. PAGE

AUTHOR OF "MORALS IN MODERN BUSINESS," PAGE LECTURER AT YALE UNIVERSITY

**I**F a science is to be of any value it must lie in its ability to forecast the future. To economists past experience must be a storehouse of general principles, which in some measure may serve business men in the same way that the computations of the astronomer serve to guide mariners over the trackless seas.

A consideration of the economic forces engendered by the American Civil War and continued by the Franco-German struggle of 1870-71 enforces the lesson that wars create a great demand for products, not only to supply their wastes, but to aid in the social reconstruction and in the increased efficiency which always follows military training. This demand, during the years between 1866 and 1873, resulted in a quick, active and strong market for merchandise. In 1873 the consciousness that prices were on an inflated level was added to the suddenly developed knowledge of our unsound financial condition, and there arose the most swift and merciless panic that it has ever been my fate to observe. Compared to it the crises of 1884, 1893, 1896, 1907 and 1914, while on an increasingly larger scale, were of trivial effect upon business welfare. The percentage of merchants failing to those actively engaged in business was far greater than in later crises, and by the gradual depletion of assets thru an industrial depression which lasted for nearly six years, many were forced to the wall who had safely weathered the panic itself. In this depression the world went thru a period of constantly decreasing prices for all commodities, in which our country was more hardly hit than any other nation because of the irregular, fluctuating and uncertain quality of the currency in which credits were contracted and debts were paid. And yet thru all this depression the merchant who was best equipped in foresight proved himself the best fitted to survive, and in many instances cleaned up an actual profit from a desperate situation.

One condition we had to contend with in those days no longer vexes us. Agriculture and mining, which were the basic industries on which our prosperity depended, were guided by little greater skill and knowledge than they had been for hundreds of years in the past. In farming little attention was paid to refertilization and none at all to intensive cultivation. The smelting of iron was still a crude process, and Bessemer steel had but hardly been introduced. The treatment of copper, silver, lead and zinc ores was by methods both primitive and wasteful.

The cessation of our war brought a demand for many new products, and while we were learning how to make them, methods were necessarily

wasteful and costly; but the country was so prosperous that the consumer was willing to pay the price.

The long depression which followed the panic of 1873 taught us the value of economy; many persons were thrown out of employment and wage conflicts, often destructive, arose between employer and employee. Those six lean years were the best industrial educators the country had had for more than twenty years. For it always happens that in periods of expansion we lose sight of economy and efficiency and in periods of depression we are keenly interested in getting ever better results for the same money.

Since that time there has been a radical change in our industrial ideals and methods. The farmer is no longer a person who can live off his land, who has few wants and little to buy. He sells nearly everything he produces, and buys as much more. Only a little while ago he was content to turn his soil fertility into a commodity and to part with it forever. He was, in fact, mining his store of nitrogen and shipping it away. Now he is thinking of making his land more valuable and more fertile year by year. And so he has gradually learned the value of agricultural efficiency; and with high priced labor effects that efficiency with machines instead of muscles.

## EFFICIENCY HAS COME TO STAY

The high value of skill and labor applied to our western lands has raised our standard of living, created new wants that our forefathers did not dream of, made of our country the best market in the world for the exchange of all kinds of products, and, incidentally compelling high wages everywhere in the United States, has brought about an equal advance of efficiency in our manufacturing industries. We are making munitions in Connecticut, paying wages twofold and threefold higher than abroad, and delivering the finished product to our British cousins for less than they can make the same goods in their own workshops.

And so it is that America's prime contribution to world progress is machine efficiency and the economy of labor. It is the final product of a limited population face to face with an unlimited opportunity. We are done forever with that boggy of our industrial inefficiency which, used by politicians as a fetish to procure favors for privileged capitalists, so long throttled the commercial expansion of our nation. For as far ahead as we can see, our work people will get the highest wages paid anywhere, because we know how to make them the most efficient, and efficient labor is always well paid. We cannot only raise cotton and wheat, but we can make tools and textiles

cheaper and better than anywhere, provided that we have free access to raw materials and a continuous market for the finished goods. That continuous market we can have if we maintain a world market for our products.

The conditions which have been thrust upon us by the war have awakened our industrial consciousness. We are learning how to adapt our excess capacity of production to the wants of other peoples. The foreign trade which we are now building need not be lost by the termination of the great struggle; as its result, it may even be increased, and for the following reasons.

## THE MACHINE IS THE KEY

The machine is the key to our commercial opportunities after the war.

Twenty-five or thirty millions of men are now opposing each other under conditions of training to a very high grade of efficiency in the handling of machines. Seven to ten millions more have been partly disabled and unless mechanically aided will never again possess their former ability for self-support. Three or four millions have already been killed or totally disabled, and the labor resources of their respective nations will be depleted to this extent, and by as many more as will be ground between the millstones of war during the continuance of the struggle. And some millions of women, among all the belligerents, have realized a hitherto unsuspected capacity for operating light machines.

When the war ceases twenty millions or more of men will return to their homes; but their characters and abilities will be far different from those which they possess when they marched away; and the home conditions will be as different as the men.

For example, take Russia. She has trained eight million men, mostly peasants, to new standards of mechanical efficiency, and to new standards of life. These men have learned how much more a man with a machine can do than a man with a hoe. They have learned the value of coöperation with other men. They have been trained to temperance and cleanliness, accustomed to better clothes and to better food, and most of them will have seen how other people live.

A very considerable part of the Russian people will have the new wants that are engendered by a higher standard of living. These wants are for machines and for products made by machines. By practice in the arts of war these soldiers are prepared for a more efficient productivity than they have ever dreamed of. Of all others they will be the most in need, and for the first time, of our peculiar American product—machine efficiency.

## An Income for Life

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$418.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

their field in Russia, but those who, with foresight of the conditions, can train demonstrators speaking the language or can educate Russian youths to the service of their organizations will be able to spread their sales over that great territory. The internal economic resources of Russia still await development. Russia is honest. It has never disowned a debt; it will therefore have credit, and if from our abundance can come the capital needed for that development, its use will carry along with it the sales of the products of our machine shops.

France, Austria and Germany are all sure to feel the comparative scarcity of labor, the raising of wages and the need of machine methods in agriculture.

In all the warring countries many producing units have either been destroyed or diverted to other purposes than that for which they were prepared. Many other factories have been closed for two or three years, the machines have rusted, the renewals necessary to keep them up to date have not been made. Worse than this, they have lost their organization; they do not know where to lay their hands upon the human skill that can pull together to run them. Men's labor will then have to be supplanted, on a large scale, by that of women and children and machines will have to be readjusted to their less highly developed muscular system. Losses of men mean scarcity of labor and higher wages. Higher wages entail a striving toward less hand labor and more machine labor, so we may confidently expect a demand for our efficiency in the form of machines. And a demand for machines means a demand for steel.

### THE MARKETS AND LABOR.

With steel prosperous the nation has always been prosperous. While comparatively few hands are directly employed producing steel, an enormous number are employed converting it into the tools and structures of productive industry. In the past the prosperity of steel has always been associated with general business prosperity. Will it be so in this instance? And so, to answer this important question it is needful to examine into the condition of the probable foreign and domestic demand for general merchandise. And first, therefore, as to the condition of the foreign markets at the end of the war.

While it would be hardly fair to measure the demand due to waste and destruction by the sixty to seventy-five thousand millions of our money values which will have been spent by the belligerents before the war is over, it must not be forgotten that a three-year diversion of twenty-five million men from creative to destructive industry has of itself necessarily created in all the warring lands a scarcity of the ordinary goods of commerce. That scarcity is already indicated by the prevalence of abnormally high prices. Shall not our resources be drawn upon to the utmost in order to supply this demand?

## For Investment

**D**URING the past 30 days we have been so fortunate as to secure an additional number of very attractive First Mortgages on farms in the better known and most prosperous farming communities.

Descriptions of these have been incorporated in our already highly interesting October List—thirty-seven investment offerings—which we will be glad to mail you upon request. Ask for list "A."

## SCHOOLS AND COLLEGES

### THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York  
FIFTIETH YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

**LOCATION:** Sixteen miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, and a good place to live and study.

**WORK:** The school has a great emphasis on the study of the classics. Recent graduates in leading colleges. Each boy studied physically and mentally.

**ATHLETICS:** Two fields with baseball diamonds for all sports, under supervision, hiking, woods life.

For information, address: ALVAN E. DUERR, Headmaster

ALVAN E. DUERR, Headmaster

### Skidmore School of Arts

A College for the Vocational and Professional Training of young women, located in America's leading health resort.

Six Departments:

DOMESTIC SCIENCE AND ARTS; MUSIC;  
FINE ARTS; PHYSICAL EDUCATION AND  
ORAL EXPRESSION; SECRETARIAL; TRADES

Four dormitories accommodate over two hundred students. Outdoor sports. Non-sectarian. Diploma commands Teacher's or Supervisor's certificate in New York and other states. Catalog on request. Winter and Summer Sessions.

Charles H. Keyes, Ph.D., President, Saratoga Springs, N. Y.

### IRVING SCHOOL for Boys

Tarrytown-on-Hudson, N. Y.

25 miles from New York, in the beautiful historic "Irving" country. 80th year. 25 years under present Head Master. New site and buildings, 1904. Prepares for all colleges and technical schools. Individual as well as class instruction. Equipment includes Athletic Field, Gymnasium and Swimming Pool.

For information address

J. M. FURMAN, A. M., Head Master, Box 925

### Crane Normal Institute of Music

Training School for Supervisors of Music in public schools. Both sexes. High School course required for entrance. Voice, Harmony, Form, History, Ear Training, Sight Singing, Methods, Practice Teaching, Chorus and Orchestra Conducting. Limited to 65. Personal attention. Catalog. 65 Main St., POTSDAM, N. Y.

### OSSINING LOWER SCHOOL

Box 119 : : OSSINING-ON-HUDSON

"Likable, Livable and Homelike." A natural, busy, joyous life in house separate from older girls. Experienced teachers trained in grade work. The girls in the Lower School have the same specialists in Art, Piano, Violin, Riding and Athletics as the girls in the Ossining Upper School.

CLARA C. FULLER, Principal

MARTHA J. NARAMORE, Associate Principal

### Hartwick Seminary, N. Y.

A first class Academic and Classical school for both sexes at \$225 per school year. Renovated building. New Gymnasium. Small Classes. Fine Rural location. For catalog, address.

J. G. TRAVER, D.D., Principal.

### Union Theological Seminary

Broadway at 120th St., New York City

The charter requires that, "Equal privileges of admission and instruction, with all the advantages of the Institution, shall be allowed to Students of every denomination of Christians."

Eighty-first Year begins September 27, 1916. For catalogue, address,

THE DEAN OF STUDENTS.

### Oberlin School for Girls

Six to Fifteen Years

Offers exceptional advantages in education and home life, in an ideal environment. Music, Oberlin Conservatory of Music. Art, French, German, Home Economics. Catalogue.

Forest Place, Oberlin, Ohio

### BOSTON UNIVERSITY

Law Medicine  
College of Liberal Arts  
Theology Graduate Department

The College of Liberal Arts now occupies its new building next to the Boston Public Library and offers the advantages of a modern college course. The building is equipped with Laboratories, Department Libraries and has direct use of the Boston Public Library. The professional schools located in the heart of the city not only offer the best course of instruction but afford unusual opportunities for self support and for the practical training in the several professions. The Graduate School offers exceptional opportunity for research work.

LEMUEL HERBERT MURLIN, President  
Copley Square, Boston, Mass.

And so the indications are that shortly after the war closes we shall be confronted with most excellent prospects of export trade in general merchandise for some time to come. Let us therefore turn about and take a view of the probable domestic demand.

We shall be obliged to confess that if our industries are well employed, and if labor is well remunerated, we cannot fail to have an equally good domestic demand for commodities.

Our labor supply will probably be depleted by diminished immigration. The diminished supply in the warring lands put against the great demand for replacement means high wages, as it did after our Civil War. High wages are the most potent of inducements for returned soldiers to stay and work at home, especially when added to improved political and social conditions, and no prospect of any return of war-madness for a generation. War taxes must be paid by those who made the war, which the laborers certainly did not.

And so immigration will probably decline, and instead of taking in seven millions of new citizens in ten years, we shall receive not more than four—a deficiency of at least three million. This means that wages of labor will continue high from natural and not from artificial causes, and we all know that high wages mean a large demand for commodities.

#### GETTING THE CAPITAL

There are always three elements in productive industry—brains, labor and a supply of capital. We Americans are apt to flatter ourselves that we have the brains to develop and manage great and profitable industries, and, on the whole, this assumption appears to have been well warranted by the outcome. We have used both our own capital and the credits extended to us by foreigners with a good degree of success, making money not only for ourselves, but for them. Of course we took the lion's share because we had the brains, which always get the lion's share.

Doubtless foreign capital will no longer be at our command; for some years it will all be needed in restoring the properties of its owners. If this be true, the flow hither of capital will probably stop with the flow of immigration. But, fortunately for ourselves, we have succeeded in effecting our own financial efficiency just at the moment when it can be of the most service to our growing trade.

Since the passage of the federal reserve act a great and hidden storehouse of credit has been opened up to the American people. Five thousand millions of lending capacity, of which none but students of economics and a few farsighted financiers were aware, have been spread out before us and we were invited to take a dip in the pot. Perhaps two thousand millions have been already invested in American securities previously held abroad. The profit of this transaction will be added to our wealth and reinvested.

The accumulation of new capital is

We wish to quote one of the hundreds of letters we are now receiving each week from History Teachers: "All but three of my students in Civics voted to subscribe for The Independent instead of the little school paper we formerly used. I should like therefore 100 copies of The Independent for twenty weeks."

Send for "How To Use The Independent in the Teaching of History and Civics."

## Insurance

Conducted by

**W. E. UNDERWOOD**

### INSURANCE BY THE STATE

An organization known as the **Farmers' Non-Partizan Political League**, with a program of radical social legislation, including state ownership and operation of a number of public utilities, including banking and insurance, is making an aggressive campaign in several northwestern states and seems to be meeting with some success. It has captured the Republican organization in North Dakota, and the indications now are that it will elect its candidates on the state ticket and a majority in the legislature.

The state insurance scheme of the league is no compromise measure. It means to make the state eventually the sole insurer within its boundaries.

From the viewpoint of the insured, the proposition is not as dangerous in the life insurance branch as it is in fire, accident and liability. It is not practicable in life insurance, principally on account of politics and the intrigues of politicians, of which it would indubitably become the victim. It is positively dangerous as applied to fire insurance and, in a somewhat lesser degree, to the other two forms mentioned.

Suppose California had been the insurer of its people in 1906, when San Francisco suffered an aggregate loss estimated at \$350,000,000, where would the state have raised a sufficient amount of ready cash to relieve appreciably the consequent distress? The stock companies, American and foreign, paid out as rapidly as losses could be adjusted about \$133,000,000. They could not have done this if, instead of doing a world business, their field had been restricted to one state. The field of a state as an insurer is circumscribed by its geographical boundaries; its premium income is limited by those lines, and any extraordinary loss by fire would ruin it as an insurer. It would have to use its credit as a political organization, a state, to pay its losses. And what does that mean? That it would resort to increased taxation of its people.

State insurance is impracticable and would prove to be expensive as compared to insurance in private companies; the theory as applied to fire and casualty insurance is dangerous.

H. K. B., Philadelphia, Pa.—Commercial Casualty of Newark, N. J., is reliable. A number of companies issue policies restricted as to conditions and benefits at \$5 and \$6 a year.

M. W. Z., Little Falls, Minn.—I am under the impression that all the largest companies write pure endowments on children, payable at ages eighteen to twenty-one. There are two plans: under one, in

the event the child dies before the contract matures, all premiums paid on it are forfeited; under the other (the rate being higher), if the child dies, the premiums are returned to the parent.

T. H. C., Cleveland, Ohio.—The United States branch of the General Accident Fire and Life Assurance Corporation, Limited, of Perth, Scotland, under our laws governing the status of foreign companies, is as if it were a local institution, its American funds being independent of the home office. On January 1, 1916, the statement of the United States branch showed assets of \$2,908,996; liabilities, \$2,407,795; surplus as to policyholders, \$500,823. During several years past the American business has been unprofitable, but its losses have been made good by remittances from the Scotch headquarters. A reorganization of the American managerial force was made last year, which will remedy former underwriting defects. A list of all good casualty companies would be too large for our space; consult leading agents in your city.

R. L., Honolulu, Hawaii.—Considered from the viewpoint of financial condition, a company doing a strictly participating business, that is a mutual, is not superior to a stock company doing a non-participating business. But I am of the opinion that the net cost to policyholders in a skilfully managed mutual company is lower than in a non-participating company. There are exceptions, however, when we consider and compare individual companies, for there are a few non-participating companies which do as well in this respect as the leading mutuals, and better than many of them. The Western States Life Insurance Company of San Francisco is an old line company, with a capital of \$1,000,000, and maintains a proper reserve. It writes non-participating insurance only. The net cost is not as low as in most of the leading mutual companies.

W. S. M., Rushville, Ind.—In 1860 the Pennsylvania legislature granted a charter to the State Insurance and Trust Company. I am not aware of it if any business was ever transacted under that name. In 1911 the corporate title was changed to Pension Mutual Life Insurance Company, with the company's domicile at Pittsburgh. Late in 1912 it acquired the business of a fraternal order known as the Pension Life Society, the latter an amalgamation (in 1910) of two other fraternal, the American Life and Annuity Society and the Order of Unity and (in 1912) the Abraham Lincoln Mutual Life Insurance Company. The Pension Mutual has also reinsured the business of the Western Life Annuity Company of Indianapolis, the Commercial Life of Indianapolis, and the United Mutual Life of Pittsburgh. The authorized capital is \$1,000,000, of which \$849,825 is paid-up. In 1913, 1914 and 1915 stockholders' dividends aggregating \$79,421 were paid out of surplus previously collected from subscribers to the stock. The active managers of the company have had considerable life insurance experience. The management expenses and cost of new business are high, the mortality rate low. Both participating and non-participating business is transacted. Understand that annuities will be the company's specialty. The company is said to be negotiating for the acquisition of the Reliable Life Assurance Company of Indianapolis. Financial statement, December 31, 1915, shows: assets, \$1,347,453; liabilities (including capital stock of \$849,825), \$1,324,565; net surplus, \$22,888. New insurance written in 1915, \$1,059,219; total insurance in force end of year, \$13,884,971. The management is reported as endeavoring to secure control of several other life companies for the purpose of merging all under the name of the Pension Life Insurance Company. For a life insurance company which is seeking the patronage of the public, the element of financial expenditure is too abundant. The management should either cease its activities in that direction, or stop trying to sell life insurance until they have their financial organization completed.

### That Pleasure Car

Have you selected yours for 1917?  
Have you gathered sufficient information to be sure which make and model best suit your needs and tastes?  
In order that your selection may be permanently satisfactory, perhaps you would like some expert advice.  
Ask our Motor Editor what you wish to know.  
He will serve you gladly and without charge.

### That Motor Truck

Have you worked out your plan for adding it to your business equipment?  
Have you figured out the cost of such a service?  
Have you clearly in mind the saving that will result?

### Those Accessories

Do you want to know more about them, and in detail?  
Do you desire information regarding the equipment of your car?  
Would you like to learn some new things about the parts that go to make up the car that fully catches?

Put your problem up to The Independent Motor Service. Tell us your motor needs and what you wish to spend. Tell us what makes interest you most. We will give your problem careful and prompt attention.

## ED. HOWE'S THOUGHTS ON MEN, WOMEN & THE WORLD

**M**OST people have the notion that Philosophy is a tremendous subject requiring long study, and the devotion a hermit gives his holy subjects. It is really an exceedingly simple thing, easily acquired in the course of the day's work; a man who dodges when a missile is thrown at him has a start in sound philosophy, since philosophy is nothing more than the science of taking care of yourself. All my life I have heard men express in private the opinions the old philosophers exprest in print.

One of the magazines lately printed a story of a foreign woman in New York: an excellent character who was always patient, always striving, altho she had a careless husband and indifferent children. How this woman worked and saved! How patient! How she coaxed her children to behave, and get an education! How she watched and aided her lazy husband! How she won, in the end, in a respectable if modest way. No need to go to the foreign quarter in New York for such a record: it may be duplicated in millions of American homes. Half the men who read the story will confess secretly: "I was brought up in a home like that, by a mother like that."

Some people are dangerously careless. I am; I worry over neglected duties today that worried me certainly ten years ago. It is my way, and I can't help it; I drew it in the lottery. I am lamentably weak in mechanics, also. The mechanism of a wheelbarrow stumps me, and I am asked to run an automobile! The best behaved person I ever knew doesn't try half as hard as I do, and gets better results. Still, I would be worse off than I am did I not exercise constant care.

Editors and politicians mold public sentiment. Could not business men do it better? Possibly the safest and most conservative business men we have are bankers; yet people are afraid of them, because of the incessant babble about the well-to-do being thieves. Nine-tenths of the bad investments made by inexperienced men and women might be avoided if bankers were consulted. And honest and capable bankers, willing to give valuable advice free, may be found in every community.

In my neighborhood, an old piano professor lives next door to an amateur who practices lessons taken from a rival. The old professor is able to point out many flaws, in addition to the annoyance. You are constantly in the presence of old professors, whatever your work. My attempt at writing is reviewed by a thousand old professors, who remark my false notes and lack of

capacity. In all your relations with men, there are old professors who note your mistakes.

A moving picture play entitled "The Battle Cry of Peace" is being shown in the provinces. It is written around a lecture by Hudson Maxim, the inventor and manufacturer of war supplies. One scene shows Mr. Maxim lecturing to an Intelligent Audience, and several gentlemen go forward to congratulate the lecturer on his Telling Points. That is about the only new thing in the play.

I teach nothing new, unless it is that honesty is the best policy. I say certain things we are trying to do cannot be done, but that there are certain important and simple things we can do, and habitually neglect. I beg the people to accept the good principles they know to be true, and find others; of my ignorance, false notions and mistakes I am as ashamed as any one can be for me.

My favorite diversion is attending good concerts. If the band or orchestra plays "William Tell," or "Raymond," or "1812," or any other selection I dislike, I am patient, knowing that these numbers have their admirers. I know the next number may please me, and wait patiently, without rendering myself disagreeable to those about me.

The Camp Fire Girls of Potato Hill were arranging for a hike, and Lena Waters said to her mother: "Mamma, we want you to go along as chaperon." Mrs. Waters is threatened with being quite a sensible woman; she replied: "No, dear; you don't want me as chaperon; you want me to go along as cook."

One of the most sensible things said on this continent in years came, greatly to my surprise, from the City of Mexico. There was a strike which threatened to greatly inconvenience the people and tie up public affairs. "This," said a Mexican official, "is not a strike; it is a riot."

I do not care much for Trail Hitters. If religion is the important thing Billy Sunday says it is, the Trail Hitters must be a stupid lot that they have not discovered it sooner. I think a great deal more of old church members than I do of the Trail Hitters.

A book has been sent me which opposes everything under the shining sun; I know of nothing that meets with this critic's approval. Here is another man who wastes his time in writing. We are very numerous.

When a newspaper starts a crusade, it goes in to win with as much energy as a prosecuting attorney goes in to

convict. In the case of a prosecuting attorney, the accused man has attorneys to watch his interests, but when a newspaper takes after a man, he has no defender.

Church people say the Lord demands ten per cent of all the people earn. For one reason and another, the Lord has been unable to get it; but the politicians have: it is estimated that of every dollar you earn, nine or ten per cent of it goes for government.

A judge who allows a receiver \$100,000 for an hour's work can make no explanation of his action, in law or reason; so he does not attempt it. But at the next meeting of the Bar Association, he delivers a profound address on the sacredness of law.

When Charles E. Hughes was a Justice of the Supreme Court of the United States he was as cold as the end of a dog's nose. Now that he is a candidate for president any one is at liberty to slap him on the back, or poke him in the ribs.

When a western man thinks of a thing that might have happened, he says there is an Indian legend that it *did* happen. By-the-way, all our Indian legends seem to have been made up by amateurs: I have never heard of a good one.

The politicians are at least becoming more candid. Formerly they hid their cupidity, but now they boldly admit their methods. This candor is commendable; possibly it will enable the dull people to appreciate the true situation.

Many things men eat greedily, a hungry dog will not touch. Haven't you offered delicacies to your dog at the back door, and seen him refuse it?

You're like the rest of us: you fuss and fume in secret, but are mighty quiet when a union man comes in. The union men think we are for them.

It isn't necessarily true because you see it in print. But a printed statement is at least more carefully thought out than ordinary talk.

In all my controversies I have noticed that it has been charged that I am wrong, or lacking in charity for the faults of others.

"Here," a man will say to another, "is the *logic* of the situation." Then he proceeds to state the *argument* of the situation.

If an exaggerated statement is a lie, there is no truth.

JUST A WORD

The Independent is a bit proud of the fact that for the last twenty years—in five campaigns—it has published a signed statement of principles from every candidate for the presidency. That is one of the ways in which we have carried out our Editorial Rule No. 1—an independent magazine prints both sides—or all sides.

In this especially interesting campaign year we are going to do it again. President Wilson, Mr. Hughes, Mr. Hanly and Mr. Benson will all state their cases for Independent readers within the next five weeks, and every number between now and Election Day will hum with the issues of the campaign. A fuller announcement will be found on another page.

Wilson was a college president and Hughes was a Supreme Court Justice. It took both of them some time to convince the public that they were thoroly and agreeably human—but it didn't take any time at all for their college mates to recognize "Tommy" Wilson and "Charley" Hughes even after the mantles and robes of high office had descended on them. Donald Wilhelm has found out some interesting things about the college careers of "Tommy" and "Charley" and will share them with Independent readers before the election has removed one of them from the lime-light.

Two poems that will be read with particular interest come from Robert Frost, whose new book is to be published this autumn. In The Independent for May 22 of this year we printed an article about Mr. Frost's work and reprinted the poem "My Butterfly," from The Independent of November 8, 1894, which, Mr. Frost says, gave him the first satisfaction of getting an adequate expression for his thought. "North of Boston" showed American readers a new interpreter of New England, direct of speech and intense in emotion, and those who love poetry will be on the lookout for "The Gum Gatherer" and "The Telephone."

REMARKABLE REMARKS

WOODROW WILSON—Genius is no snob.

ROBERT BACON—I assume the existence of international law.

ED. HOWE—There is no doubt whatever that the present war is the result of preparedness advocated by Mr. Maxim and Mr. Roosevelt.

CHAMP CLARK—The average American citizen is as patriotic as Charles Evans Hughes, Woodrow Wilson or any other big-wig in the land.

WILLIAM F. MCCOOMBS—The Republican party has cloaked its iniquity with a judicial robe, but the cloven hoof of special interests still protrudes.

CHARLES W. ELIOT—It is the duty of every American in time of war to forego the privileges which as a free man he exercises in time of peace.

CHARLES S. MELLEN—I sometimes wonder to myself whether government ownership of the Boston & Maine can be postponed another five years.

W. J. BRYAN—If we had recognized Huerta he would have been able to borrow money and to kill every person in Mexico working for the better of his country.

PRINCE HENRY OF BATTENBERG—Every thing the English do, even in sport and games, is done with the exclusive object of getting on top by every manner of trick.

THE NEW PLAYS

Some very good character acting, funny situations and clever lines make possible a Broadway success with a Sunday school moral, *Turn to the Right*. (Gaiety.)

Handicapped by its title, *His Bridal Night* is nevertheless good, clean fun, enhanced by colorful "new art" sets and the excellent dancing of the Dolly sisters. (Republic.)

Margaret Anglin is particularly unfortunate in the choice of her latest play, *Caroline*, a heavy, long-drawn-out comedy with lifeless characters and hackneyed situations. (Empire.)

We have had criminal trials galore in plays, but *The Silent Witness* shows that the old theme may still be novel and gripping if the author is ingenious and the acting good. (Fulton.)

*The Girl from Brazil* displays an ignorance of our southern neighbors unpardonable even in a musical comedy. It seems that they all talk Spanish in Rio Janeiro! (Forty-fourth Street.)

*Seven Chances*. If you had to find a girl to marry you within an hour, or lose \$12,000,000, how would you go about it? Jimmy had seven chances—but he got the right girl. (George M. Cohan's.)

You might think that *Cheating Cheaters* gave away the plot in the title, but there you cheat yourself. Anyone who could guess who were crooks before the last act deserves a prize. (Eltinge.)

The dramatization of the best seller *Pollyanna*, is frankly sentimental, but relieved by a puppy, a kitten, a few sarcasms, and much good acting, especially in the children's roles. (Hudson.)

*Nothing But the Truth* enables that supercomedian, William Collier, to demonstrate what astounding things happen when a fellow tells the solid truth for twenty four hours. Immensely good farce-comedy. (Longacre.)

OTIS SKINNER—master of romantic actors as Italian burdy gurdy man in Booth Tarkington's *Wister Antonio* gives stinging lesson in Christian charity to smug church people. Vastly entertaining American comedy. (Lyceum.)

*The Washington Square Players* have moved to a larger theater, nearer Broadway, where they are playing four one-act comedies, by Maeterlinck, Schnitzler, Tchekov and Edward Goodman, director of the company. (Comedy.)

As Well a Wedding Without Silverware  
as Silverware Without  
**GORHAM**

No Bride and Groom are more indissolubly tied to each other than Silverware and Gorham — they are the affinities of the silversmithing art.

It is Silverware of Originality — not a monotony of repetitional patterns.

It is rich in unique and distinctive motifs, created by the finest artists in the silversmithing craft, combining integrity of workmanship with inspiration of design.

Remember, too, that Gorham Sterling Silverware, thanks to its being an almost imperative feature of the American Wedding, offers a range of choice which is particularly happy in articles for wedding gift purposes, whether utility or ornament alone be the object in view.

## [MR. WILSON JUSTIFIES THE EIGHT-HOUR LAW]

**Y**OU never can tell in advance what a campaign will turn on. Sometimes you cannot even tell in retrospect. But where there turns out to be a principal issue, it often proves to be one that popped up in mid channel.

It looks as tho the railroad eight-hour law might be the thing that will come nearest to rescuing the current campaign from entire apathy. Mr. Hughes has taken to devoting a considerable part of his campaigning to an attack upon the passage of the law; and Mr. Wilson has devoted his first campaign speech—delivered at his summer home at Long Branch—to a justification of its enactment.

The only trouble is that attack and defense do not meet head on. Mr. Wilson declares that the law is a good law; while Mr. Hughes asserts that it is not what it purports to be and that it was not passed in the right way. Mr. Hughes does not discuss the merits of an eight-hour day for railroad operatives. Mr. Wilson does not discuss the propriety of enacting the law with unusual rapidity because the workers threatened to strike if it did not become law by a given day.

Mr. Wilson's speech last week from the porch at Shadow Lawn was a characteristic utterance. It breathes a fine spirit of humanity and public service. It bravely sets the general welfare above the interests of any individual group in the nation. It recognizes the deep human quality that permeates the question between capital and labor. It is only regrettable that in making this recognition he finds it necessary to repeat the solemnly meaningless statement of the Clayton anti-trust law that "labor is not a commodity." The obvious if flippant answer to the statement is, "Who said it was?" But aside from this lapse his interpretation of the true relationship between capitalist and laborer is a fine one. It runs thus:

You know that we have been a legalistic people. I say with all due respect to some men for whom I have a high esteem that we have been too much under the guidance of the lawyers, and that the lawyer has always regarded the relations between the employer and the employee as merely a contractual relationship, whereas it is, while based upon a contract, very much more than contractual relationship. It is a relationship between one set of men and another set of men with hearts under their jackets, and with interests that they ought to serve in common and with persons whom they love and must support on the one side and on the other. Labor is not a commodity. It is a form of coöperation, and if I can make a man believe in me, know that I am just, know that I want to share the profits of success with him, I can get ten times as much out of him as if he thought I were his antagonist. And his labor is cheap at any price. That is the human side of it, and the human

side extends to this conception, that that laboring man is a partner of his employer. If he is a mere tool of his employer, he is only as serviceable as the tool. His enthusiasm does not go into it. He does not plan how the work shall be better done. He does not look upon the aspect of the business or enterprise as a whole and wish to coöperate the advantage of his brains and his invention to the success of it as a whole. Human relationships, my fellow citizens, are governed by the heart, and if the heart is not in it nothing is in it.

Applying this conception of the relationship between employer and employed to the question in hand, Mr. Wilson declared that when the recent controversy engaged his attention, he perceived at once that the principle of the eight-hour day is not arbitrable. "We believe," he said, "in the eight hour day——"

Because a man does better work within eight hours than he does within a more extended day, and that the whole theory of it, a theory which is sustained now by abundant experience, is that his efficiency is increased, his spirit in his work is improved, and the whole moral and physical vigor of the man is added to. This is no longer conjectural. Where it has been tried, it has been demonstrated. The judgment of society, the vote of every legislature in America that has voted upon it is a verdict in favor of the eight-hour day.

The objection of the railroad executives, Mr. Wilson reports, was that the establishment of the eight-hour day would cost the roads an immense amount of money. His reply to them was, "How do you know how much it will cost you?"

The reasonable thing to do is to grant the eight-hour day, not because the men demand it, but because it is right, and let me get authority from Congress to appoint a commission of as impartial a nature as I can choose to observe the results and report upon the results in order that justice may in the event be done the railroads in respect of the cost of the experiment.

The law was framed and passed to carry out this plan, and Mr. Wilson thus sums up the exigency which produced the legislation, "This thing ought to have been done and it had to be done at the time that it was done so as to bring about a reasonable trial of the eight-hour day and a careful examination of the results of the eight-hour day."

**T**HIS is Mr. Wilson's statement of the case for the eight-hour law. It is a strong case, except for one almost fatal defect. It leaves entirely out of account the element of haste in its passage and of compulsion which forced the haste. If the President and the Congress had considered deliberately and thoroly the proposal for an eight-hour day for railroad operatives, unhurried by threats, and had concluded as a result of study and debate that the proposal was a sound one, Mr. Wilson's

plea in justification would ring true. But the eight-hour day had not been considered in Congress, the President had never presented it to the people as a desirable subject for legislation, there was—we believe it is well within the mark to say—no popular conviction on the subject. What is more, the legislation was enacted on a given day because four powerful labor unions threatened a general cessation of work on the railroads of the entire country if the measure did not become law that identical day.

As Mr. Hughes has pointed out with emphasis, the question is not of the justice of the eight-hour day for the railroad men, but of the propriety of the President and Congress of the United States enacting into law, without consideration or debate, the demands of a special group in the country under the compulsion of force. Mr. Wilson, in his attempt to justify the action, does not seem to us to have been quite ingenuous and candid. The law was passed and signed as and when it was because the railroad brotherhoods had the will and seemed to have the power to make the whole country suffer if it was not so passed.

The impropriety of such a procedure was indeed set forth—tho not intentionally—by Mr. Wilson in the same address. He said:

There are some things in which society is so profoundly interested that its interests take precedence of the interests of any group of men whatever. One of these things is the supply of the absolute necessities of life. It would be intolerable if at any time any group of men by any process should be suffered to cut society off from the necessary supplies which sustain life. But those supplies are of no use unless they can be distributed, and in the matter of the distribution of goods, particularly of the goods that sustain life and industry, the interest of society is paramount to every other interest; and the difficulty about all situations like that which we have just passed thru is this—that the main partner is left out of the reckoning. These men were dealing with one another as if the only thing to settle was between themselves, whereas, the real thing to settle was what rights had the hundred million people of the United States. The business of government is to see that no other organization is as strong as itself; to see that no body or group of men, no matter what their private interest is, may come into competition with the authority of society, and the problem which Congress, because of the lateness of the session, has for a few months postponed, is this problem: By what means are we going to oblige persons who come to a controversy like this to admit the public into the partnership by which the thing is discussed and decided? That is not an easy problem. A great many different methods have been proposed, and one of the reasons why Congress thought it necessary to postpone the decision for a few months was that there were so many honest differences of opinion, not as to the object, but as to the method.

This is sound doctrine. But it should have been applied to the whole problem. The main contention should not have been given away in advance.

Mr. Wilson makes a strong case for the passage of the law. But it does not seem to us strong enough.

### THE PUBLIC WELFARE SUPREME

THE labor organizations are repeating the blunder that far more powerful organizations have made from time to time since the Christian Era began, and for which they have severely suffered. It is the blunder of asserting the alleged right of any organization whatever to exist on its own terms, irrespective of the welfare of the general public as interpreted by the sovereign people.

The Roman Catholic Church made this blunder and the Protestant schism resulted. The Mormon Church

in America made it, only to feel the iron hand of the national government. The great corporate business interests have made it, only to be brought under more and more strict control by state legislatures and courts, the national Congress and the United States Supreme Court. The Brotherhoods are fatuous if they suppose that they can win a fight which such powers have lost.

There is no divine, or moral, or natural right to organize, or to control the lives of men, or to do business, or to further the interests of a class in defiance of the general will of the people organized as the sovereign state.

Whenever any body of men, in overweening confidence, asserts such a right, and proceeds by violent or other unlawful methods to carry out its purposes, the duty of good citizens is absolutely clear. The right of the public to enjoy civilized order, as Chairman Straus of the Public Service Commission admirably put it the other day, is the supreme right. At all costs it must be maintained; by overwhelming force if necessary.

### PROGRESSIVE CANADA

CANADA is taking long strides along the path of progressivism. She is finding herself in the war in a way that compels admiration. It is a big enough achievement to build a volunteer army of 350,000 for overseas service, to foot a bill of half a billion dollars for war expenses, and to raise from private pockets thirty millions for war relief. But her political progress is even more astonishing.

When the war began not a single Canadian woman had the vote. Now there is equal provincial suffrage in every province from the Great Lakes to the Pacific. The last to vote "white" was British Columbia, which enfranchised its women on September 14 at the same time that it adopted prohibition and overturned a corrupt Conservative government.

The East, as in the United States, moves slowly. Ontario, the mother-province of all the West, is not quite ready for so liberal a step. A suffrage bill was defeated last year, but a fresh campaign is planned for this winter. At Ottawa the suffragists will attempt to persuade the Dominion Parliament to give the Parliamentary franchise to those women who now vote in the provinces. Quebec, Catholic and French, is, of course, far behind. The action of the courts in refusing recognition to a woman lawyer in 1915, on the ground that she was a woman, and moreover "a married woman under marital authority," contrasts sharply enough with the liberalism of the West, where the fight for suffrage has been a relatively short and easy one.

It is not clear that the war has expedited this movement, which seems natural enough after the action of our own western states. Canada has not yet been pushed to the extremity in which England finds herself and which has convinced even Mr. Asquith of the justice of the women's claim. But in the case of prohibition the war influence is plain. Patriotism, economy and sobriety have been linked together in the public mind, and it is not surprising that there is now no "wet" territory from Ontario westward to the coast, except in the Yukon, nor in the Maritime Provinces. In Saskatchewan there are still twenty government dispensaries, but elsewhere the retail selling of liquor has been prohibited. Quebec is the only province without such legislation, and even

there over 900 of the 1143 municipalities are "dry." With the exception of Prince Edward Island, where there have been no saloons for fifteen years, this sweeping reform has taken place entirely within the period of the war.

Only in Ontario, however, where the bars were closed on September 16, is there any limit to the period of prohibition. There the sale of intoxicating liquors is illegal only until June, 1919, the intention being to postpone a final settlement of the question till after the war and the immediate readjustments which will follow. Elsewhere prohibition has apparently come to stay. Sentiment in the provinces where action has been taken recently seems to be in favor of the new régime, and already one hears the familiar statistical evidences of increased prosperity. In Alberta, for instance, postal savings have reached a monthly total three times as large as they ever were before the bars were closed.

Incidentally, there is little satisfaction for the Borden government, which has kept the reins during the war under a truce with Sir Wilfrid Laurier, in the political complexion of the provinces. The collapse of the Conservatives in British Columbia leaves the Liberals in control of every province but three, Ontario, New Brunswick and Prince Edward Island.

When the war is over Canada will have suffered severe losses, and will be carrying a heavy debt. But her splendid action on these two vital issues will make the country a better place to live in than "before the war."

### HINDENBURG TO THE FRONT AGAIN

**S**IMULTANEOUSLY with the news that Rumania had entered the war came the announcement that General von Falkenhayn had been removed from the post of Chief of the General Staff and Field Marshal von Hindenburg had been put in his place with supreme command over the Austro-Hungarian as well as the German forces. This gives Hindenburg more numerous and more powerful armies than any man ever had before since the world began.

We shall have to wait some fifty years until we can read the letters and memoirs of those who pull the wires before we shall be able to gratify our curiosity as to the real reason why the Kaiser defied the old proverb and swapped horses in midstream. But it is known that the two men have been rivals for Imperial favor. They had very different ideas of how the campaign should be conducted, and it has seemed that first one and then the other got the Kaiser's ear. When Hindenburg won the battle of Tannenburg and freed East Prussia from the invader he was made the hero of the German people. But later he dropt almost out of sight and the colossal wooden statue is not yet covered with nails. The great drive of a year ago that gave Poland to the Germans was carried out under the direction of Falkenhayn, while Hindenburg was not given enough troops to complete the conquest of Riga and Vilna.

Next summer Hindenburg was still more unfortunate, for he was left with barely sufficient forces to hold the line before Riga and could not undertake any offensive movements in the north before Russia recovered her strength. This was because Falkenhayn had drained the Russian front of men in order to turn them over to the Crown Prince for the capture of Verdun. But the men were sacrificed in vain, for Verdun was not taken

and Russians smashed in the weakened front all along the line—except that part held by Hindenburg.

Now Falkenhayn is out of it and Hindenburg is called upon to meet a new foe and defend, with reduced forces, a front a thousand miles longer than before.

### THE BOOKSHELF THIS AUTUMN

**A** GENERATION ago there were between three and four thousand booksellers in this country, says the *Publisher's Weekly*. Now, with double the population, there are fifteen hundred! Moreover, we of the United States, who labor so strenuously at English courses and free libraries, publish one-tenth as many books per capita as Switzerland, and from a fourth to a seventh of the output of Japan, England, France or Germany. Spain alone is in our class.

The fact is we are magazine and newspaper readers, and perhaps there was wisdom in the reasoning of the man who stopped his Sunday paper, for no pious scruples, but because he found it covered up his books.

However, a few publishers still manage to make ends meet, and if their autumn announcements suggest a certain exhaustion, as tho the events of the past two years had left us too weary to write anything new, there are some good books promised. The list differs widely even from that of the first half of the year. Then we were doing a good bit of soul searching on the failure of our famous "melting pot" to melt its contents into any consistent or dependable metal. Book after book reflected this commendable humility, but now, having proved that we are utter failures, we again take up practical considerations for social betterment about where we left off, save that the book lists show much discussion of military training.

The stream of war literature grows thinner, both in quantity and quality, tho there are some books of real value dealing with the Balkans and with the possible complications in the Far East. There are no new "experiences"; not a "cause of the war" has been overlooked by historians, and prophets are too busy watching events to make further guesses at results.

No thrifty fiction monger could let this drama go to waste, and war stories, with the Germans in horns and hoofs and the Allies clothed in samite, come thick and fast. Even in works of a fine type there is a strong tendency to solve all the difficulties of the situation by "killed in action."

Another trend in the autumn stories is distinctly feministic. No longer do we debate the possibility of the heroine doing things. We merely recount the doing, and what happens next. What happens next is what always has happened, so that, if the story writer be a true index of society, there is no need to worry. But, sure sign of a more normal state of mind than last year, there is wide variety in the fiction subjects, and some excellent works by new as well as old writers.

An uncommon lot of informal biography, recollections, correspondence, both English and American, is out, as tho those beyond active share in this day's turmoil had turned back with relief to the quieter years of their youth and middle age.

The countries most often talked of in the newspapers, or toward which the future points, appear in the books of travel and history: Russia, Middle Asia, Mexico. We have almost forgotten those gentle records of wanders-

ing in the British Isles and Europe that once figured largely and popularly in every autumn book list. Of the old lands only Ireland attracts attention, and this for no holiday reason, but with tragic significance.

### JAPANESE TRAITS

**D**R. MOTODA, the president of St. Paul's College in Tokyo, has just published a volume entitled *An Analysis of the Japanese Mind*. As a general impression still persists in certain quarters in the United States and elsewhere that the Japanese mind is beyond understanding, our readers will be glad to see how a clever Japanese attempts, as the Negro preacher once phrased it, to "explain the inexplicable, to fathom the unfathomable and to unscrew the inscrutable."

Among the good traits of Japanese character Dr. Motoda mentions patriotism, loyalty, affection for family and relatives, love of children, cleanliness, power of adaptation, appreciation of beauty in nature, politeness, manual dexterity, and a keen intuition of the spirit of things. He offsets these virtues with such defects as lack of public spirit, devotion to red tapism, nervous self-consciousness, careless respect for the truth, official contempt for the common people, fickleness, unpunctuality, indulgence in personal criticism, clannishness, poverty of facial expression; and indulgence in physical appetites.

This would seem a fair appraisal of the Japanese character to the average foreign traveler in Japan. For our part, we should say that the Japanese were superior to us in patriotism, loyalty, cleanliness, estheticism, alertness and thoroughness, but that we were far ahead of them in our treatment of women, in business morality, in financial and industrial development, and in the qualifications we impose for the suffrage.

### THE MINISTER'S MINISTRY

**D**R. AKED, of San Francisco, acknowledges the school of experience to be the most effective agency in teaching the minister of the gospel the limitations of his own mission. Yielding to the appeal made by Mr. Ford to "the dash of healthy recklessness" in his blood, he embarked upon the ill fated peace expedition which ended for him in general disillusionment. Without waiting for a day's consideration or counsel he forsook the responsible pastorate of a large church, rushed across the continent with all speed to join the Ford party, and labored untiringly on sea and land for the success of the movement. Failure resulted, and now after months of fruitless effort he has given up his pursuit of the peace propaganda and seeks reinstatement in his former work.

Dr. Aked, however, has not changed in the least his conception of the hatefulness of war or the supreme desirability of peace. But he confesses to have learned much about the method of destroying the one and securing the other. He perceives that there is no short cut to such a divine consummation. Neither spectacular dash nor reckless generosity can achieve the desired goal. International peace is not a purchasable commodity. When it comes, it will be recognized as the fruit of organic, spiritual, ethical and social growth.

Dr. Aked's words constitute a very humiliating confession. "We went to end the war in Europe. We started more than one war of our own. We breathed an atmosphere of suspicion, of intrigue, of hostility." Of the

Peace Conference itself he says: "The strife in the trenches cannot be more bitter nor its hatreds more deadly than the strife and hatred of our conference." Such experiences have burned into the clergyman's very soul the lesson "that the business of a minister of the gospel is—to preach the gospel."

It is a warning and a call worth heeding. The exaltation of righteousness and social justice, the development of clear thinking on ethical themes, and the cultivation of the spirit of sympathy, mutual understanding and good-will are quite as necessary to universal peace as the creation of social and political organizations commensurate with the advancing needs of civilization. Ministers may well be stirred to their utmost endeavors by a true conception of their opportunity and obligation in this matter. The earnest preaching of the gospel of good-will applied to the whole of life is the greatest contribution any clergyman can make to the Peace Movement.

Preparedness for defense may safely be left to the selfish instincts of the man in the street, and the methods of settling disputes to the leaders in constructive law and government. But upon the teachers of religion must devolve the more fundamental task of creating the moral and spiritual atmosphere and life out of which—as out of nothing else—secure international peace can spring.

### CALIFORNIA AND THE SINGLE TAX

**T**HE division of our country into sovereign states has its disadvantages. There are many fields in which the difficulty of legislating uniformly for the whole nation is a serious obstacle to progress. But there is another side to the matter. Individual states can try experiments, and the rest of the country can profit by their success or failure.

California is trying to undertake such an experiment. On election day the voters of the state will have an opportunity of adopting the single tax. An amendment to the state constitution has been proposed which provides as follows:

Public revenues, state, county, municipal and district, shall be raised by the taxation of land values exclusive of improvements, and no tax or charge for revenue shall be imposed on any labor product, occupation, business or person; but this shall not prevent the assessment of incomes and inheritances to provide funds for old-age pensions, mothers' endowments and workingmen's disemployment and disability insurance.

Land holdings shall be equally assessed, according to their value for use or occupancy, without regard to any work of man thereon; this value shall be determined in municipalities and wherever else practicable, by the "Somers system," or other means of exact computation from central locations.

The intent of this provision is to take for public use the rental and site values of land, and to reduce land-holding to those only who live on or make productive use of it.

Conflicting provisions are hereby repealed.

The amendment is proposed by initiative petition and is to be voted on directly by the people without reference to the legislature. The petition bore 137,000 signatures, of which more than 88,000 were validated according to law. Only a few more than 74,000 were necessary to secure the submission of the amendment to the electorate.

The adoption of the single tax by California would be a splendid thing, not only because it is sound in principle, but because the people of the United States ought to have a chance to see it in operation.

His criticism of the Democratic action in the railway crisis is well set forth in his speech at Springfield, Illinois:

I stand for the principle of arbitration in industrial disputes. Labor, least of all, can afford to have that principle surrendered. It is a civilized method, as opposed to the injurious contests of force, which impoverish labor and imperil the social order. The essence of the matter is a fair and reasonable hearing of all parties concerned and a just determination according to the facts. To say that fair and prompt arbitration could not have been had in this case is to indict both the administration and the American people.

Had the Executive gone at once to Congress for immediate authority to secure prompt and thorough investigation of the stated grievances in advance of action, and had he thus made instant provision for an inquiry so entirely competent as to command the respect of the country, I am satisfied there could have been no strike. We are still ruled by public opinion, and no administration need fear results if it stands firmly for essential principle.

Contrast the action of this administration with what Grover Cleveland in 1886 said with respect to labor legislation: "All legislation on the subject should be calmly and deliberately undertaken, with no purpose of satisfying unreasonable demands or gaining partisan advantage."

It is idle to excuse the action taken by the Adamson bill by a request for additional legislation with respect to the future. That legislation was not obtained. We are dealing with what was demanded and actually enacted.

We have an unjustifiable attempt to use public sentiment with respect to another eight-hour workday in order to justify a bill which does not provide another eight-hour workday, but relates solely to an increase in wages. We have seen the choice

We can stand mistakes in policies if we are sound in method, but we cannot yield reason to the rule of force. That is the path of sure disaster. I should not take first step in that path.

In the primary election in New York the chief interest was centered, as it was in the Maine election, in what the Progressives would do. In the Republican primary Governor Whitman won the nomination over his only opponent, Congressman William M. Bennet, by an overwhelming vote; and William M. Calder secured the nomination for United States Senator over Robert Bacon by a plurality of eight thousand. In the Democratic primary Judge Samuel Seabury was unopposed for the nomination for Governor, and William F. McCombs, formerly chairman of the Democratic National Committee, secured the nomination for United States Senator without serious opposition from his opponent, the anti-Tammany candidate.

In the Progressive primary both Whitman and Seabury were candidates; and the Republican leaders naturally find in the fact that Governor Whitman secured the Progressive nomination, even tho the total vote was inconsiderable, reason for rejoicing. The Democratic leaders, however, declare that if the Republicans do not get back more of the Progressive vote than was indicated by the New York primary vote—as well as by the result in the Maine election—a Democratic victory in November is assured. The Progressive enrollment in New York was 46,000, and only about 17,000 votes were cast in the Progressive primary; so it appears that most of the Progressives have already gone somewhere else. Only the presidential election will really tell where.

Mr. Hughes on the Administration and Mexico

*C. Walderdorff in Fort Illinois, Cavalryman, Brownsville, Texas*

## EUROPE: WHAT? AN ARMY AND NO WAR?

I have only recently received this authentic information of the actual instructions that were given with respect to the Government of Mexico such as Mexico then had. John Lind was authorized by the Executive to state this proposition to a minister of another government, and this is the authorized instruction: "Huerta will be put out if he does not get out; that it is the preference of the President that it should be accomplished by domestic means if possible, but if it cannot be done by domestic means other means adequate for the purpose will be resorted to."

There is no basis for that in the recognition of the sovereignty of our neighbors. There is no basis for that in a true and correct American policy. We departed from American policy and left our citizens to suffer from the barbarities which resulted when all government was destroyed and anarchy was supreme in Mexico.

We were promised in the platform of our opponents of four years ago that the constitutional rights of American citizens should protect them on our borders and go with them thruout the world and every American citizen holding or having property in any foreign country should have the full protection of the United States Government both for himself and for his property.

On the contrary, we have seen American rights abused. We have seen American lives lost, property destroyed and commerce interfered with. There was one clear duty for American administration connection with Mexico. That was the protection of American lives and American property; at all events, that was a clear and understandable duty leading to the straight path of administrative action without the shadow of turning. But instead of that there was meddling with Mexican affairs which Mexico could not understand and which cost us their friendship and respect.

I do not speak of the questions whether Huerta should or should not have been recognized. That is a matter which presents a false issue. If the administration had felt on the information it had that he had a stable government and could perform international duties then it could properly have recognized him.

If, on the other hand, it was satisfied that he did not have a stable government and could not perform the international obligations of Mexico, then it was competent to refuse recognition. But the one thing which was not proper and which had no basis was to conduct a personal war on Huerta for his extermination from Mexican politics. Yet that was what was done.

The great duty of protecting American lives and property was left unperformed while an unofficial spokesman was sent to Huerta to inform him not simply that he **would not be recognized**, but that he must eliminate himself from Mexican politics. He was told by this unofficial spokesman that he could not even be a candidate at a Mexican election. It was said that we must have a demonstration of our absolute good faith in dealing with these neighboring nations.

Yet the truth is that we did intermeddle with those affairs in a way which forfeited to us the esteem that we should have enjoyed, and finally resulted in leaving Mexico to the ravages of revolution, without protection of our citizens or the citizens of any other country. We left them to an anarchy which was indescribable and to atrocities which will not bear repetition in polite society.

There is one way and one clear way to secure the respect of Mexico and of every other nation and to maintain our prestige and our influence; one way to be really

#### MOVING TOWARD RUSSIA

Adjutant to Franz-Josef: "Your victorious armies are leaving Austria and moving toward Russia." The "victorious armies" are being driven to the prison camps by Cossacks

helpful, and that is for America to recognize the just demands of American citizenship and protect American lives and property thruout the world, and I stand here to say that so far as I am concerned, if entrusted with executive responsibility, I shall to the utmost of my powers maintain American rights on land and sea thruout the world with respect to all nations, as to American lives, American property and American commerce.

**Mexican Affairs** Pancho Villa is the Mexican bad penny. He turns up, too, at the most inconvenient moments for his enemies. The conference at New London was progressing quietly, with the Mexican conferees nervously trying to stand pat on their proposal for the withdrawal of the American troops. Suddenly Villa, not half so dead as Señor Carranza had declared and hoped, dashed out of the hills into Chihuahua City on one of his characteristic little raids.

The stories of just what happened are at wide variance. General Trevino, Carranzista commander of the Chihuahua garrison, declares that the affair was a complete victory for the government forces, that Villa lost nearly 300 against about sixty for the city's defenders, and that the bandit chief himself is wounded again and in hiding with about 150 followers. Brigadier General Bell, however, commanding the American troops nearest to Chihuahua, has sent a report to the War Department which puts quite a different face on the matter.

General Bell reported thus:

Evidence increases to show that Villa was completely successful in his attack Saturday upon Chihuahua and accomplished all and more than he said he would do. There is diversity of opinion and statements as to the number of men with which he entered Chihuahua.

Some accounts state he only had 500, while others give him 1700, but all agree he was able to secure possession of the penitentiary, the governor's palace and the federal buildings and held them for several hours and all this with a Carranza

garrison at Chihuahua City which no one places at less than 6000.

He liberated over 200 prisoners, secured and carried away more than sixteen automobiles loaded with arms and ammunition and actually took out artillery under an escort of deserting Carranza troops. He left Chihuahua with from 1000 to 1500 more men than he entered.

Villa retired leisurely and practically without molestation. The firing by Trevino's artillery occurred after Villa troops had withdrawn.

On September 14, Trevino received a letter from Villa stating that he (Villa) would be in Chihuahua to shake hands with Trevino on the 16th, and he hoped he would have a suitable reception for him, that he might be hungry and would like to have something to eat. On the 15th of September it was reported Villa personally entered Chihuahua, was seen by many of his friends there and reconnoitred the city. Of course he was in disguise. On the night of the 15th, Villa approached Chihuahua from a camp which he had maintained for two days within twenty-two miles of that city.

After Villa, columns had secured possession of the penitentiary, the governor's palace and the federal buildings, Villa himself went into the governor's palace, went to the main balcony, displayed his face and made a short speech, which in substance was as follows: "Viva Mexico! You have not your liberty. I will give you your liberty, for I am your brother. I am going to return in a few days."

It appears there had been a banquet attended by most of Trevino's officers and that about two o'clock this banquet was finished and most of the officers of the Carranza garrison were asleep. As soon as Trevino heard of the trouble he started toward the governor's palace, but his personal escort deserted him and went over to Villa.

The party that attacked the federal building rode into the building on horseback and the guard there deserted to them. It is reported that many of the Carranza troops who were killed were killed by other Carranza troops, probably as a result of artillery firing from Santa Rosa Hill.

The complete accuracy of the story as forwarded by General Bell remains to be established. But the incident has served to re-establish Villa as the most picturesque figure in Mexico since Diaz, and has rendered vastly more difficult

the task of the Carranza delegates at New London in pressing their demand for the withdrawal of American troops. This demand seems to be definitely established as the *sine qua non* of the Mexican case by a circular sent by Señor Carranza to the governors of the various Mexican states. It reads thus:

The American press is publishing inaccurate information regarding the subjects discussed by the Mexican and American Commissioners at New London. Since the proceedings of the conferences are kept secret, reports published in newspapers hostile to Mexico should not be taken seriously. I inform you of this to advise you of the methods employed by the Republicans in the political campaign. I assure you that the Mexican Commissioners are following my instructions and are only discussing the withdrawal of American troops from our national territory.

How can Carranza expect the United States to withdraw its troops while Villa is still able to operate as he did in Chihuahua?

#### The New York Strike

The street car strike in New York continued thruout the

week, tho service on nearly all the lines was considerably improved and interest centered chiefly in the saberrattling of the union leaders, who threatened a general sympathetic strike involving, perhaps, half of the 700,000 union workers in the city.

On the subway and elevated roads trains ran at normal intervals. There was a good deal of minor violence, chiefly the stoning of cars and elevated trains, which increased to the middle of the week and then subsided, after extraordinary police protection was provided and workhouse sentences had been given a number of convicted rioters. On Wednesday night a thousand policemen were distributed along crosstown lines to protect ten cars—a hundred to a car. Altho the first attempts to begin night service met with violent resistance, partial service was resumed on all the more important lines by the end of the week without much disorder.

Harding in Brooklyn Oct. 2, 1916

SOMME DRIVE!

Several conferences between Mayor Mitchel, Oscar S. Straus, chairman of the Public Service Commission, a citizens' committee of leading merchants, the union heads and the New York Railways executives proved fruitless. President T. P. Shonts of the New York Railways flatly declined to treat with the Amalgamated Association, and met all arguments by pointing to the loyal employees of the company, already organized in an independent "brotherhood" under company auspices. The union, failing to secure arbitration, and gradually losing its hold on the street-car situation, enlisted officials of the Central Federated Union and other unions in the sympathetic strike plan, and it was finally decided to call out all union workers on Wednesday on the pretext that loyal unionists could not go to their work in "scab" cars.

There was much uncertainty as to the response of the rank and file of these unions. Some ratified the strike vote, among them the longshoremen and allied unions. But others declined to strike, and it was generally thought that the claims of the union leaders were greatly exaggerated. A union boycott has been declared against all the traction lines.

**Peace in Wilkes-Barre?** There is hope of peace in Wilkes-Barre, where the street-car men have been striking for eleven months. The first difficulty came over the demand of the men for higher wages when a new contract between the Wilkes-Barre Street Railway Company and its employees was drawn up in January, 1915. Failing to agree, both sides referred the question to arbitration, but there was a nine-day strike in April because of difficulty in the selection of the third arbitrator. In July the arbitrators made an award granting a small wage increase—the amount which the company had been willing to concede, and adding a profit-sharing system. The men asked for a reconsideration, and failing to get it, struck.

### THE GREAT WAR

September 18—Allied troops occupy Florina. Germans repulse Russians from Halicz.

September 19—Germans attack in Champagne region. Italians take Austrian positions on the Carso.

September 20—Rumanians lose the Vulcan Pass in southern Transylvania. Russians advance in the Carpathians.

September 21—Bulgarians beaten back in the Dobrudja. Italians make progress east of Gorizia.

September 22—Germans launch attack at Riga. British capture mile of trenches between Flanders and Martinpuich.

September 23—Austrians blow up summit of Monte Cimone. British attack east of Combelet.

September 24—Two Zeppelins brought down in Essex. Rumanians renew assault on Austrian lines in Galcin.

Cesare in New York Evening Post

Numero, Turin

### THE GLORY THAT WAS GREECE

Satirical comment from both sides of the ocean on the part that Greece has played in the Great War. In the Italian cartoon Leonidas, the hero of Thermopylae, is crying, "Rise, my Three Hundred! Greece is in peril," and one of the Three Hundred replies: "Don't excite yourself, Leonidas, it isn't worth the trouble"

Long-continued violence has marked the strike. A detachment of the Pennsylvania State Constabulary was sent into the Wyoming Valley at the call of the sheriff, but as the mayor of Wilkes-Barre has not asked for their protection they have not been used within the city limits. Business in Wilkes-Barre is almost paralyzed and the whole valley is demoralized.

Representatives of the State Department of Labor now announce that they have persuaded the strike committee of the men to accept a peace plan, the details of which are still kept secret, and hope to bring the company to agree to its terms. Governor Brumbaugh has offered his services as mediator, and as he was expected at Wilkes-Barre this week, there is some prospect that he will be able to bring about a settlement of the strike.

**Civil War in Greece** The position of Greece as at once a neutral nation and a battlefield has always been difficult and is rapidly becoming impossible. The deportation of the Kavala garrison to Germany has roused the Greeks of pro-ally sympathies to a fighting pitch and they are no longer willing to obey a government that hesitates to abandon the policy of neutrality. Premier Kalogeropoulos is understood to have sent a vigorous protest to the central powers against their action, and an inspired article in a royalist newspaper contained the significant remark that "Only those are treated as prisoners who surrender to the enemy," thus intimating that the Bulgarians and Germans had been guilty of an act of war against Greece.

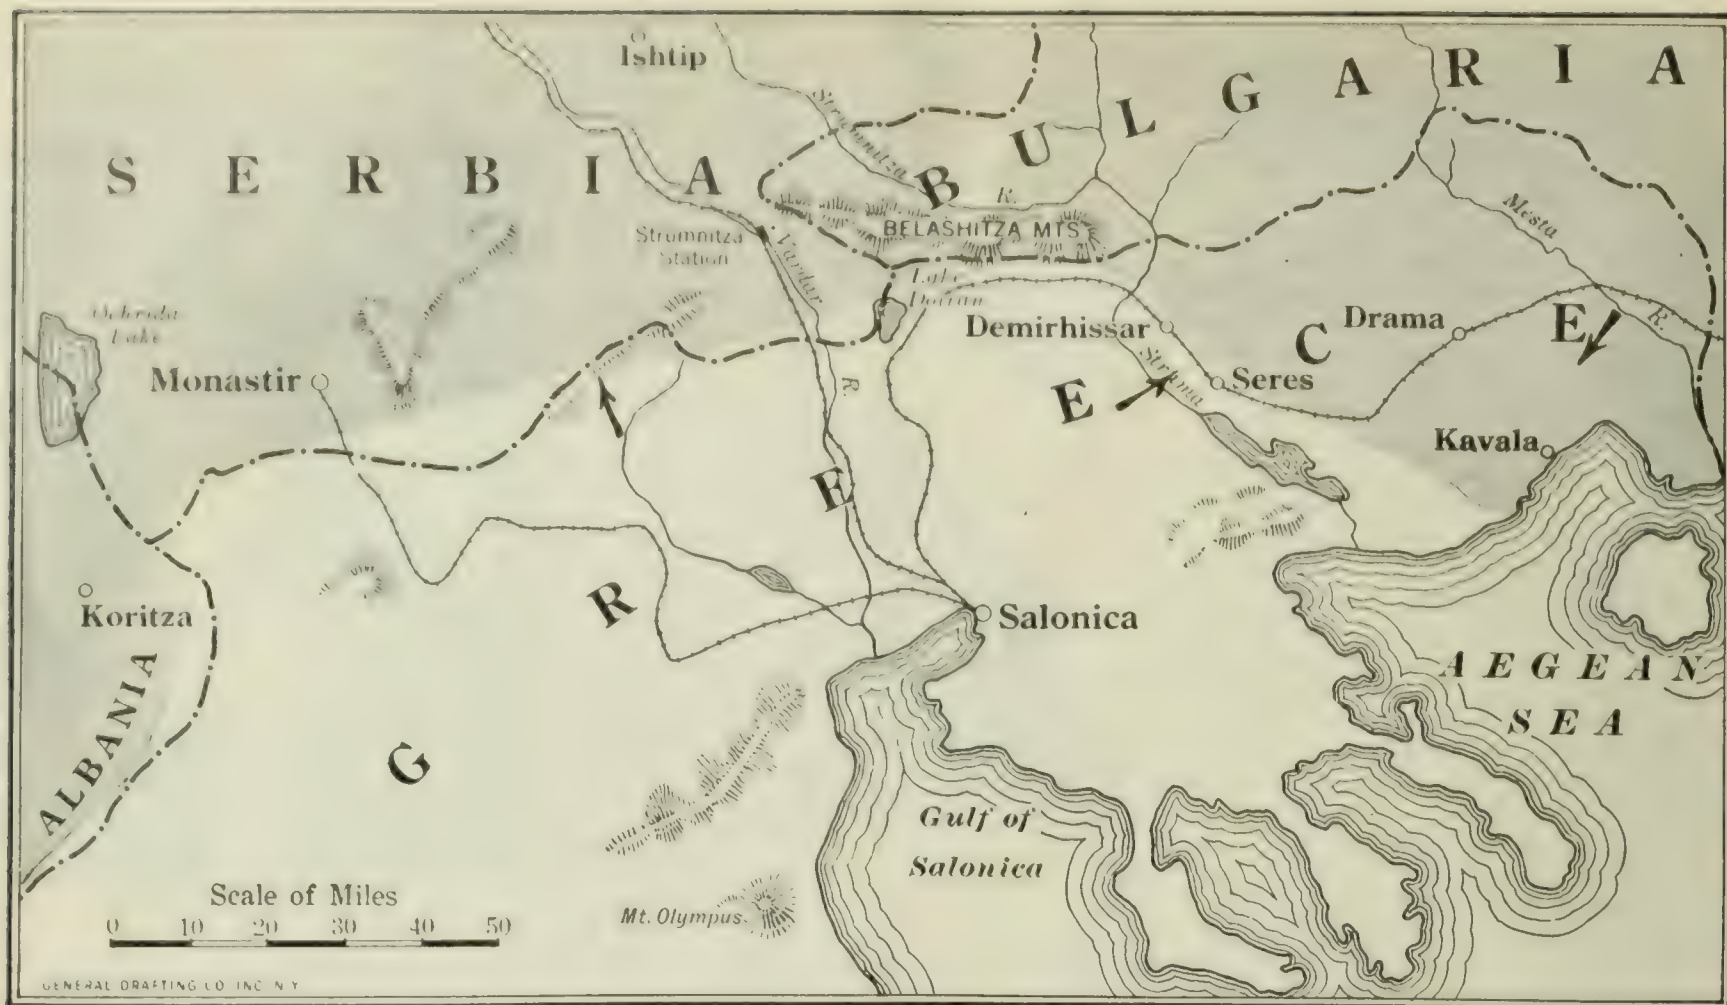

After several days delay, the German foreign office informed the Greek minister at Berlin that it might be possible to arrange for the return of the Kavala garrison to Greece if due guarantees were given that the troops on their return would not be intercepted by the

Entente authorities or punished by the Greeks for their "loyal and neutral feelings and actions." But whether the present government of Greece regards this arrangement as a satisfactory conclusion to the incident or not is now of little importance since the king and his cabinet can no longer command the obedience of the nation.

Eleutherios Venizelos, the Cretan statesman who has been unreservedly on the side of the Entente allies from the first day of the war, is now as much king in all but name as Constantine. He has not yet joined the revolutionary movement which is now threatening the throne, but he has repeated his former declaration that if King Constantine did not heed the voice of the people the nation must act independently. The followers of Venizelos have passed from words to acts. Crete as the home of Venizelos early broke into full rebellion and chose a provisional government to manage local affairs. In Epirus, the mountain region of north-western Greece, in Salonica, and in many of the Aegean islands, the revolutionists have declared against the king. Royal authority is still supreme only in Athens and in the Morea.

**Monastir Endangered** The Entente Allies are painfully conscious of the advantage the Central Powers won in overrunning Serbia and occupying northern Greece. Every week of time is precious to the Allied Powers, for winter will soon check active operations in the Balkan mountains, as it will on all other battle lines in mountainous or northerly regions, and it may well be winter before the huge composite armies gathered at Salonica have advanced far enough into Bulgaria to threaten the railroads which connect Austria-Hungary with the Ottoman Empire. At present the line of battle, which one might term the "war frontier," follows the Struma

#### THE THREAT TO MONASTIR

On the western end of the Allies Balkan front a composite force of Serbs, Russians and French is pushing hard on the way to Monastir. On the rest of the line no decisive success has been won.

River, turns westwardly thru Grecian Macedonia as far as Doiran, then follows the Grecian frontier rather closely as far as Albania. The two nations, Greece and Albania, which furnish the principal battlegrounds for the contending national groups, are nominally neutral, but their neutrality is purely formal and official. Individual units of the Greek army, and to an even greater extent the undisciplined tribesmen of Albania, take whatever side in the fighting their sympathies or their views of national interest incline them to favor.

On September 18 a force of Serbians, French and Russians took the important town of Florina in north-western Greece. This victory endangered the Bulgarian occupation of Monastir, the chief city in southern Serbia, just across the frontier from Florina. The complete occupation of the town and the neighboring hills required several days, but the Serbs had the satisfaction of making raids over the border and thus fighting on the soil of their fatherland. The Bulgarians withdrew toward Monastir, abandoning the town of Viglitsa and a number of elevated positions. The Kaimakalan plateau, the capture of which is claimed by the Serbians, is in Serbian territory. It lies 7800 feet above sea level, and military experts regard it as the most important position yet won by the left wing of the Allied army in the Macedonian campaign. But an element of doubt is injected into the situation by reports from German and Bulgarian sources which minimize or deny altogether the reports of Allied victories on the Serbian frontier.

The center of the Allied army, operating in the Vardar valley and near Doiran, and the right, which faces the Struma River, have been actively en-

gaged, but without decisive results. Hitherto it has been assumed the main advance of the Allied armies would be up the Vardar, where the course of the river is paralleled by a railroad line which runs thru the heart of Serbia. But if the success of the campaign against Monastir has not been exaggerated, Serbia may be reoccupied from the southwest. On the extreme west, in Albania, the Italians report some local successes.

#### Rumania and the War

Rumania is now experiencing all the disadvantages of a nation which must wage war at the same time on two fronts, and may in this sense feel a measure of sympathy for her enemy, Austria-Hungary. Just as the Austrian army was forced to abandon its offensive in the Trentino to meet the Russian advance in Galicia, so Rumania has almost halted the invasion of Transylvania to prevent a decisive victory by the Bulgarians in the Dobrudja. At some points in Transylvania the Rumanians have made progress, but on the whole their losses during the week have overbalanced their gains. On September 20 the Austrian Government reported the recapture of the town of Petroseny, a place of 13,000 population, fifteen miles from the Rumanian border, which was taken by the Rumanians on the last day of August. At the same time the Austro-Hungarian troops occupied the heights commanding the Vulcan (or Szurdok) pass in the Transylvanian Alps, one of the main highroads of the Rumanian invasion.

The result of the Dobrudja campaign is still in doubt. The Rumanians with their Russian allies have occupied a strong entrenched position from the Danube to the Black Sea a few miles south of the railroad which runs from

Constanza to Chernavoda. The Bulgarians and their allies, under the German general, Mackensen, have occupied the Dobrudja south of the Rumanian entrenchments, holding an area only slightly less than that of the state of Connecticut. The Bulgarians have attempted to break the Rumanian lines but it is not clear that they have done so. On September 19, German and Bulgarian forces came into contact with the Rumanian defensive and won several local successes. The Rumanians, however, counter-attacked on the following day with fresh reinforcements, many of which were brought from Russia by way of the Black Sea. The Bulgarians were temporarily halted and they entrenched to save themselves from the necessity of retreat. Thus at the present time both armies in the Dobrudja have adopted the system of trench warfare which prevails in all the other European theaters of war.

#### The Russian Campaign

The Russian offensive movement has been mainly concentrated during the week in the sector facing Halicz, the "key to Lemberg." On September 16 the Russians launched a vigorous attack against Halicz, but on the 18th the Germans recaptured most of the positions they had lost. The attempt of the Russians to take this important railroad center on the Dniester has been frustrated for the present but the Russians are not wholly discouraged. They point out that they have occupied positions of strategic importance in the neighborhood of the town and that less than three weeks of fighting on the Halicz front have resulted in the capture of 25,000 prisoners and twenty-two pieces of artillery.

In the Carpathians the Russian forces continue to accumulate small

local gains. These are of relatively slight importance at present, but if the Russians are able to use the Carpathian passes as routes of invasion into Hungary before cold weather makes them impassable to large armies they will acquire a new significance. In the Russian district of Volhynia, which includes Kovel, both sides made attacks but without changing the general situation in that sector. Further north, not far from Riga, the Germans attacked the Russian lines with the aid of gas but were repulsed. An interesting fact in connection with the fighting near Riga is that Turkish troops under German and Austrian officers have been reported among the forces engaged in the attack. This is the first time that Turkish troops have ever been used so far north.

**The Contest for the Carso** The great desolate plateau of the Carso (or Karst) is the main barrier between the Italians and their objective, the city of Trieste. The entire region has been scientifically cross-hatched with Austrian entrenchments, and as a result the progress of the Italians has been very slow. But one after another the Austrian trenches are falling before the steady pressure of superior numbers and perhaps superior munitionment. The Austrians estimate that the Italians have brought into action on the Carso front twenty brigades of infantry, a division of cavalry, and some fifteen Bersaglieri (light infantry) battalions. The Italians have also occupied a new position near Santa Caterina, in the hills east of Gorizia. The Trentino front has also been the scene of fresh activity. Here the Italians achieved a slight advance. The Austrians countered by exploding a mine under the summit of Monte

Cimone, a position occupied by the Italians on July 24. The successful decapitation of the mountain enabled the Austrians to capture nearly 400 prisoners in the ensuing action.

In estimating the present slow progress of the Italian armies regard must be had to the fact that now for the first time Italy is sending troops to a front with which she is only indirectly concerned. Until the Italian Government recently decided to take an effective part in the Macedonian campaign for the general benefit of the cause of the Entente Allies, Italian resources had been husbanded for strictly national aims. Italian troops were sent to occupy the Trentino, which the Italians hope to make their own after the war; to capture Trieste and its neighborhood, which the Italians have long dreamed of annexing, and to Albania, where Italy claims a sphere of influence. The fuller participation of Italy in the general war involves the subordination of such political strategy to more purely military considerations. The Italian campaign in Macedonia may therefore be regarded as a fair offset to any slackening of the advance against Trieste.

**Slow Progress on the Somme** The great attack of the British on September 15 and the two days following was succeeded by a comparative lull in the intensity of the fighting north of the Somme. The Germans, too hasty perhaps in their conclusions, accounted for the slackening of the advance by the theory that the available resources for a continuation of the offensive were already seriously diminished. The most important of war time resources is man power, and German estimates place the loss of French and British in the Somme campaign as

half a million killed, seriously wounded or captured. They point out that by this terrible cost the western allies had only succeeded in reconquering three per cent of the French and Belgian territory which the Germans had occupied. If the German estimate of French and British losses is at all correct it may well be that the Somme offensive was too costly for the results it has thus far achieved. On the other hand, it must be remembered that equal losses tell more heavily upon the central powers than upon the Entente allies because the latter have the greater reserves of men. It is too early to call the campaign of the Somme a success, but we must wait for its full effects to appear before venturing to pronounce it a failure.

As has usually been the case in previous advances, the Germans took advantage of the relaxation of the allied offensive to deliver heavy counter-attacks. None of these achieved any considerable success, altho Field Marshal Hindenburg is stated to be in direct charge of the German operations in the Somme sector of the western front. By Friday the British had again resumed an effective offensive movement and occupied trenches from Martinpuich to Flers, and on the next day took more trenches east of Courcellette. The French have taken a few new positions near Combles which still holds out against capture.

There is little news from other parts of the western battle-front, altho it seems clear from such reports as both sides choose to communicate that the French hold the upper hand in the fighting before Verdun. On September 19, the Germans launched a series of attacks in the Champagne country. All of these were repulsed.

A PERSEVERING PEACE PARTY

The Neutral Conference for Continuous Mediation, the residuum of the Ford Peace Party, in session in Stockholm, from which it will shortly move to The Hague. Around the table, beginning at the right, are Burgomaster Carl Lindhagen of Stockholm, a member of the Swedish Parliament; Louis P. Lochner, of the United States, general secretary of the Conference; Hantken Luken, State's Attorney of Christiania, chief of publicity; Frederick Weis, professor of plant industry at the University of Copenhagen; Markward Klausen, Danish delegate, Socialist Member of the Danish Parliament and Vice Chairman of the lower House; Johan Hammann, publisher, alternate delegate from Sweden; Baron Wallen, interpreter; Niclas Giesecke, professor of international law at the University of Christiania, Norway; J. Wolterbeck-Müller, professor of international law at the University of Rotterdam, Holland; Ernst Wigforss, professor of philosophy at the University of Lund, Sweden, alternate delegate; Hans Larsson, professor of philosophy at the University of Lund, Swedish delegate; Dr. Emil Gottschalk, Member of the Swiss Parliament; J. Scherret Pademann, Member of the Swiss Parliament and President of the Swiss Group of the Interparliamentary Union. Miss Emily Green Balch, American delegate, is absent.

## WHY PROGRESSIVES WANT HUGHES

BY JACOB GOULD SCHURMAN

THE Democrats have no chance of victory unless they poll a very large Progressive vote. And in their efforts to secure it they are resorting to desperate expedients. One of them is to invest their own party—that unpromising combination of the conservative South and Tammany Hall—with the halo of Progressive policies. Another is to denounce the Republican party as the party of reaction and its leader as the candidate of the “Old Guard.” And so President Wilson declared in his speech of acceptance, with a kind of oracular finality, that “the Republican party is just the party that cannot meet the new conditions of a new age,” while Mr. Norman Hapgood, with the same astigmatic vision, reported to *The Independent* on the eve of the Maine elections that “only the *Old Guard* is sincere behind Mr. Hughes.”

Well, the Progressives of Maine have promptly and effectively answered President Wilson and Mr. Hapgood. And those who would fain cherish their illusions may be invited to “remember the Maine” elections. The vast majority—experts say ninety per cent—of the Progressives voted the Republican ticket. Never before in the history of the state did the Republican party poll so large a vote. It swept the Maine Democrats out of the National House and Senate and restored the Republicans to control of the state.

Clearly the hope of the Progressives is in the Republican party. President Wilson’s attempt to identify the Democratic party with progressivism has failed. It was foredoomed to failure, whatever the efforts of the opportunist leader, by the character, the principles, the traditions, and the environment of the Democratic party. No state controlled by the Democratic party has ever been progressive. For triumphs of progressive legislation and administration you will look in vain among the Southern states or the industrial cities which the

Democrats control. California is the most progressive state in the Union; that distinction it owes to the work of the rank and file of the Republican party under the leadership of Hiram W. Johnson. What made Wisconsin a progressive state? The work and votes of Republicans under the leadership of Robert M. La Follette. The same story of Republican effort is true of every other state which has become or is successfully struggling to become progressive.

These actual achievements confirm the correctness of the theoretical conclusion that there is at the heart of Republicanism an element congenial with Progressivism. The case has been admirably put by Mr. Raymond Robins, the chairman of the Progressive National Convention, in his address to the Progressives of the country. Mr. Robins says:

The primary voter mass control of the Republican party is in the rural communities of the Central, Western and New England states. This group represents the highest literacy in America, is the freest from severe social and economic pressure, is in the zone of the

greatest natural tendency to industrial standardization and equality of opportunity, and inherits the tradition of Lincoln and the men who saved the Union. . . . And having preserved the integrity of the nation against the heresy of secession, will it [the Republican party] not develop and maintain a progressive national program of social and economic organization?

Turn now to the Republican leader. Mr. Hapgood’s wish and hope may have inspired him to assert that “only the *Old Guard* is sincere behind Mr. Hughes.” But Robert M. La Follette did not need to be instructed by the Maine elections. That distinguished Progressive leader had already said:

The nomination of Mr. Justice Hughes will be acceptable to the great body of progressive Republicans in this country. . . . He was not the choice of the reactionary element.

To the same effect was the testimony of Mr. Robins in the above-mentioned address:

The present leader of the Republican party won his reputation as the progressive Republican Governor of New York. He there proved himself completely independent of all boss control and demonstrated that he will take advice from many but dictation from none.

His words have been made good by deeds. His leadership is the fruit of the Progressive movement in American politics. His nomination was not two hours old when the most resourceful general of the “*Old Guard*” was dropt overboard into political oblivion. . . . Mr. Hughes’s recognition of the Progressives in the appointment of his campaign committee is a guarantee of the good faith in which he appeals for Progressive support. . . . For myself, I gladly enlist with the great majority of the Progressives of the nation under the leadership of Charles Evans Hughes.

But Mr. Hughes’s record as Governor of New York is ample demonstration of his progressivism. He was one of the first and foremost leaders of progressive Republicanism, at least in the Eastern part of the country. He declared at Chautauqua in 1908 that, paradoxical as it may seem, “human society cannot be stable unless it is progressive”; and that for the reason that growth and progress are the law of our nature.” Men’s

THEY DON'T MIX

"President Wilson's attempt to identify the Democratic party with progressivism has failed"

## MR. WILSON'S LEADERSHIP

BY NORMAN HAPGOOD

IT has been rather invigorating to have Mr. Hughes make a leading issue out of the President's prevention of the railroad tie-up. We all desired him to make an issue of something, even if it was something he would *not* have done. To expect him to mention anything constructive that he would do is evidently too much. The policy of being extremely negative, moreover, seems to have been confirmed by the results in Maine. Maine is a state in which there are not many independent voters, and in which the so-called Progressives were almost universally disgruntled Republicans or strongly Roosevelt Republicans, rather than the kind of voters who were Progressives because they believed in progress. The result, therefore, as far as it can be separated from the dominant issue of liquor law enforcement, represents the regular party vote rather than the independent vote, which is strongest in the West, but stronger in all northern states, except a few, than it is in Maine.

Probably Mr. Hughes's campaign can best be judged from this point of view—that the organization is merely trying to hold the natural Republican plurality and does not dare, therefore, to go constructively and clearly into any of the underlying issues of the day. Mr. Hughes is being used as a respectable negative, to hold, as far as possible, the Republican vote and to act as a nucleus for whatever discontent there is, as among the Germans and the Irish Catholics. Reports to me from Catholics make me think that many of them resent having their Church made an issue, as Colonel Roosevelt has been steadily trying to make it for many months preceding the scandalous moving picture climax. The danger of trying to make a Catholic issue in the open was shown by the Republican alarm when the inside story of this picture was told by the *New York World*. Campaign speakers should secure the *World* for September 12th and 19th.

About the Germans it is hard to say. The profes-

sional leaders are certainly eager to have the President beaten, thinking a defeat will be an indication of the German-American contentions. The Lincoln *Freie Presse* says that out of twenty-eight daily and 238 weekly Democratic German papers in this country not one supports the President. But no one can say what is thought by the quiet German-American citizen, who may turn out to be more of a patriot on November 7 than has been supposed.

Many more letters than I expected have arrived in answer to the question, "Why does Mr. Hughes talk and talk and never say a thing?" The majority agree with my own view, that when a lawyer has no case he can merely abuse the other side. There are a number of striking and individual observations. For instance, a resident of New York City, giving Mr. Hughes proper credit for conscientiousness, remarks: "Fortunate is the man whose conscience puts him on the side of the powerful." Professor C. Alphonso Smith of the University of Virginia writes: "The mathematician Todhunter once

brought a railing accusation against Shakespeare because the great dramatist uses such expressions as 'more beautiful,' 'most dreadful,' etc. 'Beautiful,' he condescendingly explained, means 'full of beauty' and 'dreadful' means 'full of dread!' But if a thing is full, it can't be made any fuller. The kind of mind exemplified here—analytic, circumscribed, visionless—is the Hughes type. The constructive idealist whom he berated had the Wilson type."

Discussing the plan of trying to win by mere avoidance of issues, Rev. Joseph H. Miller, of the Presbyterian Church in Huntsville, Tennessee, quotes the story of a negro who was arraigned before a Memphis judge. After some examination, the judge asked him if he had anything to say, and he replied, "No, Jedge, I'se jest gwine trow myself on the ignorance ob de co't." Another reader recalls the story of the inexperienced card player who misunderstood the signals of his experienced fellow conspirator and exclaimed aloud: "How can I play the ace when I ain't got no ace?"

Mr. Hughes undoubtedly gained

a few conservative and mugwump votes by waiting until the President and Congress had prevented the railroad tie-up and then barking about it. How those fastidious objectors will compare in numbers with the plain citizens who were pleased with the act is a mere guess, but I would bet on the plain citizen being far more numerous. The mugwump type is always ready to object to the *manner* in which things are done. It is usually more interested in form than in substance. The President, to be sure, did not wait months after a strike had begun, as Mr. Roosevelt did in the Anthracite trouble, and then jump in just before it was to be settled anyhow. He decided that the country did not want a strike; that it approved the eight-hour day; and that it would be willing to wait until December for the passage of a whole legislative program making such a situation hereafter impos-

CITIZEN HUGHES TO FIREMAN WILSON: "Why didn't you investigate before you put it out?"

# EAST AND WEST

BY RABINDRANATH TAGORE

TRANSLATED FROM THE ORIGINAL BENGALI BY BASANTA KOOMAR ROY

*The blood-red line  
That crimson the Western sky  
Is not the radiant red  
Of the rays of Thy soothing dawn.  
It is rather the terrible fire of the dying day.*

*On the seashores of the West  
The funeral pyres are emitting  
The last flames  
Caught from the torch of a selfish and decadent  
Civilization.*

*The worship of energy  
In the battle fields or factories  
Is not worshipping Thee,  
The Protector of the universe.*

*Perhaps the all-embracing rays  
Of Thy light of joy  
Are lying hidden on Eastern shores  
With patience  
Under the veil of humility  
In the darkness of silent sorrow.*

*Yes, the rays of Thy light of joy  
Are lying latent  
In the East,  
To liberate  
The Soul of the World.*

## THE DILEMMA OF ASIA

BY LAJPAT RAI

RABINDRANATH TAGORE, the great Indian poet and writer, is on a visit to the United States. En route he made a short stay in Japan and delivered a few speeches in the different parts of the country. These speeches have a value of their own in so far as they represent the state of mind of a great Asiatic amid surroundings which threaten a complete transformation of the continent which has from time immemorial been the birth-place, as well as the nursery, of the great religions of the world.

Modern economic conditions have a leveling tendency which makes short business of all that mysticism and transcendentalism for which Asia has so far been famous. Mysticism as such has no place in modern life except as a source of recreation and entertainment in week ends; or as a subject which supplies a fascinating change to the worn-out soul of the modern man. There is a certain hankering after the mysterious and the unknown which is a part of human psychology, a part of human nature, permanent and indestructible. The positive sciences have not only failed to destroy it; but on the contrary have added a kind of fuel to the fire. Judged from appearances it looks as if the modern man is dead practical and can have nothing left in him which will make him respond to this hankering after the unknown and the mysterious. Yet the very success of Tagore's writings and his popularity show that the seeker after mystery in man is not dead.

*As a member of the National Indian Congress and one of the leading lawyers in Lahore, Lajpat Rai has been in close touch with the progressive movements and ideas of India. He founded the "Punjabee," one of the important papers of the Punjab province, and he has contributed widely to other Indian periodicals and to magazines in England and America. Mr. Rai is a director of the First Indian Bank of Lahore, a member of the municipal Committee of Lahore, and a leader in the New Nationalist Movement in India. He is now in this country. Rabindranath Tagore, in the course of his visit to the United States, will lecture in sixteen of our large cities. Beginning in Seattle on September 25 and ending in Boston April 1, his tour will include Portland, San Francisco, Los Angeles, Denver, Chicago, Cleveland, Indianapolis, Cincinnati, Nashville, Detroit, Pittsburg, Philadelphia, Brooklyn and New York. — THE EDITOR.*

Here a question may be asked about Tagore. Is he a mystic, a yogi, or a reformer? He is a great poet and writer without doubt. But is he a mystic? I know Tagore will very much like to be called a "yogi" but the word "mystic" in the ordinary language of the man in the street has associations which Tagore will most probably repudiate. But leaving aside the popular connotation of the word "mystic," is not every great poet a kind of mystic as well as a yogi? Shakespeare, Milton, Shelley,

Longfellow, Wordsworth, Goethe, Schiller, had they not each and all something of a mystic in their make. Yes, probably they had, but their mysticism was at best subdued. That, however, is not the case with oriental poets. Omar Khayyam, Hafiz, Jalal, Uddin Rûmé, Shamas Tabrez, Valmika, Kali Dassa, Bhavabhuti, Tulsi Dass were all great poets but the mystic in them was predominant.

The mystic in the Occident is more or less the offspring of special culture—an exception or accident; but the mystic in the Orient is born. Mysticism is inherent in the oriental blood. It is a heritage from generations uncounted. The mysticism of Tagore has been inherited. The extraordinary part of it is the way in which he has expressed it. It is the oriental drest after the occidental that has captured the western imagination. There is originality, talent, genius in it. But above all it is the oriental expressing the mysticism of his land in an occidental language, in occidental manner to the occidental people, that appeals most to the western reader.

This does not appeal to the modern Indian to the same extent. The Asiatic loves mysticism and revels in mystic poetry. Mysticism is in the air there. There is, however, such a store of it, handed down from generations, superbly expressed, that a newcomer in the field has generally to wait for more than his lifetime to be fully appreciated and become widely popular. I do not mean that Tagore is not ap-

preciated in his own country. But what I do mean is that the quality of Tagore's poetry which impresses the modern Indian is different from what enthalls the American.

It is his capacity to speak to us of things which we have learnt to associate with the Occident, in oriental garb, which appeals to us. He makes us feel proud of our past. He professes to show us the way to absorb what is best in the new world, without losing what is valuable and priceless in the old.

For more than a generation we had been taught that there was nothing valuable in our past; that at best we were a nation of dreamers, given to analyzing things and living in an atmosphere of unreality; that exposed to the searchlight of the modern West we were doomed.

Then rose a school of writers, teachers and preachers, of whom Tagore is one, that rebuked us for our faint-heartedness, for our even doubting the greatness and the wisdom of our past. They sang to us not only of our past greatness but also gave utterance to our hopes and aspirations for the future, in song and poetry. They raised our spirits by constant, touching and pathetic appeals to our manhood and our sense of self-respect. Their very lamentations were exhortations. They had hidden in them tongues of fire. They spoke in the language of religion and of yoga. They composed in mystic strains, but every thing they said, every line they wrote, every song they composed, had a double meaning. No Indian ever felt any doubt about their meaning. The masses and the classes both understood what was meant, nay, even what was not meant. As poetry, as literature, perhaps they were not to be compared with the productions of the old masters. Perhaps that may be due only to prejudice or to that halo which always surrounds the past.

Be it as it may, however, the quality in the writings of Tagore and others of his class, which holds the Indian mind, is their confidence in the capacity of the East to hold up the torch of light to the West in things which really matter to mankind, more than the thousand and one discoveries of the modern sciences, which have added so much to the comfort, the pleasure and the force of life.

The popular mind of Asia is enthralled by this confidence; the knowing mind of the West finds the change wholesome, entertaining and even arresting; yet the thoughtful among the Asiatics feel that when the utterances of men like Tagore are subjected to careful study, and search-

ing analyses, they exhibit a great uneasiness, and a fear for the future of Asia which seems to haunt them, day and night, in moments of occupation as well as leisure, in the hustle of life as well as in retirement. It is this uneasiness and fear which found expression in the speeches that Tagore made in Japan. He came to see Japan, but what he saw was a copy of Paris, London and the manufacturing centers of Europe. He was sorry, he was pained and disappointed. He uttered a cry in which is mingled the sense of disappointment and fear, with a hope that all is not yet lost.

Speaking of Japan's achievements in assimilating her life with that of the West, he said: "Japan has imported her food from the West but not her vital nature. Japan cannot altogether lose and merge herself in the scientific paraphernalia she has acquired from the West and be turned into a mere borrowing machine." Again:

You Japanese cannot with a light heart accept the modern civilization with all its tendencies, methods and structures and dream *that they are inevitable*. [The italics are mine.] . . . Once you did solve the problem of man to your own satisfaction; you had your

philosophy of life and evolved your own art of living.

Yet with all this, Tagore recognizes that when things looked gloomy for Asia and

we in Asia hypnotized ourselves into the belief that it could never by any possibility be otherwise; Japan rose from her dreams and in giant strides left centuries of inaction behind, overtaking the present time in its foremost goal . . . Japan, the child of the ancient East, has also fearlessly claimed all the gifts of the modern age for herself. This it is which has given heart to Asia . . . Japan has taught us that we must learn the watchword of the age in which we live, and answer must be given to the sentinel of time if we are to escape annihilation.

The question that naturally arises is, how can we reconcile this "must" with the "will" of our desires; how to borrow and not to borrow; how to become West and yet remain East; how to take all what is valuable, helpful, vital in the West and yet keep out what is inhuman, soulless, petty and brutal. Can we eat the chicken and also preserve its life? Tagore thinks Japan can. Addressing the Japanese he says:

Of all countries in Asia, here in Japan you have the freedom to use the material you have gathered from the West according to your genius and your need. You are fortunately not hampered from the outside. [Are they not?] Therefore your responsibility is all the greater, for *in your voice Asia shall answer the questions that Europe has submitted to the conference of man*. [The italics are by Tagore himself.] In your land the experiments will be carried on by which the East will change the aspects of the modern civilization, infusing life in it where it is a machine, substituting human heart for cold expediency, not caring so much for power and success as for harmonious and living growth, for health and beauty.

All Asia will say "Amen." But is it possible? Is it probable? Is it likely? So far the evidence supported by Japan, nay, even on a short scale, by Calcutta (the home of Tagore) and Bombay, by Shanghai and Hong-kong, does not justify our building any hopes for the realization of these wishes.

The fact is that we Asiatics are on the horns of a dilemma. Tagore has only expressed it in his own beautiful, forceful language and in his own manner, and of that we may well be proud. Yet the dilemma remains unsolved, and the march of events in Japan holds out no promise of a solution which will be after the hearts of Asiatics. A good many thoughtful Asiatics feel that we must either accept the whole or reject it at our peril. There is no half way! It is sad if it is so. It is unfortunate. It is a calamity. Yet that seems to be the end to which the finger of inexorable fate seems to point.

TORPEDO DEFENSE WITH THE THREE-INCHERS

# THE AMATEUR SEA DOGS

BY HAROLD HOWLAND

ONE by one the three ships in their battle gray edged away from the navy yard docks and swung into the river. Important little tugs sputtered and kicked and hauled and shoved, and asserted their undying conviction that any battleship trying to sail without their aid would be a double copper-riveted imbecile. The big ships, gravely tolerant of their fuming officiousness, straightened out and headed down stream. From the curving span of the Brooklyn Bridge a dozen photographers and movie men focussed and snapped and ground away.

The Naval Training Cruise, newest manifestation of the popular thirst for preparedness, was on.

On the decks of the battleship "New Jersey" a couple of hundred experimental young Americans—and a few further removed from the adventurous years—stood about and slyly admired their glistening white new outfits and wondered what was to happen to them for the next few weeks. Up on the bridge the Executive Officer navigated the ship and did a little wondering along the same lines himself. For the Executive Officer of a warship is the official

scapegoat. He must keep the ship running smoothly, and everything functioning properly, and everybody doing his job. He must plan and dovetail and adjust and take up slack and coördinate—subject always to the purposes, the inspirations, the hobbies, the whims and the digestions of the Captain at his elbow, and the Admiral off there within signaling distance, and the beautiful, detached, Olympian Department at the other end of the wireless. So the Executive brooded on his responsibility and the volunteers speculated in their irresponsibility. The three ships plowed down thru the Narrows and along the Long Island coast and came to anchor among other volunteer bespattered ships in a secluded bay where they might consider together and find out what to do about it all.

Now the nine ships in that little fleet were laboring under grievous handicaps, and it wasn't their fault at all at all. They were ships of half a generation ago or less, and in the navy ten years spell obsolescence and a dozen verge on senility and decay. So they had been relegated to navy yards and the "reserve," where they would be economical and not clutter

things up. They had, when this blessed fleet set sail, a third of a crew apiece or thereabouts—and every officer from the Executive to the bo's'n's mate on the fo'castle and the water tender in the fire room knows just what particular kind of purgatory that means. Their officers were a "scratch" team; half of them came overside at the last minute with their trunks and bags and parcels, gathered together by an optimistic and resourceful Department from here and there and the other side of beyond. Not a few of them had the milk of their alma mater the Academy still wet upon their lips. And every executive, whether it is four million dollars' worth of concentrated hardware or of corporate commercialism that he manages, knows what *that* means. A ship's officers need to be welded together and seasoned by acquaintance and practise and mutual experience before they develop the indispensable team work and *esprit de corps*.

Then add to these trying conditions a delightfully amiable but aboundingly ignorant (in a marine manner of speaking) mass of two hundred and fifty landsmen per ship—largely drawn from the unique

genus "college boy"—and the task for the responsible heads of those ships looms portentous. The navy has a felicitous phrase, the "happy ship." It connotes team work, *esprit de corps*, mutual understanding and respect, cheerful willingness, abounding energy, effectiveness, and punch—in officers and crew. Its antithesis is "madhouse." I count it little less than a miracle that the good ship "New Jersey"—I would speak but of what I saw "close up," in the movie phrase—was for those four weeks under those staggering handicaps a "happy ship." There were rumors abroad in the fleet that the flagship—but the flagship has added to the complications of its existence an admiral and his staff, and besides it is forbidden by the law to judge. But it must be a fearsome thing to sail in a "madhouse."

So the official problem was a hard one, for that it was an all new one, and the straw for that particular brickmaking sparse. But the navy has a way of going and doing the job and complaining afterward, if it pleases, about the materials and the conditions thrust upon it. *Afterward*, mind you, when the job is done, and, by the same token, well done.

So they turned to and taught us what the navy is, and how the sailor-man lives, and what he needs to know and do and be and feel if the navy is to be ceaselessly ready and surpassingly good.

Now the first thing is order and the second thing is cleanliness. For a battleship is a barracks, and a power house, and a fort, and an eating house, and a magazine, and a workshop, and a storehouse, and an armory—and a ship. If everything is not in its place twenty-four hours a day and clean, it would straightway become pandemonium, the place of all the devils. There is not a square inch that has not its appointed function; if a thing is out of place, it is in something else's place—and every housekeeper knows what that means.

A bluejacket lives in three dimensions: his hammock, his clothes bag, his ditty box. His canvas hammock reposes by day, a long narrow sausage neatly bound round with precisely seven turns of his hammock lashing, in the hammock locker. By night it swings five feet above the deck, just un-

der the deck beams above, and rubbing elbows with its neighbor. To get into it is a feat of the acrobat, to lash it for stowing is a lesson in neatness and skill, to sleep in it, after the first night, solid comfort and refreshment, to leave it at five o'clock for another day of routine and labor a trial to the flesh.

The clothes bag, cylindrical, three feet by one and a half, of heavy canvas, hangs on a rack near your hammock billet, and holds all that you possess, except what goes in your ditty box. This little chest, say ten by ten by eighteen in inches, rests above your clothes bag, and holds stationery, tobacco, Bluejacket's Manual, clothes stops, soap, ki-yi (otherwise hand scrubbing brush), shoe shining outfit, and personal miscellany.

Beyond these three dimensions your personal life ends. In every other particular, you have all things in common. So there must be order in your personal existence, or the resulting chaos will bring discomfort, unhappiness and reprimand.

Not bad training that for a college boy who just naturally lives all over the shop, or even for a man who is used to a wife who picks up after him and caters to his masculine carelessness.\*

Then cleanliness. Working clothes, except in the engine and fire rooms, are white clothes, and white they must be kept. So Jack has half a bucket of fresh water twice a day to clean himself and his clothes; and the first dog watch every afternoon finds him in on his knees on the deck scrubbing trousers and jumper and underclothes and all with his little ki-yi and plentiful suds. Drastic methods they use in the navy, and topsy-turvy. For you rinse your clothes in salt water—fresh is too precious when it has all to be made by evaporation out of the sea. But

the ki-yi, plus elbow grease, does get things clean, and the eagle eye of the inspecting officer at quarters in the morning puts a premium on liberality with the elbow grease.

The ship must be kept clean, too; so at five-thirty we turn to and scrub decks with abundant salt water and sand, applied with the deck ki-yi and the indispensable muscle. Others of us inside the superstructure sweep and swab the deck, polish bright work—brass with metal polish and steel thresholds, ladders and hatch-combings with emery cloth—and wipe off paint work. Five times a day those decks are swept, and twice they are swabbed with a mop—think of it, ye housekeepers! For cleanliness is next to seamanship.

But these primary things that we learn have merely to do with living, in new surroundings and under highly restricted conditions. There are more important things we must have an inkling of; for a ship must be driven by engines, and navigated over the seas, and be able to fight, and win. Bluejackets, too, in these days of the passing of the marine, must be like 'Is Majesty's Jollies, "soldier and sailor too." So we put on leggings and cartridge belts and drill on the fo'castle among the bitts and the big black anchor chains and the ventilators, or on the quarter deck, which is not so cluttered up and more genteel like—for the quarter deck is "officers' country," just as the fo'castle is the men's "hang-out." One day, when the fleet is all foregathered in Hampton Roads, we all go ashore from our nine ships, and within the walls of Fortress Monroe we march and countermarch and evolute. The Admiral reviews us, and our officers confide to us between their teeth exactly what is in their minds, and it rains without reserve, and we get a little bit of a feeling that we're not a hopeless mob but the makings of a battalion.

Or we pile into pulling boats—not row boats, thank you—and perform endless maneuvers at the dictation of an officer in a motor launch who seems more concerned with exhausting all the flag signals in the "Deck and Boat Book" than with the limitation of our physical endurance. A boat which is scheduled on the Abandon Ship Bill to carry seventy men is a bit of a craft; and a sixteen-foot ash oar is quite a piece of timber. Even if you do

A BIT OF EXERCISE ON THE FO'CASTLE

have another man halving the wielding of it, at the end of two hours of pulling round and round in the offing you know you have been doing something.

Then day after day comes General Quarters, the thrilling bugle call that sends every man scurrying "on the double" to his battle station. If you are lucky your station is in a turret where you practise like mad at loading the twelve and eight inchers with dummy shells—that weigh just as many hundred pounds as if they were real—and bags of beans that simulate the powder bags of the real day. But the luck of the draw cannot be with every one, so squads of twenty or so go tumbling down ladders and hustling thru corridors into the bowels of the ship where the magazines and shell rooms hide under the arch of the armored protective deck. There we "break out" the dummy shells from the shell room and send them shooting up by compressed air to the turret. We pass out the bean bags thru the round hole in the magazine door—the magazine powdermen, for their sins, are locked into the magazine to consider on their pleasant surroundings and to speculate a little on what would happen if an enemy were really bowling twelve-inch shells at the outside of their particular rat trap. The powder goes up by hand, from stage to stage thru the vertical tunnel which contains the shell-hoisting machinery. Shells and powder-beans sent up, we sit and chat and drowse, while the gun crew up above is wearing itself out trying to beat the navy loading record, and coming near enough to it to make them all a little overbearing the rest of the day.

Then we stand watches, now in the cavernous fire rooms or alongside the glittering, slithering engines 'way below the water line, now on the high and lofty bridge under the contemplative stars. The engine rooms are fascinating if you like machinery—or have imagination; but the bridge is fascinating anyway—unless you are hopelessly prosaic. Two hours long are the watches for us volunteers; and from two to four in the morning is quite a stretch in the hot fire room or up where the wind whistles and the fog lies chill.

One night come the culminating hours of the war game, in which the twelve ships of our fleet—three others carrying the Annapolis cadets have joined us now—represent Blue Fleet, the defenders of our coast against attack. Somewhere off there Red Fleet—the real battleships, up to date and fully manned, of the North Atlantic Squadron—is circling round trying to effect a landing for a

"PIPE DOWN SCRUB AND WASH CLOTHES"

mythical (constructive, I believe, is the word) fleet of transports bearing an army of invasion. Our torpedo boats and scouts are scooting around, too, somewhere over the world's edge, looking for Red Fleet. Meanwhile we meander along in stately column, waiting for the information that will tell us where the enemy will try to break thru, and where we must strike our protecting blow.

Night comes down, and we steam along "ships dark." Every unnecessary light is out, and some necessary ones, we are inclined to believe, as we wander thru the gloomy 'tween-decks and "break out" our hammocks in sepulchral twilight. From ten to twelve I stand a watch on the bridge that night. It is ticklish business, this steaming in column on a none too clear night with "ships dark." The next ahead, usually a giddy amusement park of lights, shows two pin points, main truck light and "wake light." By those inconsiderable beacons we must navigate. Five hundred yards is the appointed interval, a distance we can cover, at the day's standard speed, in two minutes; and the next ahead, very much occupied with "keeping station" her five hundred yards behind the flagship, changes speed with irritating persistency. The "next ahead" is always a frolicsome individual, who keeps you guessing out of—the officer of the watch is convinced of it—pure malevolence.

Now a battleship is a ponderous object that stores up a disconcerting amount of momentum and lets it go

reluctantly. Two battleships two minutes apart are between them—even if they're a dozen years old—worth a million or so. So and therefore and accordingly, the officer of the watch on such a cheerful occasion as this here crucial night of the great war game has a nervous time of it—and the executive officer prowling about the bridge and the captain standing detached and impartial in a corner do not help to relax the nervous tension a bit. Nor do the inventive processes of the admiral which send the column chasing its tail in successive circles like a kittenish sea serpent.

But the gods are good to us, and we make much better weather of it than the next astern, who comes stealing up on our starboard quarter to give us the time o' night and to earn our heartfelt contempt. *We* are keeping station behind the most vagarious ship in the navy, and why can't she, with us, steadiest and most reliable of them all, as "next ahead?"

So the end of the watch comes at last; and the hammock underneath the open hatch is just as welcome as tho there were no next ahead to perplex, no next astern to annoy, no flagship to distract, no enemy to look out for. Morning comes; and general quarters drags us from breakfast to our cavernous battle stations; and rumors of the enemy slip down the hatchway; and long, long after we go on deck to find Red Fleet in offensive triumph steaming along parallel to us. We have all been sunk, the umpire ship has condescended to reveal. So Red Fleet goes off about its business, and we steam on to Hampton Roads. The fo'castle explains profanely and at length just where our admiral had made his blunder. The volunteers wonder what the game was all about, and even the officers confess that they don't know and won't find out until the War College has chewed it over and digested it and written a volume or two to prove what everybody—in the fo'castle—knew before and could have told 'em if they'd only asked him.

Thus went the cruise, and so it ended. A pleasant time was had by all. We know a lot better than we did what the navy is, how it does its job, and some of the things it needs to prepare it to do that job as it must be done. It was worth the doing, and is worth the doing again. May the department learn as much from this cruise as we did. May it thank its stars that its blunders and its blindnesses—trying as they were to all concerned—could not spoil the cruise. May they profit by them next time. Then we'll all go again.

"Tanks," "willies," "land battleships," "trench dreadnaughts," "hell machines," call them what you like, the armed and armored tractors which the British used with telling effect in last week's fighting on the Somme are the most spectacular newcomers in this war of scientific sensations since the submarine merchantman put into port. "They look like prehistoric monsters," says a British officer quoted in the dispatches. "They cut up houses and put the refuge under their bellies and walk right over 'em. They knock down

trees like matchsticks. They go clean thru a wood. They take ditches like kangaroos; they simply love shell craters,

of which are now in use on American farms. Great Britain has bought a thousand of them, and hitherto has used them only for hauling heavy guns and supplies. Now she has sheathed them in armor and mounted guns inside their shell and sent them to demoralize the Germans. The upper picture shows a somewhat smaller model of the tractor walking over a railroad track. The "tank" is probably built from a 25,000-pound model with 120-horse power and measuring nine by twenty-three feet. The lower picture shows the wheels. The caterpillar belt which encircles the wheels has been laid flat. On it can be seen the jointed track on whose segments, laid down one by one by the advancing caterpillar treads, four or five small wheels run.

# "Strict Accountability"

## as applied to the President

By FRANCIS BELLAMY

**A** LOCOMOTIVE engineer has got to have a clear record of good judgment to hold his job.

If an accident is due to his incorrect judgment, if in an emergency his mind has wobbled and he has done the wrong thing, his good intentions don't save him. Too much is at stake in the engineer's business for the public to accept any excuses whatever. Capacity for quick, right action in emergencies is the engineer's first qualification. If he falls down in one emergency, another engineer, whose record is clear, takes his place.

### Soft Excuses

That illustration was suggested by a remark made by a citizen in a political talk. Some of the glaring blunders, vacillations, and inefficiencies of the Wilson administration had been pointed out. This citizen was obliged to admit these undisputed facts, but he side-stepped them, saying:

"Well, everybody makes mistakes, and you must remember what a trying time Mr. Wilson has had."

That easy-going excuse is now the last word of many a Wilson supporter when he has been made to face, one by one, the sheer facts of the President's wrong-headed and turn-about record.

In the simpler days of our fathers we held public servants to strict account for their errors of judgment.

But in our days of softer living, a sentimentalism has soaked into much of our political thinking.

While in business we hold men to strict account because that is bread and butter; in politics, unhappily for our country, there are now a great many of these soft minds whose sympathy and weak standards lead them to excuse flagrant errors of judgment.

### The Test of Big Emergencies

The engineer who is entrusted with the welfare of a hundred millions of people has to qualify for extraordinary emergencies.

It happens to have been Mr. Wilson's fortune to engineer the country's honor and safety in a time of crisis. He must therefore be judged, fairly, by his capacity in time of trouble.

Not merely for the trouble already encountered, but for the trouble still to come. For not one of the great issues he has mishandled is ended. Their most critical developments are yet to be settled.

The first relates to Mexico. The second to Germany. The third to military preparedness. The fourth to industrial preparedness.

These issues are the protection of our citizens, the upholding of our honor, the preparation for our safety, the securing of our prosperity.

In not one of these issues has Mr. Wilson had a settled policy. In each one he has had several absolutely contradictory policies.

Nobody knows what his next policies will be.

If he knew what they would be, he would have told us definitely, instead of using high sounding, but indefinite, uncertain phrases.

### The Test of Mexico

The facts as to Mexico are undisputed. They are confirmed by Mr. Wilson's own messages and by the published papers of his State Department.

Huerta became the de facto head of Mexico just before Mr. Wilson's inauguration. Huerta was ready to give guarantees for Mexican obligations to the United States and assurances for the protection of our citizens. That is the only kind of ground on which our Government can give or refuse recognition of another government.

But Mr. Wilson swept aside the universal rule and refused recognition of Huerta because he suspected him of complicity in the death of Madero. He put a personal theory above the invariable international rule.

He has told Congress that we must not "butt in" on Mexico. But his personal attack on Huerta was the beginning of nearly four years of systematic "butting in."

He refused to accept the information of our own Ambassador, and sent to Mexico inexperienced personal emissaries who did not even know the language.

He destroyed American prestige in Mexico, and angered all classes of Mexicans by his unjustifiable intrusions, by his uninvited lectures.

He told Huerta he must get out. He told the Mexicans that they must not elect him to the presidency.

He made war on Mexico, attacking Vera Cruz, with the result that 18 American sailors and 200 Mexicans were killed, to get a salute to the flag. He did not get it and he withdrew our army in failure.

Then he pitted Carranza and Villa against Huerta. He lifted the embargo on arms, and hundreds of thousands of American guns and millions of bullets poured over the border, till Mexico became a vast slaughter house.

When Carranza became insolent, Mr. Wilson took up Villa, the champion bandit and murderer of the continent.

Then he suddenly dropped Villa, and encouraged Carranza, permitting him to march his army across our own territory to attack Villa.

When Villa attacked an American town, Mr. Wilson sent an army 300 miles into Mexico to "get Villa alive or dead," but the army was handicapped by an order forbidding it to use a railroad or enter a Mexican town.

When all Mexico resented this second war on her territory, he ordered the army to come back, without getting Villa.

In spite of the certainty that his policy would lead to collision with Mexico, Mr. Wilson did absolutely nothing for three years to increase the efficiency of our little regular army; and when we got on the brink of war he had to order out our National Guard, taking 50,000 men from their homes and business, at an untold cost of suffering to dependent families, for a service for which they were utterly unprepared, and which was entirely unnecessary if, as President, he had exercised commonsense foresight.

Mr. Wilson found a strong government in Mexico, with American lives and property safe

there. Because of his culpable intrusion the government was upset, Mexico was forced into anarchy, thousands of Americans residing there have been driven out and their business utterly destroyed, hundreds of Americans have been murdered, and nearly as many American soldiers have been killed in our two invasions there as were killed in our Spanish War.

That vast incapacity in dealing with Mexico is more than enough, by itself, to disqualify Mr. Wilson for re-election.

### The Test of Germany

Mr. Wilson has not "kept us out of war with Germany, any more than he "kept us out of war" with Mexico. But with this difference. He did get us into war with Mexico. He couldn't have got us into war with Germany if he had tried. For Germany was too busy; she had no inclination to go to war with us; and, moreover, she couldn't get at us.

But what Mr. Wilson did as to Germany was to sacrifice our national honor, and to fail to get either protection or reparation for American lives.

In February, 1915, the German Government announced its submarine programme of sinking merchant ships without warning.

Thereupon, Mr. Wilson, voicing the horror of America, wrote a note to Germany, declaring that, if Americans were killed, Germany would be held to "strict accountability." We were proud of his brave words.

But two days before the Lusitania sailed, Von Bernstorff, the German Ambassador, published a notice in the New York papers warning Americans not to embark on that ship.

That was a gross insolence—a foreign government addressing Americans in their own country, and directly ignoring the President's recent declaration that Americans had the right to sail the ocean as they please.

Never but once before had a foreign envoy dared to advise the American people. That was a French minister in President Washington's time, and Washington sent him home with a sharp rebuke.

When the German Ambassador printed insulting advertisement, the natural recourse for our President should have been, give him quick notice that if American lives were lost, as per his warning, he would receive his passports.

The historic method of all our great Presidents has been to avert a natural catastrophe before it happened. Jackson did that to France, Cleveland did that to England, Roosevelt did that to Germany—and each time prevented war and maintained our rights!

But Mr. Wilson let that golden opportunity slip, and took the insult without a word.

In speaking of that incident, Mr. Hughes said: "The chief function of diplomacy is prevention. Had this Government, by the use both informal and formal means, left no doubt that when we said 'strict accountability' meant precisely what we said, and that should unhesitatingly vindicate that position, there would have been no destruction

CHARLES E.

American lives by the sinking of the Lusitania. There we had ample notice; in fact, a *published* notice."

But having let his one great chance slip, Mr. Wilson followed his double-fist note of "strict accountability" with a diminuendo series of Please-Be-Good lectures to the German Government,—with the result that more American lives were lost, and now, after a year and a half, no reparation has been made.

The truth was, the astute German Government had taken Mr. Wilson's measure,—the measure of Bryan, his Secretary of State, and the measure of Congress. With such an aggregation it was safe to take chances which would have been unsafe with Roosevelt, or McKinley, or Cleveland. For no nation on earth has a greater respect for a strong national stand than has Germany.

Would it have meant war to call the turn that day on Von Bernstorff? Mr. Hughes says, again:

"It is a great mistake to say that resoluteness in protecting American rights would have led to war. Not only have we a host of resources short of war to enforce our just demands, but we shall never promote our peace by being stronger in words than in deeds."

History will record that when that sudden emergency came, President Wilson failed to rise to it. He will be pitied, but not excused.

That is not all. For his pedantic lectures have exasperated the Germans and lost their friendship. The aftermath is yet to come. The President who failed in the emergency is not the engineer for the final reckoning.

### The Test of Military Preparedness

Next, review Mr. Wilson's several contradictory attitudes as to Military Preparedness.

Here are the bare facts:

In the Fall of 1914 the Mexican trouble had become so acute that our armed intervention might be required at any hour. The war in Europe was proving that the principles of humanity were powerless to keep civilized nations out of war, that altogether unprecedented methods of warfare had made former methods of preparedness obsolete, and our turn might come next.

Congressman Gardner pointed all this out, and asked for an investigation of our preparedness.

Mr. Wilson answered that it might be an interesting academic inquiry, but quite unnecessary.

Later he said in a speech that there was no reason whatever to get nervous or excited over preparedness.

A few days after the submarine sank the Lusitania Mr. Wilson made a speech in which he specifically deplored the application of patriotism to preparedness, and made the notorious remark about being "too proud to fight." This took all the edge off his "strict accountability" note to Germany; the German press commented on it and the German Government acted accordingly.

Again and again in his public utterances in 1915 Mr. Wilson opposed the growing agitation for preparedness.

But the influence of Col. Roosevelt in his popular campaign for preparedness made Mr. Wilson "stop and listen." Suddenly he saw a great light.

Then he abruptly faced the other way.

On December 18, 1915, he made an amazing speech in New York in favor of preparedness. He followed this by a tour of speech-making in the Middle West, advocating a scheme of big military expansion.

But when he got back to Washington he saw still another light. He found the Democratic majority in Congress opposed to his new doctrine. He had already forced a reluctant Congress to do several unpalatable things, but this time his hand weakened.

After all his talk he surrendered his big scheme; his able Secretary of War resigned in disgust at his capitulation.

There, in twelve months, were three contradictory policies. The wrongness of the first was proved by the about-face of the second. The insincerity of the second was proved by the piffling ineffectiveness of the third.

Have we ever had a President before who could reverse himself both forwards and backwards on such a tremendous issue in the space of a year?

This is how Mr. Hughes sums up that wobbling policy:

"In view of the warnings of the past three years it is inexcusable that we should now find ourselves in such a plight."

The country was awake and was ringing with the demand for an efficient army. Mr. Wilson had his chance to engineer it. Instead, he caught on at the end of the train. He has shown himself utterly incapable to handle our national defense. We need a President who can.

### The Test of Industrial Preparedness

When Mr. Wilson went into the presidency he demanded repudiation of our tariff for protection and a new tariff for revenue only.

As a college professor of political economy he had been an ardent free trader.

Now that he had the chance to put his college theories into practice, he refused to believe that a low tariff, for revenue only, would bring a deluge of European cheap-labor products, close our factories, and throw our workmen out of employment.

He drove the Underwood low tariff through.

In less than a year, its baleful effects had settled down. In 1914 thousands of factories had been obliged to close down. Millions of men were out of work. In New York City alone 450,000 men were unemployed. It was a high-water mark of workless men.

Here are the Government's own figures: During the first five months of 1913, while still under the Republican Tariff, our exports

exceeded our imports by \$218,848,200. But during the corresponding five months of 1914, under the Democratic Tariff, our imports exceeded our exports by \$39,154,586. The whole balance in our favor had been wiped out, and a huge balance created against us.

Then came the European War, and the frenzied call for munitions and other supplies for the armies. Ten millions of fighting men needed everything we could make for them, and their governments were ready to pay any price.

Every plant that could make anything for the fighting nations turned itself into a supply factory. Never in American history had such a stream of gold crossed the ocean to us.

And now Mr. Wilson points to this fevered plenty and says, "This is the PROSPERITY I predicted. My policy has made America opulent."

But Mr. Hughes, on the other hand, points out that as soon as the war is over we will have new and difficult problems to face. Thousands of our factories are making products for which there will suddenly be no demand. These factories will close. More men than ever will be out of work, while the higher cost of living will remain a crushing burden.

If Mr. Wilson's low tariff remains Europe will engulf our unprotected industries.

In an industrial crisis like that, do we want a President elected on the written platform that the Constitution does not permit any tariff except for revenue?

Do we want a President who told the unemployed workmen and their employers in 1914 that the hard times were only "psychological"?

Surely not!

We NEED for our President a practical man who knows the language of business;

Who comprehends the problems of the manufacturer;

Who senses the needs of transportation;

Who is on the square in labor disputes, and will neither knuckle to the capitalist nor sacrifice justice to get the labor vote;

Who figures for the country's lasting prosperity.

We can have such a President in Mr. Hughes.

All his life he has dealt with business at first hand.

In his gigantic investigation of Life Insurance, and in the regulating laws he put through when Governor, he showed his ability to straighten out big business without hurting it.

In the labor legislation he put through in New York, he secured more measures for the benefit of workmen than any other American executive.

*Elect Charles Evans Hughes in November and you will bring wisdom, backbone, efficiency and American honor into the Presidency!*

HUGHES.

# WHAT ABOUT GERMANY?

NEW BOOKS THAT DISCUSS HER PROBLEMS FROM MANY VIEWPOINTS

IN handling the voluminous literature of the war, it is more useful to group the books by subject rather than to take them as they happen to come week by week from the press.

Of all the countries at war Germany seems to excite the most interest, to judge from the number of new books about her. Of France we hear strangely little, of Austria no more, of Russia not much, while of Italy, which used to afford material for a score of books a year, we have none of late, and the Balkans are less written of than usual. But of Germany and England, and what they think of each other, there is no end of writing.

The reader must remember that most of the books about the Germans which he is getting now are written by their enemies. Some of these like Henry de Halsalle's *Degenerate Germany* and Bainbridge's *England's Arch-Enemy*, aim to stimulate the war spirit by showing up the utter hatefulness of the foe. Others try to take an impartial standpoint, but still it is the view of a foreigner if not an inimical foreigner. It is much better for those who want really to hear the German side to hear it from the Germans themselves, and this not from British authors or even from British selections from German authors, such as Bernhardt, Treitschke and Nietzsche, but from accredited spokesmen of Germany at the present time. An opportunity to learn at first hand what the Germans have to say for themselves is afforded by the volume entitled *Modern Germany in Relation to the Great War*. This is a translation by W. W. Whitelock of *Deutschland und der Weltkrieg*, in which twenty-two professors discuss with German thoroughness—and sometimes German dullness—the various questions involved in the war, such as the meaning of *Kultur*, the rise of industrial Germany, her commercial and colonial aims, the neutrality of Belgium, the intrigues of England, Russia and France, the causes and the conduct of the war.

Professor Schevill in a course of lectures on *The Making of Modern Germany* has told very interestingly the story of the rise of Prussia and the development of the German Empire up to the outbreak of the great war. He is particularly concerned with getting the American to understand the German point of view, no easy task.

Especially interesting is his comparison of the individualism of England and America with the collectivism of Germany, both of which lay claim to the exclusive use of the word "democratic." After showing how efficiently the German Government looks after the welfare of every individual from birth to death, and how it has abolished

pauperism and curbed capitalism, he says:

The more we think about the matter the clearer it becomes that our dominant classes have abused the word democracy in their group interest. They carry the expression on their lips like a conjuring formula, but the thing they mean in their heart is not democracy but Liberalism. Liberalism, in fact, has been the genuine capitalist faith in the United States and, above all, in England thruout the industrial expansion of the nineteenth century.

It is Liberalism that asks for freedom, both political and economic, in order that its upper and middle class adherents may amass wealth and climb the ladder of happiness; but Liberalism is not in the least concerned with anything resembling an equal distribution of goods among all members of society, indeed, it is passionately opposed to any such idea.

Now Germany, which never bowed to the sway of individualism and never experienced an out-and-out capitalist rule, has declared her readiness to get along with less freedom in order to have more equality, and bases her claim to being democratic on this choice. And if democracy is the problem of the masses, the powerful engine of their material and moral uplift, I do not see how we can fail to admit that the American and English attachment to Liberalism works undemocratically and that non-Liberal, authoritative Germany is dedicated to a much more genuinely democratic course.

Now to get the opposite view turn to *The Nemesis of Docility* and read what Edmond Holmes has to say:

The Germans cheerfully submit to a domestic tyranny which is oppressive and inquisitorial in the highest conceivable degree and then allow their professors to tell them that they are the freest people in the world.

They do more than obey orders. They wait for them, look out for them, are lost without them. . . . They not only do what they are told to do and leave undone what they are forbidden to do; they also

think what they are told to think, believe what they are told to believe, say what they are told to say.

In support of this thesis Mr. Holmes cites sources ranging from the official reports of Belgian atrocities to the jokes of tourists on things *verboten*, an abundance of evidence certainly, but since many of his criticisms of the bureaucracy are quoted from German authors it is evident that not all the Germans are "docile," as he would have us think.

To those who are conscious of a growing prejudice against Germany and who are willing to have that prejudice rectified, no better book can be recommended than *The German Spirit*, by Professor Kuno Francke, of Harvard. It consists of three addresses: one written before the war, one at the beginning of the war and one recently, yet they do not differ greatly in opinion or in tone. The characteristics of the German spirit, as Professor Francke interprets it, are duty, devotion, self sacrifice to an ideal, thoroughness, truthfulness, slowness, solidity, and mysticism. He repudiates the idea that there is a decided break between the old Germany and the new, tho he frankly recognized a certain deterioration of taste and character due to commercial prosperity and national aggrandizement. The letters from the German soldiers which he publishes are very touching and may serve in part as an antidote for the horrors recorded in the diaries of the German soldiers which their enemies have published.

Dr. Krüger's *Government and Politics of the German Empire*, is the first of a series of "Handbooks of Modern Governments," which promise to be very useful for reference and reading. It is concise, comprehensive and careful. It keeps strictly to the facts and seems to be quite unaffected by the passions and prejudices of the war. An excellent annotated list of books and articles is appended.

Poultney Bigelow, in his *Prussian Memories*, provides further instances of the brutality and tyranny of the German official class in various parts of the world. His *Memories* begin in 1864 when he played Indian at Potsdam with the present Kaiser and his brother Prince Henry. Mr. Bigelow is always interesting, for he hits right and left, and he tells what he has seen in his globe-trotting without fear or favor. The German colonial administrator and the American consul come in for the hardest knocks.

The little volume with the taking title, *Because I Am a German*, by Hermann Frenau, is chiefly devoted to a defense of *J'Accuse*, the book by an anonymous German accusing Germany of being responsible for the war.

A PRESENT FROM HOME  
"Do they think we're a bloomin' picnic?"

Frenau, who is a Prussian, but a pacifist and a democrat, declares that "War in the modern world is a crime and its instigators are criminals in the legal sense of the word," and he demands the trial and punishment of the individuals who instigated it. Needless to say this book, like *J'Accuse*, has been prohibited in Germany.

*Germany of To-Day* is a book written from the inside by an outsider. The author, Professor Fullerton of Columbia, was the first American exchange professor to the University of Vienna, and he had been living in Munich for ten months of the war when he wrote the volume as an attempt to promote a better understanding among civilized Germans. He discusses dispassionately the German Government, army organization, colonial policy and the educational system and finds many things to admire, such as the cheapness and fairness of law courts, the protection of servants and working classes, the care for the unfortunate, the elimination of illiteracy, the prevention of fraudulent advertising and unfair competition, and the security of life, position and property.

For a more complete account of German economic legislation we must refer to *Socialized Germany*, by the present Commissioner of Immigration, Frederic C. Howe. This ranks next to Dawson's *Evolution of Modern Germany* as a storehouse of facts and it is more interestingly written.

The rapid rise of Germany into one of the great industrial nations of the world is due to the fact that here, more than elsewhere, the methods of efficient business management have been applied to political affairs. It is this, as Mr. Howe says, that "has made Germany a menace and a model, a problem to statesmen of other countries and a pathfinder in social reform," but he adds, lest we should think he wished us to swallow Germany whole, "the institutions which Germany has developed, and the efficiency that has been achieved, are in no way inconsistent with democracy."

Walter Wellman dedicates his book,

**EXCHANGE.**—Corporal would exchange a wristlet watch (not going) for a spring mattress or a tin of MacConochie's Rations.

**WANTED.**—Some nice girls to stroll with on the Engineers' North Pier.

**WANTED.**—Fifty thousand Turkish prisoners for wharf-lumping, road-making, and building officers' dugouts. Plenty of permanent work for men of right stamp. Apply any beach fatigue party—Australian N. Z. Army Corps.

**FULL** private wishes to buy guide book to London. Places safe from Zeppelin to be marked with a cross.

**TO LET.**—Nice dugout on the skyline. Owner leaving for field hospital.

#### MISCELLANEOUS

**MAN** with good memory would like the job of taking messages from the troops to friends in Cairo.

#### FROM THE ANZAC BOOK

These advertisements and the drawing on the opposite page are taken from the Anzac Book, written and illustrated by the men in the Gallipoli trenches in 1915. It is published by Funk and Wagnalls for the benefit of patriotic funds connected with the Australian and New Zealand Army Corps

*The German Republic*, "To the German People whom the world has loved and in whom the world still has faith," and in it he represents the German people as saying all the things that we should like to have them say but which they show no signs of saying yet, that they were deceived, that they repent of the "Lusitania," that they owe the American people a debt of gratitude for their sublime patience, and that they demand a republic and universal disarmament. If Mr. Wellman's forecast of the future comes true he will deserve to be called the greatest of prophets, for nothing is more improbable.

Bernadotte E. Schmitt, to judge from his name, is qualified by descent to deal fairly with France and Germany, and since he was a Rhodes scholar at Oxford, he must also be familiar with the American and the British viewpoints. His book, *England and Germany, 1740-1914*, fulfils these anticipa-

tions from its authorship, for altho he arrives at a conclusion adverse to Germany, he considers the evidence dispassionately and with a scholarly grasp of all of the factors of the problem. His discussion of the growth of Anglo-German antagonism during the last quarter of a century is the most clear and complete that we have seen anywhere, and his abundant references show that he has thoroly studied the literature of his subject from diplomatic documents and trade reports to magazine articles and polemic pamphlets. His treatment of Morocco and the Near East where Germany came into conflict with the Entente is especially valuable.

Baron Friedrich von Hügel is exceptionally well qualified to write on the delicate question of racial psychology for his father was a Bavarian and his mother a Scotch woman; he was born in Florence and has spent most of his life in Vienna and London. He discusses *The German Soul* from a pro-Ally and Roman Catholic standpoint but without bitterness toward Prussia or Protestantism. Here is a bit of his comparative psychology:

The English faults are, upon the whole, Defects; the German faults are, upon the whole, Excesses. The English are too loosely-knit, go-as-you-please, fragmentary, inarticulate; a continuous compromise and individual self-consciousness. The Germans are too tightly buckled-up, too much planned and prepared, too deliberately ambitious and insatiable, too readily oblivious of others—especially of their own need of others, of esteeming others and being esteemed by them.

## A HILL IN PICARDY

BY CLINTON SCOLLARD

There is a little hill in Picardy  
That, in the bygone days, was fair to see  
With silvery leaves of the slim poplar tree.  
Ah, lovely little hill in Picardy!

White were the boles as are a maiden's hands;  
And there were willow withes and hazel wands,  
And ferns, with frail antennae of their fronds.  
Ah, lovely little hill in Picardy!

And there the purple violets made spring  
A dream of loveliness; many a tender thing—  
Vervain and vetch—added its glamouring.  
Ah, lovely little hill in Picardy!

And there was morn and vesper song of birds  
Whereto the wind joined with its joyous words;  
And there was kindly shade for the sleek herds.  
Ah, lovely little hill in Picardy!

But now—but now—what is there left to see  
Save desolation? Riven earth and tree  
And lines of crosses tell their tale. Ah, me,  
This lonely little hill in Picardy!

# MOTOR PROGRESS

*Conducted by John Chapman Hilder*  
EDITOR OF "MOTOR LIFE"

## MOTORIZING FOR BUSINESS EFFICIENCY

IT is difficult to believe that in this era of efficiency the great mass of business men have not yet realized the value of the commercial motor. Yet figures prove this to be true. Only one per cent of the logical users of commercial motor cars in this country are actual users.

There are commercial motors of many types, designed to fit various lines of business. Some are run by gasoline, some by electricity and some by steam. All have their virtues when given the appropriate task. In subsequent articles I shall deal with the various types and the work for which they are especially suited in detail. My purpose at this time is to pave the way by telling a few of the many hundred instances in which the commercial motor has proved its right not alone to recognition, but to acclamation.

FIRST in everybody's mind comes the work of the motor truck and the tractor in the Great War—the most colossal business enterprise of our age. If ever a piece of mechanism received a more grueling test of practical worth than that undergone by the motor truck on the battle grounds of Europe, the world has yet to hear of it. Day after day, in fair weather and foul, over roads ranging from the boulevard to the mud slough, vast trains of motor trucks and tractors have kept up a steady pace, running as consistently as a Greenwich chronometer. They have carried men, supplies, ammunition, guns, searchlights, wireless apparatus and also the wounded. They have hauled and maneuvered heavy howitzers and mortars which, if hitched to horses, would never have reached the front. Equipped with armor-plate and machine guns they have wrought havoc in many a charge. And in their newest rôle of land battleship they have once again proved their terrible efficiency. It may well be said that the armies of Europe are literally kept in the field by the motor truck and by the tractor.

The Mexican situation in this country has done its share toward demonstrating the value of a motorized army. A new record in transportation annals has just been established by the United States Army Truck Train No. 13 in a run from Columbus, New Mexico, to San Antonio, Texas. The train was composed of thirty-one three-ton trucks which covered a distance of more than eight hundred miles in thirteen days actual running time. Two days were spent in El Paso and two on the road, making the total elapsed time seventeen days. According to the United States Army regulations, the standard day's journey for a four-mule team is seventeen miles. Thus it would have required at least forty-seven days, exclusive of

the four days lost en route, for this trip to have been made by mule team—a comparison which shows clearly the relative merits of the old and new style of military transportation.

NOW for a few authentic figures on motor truck operation in peaceful quarters. (The names of the business firms and the makes of trucks will be furnished on request.)

A Boston firm whose business necessitates the haulage of crushed stone and gravel have found that one five-ton truck has enabled them to retire three horse teams. Performances not possible to any other delivery medium have been achieved for them by the trucks, of which they have three. In time of rush, one truck in ten and a half hours, from seven in the morning till six at night, allowing a half hour for luncheon, delivered ninety tons, making sixteen trips and covering eighty-five miles.

It is quite within the average for the firm to get fifty miles a day from its trucks, tho most of the hauls are to building operations within the limits of the city. Altho the firm still maintains horses for nearby work, it is not replacing those that die, except with motor power.

Another big company cut its delivery costs in half by applying a five-ton truck to its hauling problems. Raw material is hauled to the plant, and the finished product carried for railroad shipment. The truck does the work both ways.

By horse drawn wagons it used to cost 70 cents per ton for this hauling. With the truck this figure varies from 28 cents to 40 cents per ton, the larger figure resulting when there is big outlay for repairs or new tires. The average is figured to be close to 34 cents per ton, a fifty per cent saving as against 70 cents per ton by horse.

A NEW YORK coal company has found that in every kind of work where there has been a comparison the advantage is all in favor of the truck.

On a five-mile return trip, a truck can make twelve trips and deliver sixty tons of coal. Under the most favorable conditions a horse-drawn team could in the same time haul four loads or

twenty tons. In bad weather the horses would be doing well if they negotiated three loads, and in some cases would be compelled to cut their loads one or two tons each trip.

The three three-horse teams required to do the work of one truck would cost daily, everything allowed for, including the wages of the drivers, \$24. The truck with all its factors would be close to \$15, tho present prices of gasoline might raise the price a trifle. Therefore the truck, in this comparison, saves eight or nine dollars every day.

With the truck it is possible in one hour to make a return trip of eight and a half miles, and deliver five tons of coal. Horses would require two and a half hours for the same trip and come back exhausted.

ONE of the greatest engineering projects that has ever been attempted on the Pacific Coast is the building of the Twin Peaks Tunnel in San Francisco. The tunnel begins at the end of Market street and runs directly thru the Twin Peaks, a distance of two and a half miles. When completed it will open up for settlement some of the city's most beautiful territory and will be the main artery of travel between the city and the comparatively level land extending to the south.

Before the advent of the motor trucks the cost would have been prohibitive, but the contractors who tackled the task knew the possibilities of the trucks and purchased them in fleets before starting the work. The ability of the trucks to turn within the narrow confines of the tunnel, the rapidity with which they receive and dump their loads, and the short space of time it requires for them to deliver their five-ton load of rock and earth have saved large sums of money and speeded up the completion of the undertaking.

So far I have mentioned only large trucks, engaged in very heavy work. The savings made by using the lighter vehicles in lines to which they are adapted are even greater. Department stores, grocery, hardware and other retail stores, furniture dealers, piano dealers, florists, truck farmers, in fact all business houses or individuals whose work necessitates hauling or delivery systems can cut down their costs by replacing the horse by the commercial motor.

Look under the hood of the average motor car and you will find that there are accumulations of dirt and grease in most of its inaccessible corners. There is a little device on the market to remove this dirt. It consists of a nozzle, two tubes and a handle. One tube is attached to an air pump, the other placed in a can of kerosene. Pump the air and point the nozzle at the spot to be cleaned. The kerosene spray removes the dirt. This outfit costs \$1.50.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While *The Independent* cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.

# Articles by the Four Candidates For President of the United States

will appear in The Independent between now and Election Day. In these signed articles the candidates will present the appeal of their parties to the nation, will state their position on the great issues and give the reasons why they should be supported at the polls in November.

## Charles E. Hughes

Republican candidate for President, will speak for the Republican Party in The Independent of October 9.

## Woodrow Wilson

Democratic candidate for President, will speak for the Democratic Party in The Independent of October 23.

## Allan L. Benson

Socialist candidate for President, will speak for the Socialist Party in The Independent of October 30, and in the same number

## J. Frank Hanly

Prohibition candidate for President will set forth the principles of the Prohibition Party.

## Six Presidential Campaign Numbers

of The Independent will appear consecutively beginning next week and culminating with the Election Number on November 13.

Norman Hapgood and Jacob Gould Schurman in The Independent's dual series entitled "Both Sides of the Campaign" are presenting the case for the Democratic and the Republican parties, respectively.

This important feature will continue in The Independent on October 16 and November 6.

Special covers, new portraits, original cartoons, pictures and editorials, will contribute to the political interest of these campaign numbers. Follow them closely and keep your election facts in order, your mind clear on the issues, and your estimate of the men well grounded.

# THE NEW BOOKS

## TUSKEEGEE

There will come in time, for the students of the school he founded, for the thousands of his race, to whom he was beloved friend as well as prophet, a personal record of *Booker T. Washington*, recording "his habit as he lived." Dr. Riley's biography centers about the work and the times, rather than the personality. Yet in some ways it gives more of the man than does "Up from Slavery," because it is free to emphasize characteristics and conditions. Himself a white man laboring for the colored race in the Black Belt, Dr. Riley is especially fitted to analyze Washington's aims, methods and results, and to consider his attitude in regard to the great wrongs under which the colored people, North as well as South, still struggle. "He could at any time have inflamed his people with a word, and at any moment have precipitated slaughter and blood," and this very power made him the more silent, that yearly list of lynchings his most terrible indictment against the white man's civilization.

Booker Washington was not a brilliant man. But he had wisdom and he had a dauntless courage before obstacles; these and his absolute sincerity and devotion seem to have been the secrets of his power. The discouraged little laborer of the salt mines; the Hampton janitor, daily scouring his one suit; the eager young man, confronted by a school minus building, land and money; the teacher pawning his silver watch for \$15 to make a third trial of the brickmaking against which were aligned teachers, pupils and parents; these are dramatic figures.

*The Life and Times of Booker T. Washington*, by B. F. Riley. Revell, \$1.50.

## A STORY OF KENT

Mr. Phillpotts has in his recent novels described some of the great industries of England—in "Old Delabole," the story of slate-mining; in "Brunel's Tower" the processes of pottery; in *The Green Alleys* he pictures County Kent in the glory of the hop-harvest. No more beautiful description of that loveliest landscape could have been given by any living English novelist.

Mr. Phillpotts' rustics are wholesome in their lives and racily wise in their talk. The idyl of the blossoming and heavily fruited hop fields and the loves of handsome young men and maidens who walk thru the "green alleys" are harshly broken across by the coming of the Great War, which sweeps the young men from the Kentish fields to the trenches in Flanders, and sets the girls to men's tasks of stringing twine and setting poles, as well as their ancient and poetic work of picking the ripe hops. The story ends "without a carriageable man left in Kent," but with the hope of the return of Nathan and Nicholas and the other khaki clad

lads we have learned to like and to respect, when the war shall be over and the sword exchanged for the pruning-knife.

*The Green Alleys*, by Eden Phillpotts. Macmillan. \$1.50.

## HEALTH

The opportunity of the individual to contribute to his own health is cheerfully discussed in a series of "chatty" papers by Dr. Edwin F. Bowers, in *Side-Stepping Ill Health*. It is rarely that an author combines technical

knowledge, common sense and a pleasant, simple style as in this book. The activities of the community in furthering the health of its members are considered by Dr. Henry B. Hemmingway, in *American Health Problems*. The author points out both the scientific and the social changes that make this kind of work necessary, the problems of medical and sanitary education, the training of health officials and the administrative problems are clearly set forth. The book is intended to appeal especially to women—and it makes a good appeal.

*Side-Stepping Ill Health*, by E. F. Bowers. Boston, Little, Brown. \$1.35. *American Health Problems*, by H. B. Hemmingway. Bobbs-Merrill. \$1.25.

## UNCOMMON SENSE

"Nonsense is never harmless" says Agnes Repplier in one of the keenly thoughtful and brilliantly phrased essays that make up her latest book, *Counter-Currents*, and with stimulating common sense she proceeds to attack some of the prevailing "nonsense" that seems to govern public opinion today. "Our Loss of Nerve," "The Repeal of Reticence," "Cost of Modern Sentiment" and "Americanism" are particularly keen criticisms of the modern willingness to drift with the current and not bother to steer—a tendency which Miss Repplier thinks must result in weakened mental vigor, for "people who pin their faith to a catchword never feel the necessity of understanding anything."

*Counter-Currents*, by Agnes Repplier. Houghton, Mifflin. \$1.25.

## ACROSS THE PACIFIC

Dr. Gulick, in *America and the Orient*, discusses, out of his long experience in Japan, the relations and responsibilities of the United States with China and Japan and the solution of their grave problems by understanding and justice, or by force. The immigration difficulty he attacks by a scheme for percentage limitation, applying to all nationalities, a plan original and apparently so workable and just, that one would like to see tried. Only why so much less care for the education of the mothers than of the laborers?

Among the practical steps making toward peace he suggests the guaranteeing of the independence of the Philippines by an agreement of the powers and the neutralizing of the Pacific, with the dismantling of those naval bases that serve as stepping stones between East and West.

Like Dr. Gulick, Thomas F. Millard pleads for justice and frankness as the solutions of *Our Eastern Question*. These he finds already embodied in the Hay Doctrine, now virtually abrogated. Of this he says:

The signing of a treaty will no more enforce it than putting a law on the statute books will enforce the law. The United States Government got the powers to agree to the Hay Doctrine and then seemed to

## FOR DEBATERS

A most suggestive and helpful book to all who are called on to address any sort of audience, is *Public Speaking*, by James Albert Winans, of Cornell University. (Ithaca: Sewall Publishing Co., \$1.50.)

A curious work prepared for students of public speaking is Dr. J. A. Mosher's *Essentials of Effective Gesture*. It has a discussion of the theory of gesture, explanatory diagrams, and declamations for practice. (Macmillan, \$1.)

Such a study of the various forms of briefs and the reason for each as is found in *The Brief and Selections for Briefing*, by C. L. Maxey, of Williams, would be most helpful to any debater whether definitely studying argumentation, of which it is a textbook, or not. (Houghton, Mifflin, \$1.25.)

A useful reference book for all who are in any way taking part in the present discussions on the vital questions of Peace, War and Preparedness is the collection of *Selected Quotations on Peace and War*. (Commission on Christian Education, \$1.)

The pamphlet, *Woman Suffrage, a Study Outline*, prepared by J. L. Wilson, contains a very full bibliography for the study of the movement from its beginnings to the latest results, and to the training of suffrage speakers. (White Plains, N. Y.: Wilson, 25 cents.)

Briefs and selected articles on *Unemployment*, compiled by J. E. Johnsen, is another issue in the invaluable Debater's Handbook Series.

A timely book is the new and enlarged edition of the *Monroe Doctrine* compiled by E. N. Phelps. This contains many articles dealing with South and Central America and Pan Americanism.

The second handbook of selected articles on the *European War*, aims to treat impartially of Germany and her allies and most space to the relations of the United States to the war.

The new edition of *World Peace* adds to the matter published before the outbreak of the Great War some practical considerations made clear by recent events and considers this topic from the grounds both of arbitration and disarmament.

The Debater's Handbook of *Woman Suffrage* is out in a third edition, with more than a hundred pages of new reprints and a bibliography of important articles published since 1912. This is probably the most useful single volume there is for suffrage workers. (White Plains, New York: Wilson, \$1 each.)

think it had done its part. The doctrine was left for other powers to enforce or to enforce itself.

Some such agreement is the only preventive of aggression and injustice and, in their train, war. But to win the powers to this we must be willing to take our share of enforcing the agreement should need arise.

Besides this immediately practical application of the theory of the "League to Enforce Peace," the book contains a full study of the Chinese Revolution, and a discussion of the recent acts and the intents of Japan which Mr. Millard, as editor of the *China Press* of Shanghai, naturally does not see quite favorably.

*America and the Orient*, by Sidney L. Gulick. Missionary Education Movement, 50 cents. *Our Eastern Question*, by T. H. Millard, Century, \$3.

### SERMONS IN STONES

The essays of John Burroughs' new volume, *Under the Apple Trees*, lean more toward philosophy than nature, tho there is a delightful record of a chipmunk and the reflections of a troglodyte will be appreciated by any one reared among rocky hillsides. For the philosophy, it has to do with instinct again, *The Primal Mind*, a title that should soften those animal lovers who do not forgive the genial sage of Slab-sides for his denial of reason to their dogs. There is a paper on the Prophet of the Soul, Bergson; and on free will within circles of binding but unfelt necessities; and on "natural selection," with always the recurring question as to the beginning of it all, the "original push" that lies behind all development.

*Under the Apple Trees*, by John Burroughs, Houghton, Mifflin, \$1.25.

### BERGSONIAN FAITH

Professor Miller of Princeton differs from the Pope in that he finds the philosophy of Henri Bergson compatible with Christianity. Doubtless this is because the Princeton conception of Christianity differs from the Papal. In his *Bergson and Religion* Professor Miller considers and refutes the various and mutually contradictory criticisms that have been raised against Bergson on doctrinal grounds. He does not attempt to construe the Jewish philosopher into an evangelical Christian, but he does show—and we believe quite correctly—that Bergson, by his emphasis upon faith, religious experience and religious insight, furnishes a new and inspiring conception of the world that is much needed in the present age. As the author says: "It will be welcomed by all true religionists who long for God but are weary of some of His dogmatic self-appointed emissaries."

Bergson himself, in summing up the message of his three volumes, says:

From all this we derive a clear idea of a free and creating God, producing matter and life at once, whose creative effort is continued, in a vital direction, by the evolution of species and the construction of human personalities.

Bergson's conception of God as creative activity reminds us of the saying of Kung Chi, the grandson of Confucius, that "what God does, that is

A complete library of the world's greatest literature now shipped to you prepaid for FREE inspection. 60 Books, bound in genuine limp leather—not imitation—placed in your home for you to read and enjoy, without paying a penny in advance. Millions of others have been fascinated, delighted, held breathless by these, the greatest stories, plays, essays, poems ever written by the greatest authors of all time! You, too, must read and reread these books a score of times if you do not want to miss half the joy of living, and you can now have the entire set of 60 masterpieces, unabridged, sent to you without paying a penny in advance.

### EVERY TITLE A FAMOUS MASTERPIECE

Glance at the list of titles. Think of having, on your own library table, 60 books like these. Think of carrying two or three titles with you away—from cars, trains, everywhere! Emerson's profoundest essays, Kipling's stirring ballads and stories, De Maupassant's most vivid stories, Poe's poems and mystery tales, Shakespeare's and Ibsen's greatest plays, G. Bernard Shaw's delightful essays, the poems of Burns, Tennyson, Browning, Wilde, Longfellow, Dante, Coleridge, famous speeches of Lincoln and Washington, great stories of Barrie and Stevenson, these and a score of other authors—60 books in all—are ready for you now, merely waiting for you to send in the coupon below, or a letter.

LIST OF TITLES			
Christmas Carol	Dickens	Sonnets from the Portuguese	Elizabeth Browning
Essays	Ralph W. Emerson	Dreams	Olive Schreiner
Uses of Great Men	Ralph W. Emerson	Alice in Wonderland	Lewis Carroll
Barrack Room Ballads	Kipling	Through the Looking Glass	Lewis Carroll
Without Benefit of Clergy	Kipling	Comtesse de Saint-Germain	Alexandre Dumas
The Finest Story in the World	Kipling	Fairy Tales	Hans Andersen
Short Stories	De Maupassant	East Ballads	W. S. Gilbert
Tales from the Arabian Nights	Dr. Jeckyll and Mr. Hyde	Mother Goose Rhymes	Henry W. Longfellow
A Child's Garden of Verses	Robert Louis Stevenson	Idylls of the King, Vol. 1	Alfred Lord Tennyson
Fifty Best Poems of England	Robert Louis Stevenson	Idylls of the King, Vol. 2	Alfred Lord Tennyson
Five Best Poems of America	Robert Louis Stevenson	Friendship and Other Essays	Henry Thoreau
Requiem of Omar Khayyam	Shakespeare	Socialism for Millions	G. Bernard Shaw
Hamlet	Shakespeare	On Going to Church	G. Bernard Shaw
King Lear	Shakespeare	Memories of President Lincoln	Walt Whitman
Macbeth	Shakespeare	The Ancient Mariner	Samuel T. Coleridge
Memoirs of Voltaire	Shakespeare	Inferno	Dante
Romeo and Juliet	Shakespeare	Leaving Speeches and Letters	George Washington
Julius Caesar	Shakespeare	A Dream of John Bull	William Morris
Sonnets	Shakespeare	Poems	Robert Burns
Othello	Shakespeare	Carson	Prosper Mérimée
As You Like It	Shakespeare	Confessions of an Opium Eater	De Quincey
Midsummer Night's Dream	Shakespeare	Words of Jesus	Oscar Wilde
Rip Van Winkle	Shakespeare	A Tillylus scandal	James M. Barrie
Sherlock Holmes	Conan Doyle	Poems	Robert Browning
A Jolly House	Henrik Ibsen	The Law, etc.	Isaiah Turgenev
Ghosts	Henrik Ibsen	The Last Days of a Condemned Man	Victor Hugo
The Murders in the Rue Morgue	Poems		
The Raven and Other Poems	Edgar Allan Poe		
Ballad of Reading Gaol	Edgar Allan Poe		
Pelleas and Melianthe	Oscar Wilde		
Manuscript Masterpiece			
Speeches and Addresses	Abraham Lincoln		
The Bear Hunt, etc.	Leo Tolstoy		

**SEND NO MONEY** The books will be sent to you for FREE examination prepaid. After 5 days return them at our expense. If you decide to keep them, pay only \$1.00 AFTER the 5 days, and the balance on easy monthly terms. The price is so low, and the books are of such amazingly high quality that everybody wonders how it can be done. Here is the secret:

We printed hundreds of thousands of books at one time, relying on the public's love for good books to make the venture self-sustaining. Leather-bound books of such high quality have often sold for as high as \$1.00 each, yet our price is but a fraction. Because of advancing prices the supply for this offer is limited. If you send in the coupon or a letter now, you will be sure of your books, and, in addition, we will ship you the handsome Book Rack Free. Mail the coupon, without money, NOW. If you want single copies send 35 cents for each, in advance. Money back if you want it. If you live outside of the United States, please send \$1.00 extra with coupon.

## Everyman's Work Shop

This is the title of an important article by Edward Earle Purinton to appear in the next Efficiency Number of *The Independent*, dated October 16. In this article Mr. Purinton will discuss the manufacturer's problem, after 12 years' study of over 500 efficiency methods and systems in Europe and America, and personal acquaintance with corporation heads, hygienic leaders, social service authorities, psychological experts and business engineers. Mr. Purinton will here present a constructive analysis of the ways to better building, increased output, improved quality, more efficient management, scientific engineering and perfect equipment. A Manufacturer's Test Chart will accompany this article.

Manufacturers are invited to Consult the Plan and Purchase Department of The Independent Efficiency Service.

The University of Paris Selected by the Yale University  
Council's Committee on Publications

God." This bit of Bergsonianism antedates Bergson by some twenty-four centuries. It is quite like the Chinese to get ahead of the rest of the world on the sly in this matter of metaphysics as well as in gunpowder and printing.

*Bergson and Religion*, by L. H. Miller. Holt, \$1.00.

## PROBLEMS OF SOCIETY

One of the striking features of present day college education is the groping of the leaders for something to take the place of the classic history, abortive science, and mathematics courses that never went far enough to "function." It is significant that the new substitute is so frequently some introduction to "social science." No one knows exactly what social science is, but there is an idea that college students ought to know something more about their social environment than they can learn from newspaper editorials or keynote speeches. This is particularly true of the smaller colleges that have clung most firmly to the classical traditions and have been most sheltered from current social changes.

An excellent introduction to *Social Problems* is the little book by Professor E. T. Towne, of Carleton College, since it assumes inexperience in instructor as well as in student. There are chapters on population, immigration, child labor, unemployment, the delinquent classes, liquor, poverty, with good outlines, review questions, detail references, useful suggestions for study, diagrams, tables and pictures. Each chapter is well worked out. Unfortunately, the student can "learn" all that the book offers and pass his examinations satisfactorily without ever discovering the interrelations of the various problems to each other and to more fundamental problems. However, it is a good beginning.

One of the problems presented in this book, that of poverty, is treated in a comprehensive and scientific manner by Professor Parmelee, of the City College of New York, in his *Poverty and Social Progress*. Like the author's earlier books, the study is synthetic, bringing together the results of studies and analyses from various angles—the biological, the psychological, the statistical and political as well as the strictly economical. The author demonstrates the futility of most of the remedial measures directed against this most devastating of social diseases. The book is suitable for college classes as well as for the general reader, and contains a great mass of material of value to the citizen who really wants to know.

Another of the social problems is studied in Professor Groat's *Organized Labor in America*. Outside of the working class movement and of the professional students of the subject, the ignorance about the purposes, ideals, methods and spirit of labor organizations is appalling. The middle class, which is most articulate in the expression of "public opinion," has not only its own bias to work against, but the fact that the chief sources of cur-

rent information are deliberately contaminated. This book should be widely read and should help to remove much of the mutual misunderstandings between the organized workers and "the general public."

*Social Problems*, by E. T. Towne. *Poverty and Social Progress*, by M. F. Parmelee. *Organized Labor in America*, by G. G. Groat. Macmillan. \$1, \$1.75, \$1.75.

## NEW STORIES

*War the Creator*, by Gelett Burgess, is "the story of a boy who, in two months, became a man," a simply told, true story of a French soldier. Its distinction from the mass of such tales lies in the fact that it tells of the terrible months of the French retreat. (Huebsch, 60 cents.)

Fascinating, musical, mysterious are *The Willow Weaver and Seven Other Tales*, by Michael Wood, tales dealing with the strange connection between man and the unseen. It is a not wholly unsuccessful attempt to handle the intangible and express the inexpressible. (Dutton, \$1.)

*Witte Arrives*, by Elias Tobenkin, is the story of a young Russian Jewish emigrant. It is interesting, but the author has become so engrossed in the movement of his story that he has missed some golden opportunities to throw light on the position of the Jew in America. (Stokes, \$1.25.)

In *The Pleasant Ways of St. Medard*, Grace King has written a charming, picturesque description of life in New Orleans after the Civil War. A ruined Confederate family's gallant struggle for existence involves many unique, skilfully drawn characters, both black and white. (Holt, \$1.40.)

*Old Glory* is a collection of patriotic short stories by Mary Raymond Shipman Andrews. The author has apparently said to herself: "The country needs patriotic stories; I will write some," a sentiment excellent from a moral, but not from an artistic point of view. (Scribner, 50 cents.)

*The Thirteenth Commandment*, by Rupert Hughes, tells rather crudely of the havoc made by the money-spending women of New York. Apparently a bride's trousseau cannot be procured under three thousand dollars, and his heroine resolves to earn her own. Her final success is as unethical as the "thirteenth commandment"—"Thou shalt not spend more than thou earnest," with no suggestion that the earning must be honest. (Harper, \$1.40.)

## FOR THE CAMPAIGN

*Blighted Mexico*, by Randolph Wilford Smith, is a furious attack on Carranza and Wilson from a pro-Catholic standpoint. Valuable in spite of its extravagant style for the evidence it gives of Mexican atrocities. (Lane, \$1.50.)

An enthusiastic admirer, George Creel, writes of *Wilson and the Issues* and finds that the President has done all things wisely save when the "babel" failed to speak "a clear word for his guidance." Mr. Wilson is his own more discriminating and more winning advocate. (Century, 60 cents.)

Till one remembers that a few men are eternal honest, one wonders, on reading Ward Macaulay's *Reclaiming the Ballot*, that the country is not wholly gone to the dogs. A premium on ignorance and corruption appears set by stupid election systems. The proposals looking toward remedy are practical and far-reaching. (Duffield, 75 cents.)

From "Constitutional Government in the United States" by Woodrow Wilson, has been reprinted the chapter on *The President of the United States*, a short, clear account of the powers of the President and the changes in these powers due to the

## Mr. H. G. Wells' New Novel

# MR. BRITLING SEES IT THROUGH

Third Edition Now Ready

In this stirring story Mr. Wells reveals the true heart and mind of the English people. He pictures the England of today in a way that cannot be easily forgotten—so vividly does he draw his characters and the scenes through which they move with high courage and heroism. Mr. Wells' new novel carries a profound message to all Americans, but the chief interest of the book is in the story itself—the life of Mr. Britling and his family—this is what wins and holds the reader's attention. \$1.50

## OTHER NEW MACMILLAN BOOKS

### THE GREEN ALLEYS

*Eden Phillpotts' New Novel*

"A representative example of Phillpotts at his best, of his skill as a literary creator and of his ability as an interpreter of life."  
—*Boston Transcript*. \$1.50.

### GALLIPOLI

*John Masefield's New Book*

Important as literature, as an interpretation of England's point of view in the present war, and as the reflection of the mind and personality of a great figure in modern literature amid fighting scenes of the Dardanelles Campaign. *Illustrated*. \$1.25.

### WITH THE FLYING SQUADRON

*By Harold Rosher*

Mr. Rosher, recently killed in action in France, was a lieutenant in the British Flying Squadron. This highly interesting book contains a vivid and thrilling description of the air battles and exploits in which he took part.

*Illustrated. Ready in October.*

### THE TURTLES OF TASMAN

*Jack London's New Book*

A most interesting collection of the best new stories by Mr. London, containing tales of adventure, of character, of unusual experiences in unusual places. \$1.25.

### THE DUBLIN INSURRECTION

*James Stephens' New Book*

Written day by day during the insurrection that followed Holy Week. Mr. Stephens' account is perhaps the most vivid and authentic that has reached this country. \$1.25.

### POLITICS

*By Heinrich von Treitschke*

Translated from the German by Blanche Dugdale and Torben de Bille. With an introduction by the Rt. Hon. Arthur James Balfour, and a foreword by A. Lawrence Lowell, President of Harvard University.

*In two volumes. The set, boxed, \$7.00.*

### George Moore's New Novel

# THE BROOK KERITH

Now in the Third Edition

"In 'The Brook Kerith' George Moore employs his finest art in an audacious way. He evokes . . . as does Flaubert in 'Salammbô,' a vanished land, a vanished civilization . . . in a style that is artistically beautiful. Never has he written with such sustained power, intensity and nobility of phrasing, such finely tempered, modulating prose."—*N. Y. Sun*. \$1.50.

## LIPPINCOTT BOOKS

FOR SALE AT ALL BOOKSTORES

J. B. LIPPINCOTT COMPANY  
MONTREAL PHILADELPHIA LONDON

### OPEN THAT DOOR!

By R. STURGIS INGERSOLL.  
Net, \$1.00

A stimulating volume with a "kick" upon the relation of books to life: the part great books play in our goings and comings, in the office, in the street, and in the market place. The relation of poetry to the suburbanite.

Similar in size and style to those popular sellers, "Why Worry?" "Peg Along," etc., etc.

### BETTY AT FORT BLIZZARD

By MOLLY ELLIOT SEAWELL. Four illustrations in color and decorations by Edmund Frederick. Net, \$1.50

This is a straightaway army love story, with the scene laid at a post in the far Northwest. It is a sequel to the famous "Betty's Virginia Christmas," so popular a few years ago. It is realistic and yet as light as Betty's laugh—presented in a delightfully dainty gift book style, it makes a charming Christmas present.

### FIGHT FOR FOOD

By LEON A. CONGDON, Advising Member of Kansas State Board of Health.

Net, \$1.25

The high cost of living is everybody's problem. This book presents the reason and stimulating thoughts upon the solution. It treats the problem from the producer's, the middleman's and the consumer's viewpoints.

### NOTE TO READERS:

Book descriptions are long and advertising space short, hence our request that you ask your book dealer for information regarding the following, just published: A new edition of Clark's **A SHORT HISTORY OF THE UNITED STATES NAVY**, bringing this standard work up to date. \$3.00 net. **THE GOLDEN BOOK OF ENGLISH SONNETS**, by William Robertson, \$1.25 net, is considered by English critics to be the best anthology published. **OLD GLASS AND HOW TO COLLECT IT**, by J. Sydney Lewis, \$3.00 net, contains 75 illustrations in color and half-tone. A book the collector and expert will prize. **SAINTS AND THEIR EMBLEMS**, \$10.00 net, is a profusely illustrated cyclopedia of the names and emblems of all the Saints. **MARVELS OF AVIATION**, \$1.25 net, is another popular scientific volume in the Marvel Library for young people. **KEEP-WELL STORIES FOR LITTLE FOLKS**, by May F. Jones, \$0.60 net, gives the information needed that will interest children in bringing about healthy, sanitary home and country places. There are 30 illustrations. **BRIEF HISTORY OF THE UNITED STATES**, by Matthew Page Andrews. A popular work as well as an excellent text book. \$1.00 net.

### A GREAT ART WORK

### JOSEPH PENNELL'S PICTURES OF THE WONDER OF WORK

Profusely illustrated. Net, \$2.00.

Mr. Pennell is notably a modern, and has found art in one of the greatest phases of modern achievement—the Wonder of Work—the building of giant ships, railway stations, and the modern skyscraper; giant manufacturing, marble-quarrying; oil-wells and wharves—all the great work which man sets his hand to do. The crisp and wonderful and inspiring touches of introduction to each picture are as illuminating as the pictures themselves.

### TRAINING FOR THE STAGE

By ARTHUR HORNBLow

Preface by DAVID BELASCO

Illustrated.

Net, \$1.25

The author is the editor of The Theatre Magazine; the book is especially for those who have stage ambitions. The presentment will be of great value to amateurs as well as professionals and of interest to all outsiders who are at the same time interested in the theatre.

### TRAINING FOR THE NEWSPAPER TRADE

By DON C. SEITZ

Business Manager of New York World

Illustrated.

Net, \$1.25

Joseph Pulitzer's right-hand man was Don Seitz. This book is for the man or woman interested in or entering the newspaper trade as editor, advertising man, printer, or reporter. It tells what is required, what the business offers and the part it plays in life.

### CLOTHING FOR WOMEN

ITS SELECTION, DESIGN AND CONSTRUCTION

By LAURA I. BALDT,

Teachers College, New York City.

Being the First Volume in Lippincott's Home Manuals. Edited by BENJAMIN R. ANDREWS, Ph.D., Teachers College, N. Y. C.

Net, \$2.00

Seven colored plates. 262 illustrations in the text.

This work deals exhaustively with the selection, design, and construction of women's clothing. The difficult problems of harmony of color and design have been fully treated. It is a book for the College short course, the high school, and the home library.

### FROM NATURE FORWARD

By HARRIET DOAN PRENTISS.

Limp leather binding.

Net, \$2.00

The public mind is unsettled; the individual lives a day-to-day existence, wrestling with disease, mental troubles and unsatisfactory issues. This book outlines a system of psychological reforms that can be followed by every man and woman.

development of the country and to the personalities of different presidents. (Harper, 50 cents.)

### THE MINISTER'S SHELF

Dr. Patten has made over the hymns and songs we were reared on to suit the praise-worthy sentiments of universal brotherhood. Even dead poets have rights, but *Advent Songs* is calculated to cause Luther, Watts, Heber, and their fellows to smile rather in pity than in anger. (Huebsch, \$1.)

Dr. Frederick W. Betts has made a thoughtful study of *Billy Sunday, the Man and Method*, drawn from the seven weeks' services in Syracuse. He probes for the weakness in the churches that makes such methods seem needful and thereby gives food for reflection to church leaders. (Boston: Murray Press, 25 cents.)

*The Issues of Life*, by Elwood Worcester, is composed of a number of sermons dealing with the close interaction of mind and body, religion and practical life. The application of religion to the physical, moral and spiritual needs of men is the object and aim of the volume. The style is vigorous, clear and effective. (Moffat, Yard, \$1.50.)

In *The Struggle Between Science and Superstition* Arthur M. Lewis writes with vigor and high purpose, but makes the oft-repeated error of confusing religion with superstition. It would make the problem easier if such critics took the precaution of finding out what churches do believe instead of basing their arguments on what they "must hold." (Chicago: Kerr, 50 cents.)

Prof. Robert Law, of Toronto, has published in the Short Course Series a reverent and deeply interesting study of *The Emotions of Jesus*, discussing with fine appreciation the few but significant gospel references to the compassion, anger, wonder, joy and geniality of the Master. The most noteworthy references to these emotions are recorded in St. Mark (Scribner, 60 cents.)

An immensely interesting collection of quotations is *Napoleon in His Own Words*, arranged by Jules Bertaut under such headings as Success, Administration, War, and translated by H. E. Law and C. L. Rhodes. Here in terse, striking sentences, is much that is valuable comment on present day Europe, much of cynical wisdom and of far-seeing statesmanship. (Chicago: McClurg, \$1.)

### SCHOOL AND COLLEGE

In *Dances, Drills and Story-Plays*, a useful little book for teachers and leaders of children's clubs, Nina B. Lamkin describes over sixty folk and fancy dances. (Chicago: Denison, 75 cents.)

*Occupations*, by Professors Gowin and Wheatley, is an excellent manual as to the human side of the leading vocations, and will be useful to teacher and parent as well as to the high school pupil, for whom it is prepared. (Ginn, \$1.25.)

*Schools and Classes for Exceptional Children*, by Dr. David Mitchell, discusses principles to be followed in classifying such children, and distinguishes between the *socially competent* and the *socially incompetent*, since this involves the question of custodial care or permanent segregation. There are discussions of the Binet tests and of other methods, and recommendations as to special clinics and treatment for feeble-minded. (Cleveland Foundation, 25 cents.)

*The Fraternity and the College*, by Thomas A. Clark, Dean of Men, University of Illinois, is an ardent defense of the Greek letter society, with some criticism of its more obvious abuses. There is unnecessarily vague talk about "fraternity ideals." Just how they differ from other ideals is

not made clear. (Menasha, Wis.: Banta, \$1.25.)

*The Harvard Advocate, Fifty Year Book*, commemorates the half century by the publication of about 150 selections from its files for 1906 to 1916. There is a great range of material, humorous, serious, prose, poetry, adventure and love, from pens known and unknown. (Harvard Univ. Press, \$1.25.)

"Voluntary and Military are words that cannot possibly exist side by side," says R. L. Gignilliat in *Arms and the Boy*. Besides the account of the system in use at Culver Military Academy, and its effects, the book is full of suggestions and data as to the present status of military training among our 500,000 high school boys. (Bobbs-Merrill, \$1.50.)

*Public Education in Maryland*, by Abraham Flexner and Frank P. Bachman, is the answer to a state's appeal for outside advice on learning its rank, twenty-third, in illiteracy. Bad politics eliminated, the same funds would ensure good schooling. Frank and discriminating, the report deserves reading by citizens everywhere. (New York: General Education Board.)

In *Overcrowded Schools and the Platoon Plan*, S. O. Hartwell presents a compromise between the traditional type of school organization and that known as the Gary. Tho the defense of the Platoon plan, as not departmental nor differing greatly from the old type, may not commend it, yet this report recognizes the economic and administrative difficulties and educational problems to be faced by any plan. (Cleveland Foundation, 25 cents.)

## GETTING ON TOGETHER

*The City Manager* is discussed by H. A. Toulmin in the National Municipal League Series. As usual in books of this class there is much information rather badly arranged and loosely written. (Appleton, \$1.50.)

There is a vast amount of important information in *Department Store Occupations* by Iris P. O'Leary. Analysis of organization, promotions, qualifications, training make a valuable report, tho disappointing in its lack of plan for changing the bad features of the work. (Cleveland Foundation, 25 cents.)

*One More Chance, an Experiment in Human Salvage*, by MacBrayne and Ramsay, gives a series of convincing pictures concerning probation experiences in Massachusetts. Both professional and accidental crimes are reported in relation to imagination, wanderlust, drugs and other factors. (Boston: Small, Maynard, \$1.50.)

By its *Citizen's Book*, the Cincinnati Chamber of Commerce sets an example other such associations might well follow. In 250 attractive, readable pages are to be had a history of the city and information as to all the departments under which its people are governed and cared for. (Cincinnati: Stewart & Kidd, \$1.25.)

*Economic Principles*, a college text-book by Prof. Frank A. Fetter, of Princeton, is an excellent illustration of the modern humanization of what was once "the dismal science." Dr. Fetter never loses sight of the sociological aspects of his science and its bearing upon the concrete problems of human welfare. Particular attention is given to the problems connected with the growth or failure of growth of the population. (Century, \$1.75.)

In the Cleveland Survey studies of the *Metal Trades* and the *Printing Trades*, Mr. Lutz emphasizes the relatively low pay in machine-made trades and the extreme specialization which makes adequate training unprofitable. As to the *Printing Trades* Mr. Shaw is more encouraging, since these trades employ a larger proportion of educated and of American born workers. Both investigations lay stress on the wage gap between fourteen and sixteen years. (Cleveland Foundation, 25 cents each.)

# GOOD BOOKS

## THE ABINGDON PRESS

WORD went forth to put the remarkable manuscript into type. Now, the linotypist was a man whose imagination had not been chained by the endless play of his fingers on the machine's keyboard. Often as he pounded out the type he sensed something of the author's days and nights of unremitting toil, of ransacking authorities, of studying all sorts and conditions of men, which had resulted in the work before him. So he leafed thru the manuscript with a light in his eye.

"Boy," he cried to the machine, "here's a great book! Let's make it good."

"All right, we will," chattered the linotype, as it nervously bit its teeth into the slugs of molten metal. "Wait—there's a bad letter. Let me try that line again. I can do better than that."

So the linotype talked away till the end and finished the last page with the feeling of having fought a good fight.

To the electrotyping room went the bright, shining forms of type so plates could be made for printing.

"Whoo!" cried the wax, as it ran over them to make the first mold for the

So unfolds the marvel of the printed word at THE ABINGDON PRESS. For 127 years the reputation of this house for fine craftsmanship has ever kept pace with the distinction of its publishing ideals. Today the imprint of THE ABINGDON PRESS on a book is a guarantee of quality. The catalog, sent upon request, lists a good many books you may be interested in. Some recent issues follow:

### THE MAN OF POWER

By LYNN HAROLD HOUGH

Twelve brief and graphic sketches of the characteristics of the efficient life. There is an interesting and vital treatment of such subjects as Mind, Conscience, Will and Emotion; a discussion of social and professional efficiency; and a chapter each on the efficient churchman and the efficient citizen.

### GIRLHOOD AND CHARACTER

By MARY E. MOXCEY

This book, while in perfect accord with the latest and best psychology, is written in a thoroughly popular style. It is intended to help those who have to deal with girls of any age to understand how the character of a girl develops that they may be better able to assist in the process.

metal plates. "Lino has done himself proud on this. Watch out," it urged, for the hydraulic press weighed down a bit unevenly. "Press more over there—and there—and there. That's it. Now all together for some fine molds."

The plates were so fine when finished that they brought a smile to the press

as it gripped them in its hand, for the press was new and had all the ambition of youth to make a reputation. Hour after hour it waved over them the magic wand of inked rollers and tossed out huge printed sheets that put admiration into the eyes of the critical pressman.

"There!" said the weary press, after the run. "I kept my end up that time."

"Better not boast too soon," gasped the sheets as they lay flung one upon the other. "We're not books yet."

But they soon became books. They were folded, sewn and bound, and before long were dressed in their paper covers to go out and make their way in the world. But they always remembered how their friends, chained in the shop, had worked with a great pride of performance.

## Majestic Coal Chute

Keep the coal man from marring the sides of your home, protect your walk, basement, lawn and shrubs. A glass door set in a window, giving splendid light to the basement. It looks from the inside and is fireproof. It is extra durable, has a heavy steel body, strong steel door frame and boiler plate hinges. Every home should have one.

**Write for Free Book** Describing the Majestic Coal Chute and other Majestic specialties: Garbage Reclaimers, Milk and Package Reclaimers, all metal Basement Windows, Pothole Reclaimers, Street and Park Refuse Cans, Metal Plant Boxes, Pipe and Popcorn Warm Air Purifiers, etc.

The Majestic Co., 652 Erie St., Huntington, Ind.

## FIGHTING TRIM

**W**HETHER your battle is fought in the trenches, behind an office desk or in the home *you need to keep fit.*

It's comparatively easy for the soldier to keep up to scratch. The civilian—man or woman—has a harder task. Sedentary habits, insufficient exercise, too much food and too much hurry about eating it, combine to cause a more or less chronic condition of constipation.

Don't think you can dispose of constipation with a cathartic pill. Laxatives and cathartics cause more constipation than they cure and their persistent use is likely seriously to undermine your health.

NUJOL relieves constipation effectively and has none of the objections which are common to all drug remedies. It acts as an internal lubricant, preventing the bowel contents from becoming hard and facilitating the normal processes of evacuation.

NUJOL, put up in pint bottles only, is sold at all drug stores. Refuse substitutes—look for the name NUJOL on bottle and package.

# A Number of Things by Edwin E. Slosson

It seems to me that this holding of three political conventions is a great waste of time and breath, when the resulting platforms are so much alike. We all sit in the same chairs; why should we not stand upon the same platform? Men differ in opinion less than in leg-length. Let us standardize our political creeds and save friction. A form like the following ought to suit everybody:

### AN INTERCHANGEABLE PLATFORM

**Americanism.** We maintain that loyalty to this nation, undivided allegiance and unhesitating devotion to the flag, the constitution and the memory of the founders of this fair land of liberty, is the paramount issue in this campaign; and we unhesitatingly denounce the opposing party for its paltering and disingenuous stand on this question.

**Preparedness.** We boldly declare for adequate preparedness and condemn the plans of our opponents as inadequate and excessive. We unhesitatingly denounce all unnecessary war in the strongest terms.

**Mexico.** While we abhor any intervention in Mexico, we shall not hesitate to intervene if in our judgment it becomes necessary.

**Foreign Policy.** We should insist that every nation respect American rights even if we have to rattle the sword in its sheath to vindicate our honor; and we should do this in such a way as to maintain strictest neutrality, win the cordial friendship of all the warring nations, and preserve our own nation from becoming involved in the bloody conflict.

**Tariff.** The tariff should be scientifically adjusted so that the interests of the consumer will be safeguarded without prejudice to the interests of the producer, that trusts and monopolies will be discouraged, that labor will obtain its just rights in so far as they are proper, and capital will prosper but not unduly, and that American industry and American trade will enter hand in hand into every market of the world.

**Social Justice.** We believe in it whatever it is.

**Woman Suffrage.** See state platforms for particulars.

**Immigration Policy.** We believe in admitting the right kind of aliens and excluding the others. This is a free country and it is our duty to see that its freedom is not abused by those who have other ideas than ours of what freedom is.

**Conservation.** We believe in protecting our natural resources from exploitation and in bringing them into full use without further delay.

**Appeal to the People.** On all of these vital issues our opponents take a position which is diametrically opposed not only to our own but to that of all that illustrious band of heroes who have raised Old Glory among the stars. As to what we mean by any particular plank, we refer you to the wonderful statesman and fearless champion of the right who is our revered standard-bearer: Theodore Woodrow Hughes! We

Per INDEPENDENT

point to his record as the vindication of our principles, and to our principles as the vindication of his record, and we declare unhesitatingly and before all the world, no matter how the bold declaration may injure us, no matter how the other party may misrepresent our frankness, that we believe in the golden rule, the Monroe Doctrine, the ten commandments, and government of the people, by the people and for the people:

Samuel Johnson, like every true Tory, was opposed to any improvement in spelling. He said:

Imlac in *Rasselas*, I spelt with a *c* at the end, because it is less like English, which should always have the Saxon *k* added to the *c*.

Boswell, also "a zealous Tory but not enough according to knowledge," adds the footnote:

I hope the authority of the great Master of our language will stop that curtailing innovation, by which we see *critic*, *public*, etc., frequently written instead of *critick*, *publick*, etc.

Fortunately for us "the authority of the great Master" was overruled by the common sense of the general, otherwise we should still be writing *arithmetick*, *pathetick*, *almanack*, and all the rest of them. Let us hope that the little masters of our day who are trying likewise to check human progress toward a genuine orthography may prove equally impotent.

But while I am glad that our forefathers had sense enough to see that both *c* and *k* were unnecessary and courage enough to drop one of them, I must say that I think they made the wrong choice. The *k* had the better right to existence, since it has but the single sound, while *c* merely substitutes for *s* or *k* and it is impossible to know which is meant until the next letter tells us. Besides *k* is an awkwardly shaped letter and therefore makes easily recognizable any word in which it appears, while *c* is commonly confounded with *e* in both script and type and might be dropped from the alphabet as superfluous. But since one or the other of them must go and such good progress has been made in the last hundred years in eliminating the *k*, I suppose we had best say good-bye to it and *cic* it out.

When some scientific Creasy comes to write a book on the really "decisive battles of the world" he will count among them that recorded in the private papers of Napoleon as:

This day the emperor granted two thousand livres from his private purse to investigate the possibility of making sugar from the beet root. Thus France may escape the heavy tribute she is yearly forced to pay to foreigners.

That act did more than any of his other efforts to accomplish his dearest dream, the overthrow of the sea-power of England. It did not weaken that sea-power but it rendered it partially powerless. What did it matter that Britannia ruled the waves if France could grow her sugar on her own soil? What did it matter that in the battle fought in the strait between Dominica and Guadeloupe on April 12, 1782, Rodney beat De Grasse? Napoleon's little flier in applied chemistry robbed the British

## Concerning New Doran Books

**What do you read?** After all, a large share of your reading is fiction—library returns and booksellers' reports confirm the fact that like it or not as we may choose the reading world today is gratified largely by the novelist. Then it becomes a matter of selection. It has been our endeavor to make our imprint synonymous with a really worth-the-reading book. Ask your bookseller for the Doran books, among which you will find as recently issued these:

### THE DARK FOREST

Hugh Walpole \$1.35

### OLD JUDGE PRIEST

Irvin S. Cobb \$1.25

### THREE SONS & A MOTHER

Gilbert Cannan \$1.50

### THESE LYNNEKERS

### I ACCUSE

\$1.50

### PATHS OF GLORY

Irvin S. Cobb \$1.50

There are two books, by authors who have made their places secure—but never so secure as since the writing of these:

### THE DARK FOREST

By Hugh Walpole

In this extraordinary novel the author of *Fortitude*, etc., has succeeded in re-thinking the Russian novel in terms of his own knowledge of life and character. Mystical, poetical, spiritual, the charm of this book is the triumph of the soul over disaster. \$1.35

### THESE LYNNEKERS

By J. D. Beresford

A novel of life and love—an absorbing analytical social study which never for a moment drags throughout its nearly 500 pages—a character creation of permanent significance. \$1.50

We might quote pages of complimentary reviews—yet we prefer the simple statement that these are books which have had the definite approval, not only of the professional reader, but of such folk as you would number among your distinguished friends.

# Resinol Soap

has made your skin so clear!"

"Yes. It seemed impossible that anything so simple as washing my face twice a day with a delightful toilet soap could do more good than all those tedious, expensive treatments, but in a few days I could see an improvement, and now my complexion has the clear, healthy look I thought it had lost for good."

If you are having trouble with your complexion, if you find that a pimply, or otherwise unattractive skin, is a handicap, what wouldn't you give to be able to say what that girl said?

The gentle healing medication in Resinol Soap reduces the tendency to pimples and oiliness, soothes irritated pores, offsets many ill-effects of cosmetics, and gives the real beauty of the complexion a chance to show itself.

Men find Resinol Soap cleanses and softens the skin most agreeably.

Resinol Soap contains absolutely no alkali or artificial coloring, so may be used freely on the most delicate skin. Sold by all druggists and toilet counters. For a sample cake, free, write to Dept. 25-D, Resinol, Baltimore, Md.

victory of its sweetness. The French lost the West Indies but the West Indies lost their value. Plantations went back to the bush, and fine old colonial mansions sank into decay. The islands became visibly blacker year by year as the percentage of sugar in the beet increased.

Starting with what seemed a hopeless handicap, a bare six per cent of sugar to the cane's twelve, the beet gained steadily upon its tropical rival. Within fifty years the sugar beet had caught up with the cane; then it forged ahead, fourteen, sixteen, eighteen per cent, and by the end of the century had scored a record of twenty, all thru its rigorous course of eugenics.

What Napoleon called a "heavy tribute" for France was nothing to what England was then "forced to pay to foreigners." By 1914 she was sending \$185,000,000 a year out of the country to pay for sugar, and most of it went to Germany, where it helped to build up the German navy which was preparing to challenge her supremacy of the seas. And now, when the Germans can no longer sell their surplus sugar to England, they turn it into alcohol and use it for running armored autos and manufacturing high explosives.

All because the chemists of Napoleon had taught the continental powers how to stand on their own feet. Ibsen's "Enemy of the People" ends with the paradox: "The strongest man in the world is he who stands most alone." I wonder if that is true of nations.

In this page of February 28, 1916. I ventured to hint that it was a good thing that the Ten Commandments went into effect before the referendum was adopted, for if put to vote now not one of them would be likely to pass. *The Bulletin* of Sydney, Australia, followed up the suggestion by offering a guinea for the best set of ten commandments suited to Australian conditions and temperament. Now the first commandment for the Australian is evidently; Thou shalt not say "Thou shalt not" to him, because then he will go and do it out of a spirit of independence. So *The Bulletin* awards first prize to the following as written in Australese and in a form most likely to be effective:

1. Yer might as well stick for Orstralia.
2. Yet might as well stop borrowin'.
3. Yer might as well keep from usin' too many blanky swear-words.
4. Yer might as well send yer kids ter Sunday school—it won't 'urt 'em.
5. Yer might as well 'ave a bit of learnin'.
6. Yer might as well give yer boss a fair deal—yer might be boss yerself some day.
7. Yer might as well stick to yer own old woman (they're owl alike).
8. Yer might as well make yer own tools and duds.
9. Yer might as well pay yer debts.
10. Yer'll blanky well 'ave ter be a better stousher than the next bloke.

Ethel Pawley.

It seems that the motive of King Ferdinand in making war against Austria-Hungary was to put more room in Rumania and to put the Hun out of Hungary.

## WHY PROGRESSIVES WANT HUGHES

(Continued from page 14)

physical and economic environment change, and their ideas and sentiments grow and expand; it is necessary, therefore, that governmental institutions and laws should be modified to accommodate themselves to these advances. Governor Hughes animated his party with this spirit of progress and secured thru its agency great measures of progressive legislation. Among them may be mentioned the laws establishing the Public Service Commissions, providing for the better regulation of the insurance companies, creating the commission to inquire into the social aspects of occupational injury and disease, and initiating the policy of workmen's compensation.

I suppose that a governor's attitude toward labor problems is the chief practical test of his progressivism. What was Governor Hughes's record? Here it is from the *Legislative Labor News* of New York, October 10, 1910:

Now that Governor Hughes has retired from politics and ascended to a place on the highest judicial tribunal in the world, the fact can be acknowledged, without hurting anybody's political corns, that he was the greatest friend of labor laws that ever occupied the governor's chair at Albany. During his two terms he has signed fifty-six labor laws, including among them the best labor laws ever enacted in this or any other state. He also urged the enactment of labor laws in his messages to the Legislature, even going so far as to place the demand for a labor law in one of his messages to an extra session of the Legislature.

Only 162 labor laws have been enacted in this state since its erection in 1777—in 133 years. One-third of these, exceeding in quality all of the others, have been enacted and signed during Governor Hughes's term of three years and nine months.

In much of this legislation Governor Hughes was blazing a new path. Notably was he a pioneer in constructive legislation for the establishment of a fair and adequate system of compensation for workmen's injuries. As far back as 1909, two years before the enactment of the Wisconsin workmen's compensation law, Governor Hughes recommended to the Legislature of New York the making of provision "for special and expert inquiry into the question relating to employers' liability and compensation for workmen's injuries." He declared that existing condition were "so unjust that there should be remedial action." And he had the satisfaction of approving as governor a promising workmen's compensation bill.

Governor Hughes went on the Supreme Court bench the following year. His work as a member of that court was performed in the course of judicial duty; it is therefore absolutely removed from politics. But the American people will be interested in learning that the progressive spirit which animated Mr. Hughes as Governor of New York breathes thru the judicial opinions he subsequently prepared as a Justice. These opinions have all been brought together in Judge Ran-

# MAZDA

"Not the name of a thing,

but the mark of a service"

From the incoming host of new ideas on lighting, MAZDA Service selects for the makers of MAZDA Lamps, only those developments in design, materials and methods that will improve the light you enjoy : :

### The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research

Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

Customer Calls Desk a "Splendid Servant"

Gentlemen:—  
"That desk I bought of you last July is a splendid servant."

"There are no dust-gathering pigeon holes, nor losing of papers, nor interference with air circulation as in most roll-top desks. Its built-for-the-purpose filing drawers are much better than the stick-and-bind old-style storage drawers that were a part of the flat top desk I used previously. My mail and advertising work is sixty per cent heavier than when I bought the desk and yet it gives me such assistance that I attend to all this with much less effort. Although I am ordering additional filing equipment from you, the system will have its headquarters at this desk."

Cordially, Louis Victor Eyeteing.

Blanks or Electros

som's volume on "The Statesman as Shown in the Opinions of the Jurist." In these interpretations and applications of the law and the Constitution, Mr. Hughes unconsciously reveals his outlook upon public questions and the way in which his mind and heart work when he is brought to face vital issues of national policy. And Judge Ransom, himself an ardent Progressive, sums up the result in the declaration that these judicial opinions of Mr. Hughes "reveal a man who is looking at actualities and is facing forward."

Judge Ransom holds that the most memorable service rendered by Mr. Hughes as a Justice of the Supreme Court was his Nationalist response to the challenge made upon our federal system by the complexity of modern transportation and industrial problems. In respect to matters of national scope Mr. Hughes vigorously and consistently asserted the primacy of national over local interests.

In those judicial opinions Mr. Hughes showed little patience with legalistic and technical obstruction to legislation enacted in the interest of social justice or for the promotion of social welfare. "Freedom of contract" has been the great engine of the reactionary obstructionists. But Mr. Hughes agreed with his colleagues that "there is no such thing as absolute freedom of contract" and that the power of government is so extensive that it may forbid or regulate "every contract which is reasonably calculated to injuriously affect the public interests." The converse of this proposition he stated and applied admirably in the Illinois child-labor case:

Where, as here, such legislation has a reasonable relation to a purpose which the state was entitled to effect, it is not open to constitutional objection as a deprivation of liberty or property without due process of law.

Another case coming before the Court was the eight-hour work-day for women in California. The legislation was sustained in an opinion written by Mr. Hughes, in which it was held that while a limitation of the hours of women "might be pushed to a wholly indefensible extreme" there was no reason for the conclusion "that the limit of the reasonable exertion of protective authority has been overstepped" in the statute. And in the B. and O. R. R. case, where a limitation of the hours of labor of railroad employees was under attack, Mr. Hughes said, for a unanimous Court, that

in its power suitably to provide for the safety of employees and travelers, Congress was . . . competent to consider, and to endeavor to reduce, the dangers incident to the strain of excessive hours of duty on the part of engineers, conductors, train dispatchers, telegraphers, and other persons embraced within the class defined by the act; and in imposing restrictions having reasonable relation to this end there is no interference with liberty of contract as guaranteed by the Constitution.

Progressivism is part of the spirit of Charles E. Hughes. It expresses itself alike in his judicial opinions, his legislative recommendations, and his executive actions.

## GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an Annuity or an Old Age Income Policy as issued by the Home Life Insurance Company of New York. The Annuity will yield a much larger income than can be obtained from any other absolutely secured investment. The Old Age Income commences at age 60, but in case of prior death the monthly income immediately accrues to the beneficiary. For a sample policy write to

**HOME LIFE INSURANCE COMPANY**  
256 BROADWAY GEO. E. IDE, President NEW YORK

MR. WILSON'S LEADERSHIP  
(Continued from page 15)

sible. It is easy to forget what he avoided; to forget the horrors of what Mr. Hughes in his hindsight thinks he would have chosen in place of a settlement. Perhaps the mothers who feared their babies might die for lack of milk will not forget. The *Railway Age-Gazette*, on September 1, said: "The United States is confronted with what may prove to be the greatest disaster in its history since the Civil War." That disaster the President avoided.

Mr. Hughes is doing his best to make the settlement of the Mexican problem impossible. Why did he not make the strike settlement impossible by speaking before 70 out of 124 Republicans voting in the House of Representatives had cast their ballots in favor of the eight-hour day?

The fact that Mr. Hughes has become so truly excited about the eight-hour law is an admirable index to his type of mind. It is just the sort of thing that would excite him. It has excited the property classes in general. Mr. Hughes is absolutely honest; no corporation could force him to go against his conscience; but on the other hand he is normally thinking practically all of the time the way the big corporations think; the way respectable society thinks; the way money in general thinks. The farmer and the laboring men do not exist for him. The fact that a great calamity was avoided for the country; the fact that the Adamson law enables us to secure a large amount of definite information about the results of an eight-hour system on railroads, thus preparing the way for the whole legislative program settling the railroad question; these facts mean very little to Mr. Hughes. He gives no sign that he appreciates the value of the six months actual experiment. Like most honest, able and respectable conservatives, he seizes upon some point of principle that gives him a good excuse for working on the property side. The fact that he does this honestly and enthusiastically makes him not less, but more dangerous, as a leader of reaction. Big money, when it is clever, realizes that a Hughes is worth much more to it than a Penrose, a Barnes or even a Smoot. Honest and independent blindness to human need, honest and independent devotion to established privilege, is a far more powerful instrument than small dishonesty can ever be. This election is going to be a contest between dishonest privilege and honest, well meaning, blind, conservatism, working together as allies, on the one hand, against enlightened, modern, able and constructive progressiveness on the other hand. Mr. Hughes is too intelligent to fight on such matters as the Federal Reserve Act or the Rural Credits Act or the Child Labor Act. He is intelligent enough to choose issues that are harder to see in their clear essence, such as the Mexican policy and the Adamson Act. But underneath it is all the same thing, whatever the pretext may be.

## The Highest Choice

Do not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

## "You Get The Job"

"We've been watching you, young man. We know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want in this firm's responsible positions. You're getting your promotion on what you *know*, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man *trained to hold it*. He's watching you now, hoping you'll be ready when the opportunity comes.

The thing for you to do is to start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools. Over 5000 men reported advancement last year as a result of their I. C. S. training.

The first step these men took was to mark and mail this coupon. Make your start the same way—and make it right now.

I. C. S., Box 4527, Scranton, Pa.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4527, SCRANTON, PA.

**DETROIT SCHOOL OF LETTERING**

Established 1899, 300 D. S. of L. Bldg., DETROIT, MICH.

The contention that the eight-hour day is impossible on railroads is old stuff. It is always cropping up, at every new move. Cotton mills cannot be run without child labor. Minimum wage laws will drive industries from the state. The Seaman's Act will destroy shipping, etc., etc. It is the everlasting wail against betterment; the stereotyped phrases of privilege. The eight-hour day can be applied to railroads, and will be applied, unless it is prevented by the roads themselves. One whine is that engineers prefer to work longer hours. We heard the same story when sixteen hours began to seem too long in steel mills. There are always some men whom economic pressure makes ready to work too long: what if there are? Does Mr. Hughes think that is sufficient reason that the whole lot of labor never should be lifted?

Perhaps he knows how definitely the United States Government is committed to the eight-hour principle. If not, let him read the Act of Congress of August 1, 1892, amended by C. 106; Acts 1912-13; Sec. 3738; and C. 174, Act 1911-12; as well as the notable series of eight-hour acts put thru since Wilson became President.

Also he might look at the laws of the states, taking only legislation affecting railroad employees, and including only eight-hour laws, not nine and ten-hour laws; for example:

ARKANSAS—Acts 1907, Art. No. 282, Sec. 1.

CONNECTICUT—Acts 1909, C. 242, Sec. 1. MARYLAND—Pub. Gen. L. 1911, Art. XXIII, Sec. 323.

NEVADA—Act 1913, C. 283, Sec. 2. NEW YORK—Consol. L. 1909, Sec. 8; amended C. 466, Acts 1913.

TEXAS—Rev. Civ. Stat. 1911, Art. 6586, Rev. Crim. Stat. 1911, Art. 1555.

WEST VIRGINIA—Acts 1907, C. 59. WISCONSIN—Stat. 1911, Sec. 1816m.

One subject of importance has not received sufficient attention. It was brought up in *Harper's Weekly* while I was editing that publication, and has been mentioned occasionally in the daily press since then; but it deserves the most careful reflection.

Since Mr. Hughes thinks he wants to talk about efficiency let him give a little picture, as he sees it, of the work of a Republican Senate under him. These will be heads of most important committees: let him tell us what he thinks he can do with them:

*Appropriations*, Warren of Wyoming.

*The greatest shepherd since Abraham.* *Banking and Currency*, Nelson of Minnesota, Chairman of the Ballinger committee and leader of the pro-Ballinger forces.

*Military Affairs*, Henry A. du Pont, of powder fame.

*Finance*, Penrose of Pennsylvania, who needs no description.

*Judiciary*, Clark of Wyoming, copper king.

*Naval Affairs*, William Alden Smith of Michigan, made forever famous by the "Titanic."

*Public Buildings and Grounds*, Sutherland, one of the ablest and most persistent of the Old Guard leaders.

## EVERYMAN'S OFFICE

In the Office Efficiency Number of The Independent for November 20, Edward Earle Purinton will discuss the business executive's problems as to conservation of his own time, relations with his managers and workers, methods for saving labor costs, speeding up work and applying scientific principles to the day's work in the office, no matter what may be the nature of the work for which his office exists. A Test Chart for determining the Efficiency of "Everyman" in his office will accompany this article.

Office Efficiency Number  
November 20th

ters, who is said never to have been right on any question in his long life.

What the Old Guard Republicans plan for an agitation in favor of a most extensive tariff was told by Gallinger recently and quoted in my last article in The Independent. Gallinger's speech, therein referred to, should be read by every serious voter, especially as Mr. Hughes shares fully the Old Guard worship of a tariff made by the agents of the big trusts.

A great thinker and doer, of deep knowledge and sweeping accomplishment, not addicted to vague enthusiasms, recently visited the President. He talked with him of the strike, Mexico, the Supreme Court. Coming away he said: "Wilson was unusually fitted for the job when he went in. He is many times as well fitted now. His power to learn is startling. Today his mastery, clearness, courage and sense of direction are amazing. If there ever was a situation in which a people should trust its leader, that situation is here and now. Of course, there have been mistakes. It could not have been otherwise. But how trivial they are; how noble and big the record. The man who will not stand by his leader, in such a crisis, after such steadiness, growth, and rightness, is not the kind of citizen this country needs." I cannot use the man's name, but he represents the ablest and best informed thought of the country; and I believe the words I have quoted are the voice that will be decisive next November.

### PEBBLES

If the paper famine gets much worse, it's even possible that Mexican money may assume some actual value.—*Philadelphia North American*.

A peculiar thing about this war is that while some of the belligerents never lose a trench, yet they recapture quite a number. —*St. Louis Star*.

"Am I good enough for you?" sighed the fond lover.

"No," said the girl, candidly, "you're not, but you are too good for any other girl." —*New York Times*.

"Maria, you'll never be able to drive that nail with a flatiron. For heaven's sake, use your head," admonished Mr. Stubbins. And then he wondered why she would not speak to him the rest of the day. —*Puck*.

An American lady at Stratford-on-Avon looked even more than the usual American fervor. When she reached the railway station she remarked to a friend, "To think that it was from this very platform the immortal bard would depart whenever he journeyed to town!" —*Sacred Heart Review*.

Little Harold having climbed to the pinnacle of the roof of a very steep shed, lost his footing and began to slide with terrifying swiftness toward that point where the roof swept gracefully off into space.

"O Lord, save me!" he prayed. "O Lord, save me! O Lord!" Never mind. I've caught on a nail! —*Harper's Magazine*.

The grammar school principal went from room to room explaining what to do in case of fire. The pupils listened with respectful attention until he came to his final instructions, then grates and giggles disturbed the principal's serenity.

"Above all things," he said, "if your clothing catches fire, remain cool!" —*New York Times*.

Commerce has its masterpieces no less renowned than art.

Probably the greatest commercial masterpiece of the ages is that all-steel modern Pegasus of the rails, the

## BY LUIGI CRISCUOLO

### FOREIGN GOVERNMENT BONDS IN THE UNITED STATES

THE interest of a large number of American investors has been focused upon investment possibilities in bonds of foreign governments, either those engaged in the war or those indirectly affected. Since the outbreak of the war approximately \$1,500,000,000 in foreign government bonds or credits have been placed in the United States and indications point to more issues. Aside from the new loans, Americans have purchased at bargain prices upward of \$100,000,000 in various old issues.

There are many investors who purchase European government bonds from purely patriotic motives, because they wish to give financial support either to the Allied Powers or the Central Powers. There are others who feel that now they have an opportunity to acquire choice government securities at the prices of American corporation bonds, or even on a more favorable basis. Some of our readers will remember that just one year ago we mentioned the fact that if the Allies were to come to us for another loan, there would be a question as to whether we could, or would, grant one on the same terms; that the chances were that European government bonds would sell at lower prices than our own corporation issues. Events have justified the prediction.

The Anglo-French five per cent loan was placed after considerable negotiating and an elaborate newspaper campaign of education. The bonds declined in price, but it could hardly have been expected that the American public could digest in a few months an issue of such magnitude when the normal financing of one month in ordinary times was but \$100,000,000. Only the continued, tho wholly unexpected, prosperity that spread over the whole land due to the enormous war orders placed this country in a position to extend such large credits.

There had been considerable speculation as to how loans following the Anglo-French issue would be secured. Both English and French bankers and government officials were so exalted on the question of national dignity that they felt the credit of either country was good enough without the necessity for collateral back of any loans. But the American public had become rather wearied of a war that seemed to have no end and even the bankers forgot the proverbial strength of England and France; so recent loans have been secured by ample collateral instead of promises to pay.

In August, France placed thru American bankers a loan of \$94,500,000. This was effected thru the issuance of that amount of American Foreign Securities Company three year 5 per cent.

notes at 98. The notes are secured by collateral pledged with the Bankers Trust Company of New York having an approximate value of \$113,449,000 and consisting, in the main, of Canadian, South American and European government issues. The company holds the obligation of the French Government pledging itself to repay the principal of the notes in three years, as well as maturing interest. The bonds are now selling at 98, yielding 5.70 per cent, and appear attractive apart from the obligation of the French Government.

The British two-year 5 per cent loan of \$250,000,000 placed the first of last month at 99 is secured by collateral having a value of \$300,000,000 pledged with the Farmers Loan & Trust Company of New York. It was provided that if the securities so pledged suffered a decline in market value, additional collateral was to be added to assure a deposit of securities valued at 120 per cent of the principal amount of the issue. These notes are selling at 99, yielding 5.50 per cent, and are attractive.

Large purchases of Russian, German, Italian, French and Argentine internal issues have been made abroad at low prices for the account of American investors. Due to the low rates of exchange on those countries, it has been possible to purchase standard government issues at abnormally low prices. The interest in many instances is payable only in London, Paris, and other financial centers, and can be collected in some cases only at current rates of exchange. For this reason buyers are either holding their coupons until exchange goes back to near normal or figuring that the loss in collecting interest will be more than made up by

the gain in market value of the bonds. Among the issues in demand are Russian Internal 5½s due 1926. Normally Russian roubles are worth 51.45 cents, but they are now about 32.40. Due to this condition it is possible to purchase a 1000 rouble bond for about \$313, normal parity \$514.50. As Russian exchange advances toward parity there is a possibility of profit in these bonds, and if the war should end without disastrous financial results to Russia it would not be surprising for these bonds to sell near par before maturity in 1926. However, while Russia has enormous undeveloped resources and is a ripe field for American capital and enterprise, the stability of the government does not compare with that of England, France or Germany and for that reason the bonds are considered speculative.

Both Germany and Austria have made large issues of bonds for war purposes, but due to the difficulties encountered in shipping bonds to the United States, and possibly to the feeling against the Teuton powers that generally exists, only a rather small market has been made for these issues. There have been large purchases of Italian 6 per cent notes, Argentina 5s of 1909, and many miscellaneous issues that are not actively traded in as yet.

It is not possible to forecast the result of the war or the effect of a victory of the Allied Powers upon German or Austrian securities, for instance. While a purchaser of any unsecured government bonds is to an extent gambling upon the outcome of the war, it is almost inconceivable that any of the strong European nations will default upon their obligations.

The chances seem to indicate that any new issues will bear about the same interest rate as recent loans. However, as time passes the various loans will probably have some feature that will make them more attractive than previous loans, either by virtue of collateral deposited or terms of conversion into subsequent loans. One beneficial effect of the issuance of secured loans has been the lessening of liquidation of American securities.

Until a more definite foreign policy is apparent, it is not wise for small investors to consider foreign government bonds, excepting those secured by collateral deposited in the United States, or bonds of large municipalities either in the Allied countries or the Central Powers. We are favorably disposed toward good South American government issues, particularly those of Argentina. Large investors, meaning those who invest from \$10,000 upward each year, can afford to take what risks there may be in purchasing such new war loans as may be offered here.

*This week we introduce by name the Investment Editor of The Independent who for the last seven months has conducted our Investor's Service and has written the monthly talks to investors now called "Market Place Talks." Mr. Criscuolo is the statistician of one of the most prominent banking houses in this country. His personal attention, in this department, is given to the desires of our subscribers for information with regard to investments of all kinds. Readers who seek such advice will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, a business or a professional man, woman or minor. All information thus received will be held in strict confidence.*

Conducted by

W. E. UNDERWOOD

## DEFERRED DIVIDENDS

A correspondent writes, somewhat apprehensively, to ask what I meant when, in a recent article, I asserted that the State of New York had outlawed the deferred dividend scheme of life insurance in 1906. Under the circumstances, why did not the company in which he holds such a policy pay him the accumulated profits and annually thereafter such others as were earned? The answer is that the law did not affect the policies then in force; it simply forbade such contracts being entered into thereafter. The law was recommended by the Armstrong legislative committee which investigated the whole life insurance business in 1905. In their report the abuses prevalent under the deferred dividend system were exposed and unqualifiedly condemned.

L. E. H., Milmine, Ill.—Replying to your questions in connection with my position on the amount of capital invested in the stock of a life insurance company, and, second, the custom in vogue by some companies of issuing both participating and non-participating policies: First, a going company having all its machinery in full operation needs no capital. Admitting that it was needed at the start, it is but fair that those who invested it should be protected and receive a reasonable reward in dividends on the amount invested. But the amount of capital should not be excessive; nor once the company is in successful operation should it be largely increased. This observation applies only to such companies as are selling participating insurance. Non-participating companies are excepted because their policyholders get insurance at a lower premium rate than do those in participating companies, the former receiving no dividends, the latter depending on dividends to reduce the gross cost. A large amount of capital is a drain on participating policyholders and the service they receive for it is useless. Now as to the second question, participating and non-participating insurance are competitive lines, the profits from the former accruing to policyholders; those from the latter, to stockholders. The New York law prohibits a company doing both kinds—they must choose one or the other.

A. R. W., Rock Island, Ill.—It is impossible for me and, I fancy, difficult for the company in which you hold a deferred dividend policy even to approximate the amount of the dividend eight years in advance of its maturity. As a matter of opinion only, I will say that a dividend on a 20-year endowment equal to fifty per cent of its face is excessive. Your policy was in no way affected by the law which simply prohibited the issuance of such contracts in the future. I would advise you to carry the policy you have to maturity. You stand to lose too much by discontinuing it.

H. F. L., New York, N. Y.—Your age decides me in expressing the opinion that Ordinary Life is the form you should now have. You need more than you are now carrying. If you can do so conveniently increase your premium expenditure \$300 a year, you can secure about \$7000 for that amount. The Presbyterian Ministers' Fund is an excellent institution.

## An Investment Suited to Your Requirements

can be found in our new list, No. 950AB, which offers wide variety in

<b>Character of Securities</b>	First mortgage bonds upon real estate, manufacturing plants, natural resources and other properties of ample value and earning power to protect the investor, also municipal bonds and farm mortgages.
<b>Location</b>	In established sections of United States and Canada.
<b>Maturity</b>	One to twenty-five years.
<b>Interest</b>	4¼% to 6%.
<b>Amount</b>	\$100, \$500, \$1,000 or more.

## A SWIMMING POOL THAT SCRUBS ITSELF

BY WILLIAM S. FRANKLIN

Former Professor of Physics at Lehigh University

THERE are two solutions of the problem of swimming pool sanitation: sterilization combined with occasional cleaning, and extremely frequent cleaning of the pool and changing of the water. Both solutions are of course greatly helped by the enforcement of rigid hygienic rules among the users of a pool.

The first solution is exemplified in the present day operation of every high-class pool, and the second solution is embodied in a pool which is now being built at the Bishopthorpe School for Girls in South Bethlehem, Pennsylvania, the so-called Bethlehem Plan Pool.

The Bethlehem Plan makes it physically and commercially possible to do what is exactly equivalent to emptying, scrubbing and refilling a pool with drinkable water three times a day, and to circulate drinkable water thru the pool at a two-hour rate while the pool is in use.

The possibility of going to such an extreme depends upon three factors.

(a) The purification of badly polluted river water for city use costs less than half a cent per thousand gallons if we do not count the cost of lifting the water several hundred feet nor the cost of distributing the water thru an expensive and quickly rusting system of street mains. Therefore, water clean enough to drink can be obtained at the swimming pool at less than half a cent per thousand gallons by treating the used water in the pool instead of going several miles (partly horizontal and partly vertical miles) to get for treatment a supply of water a thousand times as filthy as the pool water ever could be! Of course the treatment of pool water on the scale involved in the Bethlehem Plan depends upon the utilization of all of the available space under platforms and dressing rooms for standard type sand filter beds. The small filters which are now almost universally employed are entirely inadequate.

(b) How inefficient it is to filter water and mix it at once with the used water in a pool! How much water would you, Mr. Fastidiousness, want to run thru an overflowing bath tub to eliminate to your satisfaction the leavings of Mr. Dirty's bath? An arrangement for preventing absolutely the inflowing clean water from mixing with the used water in a pool, and for automatically scrubbing the bottom and side walls of the pool is the most important feature of the Bethlehem Plan.

A lightly framed bulkhead stands across the pool like a water gate and rests with its entire weight on the bottom of the pool. An "inner" tube of rubber runs along the bottom and ends of the bulkhead, and this inner tube is inflated to about one pound per square inch so as to push a canvas "shoe" snugly against bottom and side walls of the pool. It is evident that this bulk-

## Stocks and Bonds ON THE PARTIAL PAYMENT PLAN

A small first payment enables you to purchase one share or bond, or as many as you care to, of Railroad, Industrial and Public Utility Companies. The balance may be paid in convenient monthly installments of \$5, \$10, \$20, etc., depending upon number purchased. You may divide your investment among several dividend paying securities under this plan.

119 West 40th Street, New York

head would quite effectively scrub bottom and side walls by squeegee action if it were pushed along.

While the pool is in use the bulkhead stands idle at either end of the pool, looking not much more conspicuous than the end wall of the pool itself, and the continuous circulation of water thru the pool takes place without affecting the bulkhead, and of course with all the inefficiency of the mixing process as above described; but at noon, say, when there are few or no swimmers in the pool, the valves are set so that the pure water enters at one corner into the narrow space behind the bulkhead, flows across the end of the pool in the narrow space, and passes thru openings thru the bulkhead into the pool; and, of course, water flows out of the other end of the pool into the filter beds. At this stage the back face of the bulkhead and the end wall of the pool are swabbed by and the loosened sediment is carried out into the pool by the swift stream of pure water. Then the openings thru the bulkhead are closed and the inflowing pure water rises an inch or two in level in the region behind the bulkhead and begins pushing the bulkhead along. This action continues until two o'clock or two-thirty o'clock, by which time the bulkhead will have reached the other end of the pool; when every drop of used water will have been eliminated from the pool and every portion of the inner surface of the pool freshly scrubbed. The pool will be in the condition of a well cleaned glass of drinking water on a dinner table! And it can be brought again to this condition between six and eight p. m., and again before the hour of opening in the morning!

(c) The accumulation of sediment is obviated in the Bethlehem Plan as follows: The sediment gathers in front of the bulkhead as it squeezes the bottom of the pool. A strip is fastened to either side of the bulkhead near the bottom, and when the bulkhead comes against either end of the pool a bounded channel is formed under this strip; and the accumulated sediment is in this channel. This channel opens at its middle into a waste pipe, and by opening the waste valve the sediment is drawn out of the channel and discharged into the sewer.

Of course it is feasible, and in some cases it would be desirable, to use chloride of lime in the water in combination with the Bethlehem Plan. If this were done one emptying, scrubbing and refilling operation per day would no doubt be sufficient. Indeed, one such operation per day would be sufficient for a pool which is used only during the afternoon period. But the use of chloride of lime gives a faint odor of free chlorine and no doubt causes a slightly increased irritation to the sensitive membrane of the nose, eyes and throat. Daily application of the chloride is necessary and it takes more of it than is commonly supposed to insure sterility.

"I saw your wife and daughter the other day, but they didn't see me." "So they said."—Boston Transcript.

## Make Men Believe in You!

Complete Course \$1.00

Written for both men and women  
Foreword by SIR HERBERT TREE

Success Depends on PERSONALITY  
**DEVELOP YOURS**

YOUR personality counts whenever you come into contact with people. In business, at home, in club work—if you have a strong personality you dominate; others believe in you. A well developed personality makes you stand out above the thousands who surround you.

"How To Develop Your Personality" by Clare Tree Major

tells you in a common sense way, how to break down the barriers that keep your personality from expanding.

**Don't Waste Your Opportunities Any Longer. NO RISK**

Just attach a dollar to the coupon at the bottom and mail today. Your money back if you are not satisfied and return the book within five days.

# BOTH SIDES

# A DEBATE

## THE PRESIDENTIAL CAMPAIGN

*RESOLVED, That the Republican national ticket should be elected in November.*

**T**HE most absorbing question now before the American public is whether or not the present Democratic administration deserves the indorsement of the electorate and should be returned to power for four years longer. The arguments for each side are to be found in the personalities of the candidates, their qualifications and records; in the issues as outlined in the party platforms and developed and explained in the speeches of party leaders, and in the record of the present administration as compared with Republican administrations. This brief was prepared by Preston W. Slosson.

### AFFIRMATIVE

I. Mr. Hughes is better fitted for the presidency than Mr. Wilson.

A. By personality.

1. Hughes has always been a practical reformer acquainted with the commercial and industrial life of the country; Wilson is a theorist and doctrinaire.

2. Hughes is a man of great executive capacity, consistency and resolution; Wilson has shown himself inconsistent, erratic and unwilling to listen to advice.

B. By training.

1. Hughes has been active in public life for many years; Wilson had no political experience except a brief term as governor of New Jersey before becoming President.

2. Hughes has the inestimable advantage of having served upon the Supreme Court.

C. By record.

1. Hughes was by common consent the ablest governor New York has had in many years. (a) He instituted the public service commission. (b) He fought and destroyed the party machine by an appeal to the people of the state on the question of the race-track gambling bill.

2. As a justice Hughes won the admiration of his colleagues on the Supreme Court and the respect of public men of all parties.

II. The Republican party deserves support for its stand on current issues.

A. The Republican party is committed to the protection of every American citizen who pursues his lawful business at home or abroad.

B. The Republican party is in favor of a more adequate army.

C. The Republican party opposes any interference in the internal affairs of Mexico except to secure American rights.

D. The Republican party adheres to the historic American doctrine of protection, which is now more necessary than ever to prevent the ruin of American industries by the "dumping" of cheap goods from Europe after the war.

E. The Republican party stands for nationalism against sectionalism.

1. Mr. Hughes has recognized the suffrage question as a national issue, which Mr. Wilson refused to do.

F. The Republican party and its candidate are committed to a rigid observance of the merit system in appointments to government positions, and to the establishment of a national budget, the greatest lack of our present government.

G. The Republican party stands for the fulfillment of our duty to assure the Philippines a stable and progressive government.

III. The present administration is condemned by its record.

A. The foreign policy of the Wilson administration has been discreditable.

1. The administration has failed to prevent the wholesale slaughter of American citizens by German submarines or the interruption of our legitimate commerce by the Allies.

2. The administration has failed to secure the safety of American citizens in Mexico or even to protect the integrity of the American border from raids.

3. The administration has unwisely taken sides with certain of the revolutionary factions in Mexico.

4. The administration has twice resorted to armed intervention in Mexico and yet has failed to accomplish the pacification of the country.

B. The administration has thwarted adequate preparedness.

1. Wilson opposed any increase in the army or navy long after the outbreak of the Great War had shown its necessity, and accepted as adequate an army appropriation bill which made a heavily subsidized state militia our main reliance in case of war.

C. The Democratic administration has been a carnival of extravagance.

1. The heaviest appropriations in our history have been made under it; much of it going for "pork" and such socialistic experiments as the Shipping Bill.

D. The Democratic tariff has been harmful to the country.

1. The country was on the verge of a panic until the Great War cut off the flood of imports from Europe. The sudden "war prosperity" cannot outlast the war.

2. The loss of revenue from tariff decreases made necessary the imposition of heavy direct taxes by the federal government, unprecedented in time of peace.

E. The Democratic administration has supported the spoils system.

1. Competent men have been removed from office for political reasons.

2. The Secretary of State, Mr. Bryan, shamelessly used the consular and diplomatic service of the country to reward "deserving Democrats."

F. The industrial policy of the administration has been bad.

1. It has aimed to destroy business combinations rather than to regulate them in the interest of the public.

G. The administration cannot claim the credit for its best legislation.

1. Republican votes helped carry the Federal Reserve Act, the Child Labor Bill and the useful features of the preparedness measures.

### NEGATIVE

1. Mr. Wilson is better fitted for the presidency than Mr. Hughes.

A. By personality.

1. Wilson has the broad vision of the scholar and statesman; Hughes has the conservatism of a lawyer.

2. Alike as president of Princeton, Governor of New Jersey and President of the United States, Wilson showed unusual executive ability.

B. By training.

1. Before he entered public life, Wilson was known as an authority on political science and American history.

2. Wilson has the advantage of the experience of one term as president.

C. By record.

1. Wilson's term of office as Governor

of New Jersey was at least as fruitful in useful legislation as that of Hughes in New York, while nothing in Mr. Hughes's career can be compared to Wilson's achievements as President.

2. The service of Mr. Hughes on the Supreme Court is a positive disqualification for it establishes a precedent which will tend to drag the Supreme Court into every political struggle.

II. The Democratic party deserves support for its stand on current issues.

A. The Democratic party stands for peace and friendship to all nations.

1. It opposes any war on behalf of capitalistic interests in Mexico.

2. It opposes any intervention in the war in Europe.

B. The Democratic party favors a tariff commission and legislation to prevent "dumping," but it opposes a return to the high protective system which the country repudiated in 1910 and 1912.

C. The Democratic party favors preparing the Philippine Islands thru self-government for the complete independence which they so strongly desire.

III. The present administration is justified by its record.

A. Wilson has more than once averted the danger of war from the nation.

B. Wilson has secured the rights of Americans to travel in safety on the high seas by diplomatic methods.

C. The recent army and navy appropriations mark the greatest advance toward complete preparedness that the country has ever made.

D. By lowering tariff duties and establishing the federal income tax, the administration has shifted the burden of taxation from consumption to wealth.

E. The financial policy of the administration has been beneficial.

1. The Federal Reserve Act was admittedly the greatest improvement ever made in our banking system.

2. The extension of rural credits has benefited the American farmer.

F. Wilson has been a friend of labor.

1. The Child Labor Bill was an achievement of the administration.

2. The Workmen's Compensation Act was also the work of the administration.

3. In the railway dispute Wilson championed the eight-hour day.

G. The Clayton Anti-Trust legislation for the first time explained and made enforceable the Sherman Anti-Trust Law.

II. The Shipping Bill is the first effective step which has been taken to rebuild an American merchant marine.

I. The administration has strengthened the Monroe Doctrine.

1. It has restored peace and order to Hayti and Nicaragua.

2. It accepted the cooperation of the A B C powers in the Mexican question and has steadfastly sought to avoid a Mexican war which would injure our relations with other American republics.

3. It has negotiated for the purchase of the Danish West Indies.

J U S T A W O R D

These days are not very favorable for war prophets, and even more unfriendly to other kinds, but the influence of the great thinkers of our present-day world is still to be reckoned with as an undercurrent in the life of the nations. Dr. Slosson, who has introduced Independent readers to most of the Twelve Major Prophets of Today, as he calls them, has studied the work of F. C. S. Schiller and Gilbert K. Chesterton in two illuminating articles which he entitles "A British Pragmatist" and "The Poet Chesterton." They will be published in the near future.

Mr. Purinton believes that the factory is a great undeveloped educational storehouse, and that factory problems offer considerable help in solving personal and home problems. In "Everyman's Workshop," which will be published in the October Efficiency number, he considers the factory-builder's and factory-manager's tasks from the efficiency viewpoint.

Then we have a helpful article about poetry—or at least about *vers libre*—from Professor John W. Cunliffe, Associate Director of the Columbia University School of Journalism. Whether you are on the fence about the "new poetry" or not—but who *can* keep his balance in discussing *vers libre*?—you will be interested in this even-handed discussion of a much-debated subject.

OLD WORLD FRAGMENTS

In the Military Academy, founded in Petrograd by the "Russian" Minister, and Field Marshal Burkhard von Muennich (1683-1767), the study of Russian history was completely eliminated from the program "as being superfluous."

Of the total annual production of about 20,000,000,000 hundredweight of coal, Germany's quota is 5,600,000,000. Two of her principal coalfields contain a reserve sufficient for eight centuries at the present rate of consumption.

Simon Moenby Bethmann (1768-1826), a Jewish ancestor of the German Chancellor, Theobald von Bethmann-Hollweg, was one of the greatest bankers and philanthropists of Frankfurt on the Main. Emperor Francis I of Austria raised him to the ranks of nobility. When, October 31st, 1813, Napoleon occupied Bethmann's villa, its owner prevailed upon the French emperor to save his native city. When the Jews of Frankfurt founded the "Phihm

thropin" in 1804, Bethmann not only donated to this first Jewish industrial school a large sum, but made active propaganda for it among his rich and influential Christian acquaintances.

Our continent has, according to the *Literary Journal*, 18,000 libraries with a total of 75,000,000 volumes. Two thousand, eight hundred and forty-nine have more than 5000 volumes; 5453 own 1000 to 5000. The city richest in libraries is New York with 214 libraries, totaling seven and a half millions of volumes.

The well known German commercial agency of Schimmelpfeng, which was in receipt of a subvention from the German Chamber of Commerce, had the courage to establish one of its branches in the very heart of Paris, forwarding to Berlin every month tabulated information respecting the solvency, debts and assets of every firm in France.

Nothing better illuminates the progress of the women's emancipation movement than the fact that the Turkish Government, in spite of the war, has found the leisure and money (annual subvention of \$12,000) to establish at Pera (Constantinople) the first genuinely Turkish theater, admitting women to its matinees. Of course the regular evening performances are for gentlemen only.

Nobody will any longer have the right to reproach the German Government with ill treatment of its Russian prisoners. The general staff went so far as to authorize the publication of a new magazine in the Russian language (*Russkij Vjestnik*—Russian Messenger) in order to keep the Russian prisoners in Germany well informed about the current war news and the economic conditions of Poland and Russia.

REMARKABLE REMARKS

G. STANLEY HALL—Music makes the world tinglingly real.

THEODORE DREISER—A literary reign of terror is being attempted.

DAVID BELASCO—I do not believe in harrowing audiences unnecessarily.

THOMAS A. EDISON—This man Wilson has had a mighty hard time of it.

PETER NEWELL—Some of my best work has been done when I had a baby on my lap.

CROWN PRINCE FREDERICK WILLIAM—The common soldier is a human being as I am.

HAIR-JOU-KIA—Every Chinese statesman must be a poet or man of letters of some sort.

CHARLES M. SCHWAB—One soon wearies of riding about for pleasure in private yachts and private cars.

SECRETARY DANIELS—It is the easiest thing in the world for an executive so to act as to plunge his country into war.

MRS. CHARLES E. HUGHES—Every man who succeeds in life has a wife who thinks he is the greatest man in the world.

LORD NORTHCLIFFE—England will not make peace until she has taken William prisoner and brought him to England.

ADMIRAL DEWEY—Our ships are as good as any, our officers are as good as any and our enlisted men are the finest in the world.

SOCIALIST CANDIDATE BENSON—What do you care if the national wealth has increased forty one billions since Mr. Wilson became President? Have you any of the billions?

CHARLES WARREN FAIRBANKS—To be chosen as the candidate of the Republican party for the vice presidency is a distinction which any patriotic American may well covet.

COUNT HERMANN KEYSERLING—All the contending nations are playing with the same ideals, like tennis-players with the same set of balls, and all have in reality a scope altogether independent of the ideal; they just want to win.

Range extenders! It's the *plus-*  
power of Twin-six motors that make  
Packard limousines *all-purpose* cars

Freed—from the confines  
of city pavements.

Liberated—for service on  
rough country highways and  
byways.

The open road holds no  
more difficulties for Packard  
limousines than for any tour-  
ing car.

Wherever the urge may  
lead, go now in comfort, with  
distinction—sheltered from  
wind and storm and dust.

It's a *great motor*—this  
Twin-six of ours—that makes  
this luxurious, far-range travel  
possible.

Time has tested it and proved  
it a more wonderful motor than  
even our hopes had anticipated  
—more powerful—economical  
of gasoline—silent—agile.

Packard limousines—always  
leaders in style and elegance  
—are now doubly useful—  
for you. Why not let us  
demonstrate? Write Detroit.

*Ask the man who owns one*

## THE PARADOX OF GREECE

**T**HE world has never known whether to laugh or to weep over the Balkans. Consequently it has done both. The half dozen little mountain states with their petty politics and strange customs have served as the setting for comic operas and wild romances, for Merry Widows and Chocolate Soldiers, and the heroes of Zenda, Graustark and Ruritania. But, on the other hand, the world has been shocked at the atrocities arising from their fierce and racial religious feuds. These puppet principalities, which the Great Powers set up and intended to control by pulling the wires, proved to have a life and will of their own. The princes made themselves kings and the artificial states developed national pride of the intensest sort and conflicting ambitions that have brought many wars upon Europe, including this last and greatest.

The situation in Greece presents in their extreme form both the absurd and the tragical elements characteristic of Balkan embroglios. This is the crucial point of the Great War and the action of one or two men in Athens will determine, if not the issue, at least the shortening or the lengthening of the conflict, and consequently the fate of millions of human beings. But, disregarding for the moment its serious aspects, a more amusing mixup cannot be imagined. We see a king giving away to his worst enemies territory that he wrested from them by war three years ago, and an ex-prime minister organizing mutiny in the army in order to force his king to lead the army against a country with whose aid he had doubled the size of the kingdom. Greece is nominally neutral and theoretically at peace, yet the troops of a dozen nationalities are fighting and fortifying there. The powers that signed the treaty establishing the independence and integrity of Greece are now making themselves quite at home and running things to suit themselves. Three years ago Russia was trying hard to make Greece let Bulgaria have the port of Kavala. The King of Greece refused and went to war with Bulgaria in order to get Kavala. Two years ago Premier Venizelos was willing to cede Kavala to Bulgaria in exchange for territory in Asia Minor, but the King refused and dismissed Venizelos from office. Now the King has tacitly consented to the occupation of Kavala by the Bulgars without any compensation, and Venizelos is in rebellion because he wants the Greeks to fight for Kavala, and Russian troops have been sent to Greece to regain Kavala for the Greeks. The Greek gar-

rison of Kavala has been taken off into Germany; kidnapped, claims Venizelos, and he wants to send an army to their rescue. But from Germany we hear that the Greek troops were taken into the interior at their own request because they did not want to fight Germany, and that they were received at Göritz as honored guests with brass bands and flowers and a personal message from the Kaiser.

The island of Cyprus, which Turkey turned over to England in 1878 to induce England to prevent the Russians from getting Constantinople, was last year offered by England to Greece to induce her to aid in giving Constantinople to the Russians. Venizelos was anxious to take it, but King Constantine refused because he said the Gallipoli campaign was bound to be a failure. He was right, as it proved, from a military standpoint, but it might have been better for him to have joined in the ill-fated Gallipoli expedition, for he is likely to have to join the Allies after all, and will not get Cyprus as a reward. Meanwhile the Cypriotes are discontented, because they are as anxious to join Greece as were the Cretans, and they see less chance of it, now that they form part of the British Empire, than when they were nominally under Turkish sovereignty.

Last and strangest of all, we see Venizelos, the Cretan, slipping away by night to his native island to engage again in the business with which his career began, that is, insurgency. Four times he has started a rebellion in Crete and four times he has involved Greece in war, if we count the present war. The first war was fought in 1897 against Turkey for the acquisition of Crete. Constantine, then Crown Prince, made an ignominious failure as a military leader, and only the intervention of the powers saved Greece from conquest by the Turks. In the second war against Turkey in 1912 Constantine, with the aid of the Serbs, Montenegrins and Bulgars, conquered Macedonia, but the Balkan League—Venizelos's great diplomatic achievement—fell apart when it came to the division of the spoils, and in the ensuing war Greece, Turkey, Serbia and Montenegro fought against Bulgaria. In the present war, which Venizelos is determined Constantine shall enter, Bulgaria and Turkey are fighting together against Rumania, Serbia and Montenegro. Italy, which in 1913 thwarted the ambition of Serbia for an Adriatic port and threatened Greece with war over Albania, has now sent an army to Salonica to force Greece, willy-nilly, to go to the rescue of Serbia.

Twenty years ago French and British troops were landed in Crete to overthrow Venizelos because he had declared for the King of the Greeks. Now Venizelos is back in Greece to overthrow the authority of the King of the Greeks in the interests of the French and British who are in possession of Greece. King Constantine is now said to be convinced of the necessity of yielding to the Allies and joining in the war against Germany, but Queen Sophia, being the sister of the Kaiser, is naturally unconvinced. But if the King should decide to declare war he must violate the constitution and act against parliament, for the Venizelist or pro-Ally party was defeated in the recent elections owing to a political trick of the King, who allowed Venizelos to mobilize the Greek army with a view of joining the Allies and then deposed Venizelos from the premiership and dismissed his parliament. The Venizelists, holding that it was illegal to hold an election during mobilization, refused to vote, and so the King got a parliament to suit him—tho apparently it does not suit him now.

But with Allied troops of a dozen nations occupying Macedonia and an Allied fleet threatening Athens, constitutional quibbles do not count. *Inter arma leges silent*. Mars rules and political scheming is of no avail. The kingdom of Greece goes, like Alexander's empire, "to the strongest."

### WHICH IS THE PARTY OF PROGRESS?

IN his second campaign speech, made like the first at Shadow Lawn, Mr. Wilson paid a fine tribute to the membership of the Progressive party. He was attacking the Republican party as the party of the special interests, and said:

You remember that four years ago there was a great body of spirited Republicans who said, "This thing is becoming a fraud and a sham. We have been taking care of some people, but we have not been taking care of the great body of the people. We have not thought about their morals, we have not thought about their health, we have not thought about their rights as human beings, and we insist that you put the policy of this party in our hands, or we will go off and form a party of our own," and thereupon the great Progressive party sprang up—great, not because it turned out to be more numerous than the party from which it had seceded, tho it did that, but because it had the real red blood of human sympathy in its veins and was ready to work for mankind and forget the interests of a narrow party. I want to pay my tribute of respect to the purposes and intentions of the men who formed that group in our politics.

There are wide differences of opinion as to the motives and the impulses which led to the creation of the Progressive party. But we believe that the candid historian of the future will find the central truth of its brief career in the fact, so well expressed by Mr. Wilson, that "it had the real red blood of human sympathy in its veins and was ready to work for mankind."

The Progressive party is no more. Where has its mantle fallen?

Mr. Wilson asserts that the heritor of its ideals and its human sympathies is the Democracy. On that ground he claims for his party the adherence of the young voters of the country, representatives of whom were his hearers at Shadow Lawn on September 30. He said of himself: "I am a progressive. I do not spell it with a capital P, but I think my pace is just as fast as those who do."

There is much in Mr. Wilson's record as Governor of

New Jersey and as President to justify this declaration. Under Mr. Wilson the Democratic party in his state and in the nation has made a splendid record of progressive legislation. But in both cases it seems to us clear that Mr. Wilson has been better than his party. He is a progressive; but we are not so sure that his party is anywhere near so progressive as he. The long-drawn-out contests at the Baltimore convention in 1912, which resulted in Mr. Wilson's first nomination, showed the power of the reactionary forces in the Democratic party, just as the reluctance of the Republican convention of 1916 to accept Mr. Hughes as its candidate revealed the strength of the similar elements in the Republican party. We do not believe that the leopard spots of reaction in either party have been much changed by the passage of time.

From the results of the election in Maine and of the primary election in New York it appears that more Progressives are going to the Republican party than to the Democratic. Whether this preponderance will hold good thruout the country only the coming election will show.

Mr. Hughes is progressive as well as Mr. Wilson. He was as fiercely fought by the bosses of New York as was ever Mr. Wilson by the bosses of New Jersey. The Republican "old guard" at Chicago was as reluctant to accept the one as was the Democratic "old guard" at Baltimore the other. Mr. Wilson is wide of the mark in assuming that the election of Mr. Hughes means the return to power at Washington of the kind of crass reactionism that created the progressive movement in the Republican party.

In other words, the choice of the voter on November 7 is not between a progressive administration and a reactionary administration. A government of special interests is as unthinkable under Mr. Hughes as under Mr. Wilson.

### PARTNERS IN DISCREDIT

THE collapsing strike on the New York traction lines reflects little credit on either side in the controversy. The attempt to bolster up the cause of the strikers by a sympathetic strike of all kinds of trades thruout the city was a fizzle. It failed for the precise reason that will make the traction strike fail in the end. The strikers' case is not strong enough to command popular support. It has at its heart the fatal weakness of a deliberately broken agreement.

When the first strike was settled in August, the employers and the workers on the two surface car systems—the New York Railways Company and the Third Avenue—signed agreements to submit any future controversies to arbitration. Now the New York Railways is a part of the Interborough system, which also includes the subway and elevated lines. The union leaders undoubtedly had in mind the extension of their organization to the elevated and subway. But the Interborough managers forestalled them. They induced the subway and elevated employees in large numbers to join an independent union planned by the managers themselves, and to sign individual agreements with the company. The agreements provided for a wage increase and bound the workers not to strike for two years.

The Amalgamated Union, which had engineered the surface lines strike, contended that this action on the

part of the Interborough officials was, in fact, if not in appearance, a violation of the agreement of August 12. This contention the Interborough repudiated in the time-honored name of freedom of contract and individual liberty. The Amalgamated thereupon called a second strike on all the lines of the city.

This was a clear violation of the agreement of August 12. The workers on the New York Railways lines had a faint shadow of excuse, in that that company is identical in control and management with the subway and elevated lines. But the workers on the Third Avenue had none at all. The Third Avenue has no connection whatever with the Interborough.

So the action of the surface line workers in going out a second time was without justification. The agreement they voluntarily signed should have been kept in letter and in spirit. It is no wonder that they could not win popular approval for their action.

But the Interborough managers are far from blameless. In the conferences which led up to the signing of the agreement of August 12, the general manager of the New York Railways Company, who is also the operating manager of the subway and elevated lines, let it be distinctly inferred from what he said that the Interborough officials would treat the elevated and subway employees in the same way that the surface lines employees were to be treated under the agreement. Mr. Shonts, the president of the Interborough, subsequently repudiated the assurances given by Mr. Hedley, and declared that no one but the board of directors could bind the Interborough to such a procedure. This is undoubtedly technically true. But to have Mr. Hedley permit such an impression to persist in the minds of the representatives of the workers, and for his superiors to repudiate it cavalierly when it served their purpose looks a good deal like sharp practise.

In any case the whole attitude of Mr. Shonts and his associates thruout this controversy has been that characteristic of the dark ages of industrial relations. They have shown every indication of a purpose to treat the workers in their industry in the spirit of feudalism. Such conceptions as the partnership between capital and labor in industry, and industrial democracy, find no admittance to their minds.

So both sides in this drawn out controversy have little to congratulate themselves upon. The workers did their cause serious harm when they wantonly broke their agreement. The employers are attempting to impose upon their workers and the community the outworn oppressive methods of a bygone age.

## AS MUCH AS THE PEOPLE WANT—AND NO MORE

**A**N attempt to put a plank into the New York state Republican platform calling for the repeal of the direct primary law did not succeed. It would have been pure folly, if it had. The direct primary has come to stay. There is just one thing that ever prevents it working well—popular apathy. But there is no machinery under heaven that will give good popular government when the people do not care enough to use the machinery.

The true test of the direct primary comes when the people are aroused and eager to accomplish certain

things by the selection of certain men. Then with the direct primary neither bosses nor special interests can stop them, if they care enough. With the old caucus and convention system they could be stopped by the sheer inertia of the machine. The direct primary will give us as much better public officials as the people really want. But you cannot make machinery take the place of will power.

## THE CART BEFORE THE HORSE

**T**HE trouble with the conference at New London is that the two sets of conferees are talking about different things.

Carranza wants the American troops out of Mexico. He is apparently interested in nothing else.

The United States wants American rights respected on the border and in Mexico. It sees no reason for disturbing the status quo until that is assured.

Carranza wants us to take our soldiers away because he *says* that he can keep order in the border states.

But Villa, by his spectacular and more or less successful raid on Chihuahua, gives him the lie direct.

All that we ask is that Carranza shall not only promise but perform.

Until he does so, his demand for the recall of the Pershing column is putting the cart before the horse with a vengeance.

## MEXICO GIVES US A LEAD

**T**HE news comes from Mexico City that President Carranza has issued a decree abolishing the office of Vice-President in the republic of Mexico. The reason assigned for the constitutional change is that many Mexicans resort to intrigue or rebellion to obtain the coveted post. If this country should ever decide to abolish the vice-presidency it would certainly not be for that reason. The stability of our republic is not in the least endangered by sinister conspiracies of politicians anxious to win "the second highest office within the gift of the nation." Nor do our Vice-Presidents ever attempt to remove by open revolt or secret conspiracy the one man who stands between them and the highest goal of political ambition. Mr. Wilson has many worries, but Mr. Marshall is hardly one of them. In this respect, at any rate, we may be thankful that we are not as others are, even these Mexicans.

But for other and totally different reasons we may find Carranza's constitutional amendment worthy of our consideration. The American public is always too willing to take a chance that the President will survive his term, and is largely indifferent as to who is chosen Vice-President. And yet five Presidents have already died in office, and any insurance company would rate the occupation of President "extra-hazardous." The possibility is not slight that our President for a large part of the next four years will be Mr. Fairbanks or Mr. Marshall, and yet not one voter in a hundred will be influenced by the fact. The average Vice-President is a man of worthy character and respectable abilities, but one whom no convention would dream of nominating for President. What is worse, the candidate for Vice-President is usually selected from the opposite faction of the party from the candidate for President, with a view to party harmony. Therefore, the death of a President often means

as great a break in national policy as if a new party had come to power.

If there were no vice-presidency, and under the present constitution there is none after the President or Vice-President dies during his term of office, the Secretary of State would succeed the President. This would at least tend to ensure the continuance of the policy of the administration thruout the remainder of the presidential term, since the Secretary of State is the President's own appointee. The Secretary of State is, moreover, usually a man of distinction within his party; he is almost always a larger man than the Vice-President, frequently than the President himself. Among those who have held the portfolio of state in various cabinets are such leaders as John Jay, Thomas Jefferson, John Marshall, James Madison, James Monroe, John Quincy Adams, Henry Clay, Daniel Webster, John C. Calhoun, Edward Everett, W. H. Seward, Hamilton Fish, James G. Blaine, Richard Olney, John Hay, Elihu Root, William J. Bryan, and others of equal distinction. We may be glad that some of these men did not succeed to the presidency, or even sorry that others on the list did, but we cannot deny that, taken as a whole, they form a more distinguished and memorable list of statesmen than the men who have been Vice-President. Why, then, should we not take a hint from Carranza and abolish the vice-presidency?

### THE EDUCATION OF YOUNG TURKEY

THE news that a body of German professors and engineers had been sent to Constantinople to establish schools of higher education is of especial interest to the United States, because hitherto the support of such enterprises has devolved upon Americans. But the Kaiser has long been anxious to share the burden, in fact to relieve us of it altogether. Some years ago, when the Porte was anxious for the development of scientific farming in the Ottoman Empire, an appeal was made to the American Government, since it maintains the most elaborate system of agricultural colleges in the world. Secretary of State Hay took up the matter and in coöperation with Secretary of Agriculture Wilson worked out a plan for such an institution in Constantinople, to be manned by American experts in agricultural training and research. But when the vigilant German Ambassador at Washington, Herr von Holleben, heard of it he promptly notified Berlin, and the German Ambassador at Constantinople informed the Sultan that if he wanted an agricultural college he must employ German professors, for Americans would not be allowed.

Such a spirit of intolerance is particularly misplaced in Turkey, where the field is large and the laborers few. Robert College and the Constantinople College for Girls are doing splendid work in their respective fields, yet there is much need for technological institutions such as the Germans know so well how to conduct. The advent of the Germans would then be welcomed, but for the fear that they aim to monopolize the educational field in case they retain control of Turkey.

The prospect is still more gloomy in case the Allies are victorious, for Russia has been promised Constantinople, and Russia is hostile, not only to foreign education, but to education of any sort except that which is subservient to state and church. Our missionaries in

Armenia have been privately informed that their schools will be closed when Russia takes over that territory, and those who are best acquainted with the situation fear that the American colleges in Constantinople will share the same fate in case that city is given over to Russia. Doubtless some effort would be made by England to have such institutions protected by treaty, but this would be of little avail unless Russia has changed her educational policy, and there is no sign of that so far.

### FROM THE SHOULDER

WOODROW WILSON does not lack the "fighting edge." His reply to the president of the American Truth Society, a Mr. O'Leary, is a masterpiece of rebuke.

Mr. O'Leary sent the President an offensive telegram charging him with Anglomania and pro-British partiality. Mr. Wilson's reply was curt:

Your telegram received. I would feel deeply mortified to have you or anybody like you vote for me. Since you have access to many disloyal Americans and I have not, I will ask you to convey this message to them.

We hope that it stung.

### USING THE METRIC SYSTEM

ONE incidental result of the war is that large numbers of manufacturers and workmen in England and the United States have for the first time become familiar with the metric system thru its use in making goods for the continental Allies. Now, after a man has been using the metric system it is as hard for him to go back to our awkward and irrational weights and measures as it is for one who is accustomed to the decimal coinage of other countries to use pounds, shillings and pence. The theoretical superiority of the metric system has always been well known and conceded in Anglo-Saxon countries, but so long as the people were unacquainted with its practical advantages thru personal employment of it, the movement for its general adoption made little progress. Now the general public is becoming familiar with it and the American or Englishman talks about "42-centimeter guns" and "203-meter hill" as easily as if he were a Frenchman or German.

The scientific and engineering societies of Great Britain are urging that the metric system be made compulsory and the question has already been brought up in Parliament as a necessary means of trade expansion. A country that insists upon its customers using its own local weights and measures instead of those of the rest of the world will be at a permanent disadvantage. The Pan-American conferences always talk about the desirability of a common system in the Americas and always recommend the metric, but the United States holds out like an obstinate juror against the other twenty republics. Recently, however, it seems that American prejudice is dying down. The National Wholesale Grocers' Association is awake to the need and has recommended that the metric equivalents of the weight of contents be printed upon all packages. Our schools have long included the metric system in their curriculum, but it has often been taught in a perfunctory and uninviting way. Now is the time for teachers to take it up in earnest and give their pupils a practical acquaintance with its advantages.

# THE STORY OF THE WEEK

## The Campaign: Mr. Wilson Speaks Again

Mr. Wilson's second campaign speech was made on September 30 to a group of members of the Young Men's League of Democratic Clubs from the porch at Shadow Lawn. His speech was received by wild enthusiasm by his hearers. Mr. Wilson delivered an attack in force upon the Republican party. He reminded his hearers that the Democratic party was the only party in the United States that had survived since the beginning; and predicted that the death in turn of the Federalist and the Whig parties would be followed soon by the death of another. Mr. Wilson found the reason for the persistence of the Democratic party, and the passing successively of its opponents in the fact that "it is the only party all of whose life has been governed, or at any rate inspired, by a definite principle, an absolute belief in the control of the people, their right to control, their capacity to control their own affairs and shape them in the common interest." He declared that the Republican party as now constituted and led believes in government by the attorneys of special interests.

Mr. Wilson paid a warm tribute to the membership of the Progressive

party, which we comment upon editorially on another page. He contended that the Democratic party had taken advantage of its opportunity to do the things that the Progressives wanted to do and could not do because they were not put in power.

He asserted that the Republican party merely wants to get control of the government, and "a party that merely wants control does not have to have any principles."

He said that the Republican party would make radical changes in the foreign policy of the United States if it came into power and asked the question, "If they are going to change it, in what direction are they going to change it?" The question he answered for himself in this way: "There is only one choice as against peace and that is war. Some of the supporters of that party, a very great body of the supporters of that party, outspokenly declare that they want war, so that the certain prospect of the success of the Republican party is that we shall be drawn in one form or other into the embroilments of the European war."

Mr. Wilson further asserted, in commenting upon the Federal Reserve act, that in the days of Republican dominance, Wall Street controlled the actions of the Treasury of the United

States. He declared that his opponents, and the special interests behind them, would be perfectly content with much of the important legislation passed by his party—such as the Federal Reserve act, the tariff board law, the rural credit law—provided they could have the opportunity of the members of the boards created by those acts.

In conclusion he intimated that the Republican desire and purpose was to "return to the good old days of Mark Hanna." He elaborated the point in this way:

But now you will notice we have returned to the good old days of Mark Hanna in the Republican party. Some of the very gentlemen who were prominent in that odious régime are now at the head of affairs in the management of the Republican campaign. The lieutenants of Mark Hanna have returned to authority, and the lieutenants of Mark Hanna represent the choices, the determinations and, so much as we can conjecture, the policy of the Republican party. What they want to do is to get control and then determine the policy in private conference. We are not going to be taken into their confidence.

It would not be wise for them to take us into their confidence. They want to control, possess. Those are the magic words for them. They do not think we have sense enough. They do not think we have coherence enough. They do not think a great body of free people know how to hang together in its own cause, and that a little body of men that always hangs together

#### OPENING THE SHADOW LAWN CAMPAIGN

President Wilson will make very few campaign speeches except those with which he will greet the various bands of Democratic pilgrims who journey to his summer home at Long Branch, New Jersey. This was a delegation of business men from Trenton

can in the long run manage the people, and it is up to us to show them that that is impossible. The people of the United States have frequently been fooled, but they are not often fooled several times in the same way, and this barefaced attempt to fool them in the same old way is, in my judgment, one of the most futile things that was ever attempted.

Take it for all in all, there was nothing of the apologetic in Mr. Wilson's speech, and much of fire and fight.

**The Campaign:** On the same day that Mr. Roosevelt Attacks Wilson was attacking the Republican party at Shadow Lawn, Mr. Roosevelt was making an assault upon the administration at Battle Creek. The main points at which the fire of Mr. Roosevelt's wrath was hurled were the same as before: the President's Mexican policy, the President's foreign policy and his action in connection with the eight-hour law. There was nothing especially new in what he had to say about Mexico and Germany, altho he did point out that the President's refusal to recognize Huerta because of the bloody way in which he had attained power, convicted him of fatal inconsistency. For at the same time that he was refusing recognition to Huerta he was according it to Colonel Benavides in Peru, who had obtained his power by the exact means which Mr. Wilson denounced in the case of Huerta. Mr. Roosevelt summed up his conclusions on this point thus:

It is absolutely impossible to accept Mr. Wilson's statement as a justification in the case of Huerta, unless we admit that that very statement irretrievably condemns him in the case of Benavides. The only other explanation is that Mr. Wilson's statement in the Huerta matter was not intended to correspond with the facts, but merely to appease well-meaning persons who were ignorant of the facts.

In connection with the eight-hour law, Mr. Roosevelt pointed out again with characteristic emphasis that it was not a question of hours of labor at all, but a question of wages. But he did more, he made a concrete statement of what in his opinion the President should have done:

There was but one course that could rightly have been taken, and that the perfectly simple course. The President had ample knowledge. He had many weeks in which to secure proper action by the par-

ties to the controversy; and if either would not agree to such action, he had ample time in which to get Congress to give him any power necessary in order to deal thoroly and without difficulty with the situation. If the regular board of mediation and conciliation was inadequate, he should have at once appointed a special commission, which would have included men thoroly acquainted with the situation from the wage workers' standpoint, possess of an understanding sympathy with the wage workers, and incapable of being bullied or of being influenced in any improper manner. The President should have insisted that every matter be laid before this committee of arbitration, and nothing withheld. The commission would have dealt in thoroging and satisfactory fashion with all the various questions involved—all of which are inter-related and interdependent. It would have dealt with the question of an eight-hour day, and with the complicated question of the amount of wages to be paid for that day and for overtime in the various positions. It would also have dealt with the question as to whether this necessarily meant a raise of rates. As an incident to this it would have had to take up the question of securing just remuneration to the property holders; and therefore it would have had to deal with any questions of recent over-capitalization; for altho I do not believe it would be wise to take up old cases of over-capitalization (where grave injustice to innocent people would be caused by any action), any recent instance of over-capitalization should be accepted as having been gone into after full notice and with full knowledge, and should be punished accordingly.

Pending the decisions of the commission,

it should have been made clear that the President would permit no interference with the traffic which is essential to the life of the commonwealth; that there should be no stoppage of the arteries of circulation in the body politic and social; and that rather than see such a stoppage the government would itself run the trains if necessary until such time as the commission could report. When the commission's report was made, it would have become the duty of the government to see that it was put into effect, and in case of any controversy itself to interpret and apply the rules. That was the course demanded by courage and honor; and that was the course demanded by every man to whom Americanism was a fact, and not an empty phrase.

The two speeches at Battle Creek and Shadow Lawn, strikingly parallel in their vigor and hard-hitting, made the last day of September easily the most interesting day of the campaign thus far.

**No Milk for New York** New York City faces a milk famine. The farmers have struck. The big distributors of milk in the city have contracts with the dairymen who produce the milk, and those contracts expired on September 30. The milk producers have organized a Dairy-men's League, which has about 15,000 farmers in its membership and controls about 300,000 of the 350,000 cows in New York State. The league has asked the distributors to pay an increased price for the milk during the next six months, rendered necessary, they contend, by the increased cost of production.

The statement issued by the league makes the following explanation:

The dairymen are not suggesting or dictating what the price to consumers should be, as the dealers are fully able to determine that for themselves, but the farmer can not longer continue to sell milk for less than the cost of production.

The dairymen have given the dealers every reasonable opportunity to have their milk, and if the public are inconvenienced by a shortage of milk they must place the responsibility on the dealer who is not willing to pay the farmer a fair price for the choice milk which the public demands.

The dairymen have found by experience that there is no other method of securing a fair or living price for their milk, as the dealers will not consider production costs or negotiate in any way with the farmers, as they have always paid up what they chose to and sold our milk at the prices which they also have set.

The dealers refuse to have anything

#### THE GREAT WAR

**September 25**—British take Morval and Lesbœufs. French take Raucourt. Rumanians regain Vulcan Pass.

**September 26**—British take Combles and Thiepval. Teuton troops attack Hermannstadt, Transylvania.

**September 27**—Venizelos starts revolution in Crete. Russians claim capture of 420,000 men, 600 cannon and 2500 machine guns in four months' offensive.

**September 28**—Serbs and Bulgars fighting over Mount Kaimakalan, Macedonia.

**September 29**—Rumanians defeated at Rotenturm Pass, Transylvania.

**September 30**—Germans hell Thiepval. British losses in July, August and September in battle of the Somme total 397,169.

**October 1**—Another Zeppelin brought down near London. Brudell renews drive on Lemberg.

to do with the league. The manager of one of the distributing companies makes this explanation of the refusal: "We will not make a settlement with the Dairywomen's League, for the simple reason that it has no legal standing and no facilities to enforce any agreement it might enter into."

The State Commissioner of Foods and Markets estimates that unless an agreement is reached between producers and distributors more than seventy-five per cent of the city's milk supply will be cut off.

As usual in such controversies, the public will "pay the freight." Its milk supply will not only be cut down, but the price of the milk it succeeds in getting is to be raised by the milk companies.

**No General Strike in New York** On Wednesday, September 27, New York union workers in many trades, numbering altogether anything up to 350,000, were to have struck in sympathy with the Amalgamated Association of Street and Electric Railway Employees, which was still carrying on a losing strike against all the traction companies in Manhattan, Queens and the Bronx.

But the general strike as announced by the Joint Labor Conference Committee failed to occur. Between twelve and thirteen thousand men did go out, in addition to a few thousand more who struck for reasons of their own. But after two days six thousand brewery workers who had joined the sympathy strike went back to their jobs, leaving only 4000 machinists and a handful of other workers. The United Hebrew Workers, who were celebrating

their New Year, were not at their machines, but they failed to ally themselves with the labor demonstration.

Meanwhile the service on the subway and elevated lines remained normal and the street cars made about 75 per cent of their usual daily runs, tho night service was not fully restored in Manhattan and not attempted in the other boroughs till the end of the week. There was practically no violence in New York, but some serious rioting took place in Westchester County, just north of the city.

**The Mexican Conference** The joint conference on Mexican affairs has moved to Atlantic City. The hotel in which it was meeting at New London has closed for the season. But the conference has made little other progress. The Mexican conferees want to discuss nothing but the withdrawal of the American troops; the American conferees want to discuss anything but that.

Meanwhile the resurgent Villa continues to stir up Northern Mexico. On the twenty-seventh a band of Villista bandits engaged in a violent fight with Carranza forces at Cusihiuriachic, an important mining center about fifty miles from Chihuahua City. The Carranza leader reports that a hundred of the bandits were killed, and that the government forces also suffered heavily.

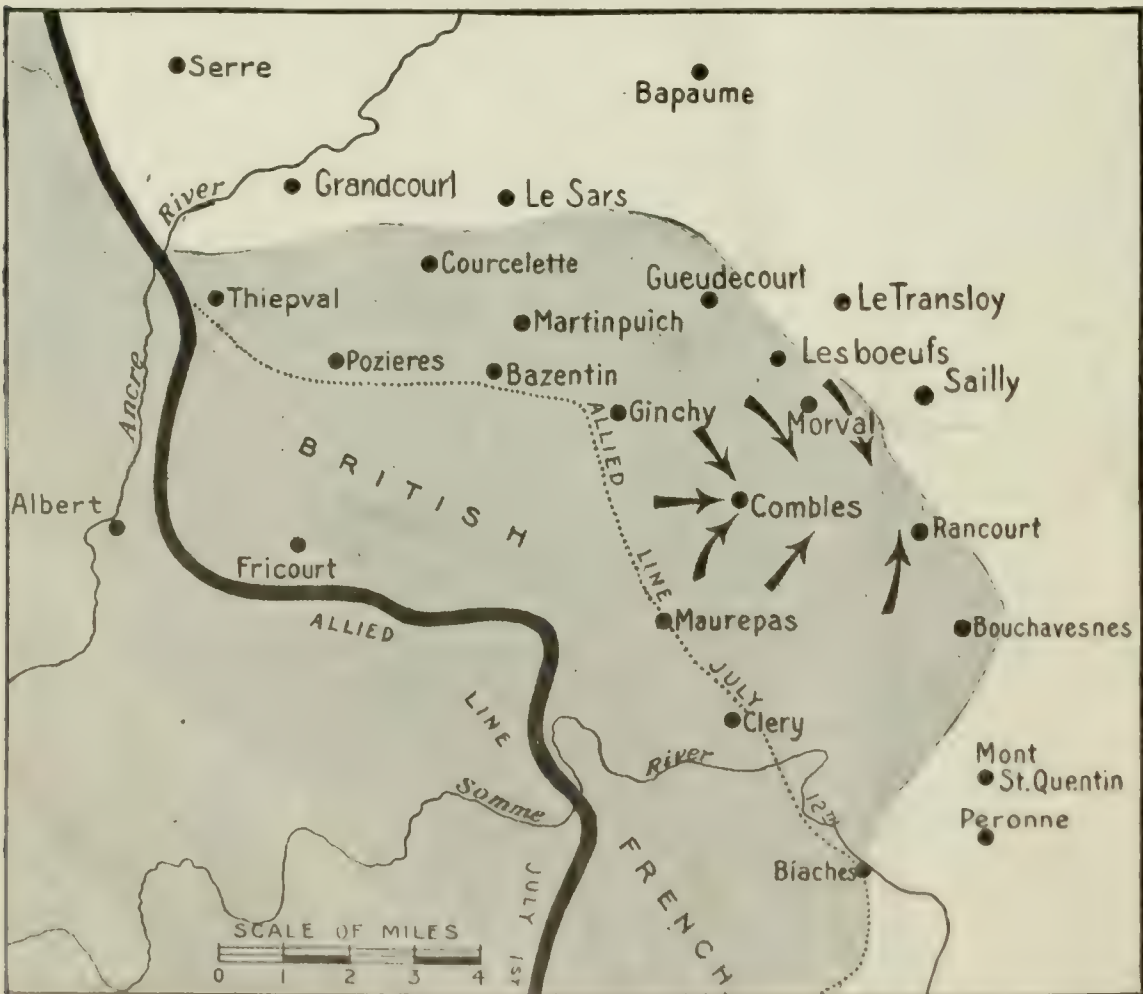

Ten thousand of the militia forces now on the border are to be relieved by troops from other states already mobilized. Units from Maine, New York, Massachusetts, Rhode Island, Wisconsin, Connecticut, Montana, New Jersey, Utah and the District of Columbia are to return home.

**The Capture of Combles** On Tuesday the Allies on the Somme made more important gains than in any week since the first. Two of the village fortresses that have been blocking their way, Combles on the east and Thiepval on the north, have been overthrown. The fall of these strongholds had been confidently anticipated, for they had both been pocketed and subject to attack on three sides for some time.

Combles is a village with formerly two thousand inhabitants on the railroad that runs from Péronne to Albert along the north side of the Somme River. Here the British and French lines meet, so the town was carried by the joint action of the two forces, working in perfect coördination. The British pushed forward north of Combles, taking the villages of Morval and Lesbœufs. The French, having the week before taken Bouchavesnes, which brought them more than two miles east of Combles, now turned north and took Rancourt. So Combles was caught between the jaws of the Allied nippers and a gap of less than a mile was left thru which the Germans might withdraw the beleaguered garrison. Most of the troops in Combles retreated in the night thru the gap between the French and British lines and the big guns had been taken away previously, but other munitions and supplies in great quantity fell into the hands of the Allies as they occupied Combles on the morning of the 26th.

In the fighting of Monday and Tuesday the British took nearly four thousand prisoners, mostly, a British correspondent reports, Rhenish Prussians, "strong and well built young men, very smart and soldierly and with very little of the dirt of war upon them." The British losses are estimated at less than eight thousand. The counter-attack of the Germans from Le Transloy after the British took Morval was more feebly delivered than formerly and the Prussians fled before the British barrage fire, throwing away their rifles and equipment. From this the British infer that the German *morale* is broken.

**Rumanian Defeat at Hermannstadt** The Rumanians began the war by seizing all the passes in the mountain barrier that separates them from Hungary and sending armies thru each of them. Little opposition was offered and soon they were in possession of the most important cities on the border, Kronstadt, Hermannstadt and Petroseny. But the retirement of the Austro-Hungarian forces seems to have really been what all backward movements are called, "a strategical retreat." For the defense of this region had been entrusted to General von Falkenhayn, whom Hindenburg recently displaced as Chief of the German Staff, and his plan, as it now appears, was to wait until the Rumanians were fifteen or twenty miles inside the boundary and then seize the passes behind them. Vulcan Pass, that leads to Petroseny, was first captured, and the Rumanians had to evacuate Petroseny and send strong forces to re-

THE CAPTURE OF COMBLES

The fortified village of Combles was evacuated by the Germans after it had been almost completely cut off by the French from the south and the British from the north. The British have also stormed the stronghold of Thiepval dominating the Ancre River and are now attacking Le Sars and Le Transloy. The shaded area is ground gained by the Allies.

Underwood &amp; Underwood

## THE GREAT MAN OF GREECE

Eleftherios Venizelos, the Cretan, is now master of Greece and is forcing the king into war against the Bulgars by raising an armed insurrection. This is the fourth war in which Greece has become involved thru his efforts

gain Vulcan Pass. Then Falkenhayn tried the same tactics on the Pass of the Red Tower (Rotenturm), that leads to Hermannstadt. A body of Bavarian troops under Lieutenant General Kraft von Delmensinger occupied this pass by a bold mountain march on the morning of September 26. At the same time the Rumanians at Hermannstadt were attacked by superior forces, and after three days of hard fighting were driven back in disorder. But here the retreating troops found their way thru the Red Tower Pass blocked by the Bavarians and had to make their way into Rumania as best they could.

While Falkenhayn is attacking Rumania from the mountain side on the north, Mackensen is attacking it from the sea side on the south. The Bulgar and Teuton troops, advancing thru the Dobrudja, between the Danube River and the Black Sea, captured Silistria, "the key to Bucharest," as the Rumanians call it, but before they had got much beyond this they were met by a combined Russian and Rumanian army. From September 16 to 20 two of the best divisions of Bulgarian troops, supported by heavy German artillery, tried to break thru, but the line held and both sides seem to have entrenched themselves at this point.

**The King's Dilemma** In spite of the daily rumors that King Constantine was about to declare war upon Bulgaria he has continued during the week in a state of apparent vacillation, taking counsel alternately with the pro-German and pro-Allied parties among the officers and statesmen. On September 18 the government of Premier Kalogeropoulos under his direction notified the Allies of the desire of Greece to join them

and asked that Greece be guaranteed her territorial integrity and campaign expenses. He also expressed a willingness to agree to all the demands of the Allies as to the reorganization of the Cabinet and the elimination of members unacceptable to the Allies. The Allied Powers, however, failed to receive this protestation of sympathy and proffer of support with the enthusiasm and confidence which the King expected and there seems to be some hitch in the negotiations.

General Moschopoulos, chief of staff, presented to his sovereign the petition of five hundred of the Greek officers demanding an immediate declaration of war against Bulgaria without waiting for the assistance of the Allies. Many of the Greek officers and soldiers, without waiting for such action, have already volunteered in the armies of the Allies.

But the King, even if he has become convinced of the necessity of joining the Allies, is embarrassed by the fact that a considerable proportion of his officers are pro-German and that the present parliament was elected, at his instigation, on an anti-war issue. The leader of the Chamber of Deputies, Mr. Gounaris, declares that the Greek Parliament will never consent to war.

**Rebellion in Crete** Ex-Premier Venizelos, despairing of persuading the King to take up arms against Bulgaria, has started an insurrection in his native land for the purpose of compelling such action. He embarked at night on the steamer "Hesperia" for Crete accompanied by Rear Admiral Paul Condouriotis, former Minister of Marine. On their arrival at Suda Bay, Crete, they were received with enthusiasm by citizens and soldiery, and taken in motors to the barracks at Canea, where Venizelos made a speech declaring the object of the insurrectionary movement. The essential points of their proclamation are as follows:

The application of the personal policy of the sovereign, a victim of bad counsel, has resulted in a rapprochement with Greece's hereditary enemies, the violation of the constitution, internal anarchy, and isolation and contempt for Greece, which

the Allies consider hostile because she refused the Serbs the facilities accorded the Bulgars.

The victorious army of 1912-1913 abandons the territory conquered by the nation's blood; the population is fleeing before the invaders; war material has been given to the Bulgars; Greek soldiers have been sent to Germany by way of Sofia, and patriots are regarded as traitors.

Today is not the moment to establish the responsibility. Our duty is to save what there is still time to save. To attain this it is essential to reestablish national unity by an immediate return to the policy dictated by the national conscience, namely, range our selves on the side of the Allies and Serbians to expel the invaders.

It would be a happy event if, at the eleventh hour, the King should decide to take the lead of the national forces. In a contrary event, it is our duty to do the needful to save the country from the threatening ruin. We are entering the struggle convinced that the nation, independently of the state, will accomplish the miracle and bring the country back to the status of eighteen months ago.

VENIZELOS,  
CONDOURIOTIS.

At the conclusion of the speech of Venizelos a resolution was adopted by the assemblage authorizing the formation of a Provisional Government to be composed of ex-Premier Venizelos, Admiral Condouriotis and General Danglis, former Minister of War, to organize the forces of the country for fighting in the cause of the Allies. Then a salvo of three thousand rifles was fired in honor of Serbia. Similar risings took place in Chios, Mitylene, Corfu and other islands and in parts of continental Greece. The soldiers generally mutinied or went over with their officers

THE THIEPVAL ENTRENCHMENTS

This map of the German fortifications about the village of Thiepval, prepared by the British Intelligence Service before the Allied offensive on the Somme was undertaken, shows clearly why the Germans were able to hold this position against persistent attacks for nearly three months. The black lines are the German trenches. The lighter line on the left is the British front on July 1 when the offensive started. The crosses indicate barbed wire entanglements.

Weed in Philadelphia Public Ledger

## THE DILEMMA

to the insurgents, but in some places groups of loyalist officers and troops put up a hard fight. Altogether Venizelos is said to have at his command some 25,000 armed adherents.

**The German View** The speech of Chancellor von Bethmann-Hollweg at the opening of the Reichstag on September 28 was received with especial interest, for the world was curious to see what he would say of the war situation. A large part of the address was devoted to the denunciation of Rumania for her violation of the treaty of alliance with Austria-Hungary. The Chancellor stated that up to a few days before the Rumanian armies crossed the Transylvanian Alps into Hungary he had assurances from both the King and Premier Bratiano that Rumania was not going to take up arms on the side of the Allies.

After reviewing the several campaigns the German Chancellor summed up the situation as follows:

On the Somme front there have been isolated hostile successes which, however, do not change the general situation. Otherwise a successful defense has been made

against all hostile attacks, and thus the enemy attempts have been thwarted. In the Balkans the hostile plan failed. Thus the enormous war goes on.

The aims proclaimed by our enemies are becoming increasingly clear and admit of no misunderstanding. They are: Last of conquest and annihilation. I have spoken in this House repeatedly about them. It is proposed to give Constantinople to Russia, Alsace-Lorraine to France, the Trentino and Triest to Italy and Transylvania to Rumania.

What Great Britain wants to make of Germany is shown by the British without any possibility of doubt. They want to destroy our national life. The Germany which England wants to lay at her feet is a country without military defense, a country crushed economically, boycotted by the entire world and sentenced to lasting economic infirmity.

When this German competition shall have been eliminated, when France has lost all her blood, when all her allies of war must toil as England's slaves in the financial world, when the neutral world of Europe must follow each English command and submit to every British blacklist, then England will build on devastated Germany her dream of English world dominion.

A German statesman who would refrain from using against this enemy every proper means of warfare which is likely to shorten the war deserves to be hanged.

Germany will not be permitted to think of peace while her house is burning. She must first extinguish the fire.

The Chancellor's speech is regarded both in Germany and England as more moderate and pacifically inclined than his former utterances. From the omission of any reference to Belgium and other possible annexations it is inferred that the Chancellor sides with those who would be willing to make peace on the *status quo ante*. His strongly worded but vague allusion to the use of any weapons to shorten the war is thought by some to mean that he is likely to withdraw his opposition to the employment of submarines against commercial shipping.

## The British View

The interview given to the United Press by David Lloyd-George, Secretary of State for War, is of such importance that we must quote some paragraphs. It is commonly understood as a warning to the United States not to undertake any negotiations with a view of bringing the war to an end.

Germany elected to make it a finish fight with England. The British soldier was ridiculed, held in contempt. Now we intend to see that Germany has her way. The fight must be to the finish—to a knockout.

The whole world, including neutrals of the highest purposes and humanitarians with the best motives, must know that

Plutchke in Louisville Times

## THE PRAYER OF THE NEUTRALS

there can be no outside interference at this stage. Britain asked no intervention when she was not prepared to fight. She will tolerate none now that she is prepared until Prussian military despotism is broken beyond repair.

There were no tears by German sympathizers when the few thousand British citizens who never expected to be soldiers, whose military education started only a few months previously, went out to be battered, bombed, and gassed, to receive ten shells for every one they could fire—went out, fought, and died like sportsmen without even a grumble. I repeat that there was no whimpering then, and the people who are now moved to tears at the thought of what is to come watched the early rounds of the unequal contest dry eyed. None of the carnage and suffering which is to come can be worse than the sufferings of those allied dead who stood the full shock of the Prussian war machine before it began to falter.

But in the British determination to carry the fight to a decisive finish there is something more than the natural demand for vengeance. The inhumanity, the pitilessness of the fighting that must come before a lasting peace is possible is not comparable with the cruelty that would be involved in stopping the war while there remains a possibility of civilization again being menaced from the same quarter. Peace now or at any time before the final and complete elimination of this menace is unthinkable. No man and no nation with the slightest understanding of the temper of this citizen army of Britons, which took its terrible hammering without a whine or grumble, will attempt to call a halt now.

TEUTONIC TROUBLES ON MANY BATTLE FRONTS

# FROM STATE TO STATE

**ALABAMA:** The second annual short course for the canning club girls of Alabama, recently held at the Alabama Girls' Technical Institute at Montevallo, was attended by a large number of girls from twenty-seven counties. Interest in this work is growing rapidly thruout the state, and home canning is becoming one of the important industries. Not the least of the benefits derived from the short course was the interchange of experiences among the girls themselves. Many of them, with small gardens and skill in canning the products, have been able to contribute largely to the family expenses, several putting up more than 1500 cans each in a single season. Some of these canned goods brought as high as 50 cents a quart. Two little sisters in St. Clair County last year sold more than 2000 cans, making money enough to support the family while their father held his cotton for an advanced price.

**ARIZONA:** One of the largest rubber companies in the United States has bought 9200 acres of land near Hackett, in this state, and will at once begin preparations there for manufacturing rubber from the guayule plant, with which it has been experimenting for a number of years. The plans of the company provide for the expenditure of \$1,000,000 on the factory and homes for employees. The guayule is a desert plant, requiring a minimum of water. By offering a good market for it the company is encouraging farmers of the state to cultivate it on lands unsuited to crops requiring irrigation.

**CONNECTICUT:** A committee appointed some time ago to investigate the general condition and requirements of the county jail at Hartford has gone so deeply into the subject that it is believed its report will start a state movement for revising the entire system of handling prisoners. The committee is said to favor employing prisoners on farm, laundry, repair and other work for furnishing supplies to public institutions. It also will report on the treatment of debtors, urging that instead of being sent repeatedly to jail for a few days they should be sentenced for periods long enough to make reform possible.

**KENTUCKY:** The authorities of this state have decided upon a vigorous policy of forest conservation. State Forester Burton is taking steps to acquire small tracts of cheap cut-over land in various parts of the state for demonstration purposes. He believes that the awakening of farmers to the value of wood-lands is of first importance. At the state nurseries seedlings are being raised from tree seeds collected in Kentucky. These are to be had by land owners at the cost of production. Federal authorities and the large mining interests of this and neighboring states are giving aid in the work. It is hoped that the next legislature

will pass stringent measures to prevent wasteful cutting and reckless burning of timber.

**LOUISIANA:** As for romance, the people of Louisiana say there is nothing in imaginative literature to compare with the story of the sulphur beds in Calcasieu Parish, of their own state. As early as 1865 sulphur was discovered there, but it was found to lie under a bed of quicksand 500 feet thick, and attempts to mine it were abandoned. Some thirty years later Herman Frasch conceived the ridiculously simple idea of pouring hot water down a driven pipe perforated at its bottom, dissolving the sulphur and pumping it out, so pure that it needed no refining. Many such pipes are now in operation there, two firemen and one water tender taking care of the battery of boilers at each well. Stock to the amount of \$200,000 is held by the Frasch family and three others, and it is said this earns not less, probably much more, than \$2,400,000 annually.

**MICHIGAN:** A school to prepare boys and girls for club leadership has been instituted at the Michigan Agricultural College, under the direction of E. C. Lindemann, state leader in club work. It is said to be the first school of its kind organized in the United States. There are 374 boys' and girls' clubs in the rural districts of Michigan, with an enrollment of more than 6000; and their number is increasing so rapidly it has become necessary that club leaders be developed in order to obtain the best results. At the new school instruction in the technique of club work is given. College observers say that this work has been very effective in the redirection of country life in the state.

**MINNESOTA:** Charles E. Vasaly, of the State Board of Parole, reports that the "adviser" plan of the Prisoners' Aid Society is accomplishing much good, not only for paroled prisoners, but for the men who are acting as their advisers. Nearly every paroled man in Minnesota, he says, has some reputable business man to whom he turns for counsel and aid in establishing himself as a useful member of society. While these advisers are not expected to give either money or work to their charges, it is said that in many cases the "brothering" has led to warm friendships and mutual advantages.

**MONTANA:** President Wilson has restored to entry 1,892,468 acres of land in northern and northeastern Montana, heretofore included in coal withdrawal. A large part of this land has been entered under the homestead and other non-mineral land laws, but whatever of such entries have been patented since the withdrawals in 1910, reversion has been made to the United States of all underlying coal. The entire restored area has been recently classified by the Geological Survey,

and non-mineral entrymen on parcels classified as non-coal land will now receive full or unlimited patent. Areas classified as coal land are opened to absolute sale and entry under the coal land laws.

**NEW HAMPSHIRE:** Early in the summer Prof. W. C. O'Kane, of New Hampshire College, was hopeful that the gypsy moth had been at last conquered in this state. He then estimated that there were not one-fifth as many of these pests as there had been five years before. Now, however, they have appeared in such numbers in the southern part of the state that the forests in many sections have been utterly defoliated and the bush crops, especially blueberries, ruined. Parasites, which have been heretofore successfully used in arresting the progress of the moths, seem to have no efficacy.

**NEW YORK:** The State College of Forestry at Syracuse has taken definite steps toward the planting of forest trees along the rural highways of the state. A preliminary survey, just completed, shows that nine-tenths of these highways are devoid of shade trees. A detailed study of the most important roads is to be made at once, the information so gained to be used as a basis for an educational movement thruout the state. Results of observations are to be issued in a publication to organizations, such as automobile clubs, women's clubs, commercial associations, and to individuals interested in the landscape treatment of rural roadsides of the state. It is the hope of the college eventually to make New York State, with its varied scenery, a vast system of beautiful parks and shaded parkways.

**OKLAHOMA:** Attorney-General Freeling, of this state, has filed complaint against every refining company and oil corporation offering gasoline for sale in Oklahoma. He believes that the advance in price from 17 cents a gallon last March to 25 cents at the present time is in accordance with an "understanding," and therefore a violation of the Federal law. That here, at the center of the most extensive oil fields, the price is higher than in many distant states, and that the increases are simultaneously made by all companies seems to him a sufficient reason for assuming that there is unlawful combination.

**OREGON:** More new school houses are now being built in Oregon than ever before in the history of the state; and most of them are designed for the Portland system of teaching. This system is based on a belief that there is no average child, and that individual instruction is better than mass education. In the Portland schools there are eighteen ungraded rooms for pupils who work either too slowly or too rapidly for the regular grades. Fifteen pupils is the limit for each of these rooms, and progress is individual. There

are also rooms for pupils who are too slow even for the ungraded rooms. Another feature of the Portland system is that teachers are promoted with pupils, so that one instructor carries the same children thru several grades. The National Education Association has recommended the Portland plan as a model.

**TENNESSEE:** The new "Harahan" bridge, spanning the Mississippi River at Memphis, said to be the largest structure on the river, is now open for traffic. Including the approaches, it is three miles long, the bridge proper being 2600 feet. Its cost was approximately \$5,000,000. Construction was begun in 1913.

**TEXAS:** The rough and ready way in which many county boards in this state used to judge road material has almost wholly given way to the more scientific and less expensive method offered by the laboratory maintained at the University of Texas for testing such materials. The road materials of this state include shell, sand, clay, gravel and stone, varying greatly in value and in lasting quality under traffic. The university laboratory makes free tests of all these materials and recommends the one most economical for the particular locality or traffic which it is to serve. A bulletin on "The Road Materials of Texas," now being freely distributed, gives the results of much original research and is of great value to road builders.

**VERMONT:** On the 125th anniversary of her admission to the Union, Vermont began a "big drive" for the civic and commercial development of the state. At the invitation of the Greater Vermont Association more than 1000 leading citizens from all parts of the state, men of national prominence, former citizens of Vermont and governors of neighboring states met to devise ways and means of making the best uses of the state's resources. Many excellent suggestions were made, which the association promises to carry out to the best of its ability. The tidying up of the state, especially in the farming districts, the improvement of roads and the parking and boulevarding of the mountain sections are among the things to be undertaken at once.

**WASHINGTON:** Since the war began Great Britain and France have spent more than a million dollars for spruce timber from Washington and Oregon to be used in the manufacture of aeroplanes. It is said that no other district furnishes spruce as long, wide and clear as these states do, and that European nations have been so eager to get it that when ships could not be obtained on the Pacific coast they have sent the lumber across the country by rail. At the beginning of the war the price for spruce was \$15 a thousand, but since then it has advanced considerably.

# SHALL FORCE OR REASON RULE?

BY CHARLES EVANS HUGHES

CANDIDATE OF THE REPUBLICAN PARTY FOR PRESIDENT OF THE UNITED STATES

**I**N every presidential campaign there are many issues that separate the parties. In my speeches thruout the country I have devoted attention from time to time to every question upon which it seemed to me important that the American people should pass judgment as between the two great parties and the two candidates for the Presidency. But there is one fundamental issue that has such far-reaching significance for the future of the American people, one occasion on which the present administration, by its surrender of a vital principle, has so gravely threatened the soundness of our national government, that I am glad to emphasize it again for the readers of *The Independent*.

The just interests of labor are the concern of all. We must have the sense of fellow-workmanship if we are to make progress. I desire to see safe conditions of work, wholesome conditions of work, adequate opportunities for education and recreation, reasonable hours of work, proper wages. This is not to promote efficiency for its own sake, but to realize our ideals in betterment of the conditions of human living.

The Adamson bill is a force bill. It was legislation without inquiry, without knowledge. The demand by the administration for such legislation as the price of peace was a hu-

miliating spectacle. It was not only a serious misuse of official power, but a deplorable abdication of moral authority.

The excuses presented are futile. I am not opposed to the principle of an eight-hour workday. The Adamson bill is not a bill providing for an eight-hour workday. It does not fix hours at all. It regulates wages. Its provisions do not require any employer to employ any set of men for only eight hours a day. Eight-hour day laws are to avoid fatigue and overstrain by prohibiting employment in excess of the requirement. There is nothing of that sort in this bill.

What it does is to provide by law for an increase in wages for certain men. They may work just as long as before. They may work ten hours or more. They are simply to get more pay. The act provides that eight hours shall, in contracts for labor and service, be deemed a day's work, and the measure or standard of a day's work. For what purpose? For the purpose of reckoning the compensation for the services of all employees of the sort described.

It is provided that "pending the report of the commission to be appointed, and for thirty days thereafter, the compensation of railway employees subject to this act for standard eight-hour workday shall not be reduced below the present standard day's wage, and for all necessary time in excess of eight hours such employees shall be paid at a rate not less than the pro rata rate for such standard eight-hour work day." Then follows the penalty for violating any provision of this act.

In plain English the men affected are not required to work fewer hours, but are to have ten hours' pay for eight hours' work, and additional pay for additional hours. The act applies a wage scale for a greater number of hours, to a less number of hours, without changing

at all the actual time of service. We have words which may seem to mean one thing and in fact mean another. The phrase "eight-hour day" is apparently used to tickle the public ear in order to establish something quite different. If it was proposed to fix an eight-hour work day why were not work for longer hours and all contracts for longer service prohibited under penalty, save where emergencies exist?

It is said for this bill that it will have a tendency to procure an eight-hour day. This is extremely doubtful, but we are dealing with what the bill actually enacts, not with inconclusive suggestions of tendencies toward something else which is not enacted.

This bill must be judged by what it provides, not by what it does not provide. It is nothing more than a measure to fix wages and as a measure to fix wages it must be judged. If as such a measure its passage was justified, it needs no further excuse. If not, its passage is not to be condoned by reference to another eight-hour work day which it does not establish. Such reference can only be regarded as a subterfuge.

We are, therefore, not concerned with anything that is said of the judgment of society with respect to an eight-hour work day. There is plainly no judgment of society upon the increase of wages this bill requires.

If the asserted judgment of society inspired it why does the act apply only to a limited number of railroad men, relatively few? Why are certain railroads less than one hundred miles in length excepted? Why are electric street railroads and electric inter-urban railroads excepted? Is there a failure of the judgment of society upon the eight-hour day in these cases? The obvious fact is that there was a demand for an increase of wages as to certain men and the administration in advance of investi-

© Underwood & Underwood

gation surrendered to this demand. That the subject was one requiring investigation is apparent. The bill itself concedes this in its provision for a commission. If there is anything that demands careful inquiry it is a proposition affecting readjustment either of rates or of expenses of carriers. The entire community depends on their efficiency, upon fair action by them, and fair action toward them.

What is fair and right must be done, but what is fair and right must first be ascertained. When railroads are required to expend additional millions this burden must ultimately fall on the public. If expenses are necessarily increased beyond what existing rates will stand, the rates must be increased.

It was proposed in substance by the administration that increased rates should be charged to shippers so far as required to pay this increase of wages. Assurance was given that "no obstacle of law" would be suffered to stand in the way of railroads in increasing their revenues to meet resulting increased expenses so far as development of their business and of their administrative efficiency did not prove adequate to meet them.

We may pause to ask what is the significance of this reference to "obstacle of law." The law provides for "reasonable rates," and an appropriate proceeding for fixing of reasonable rates by the Interstate Commerce Commission. Were these proceedings and the provisions of law the "obstacles of law" to which reference was made? Were they to be overcome, if necessary, to accomplish the desired increase?

It must be understood that the burden of increased rates is passed on to the public. It necessarily affects a host of activities, agricultural and industrial.

Increase of wages for selected classes of men on railroads might result in restrictions on a great number of other workingmen, not only those employed by railroads, but upon those employed in industries throughout the country if the latter be required to operate under increased transportation charges.

Again, what becomes of present adjustments and business agreements

relating to the men whose services are involved in this bill if wages are fixed by law in this manner?

Manifestly we have here an extremely intricate question of rates and outlays. What was the manifest duty of the executive? Plainly to insist that investigation should precede action, and that nothing should be yielded to force. It was stated by the executive in his address to Congress that "the matter" had been agitated for more than a year. Why, then, was it not investigated? Could not the administration command all necessary machinery for fair and thoro inquiry? Not only did the administration fail to take proper action on its own initiative, but the business men of the country appealed in vain to the administration for investigation. Their request won no favorable action.

Time was allowed to run, and then came the surrender that shocked the people throughout the land. Was the "crisis" unforeseen? Why was it

permitted to arise, when the administration was forewarned?

I stand for the principle of arbitration in industrial disputes. Labor, least of all, can afford to have that principle surrendered. It is a civilized method, as opposed to the injurious contests of force, which impoverish labor and imperil the social order. The essence of the matter is a fair and reasonable hearing of all parties concerned and a just determination according to the facts.

It is no answer to say that the awards of arbitration are not always just. The effort should be to improve reasonable methods, not to subvert them. Railroad companies refusing arbitration have been condemned at the bar of public opinion, and great progress has been made in the direction of the peaceful and reasonable settlement of labor disputes.

The public judgment will not tolerate any reactionary course either by powerful groups of workingmen or by powerful groups of employers. The peace,

good order, and progress of society are too important to be sacrificed in this way. To say that fair and prompt arbitration could not have

© International Film

been had in this case is to indict both the administration and the American people.

It is said that we were suddenly caught. I find no foundation for this excuse. I see nothing sudden about the matter, but sudden or otherwise, there was no justification for the yielding of principle.

Why not try the efficacy of standing for principle instead of giving it up in fear? Of those who seek to excuse the administration's surrender on the ground of exigency I ask how far do you propose to yield to force? Where will you make a stand? Do you cherish the vain hope that by surrender you will accumulate courage or ability to withstand pressure?

Let me also say that force can unmake as well as make, that it can reject courts as well as arbitration, that it can dispense with any part of the orderly procedure of government which it may oppose.

When force is proposed and arbi-

© International Film

tration is refused there is but one stand to take, and that is to appeal to the judgment of the country to vindicate the processes of

reason. Had the executive, when arbitration was declined, at once directed the entire force of public opinion, as he easily could, to the demand for the recognition of the principle of arbitration, I have no doubt he would have won and the nation would have been his debtor.

Had the executive gone at once to Congress for immediate authority to secure prompt and thoro investigation of the stated grievance in advance of action, and had he thus made instant provision for an inquiry so entirely competent as to command the respect of the country, I am satisfied there could have been no strike. We are still ruled by public opinion, and no administration need fear results if it stands firmly for essential principle.

I do not speak of the propriety or advisability of fixing wages by law. That is a separate matter. I am now dealing with a more fundamental question—legislation according to the facts, as opposed to legislation under pressure in the absence of inquiry. We have undoubtedly too much legislation without adequate consideration, but there are usually the forms and presumptions of legislative consideration on the merits of proposals. Here even those were absent.

Within a few hours, on demand of the administration, Congress provided a mandatory increase of wages, involving millions of dollars, without any idea whether the increase was or was not justified. And this action was taken in connection with the essential instrumentality of commerce, the arteries of our commercial life.

Mr. Adamson said of his

bill, "It is hasty legislation, I admit, to meet an emergency?" What emergency? The emergency of force to which the administration had capitulated. Mr. Underwood said, "We have no information on which to legislate and to fix rates of wages which we are going to do and are attempting to do."

Contrast the action of this administration with what Grover Cleveland, in 1886, said with respect to labor legislation:

All legislation on the subject should be calmly and deliberately undertaken with no purpose of satisfying unreasonable demands or gaining partizan advantage.

It is idle to excuse the action taken by the Adamson bill by a request for additional legislation with respect to the future. That legislation was not obtained.

One of the foremost friends of labor writes me the truth as follows:

Those of us who know the labor struggle, and have helped in the fight for standardizing in our industrial life well know that in the end laborers gain nothing by violence, unjust or arbitrary action of any kind, or the exercise of anti-social power of any description.

Adamson made no attempt to meet an emergency. He had no information on which to legislate and to fix rates of wages which we are going to do and are attempting to do." © International Film

Underwood & Underwood

© International Film

However, some groups may be advanced in economic power by illegitimate means; the common interests of the great group of toilers can never be. Such gains are always at the cost of public opinion and support, are temporary and evanescent in character and operate to lessen the coöperation of that just public sentiment for the well-being of the workers of the world so essential to their improvement of the conditions of labor.

We have an unjustifiable attempt to use public sentiment with re-

spect to another eight-hour work day in order to justify a bill which does not provide another eight-hour work day, but relates solely to an increase in wages. We have seen the choice of what seemed to be the easier way, which escaped the necessity of a determined stand for principles. We have seen what has appeared to be the consideration of immediate political expediency at the expense of public welfare.

The issue thus presented is fundamental. The multiplying activities of the government would be intolerable if we did not proceed in accordance with judgment based on an examination of the facts. These processes of reason are the only alternative to tyranny. We are an alert and intelligent people, with every opportunity for ascertaining the facts of any situation. Our problems in the future are likely to be in the main economic problems and they will severely test our capacity, but we shall find solutions if we are open-minded and thoro in our investigations.

We can stand mistakes in policies if we are sound in method, but we cannot yield reason to force. That is the path of sure disaster. I should not take the first step in that path.

On November 6 President Schurman and Mr. Hapgood will bring their debate to a close

And the Election Number, dated November 13, will tell the end of the story—and paint the moral

# COMPULSORY SERVICE FOR THE GERMAN WOMAN

BY CHARLOTTE TELLER

THERE is an army of women working inside of Germany today. Its remarkable efficiency and energy have been recognized by every one. The men of Germany have nothing but praise for the women. The women are full of criticism of themselves. They know with what difficulty some of their results have been achieved. And they attribute this difficulty to lack of training.

For this reason the heads of the army of women are now demanding what the heads of the army of men demanded after the Franco-Prussian war—the institution of a year of compulsory service and training for every able-bodied girl between seventeen and twenty.

"The war has made women aware that, over and above their domestic and professional duties, the state has a claim on them for direct help in the performance of the national task. Out of this awareness the idea of compulsory service has sprung."

So says Helena Lange, one of the most radical feminists in Germany. Besides being an author and teacher, she has for years been a pamphleteer on behalf of the higher education of women, and has organized the Prussian women school teachers into a dignified and effective labor union. Associated with her in the demand for compulsory service are Lydia Stöcker, who is also prominent in the women's educational movement; Gertrude Bauemer, the orator of the German feminist movement; Hedwig Heyl, who is chief of the great general staff of German women during the war, and Henrietta Goldschmidt, the first woman to make this demand—years ago.

These leaders agree, in the first place, that military training shall not be included in the year of drill. Stories of women fighting in the ranks, of which one hears in the other belligerent countries, are never told in Germany. The German women are too obedient to try to evade the law in this fashion; they are too practical to attempt by such methods to refute "the last argument against woman suffrage"; and, above all, they are too practical, and too thoroly permeated with the Teutonic faith in specialization, to attempt to do what the men can do better.

During this war, the women have found their field in all the civilian duties ordinarily fulfilled by men. Their year of compulsory service is to make them more efficient soldiers in the

*During her recent visit to Germany Charlotte Teller—who is otherwise Mrs. Gilbert Hirsch—studied particularly the problems that the war has brought to women. In The Independent for August 7 she wrote of Hedwig Heyl, "the woman who would not let Germany starve." Here she describes the organization of Germany's army of women "whose battlefields are the factories, workshops and fields." Mrs. Hirsch is the author of many stories and articles and of a play, "Higginbotham." — THE EDITOR.*

armies whose battlefields are the factories, workshops and fields.

In German, the word for political and domestic economy is the same—*Hauswirtschaft*. And there is a growing consciousness that the tasks are the same. For this reason the majority of women demanding this year of service wish to make domestic economy the basis of all the drill.

"Every woman," says Helena Lange, "must first be master of her individual household duties."

This mastery extends to a mastery of the science of foods, their chemistry and preparation; of nursing and sanitation; of social welfare work for children.

The compulsory service idea has its opponents. Many are unable to see how the caste system can be laid aside by women—the traditional upholders of conservatism—to permit of all girls learning together. The war has, to an extent, fused all the women of Germany into a homogeneous mass. But it is feared that when the stress of emotion dies down, class jealousy and snobbishness will again come to the fore. The answer usually made to this objection is that the service will be a state institution; and that, when the state commands, every German, man or woman, is accustomed to obey without question.

Then there is the question of expense. The number of girls who each year reach the age prescribed for training would average about 400,000. A certain percentage would, for one or another reason, not serve. In the case of the men, it is 10% and it is assumed that the percentage for women would be about the same. But this leaves 360,000 girls to be trained by the state each year. The expense would be tremendous.

But it has been suggested that this difficulty—as well as the threatened danger to the caste system—can be met by offering inducements to the

girls of the "upper classes" to pay their own expenses. This idea is borrowed from that provision in the men's compulsory service law, which permits a man to serve only one year, instead of the usual two or three, if he pays his own expenses.

Since all the girls are to serve only one year, the inducement to be held out to those who pay their own way will not be a shortening of the period of their service, but greater freedom in the choice of a specialty. If they can show that they are already efficient as housekeepers, they will be allowed during this year to take up other branches of social service.

But the women who have made social and charitable work their profession object to this. They fear the competition of these "amateurs." They have no reason to fear. In Germany the specialist rules, and the amateur takes orders. A further systematizing of all social welfare work has been planned. The leadership will be given to these women who have made it their profession.

Another outcry has come from the women doctors, women lawyers, women teachers, who fear that this course would interrupt their special training. This is being answered by a proposal to reorganize the entire system of education for girls and women, in such a way as to include the year of drill in household economy and social service as an integral part of the intermediate schooling. It will be the more easy to do this, as all the schools in Germany, public and private, are under state supervision.

It is interesting that the opponents of compulsory service are to be found in greater numbers among the extremely radical than among the reactionary circles. The militant feminists—and Germany has quite a few of these—maintain that it is an attempt to deprive the German woman of the fruits of that struggle for higher and unrestricted education which she has been waging for the past twenty-five years. They declare that this whole movement is simply a "sublimation" of the old *Kinder, Küche und Kirche* ("Children, kitchen, and church") philosophy. They insist that the emphasis on "economy," whether political, national or domestic, lowers the standard, making it merely utilitarian.

But the war is an effective answer to all this. Those women who have been of the greatest help have been the ones trained in domestic economy.

Englewood, New Jersey

# WHAT CANADA HAS DONE

BY W. R. GIVENS

PUBLISHER AND EDITOR OF THE KINGSTON DAILY STANDARD"

**T**WO years ago, on August 4, 1914, when Canada entered the war by the side of Great Britain and her Allies of her own volition—"Daughter in her Mother's house, Mistress in her own"—her public net debt stood at \$314,301,625. At the present she is spending on the war alone, on her troops at home and overseas, a total of \$1,000,000 daily; or, in the year, more than her entire national debt of two years ago. And yet, except from a few whimperers and professional or political agitators, one hears no complaints or grumblings—no protests at or railings against the expenditures. The rather—and it but emphasizes the fact that the British bulldog spirit has found lodgment in Canada—the people, having given of their best blood and brawn at Ypres, at Festubert, at Langemarcke, at Givenchy, at Verdun (for our total in killed, wounded and missing is now 30,000) are practically solidly behind the government in its forward work and are prepared, as General Grant was in his time, to fight the issue out "if it takes all summer."

This, then, is an outstanding feature in Canada today after two years of war, that her people and her government alike are more determined than ever to do their bit for the cause of Empire. They have seen their per capita debt increased to over \$50; they have had additional taxes placed upon them; they have seen one home after another put in mourning, and the will of the people remains inflexible that Canada and her sons shall stay in the fight to the finish until the war-mad Huns shall be finally and fully overcome, and liberty and light be again assured to the world.

But tho this be an outstanding feature there is one other that must appeal to the thoughtful people of the world as yet more significant: that in these two terrible years there has been no governmental scandal or graft, no governmental corruption or dishonesty. Mistakes of judgment there undoubtedly have been, but they have been in minor and inconsequential matters and accepted as such by the people. True, there were charges against Sir Sam Hughes, Minister of Militia, and the Shell Committee—the latter an Imperial organization for which the Canadian Government was in no wise responsible—but after these charges had been exhaustively investigated by a non-partizan commission of judges Sir Sam and the Committee

were completely exonerated and the charges almost contemptuously dismissed. Beyond this, there has been not even a breath of suspicion against the government, presided over by Rt. Hon. Sir R. L. Borden, who has grown amazingly in statesmanlike stature and political sagacity in this time of national stress.

Here, then, is where we find Canada after two years of war—undaunted in her spirit, unshaken in her purpose, and with a clean and honorable record of work well done. As to what that work has been, let the figures themselves, briefly put, tell the story.

Thirty-three thousand men armed, equipped and sent overseas within six weeks after the declaration of war—the greatest number of armed men ever to embark upon the seas at one time, up to then—and this tho at the outbreak of the war Canada had only four permanent military units of less than 2500 men.

Three hundred and fifty-thousand six hundred and fifty-five men all told recruited up to date out of 500,000 to be raised, this total coming from available male recruits in all Canada estimated at 1,250,000.

The sending of 250,000 men overseas without the loss of a single life while in transport.

A total of \$400,000,000 already raised for war purposes, with another domestic loan of probably \$100,000,000 to be called for at once, the advertisements for this loan now being out; savings banks deposits increasing, nevertheless, from \$699,399,000 in August, 1914, to \$738,169,000 on March 31, 1916.

The manufacture for the Allies of munitions to the amount of \$30,000,000 per month and the creation of over 400 factories for this purpose.

The establishment of numerous training camps, including the huge Borden Camp in Western Ontario, where at least 30,000 men can be accommodated.

The passing of a generous pension bill for Canadian soldiers, who, by the way, are the best paid soldiers in the world today.

The establishment of separation allowances for wives and children of soldiers on active duty.

Private donations to the amount of \$30,000,000 to the Patriotic Fund, the Belgian Relief Fund, the Red Cross Fund, etc., etc.

The raising of \$50,000,000 per year in new taxes—and this without increasing by one dollar the cost of living or the necessities of life, these

taxes being on note circulation of banks, on gross incomes of trust companies, on checks, on telegraph messages, on sleeping car tickets, on perfumery, on wines, on bills of exchange, on letters (which now require an additional cent stamp), on excess war profits, on business profits beyond seven per cent in the case of companies capitalized at \$50,000, and beyond ten per cent in certain other cases, etc., etc. The taxes, in short, as in England, have been levied against those best able to bear them, and it is a tribute not alone to the wisdom of Sir Thomas White, the Finance Minister, but to the people themselves that they are accepting their added burdens without complaint.

Other features of the work have been the establishment of hospitals overseas, and various direct gifts to the Imperial Government—as, for example, a donation from Canada, two days after the outbreak of war, of one million bags of flour, supplemented by various provincial gifts, led by the premier province, Ontario, which has done a magnificent work thruout this period. It is only Quebec, the province of Sir Wilfrid Laurier, ex-Premier, who, as is well known, has never been an Imperialist, that has failed to live up to its own best traditions. Tho with nearly one-third the population of all Canada, this French Canadian province has given but a handful of men to date, 36,890, of whom nearly 10,000 came from the English-speaking residents of the province; while its contributions in other directions have been pitifully small and disappointing. That Sir Wilfrid Laurier has not been able to do more with his own people has been a sorry and grievous disappointment. The fact is, however, that he has apparently not tried to do it, having made only seven public speeches in his own province in the last two years. Naturally, the rest of Canada—English-speaking—bitterly resents this, that Quebec should shirk while all the rest of Canada fights, and when the war is over it will not surprise if there shall be a day of reckoning for that province, some of whose leaders, it is an open secret, have for years dreamed a dream of an independent French republic on the shores of the St. Lawrence. At the moment Canada—outside of Quebec—is too busy to give much heed to this ambitious plan. That time will come later.

# Two Poems by ROBERT FROST

## THE TELEPHONE

**W**HEN I was just as far as I could walk  
From here today,  
There was an hour  
All still  
When leaning with my head against a flower  
I heard you talk.  
Don't say I didn't, for I heard you say—  
You spoke from that flower on the window sill—  
Do you remember what it was you said?

*First tell me what it was you thought you heard.*

*Having found the flower and driven a bee away  
I leaned my head,  
And holding by the stalk,  
I listened and I thought I caught the word—  
What was it? Did you call me by my name?  
Or did you say—  
Some one said "Come"—I heard it as I bowed.*

*I may have thought as much, but not aloud.*

*Well, so I came.*

## THE GUM-GATHERER

**T**HERE overtook me and drew me in  
To his down-hill, early-morning stride,  
And he set me five miles on my road  
Better than if he had had me ride,  
A man with a swinging bag for load  
And half the bag wound round his hand.  
We talked like barking above the din  
Of water we walked along beside.  
And for my telling him where I'd been  
And where I lived in mountain land  
To be coming home the way I was,  
He told me a little about himself.  
He came from higher up in the pass  
Where the grist of the new-beginning brooks  
Is blocks split off the mountain mass—  
And hopeless grist enough it looks  
Ever to grind to soil for grass.  
(The way it is will do for moss.)  
There he had built his stolen shack.  
It had to be a stolen shack

*Because of the fears of fire and loss  
That trouble the sleep of lumber folk—  
Visions of half the world burned black  
And the sun shrunken yellow in smoke.  
We know who when they come to town  
Bring berries under the wagon seat,  
Or a basket of eggs between their feet;  
What this man brought in a cotton sack  
Was gum, the gum of the mountain spruce.  
He showed me lumps of the scented stuff  
Like uncut jewels, dull and rough,  
It comes to market golden brown;  
But turns to pink between the teeth.*

*I told him this is a pleasant life  
To set your breast to the bark of trees,  
That all your days are dim beneath,  
And reaching up with a little knife,  
To loose the resin and take it down  
And bring it to market when you please.*

# SCHOOLMASTER TO HALF A MILLION

WHAT SUPERINTENDENT MAXWELL, OF NEW YORK, THINKS OF AMERICAN SCHOOLS

BY CHARLES PHILLIPS COOPER

**F**OR the first time in nearly thirty-five years the Old Lion of the great public school system of New York City is forced to take rest. It was in 1882 that William Henry Maxwell became assistant superintendent of the schools of Brooklyn, and from that day he has been a force in the educational affairs first of the city and later of the nation. In due course he became the head of the schools of Brooklyn, and in 1898, when after consolidation Greater New York wished to revise its cumbersome old system and join the modern educational movement, it selected Doctor Maxwell as its first superintendent of schools. He has held the office ever since.

Recently the Board of Education granted Doctor Maxwell a leave of absence at full pay of \$10,000 a year.

This leave of absence was voted after the board, by a vote of 31 out of a possible 40, had reelected Doctor Maxwell to the superintendency for a full term of six years.

It is a big job. On every school day of this year of 1916 more than 600,000 children of all ages storm the schoolhouses that Father Knickerbocker supplies. This school army would make six cities of the size of Albany; would almost duplicate Boston; would make four cities of the size of Omaha, and two of the population of Minneapolis. In it lies the future of the greatest city of America.

A glance at the material side for a moment will show something of the magnitude of the problem that the school authorities of New York City puzzle over. The budget appropria-

tion of the department of education for 1915 was \$39,840,349, of which \$32,609,695 constituted the general school fund for teachers' salaries. For 1916 the appropriation is \$36,865,981.

I asked Doctor Maxwell what in his long career made him most proud.

"I believe I can claim the credit," he said, "of taking the appointment of teachers out of the hands of politicians. I believe that is the best thing I have ever done, and I am prouder of it than of any other one achievement. You remember how it was in the old days, when every grade teacher had a politician behind her. It was bad for the teacher and very bad for the schools. I originated the legislation which demanded certain training in the case of all the

teachers of our common schools, fixed standards, and, in fact, put the teachers under civil service regulations. The teacher is appointed on her merits, and at the same time she is assured of her employment, so that she can give her undiverted attention to her work.

"That is the only satisfactory system in a large city. In a smaller place I would give the superintendent the power of appointment. That plan works most successfully in Yonkers. In the great metropolitan community, however, appointment under the New York City system of examinations is the only safe way. As I look back over the last thirty-five years crowded with work, while our present great machine was evolving, I think that has been the one greatest development—the elimination of politics in the appointment of teachers.

"Some years ago I was regarded as the 'herald' of the new education. Yet not very long ago I was called the 'great conservative.' I think that the educational system has progressed and is progressing all the time. I recall that when I first went into the Brooklyn schools one of the old principals, a man well along in years, said to a friend of mine that they had not hitched their wagon to any star—it was hanging to a comet. I was for progress then as I am today."

"There has been progress all along the line from the day of the three R's. I should say that the adoption of the kindergarten idea has influenced education along all lines and has been the one great reforming influence. Next in importance I would place the development of the manual training idea. I always have been an enthusiastic advocate of manual training. In the early days in Brooklyn I fought for it when only one man was with me. I call the development of manual training, cooking and sewing classes, real progress.

"A few years ago we discovered by chance that thousands of children of the New York schools were coming to school in the morning hungry. Their poverty was appalling. Think of it! Children starting in to learn their lessons when their stomachs were empty. Thru friends I raised a fund of \$18,000 and with it bought food supplies, and the girls in the cooking classes prepared it for those

hungry children under the direction of their teachers of cooking. The spirit of the teachers and the girls was wonderful. There was educational value in the work those girls did. It was education in the very highest sense.

"Today we take a wider view of things than we did twenty-five years ago. In our schools we have collateral reading along with our American history, reading bearing on European history. We try to teach the children that history did not begin with 1492.

"Do you know that when I went into the Brooklyn schools they learned their American history by rote? They spent six years on the textbook learning two or three paragraphs a day. That 'learn it by heart' method was in use quite generally. It is not today. Have we not progressed? I do believe in some memory work. I think that parts of masterpieces of literature should be committed to memory—but no more of that crudity of the older day.

"Then we try to teach civics today in a practical way. We want the pupils to know what a policeman represents in our municipal government; how to call the fire department; and we want to show them that they owe a duty to the city and the state. We

try to abolish rowdiness, making the boy feel that he owes something to the community; by informing him that his father, as a taxpayer, is a part owner of all public property, and that it is to his interest to protect it. We owe the safe and sane Fourth of July to the feeling that has grown up thru the teaching in the public schools.

"We have our summer schools and our vacation playgrounds and our Public School Athletic League. All these are developments of the last decade. I think that they indicate real progress.

"If we ever are to have universal military training in this country we shall find the best foundation in the Public School Athletic League. The league has been one of the great achievements of the system in New York City. The ethical results have been wonderful."

Dr. Maxwell, who has been attacked many times because he introduced "fads and frills" into elementary education, asserts nevertheless that above other things he is a warm advocate of cultural training pure and simple. "Yet," he said, "we cannot be blind to economic conditions here. Many of these children must go to work as soon as possible. I do not favor mixing cultural and industrial training. Let it be one thing at a time. If a child is in an industrial school then he should not be bothered with cultural training. Let it be one thing at a time. That is one secret of the great efficiency of Germany—intense application to the matter in hand."

Superintendent Maxwell believes, in brief, that, despite the opinions of the radicals, the educational system of the United States as expressed in the common schools has kept pace with development in more material lines, and that those who peer into the future lugubriously are not supported by the facts; that out of the discussion as to the proper way to train young children, having in mind the kindergarten and the Montessori systems, there will be evolved a system that will combine the best features of both; that in public school athletics will be laid the best foundation of universal military training, if in the future the nation ever adopts that policy.

SUPERINTENDENT MAXWELL

# THE NEW BOOKS

## TOMMY ATKINS

For a concrete example of the difference between an organized society recognizing mutual obligations, and individualism lacking all ties of ethical cohesion, read *Kitchener's Mob*, by James Norman Hall. Mr. Hall is a young American, who was in London when the war storm burst, and joined a newly formed battalion of the Royal Fusiliers. Tho the majority of his comrades owned London as their birthplace, the battalion was drawn from all parts of Great Britain and from all classes, and may be taken as a sample of the English people. The impulse which moved many of them was simply the prospect of three square meals a day together with weekly pocket money. Others regarded the war as a sporting adventure. They appeared unconscious of the wrongs of Belgium, and displayed little indignation against "Fritzie," the enemy. On the other hand they did possess a deep-seated, unspoken patriotism concealed beneath a light exterior. As a body they were precisely a mob, so distasteful to an old soldier, who had re-enlisted among them, that he deserted at the first opportunity.

Some months of hard training and discipline wrought a remarkable change. They lost individuality at first, "to regain it in a new aspect, a collective individuality." Then they went forth not only to fight "Fritzie," but to acquire a respect for him. Finally they plunged into the last possible war horror. Drenched with streams of red blood, nauseated with every form of ferocious might, they bravely held on as their only manly course, but they grew sick of war. They envied the wounded. They failed to see a high moral purpose anywhere in that appalling slaughter. Once an English skylark rose and sang above the No-Man's-Land between the opposing forces. It went straight to the hearts of the British soldiers. "Ain't 'e a plucky little chap," said one of them, "singin' right in front of Fritzie's trenches fer us English blokes?" This single touch is worth a dozen books unenlightened by that bond of comradeship glowingly emphasized by Private Hall.

*The Great Push*, by Patrick Macgill, the first book by a recognized author who has actually experienced trench warfare and taken part in a major engagement is a significant psychological exposé of what the Brit-

ish soldier really is. Take the chapter, Before the Charge, for example. Gathered in a little cottage at Loos is a group of soldiers waiting thru the night of suspense for the daybreak of slaughter. Here, if ever, human beings shrank in natural revolt from the task, not of their choosing, which must be done. "Of the enemy," he writes, "I knew very little, except that he suffered as we did in an insane combat."

Interesting and well done as is *Adventures of a Despatch Rider*, by Captain W. H. L. Watson, the retreat from Mons seems history. But here is what Captain Watson has to say about modern war: "Oh the waste, the utter damnable waste of everything out here—men, horses, buildings, cars, everything. Those who talk about war being a salutary discipline are those who remain at home. In a modern war there is little room for picturesque gallantry or picture-book heroism. We are all either animals or machines, with little gained except our emotions dulled and brutalized by nightmare scenes which cannot be written about because they are unbelievable. I wonder what difference you will find in us when we come home?"

Again, take *Battery Flashes*, by "Wagger," a collection of letters by an artillery sergeant. From his compara-

tively secure position in rear of the fighting lines, he is less appalled, less benumbed into utter loss of individuality than the trench fighters; yet when the official report states: "There is nothing doing on the Western Front," he describes choking fumes from the gas shells, dodging of shrapnel splinters, water more than knee deep in the trenches, tho none to wash with and little to drink.

*Kitchener's Mob*, by J. N. Hall, Houghton Mifflin. \$1.25. *The Great Push*, by Patrick Macgill, Doran. \$1.25. *Adventures of a Despatch Rider*, by W. H. L. Watson, Dodd, Mead. \$1.25. *Battery Flashes*, by "Wagger," Dutton. \$1.

## STATESMEN AND GENERALS

One hundred and seven years after the birth of Lincoln the flow of biographies still continues. The three books here brought together will serve very different groups. H. B. Rankin's *Recollections* combine first-hand material with expression of a desire to correct misapprehensions created by Herndon and others. A chapter on Ann Rutledge, headed by Edgar Lee Masters's free verse tribute, shows clearly the part Lincoln's love for her played in his development. Less convincing but of value is the treatment of Mrs. Lincoln and her influence. The pictures of life in the law office are delightful, especially those having to do with such events as the first reading of Whitman's "Leaves of Grass," and very valuable is the chapter on Lincoln's religion.

The analysis of Lincoln's actual cases, made to aid in determining his rank as a lawyer, is effectively done in J. T. Richards's *Abraham Lincoln, the Lawyer-Statesman*. The section on his oratory is less adequate, and those concerned with proving him a conservative with reference to negro suffrage and the independence of the judiciary fail to consider the changes in interpretation that come to a man with new developments in a situation. Lincoln had certainly a liberal and constructive mind, whatever may have been his views on a particular subject at a given time.

*Abraham Lincoln*, by D. E. Wheeler, in the True Stories of Great Americans Series for young folks is like its companion dealing with *Ulysses S. Grant*, by Lovell Coombs. Both bring out the high lights of the two careers and appeal to hero worship.

Mr. Oleott had access to unusual sources for his

*Life of William McKinley*, especially in the material collected by the President's secretary, Mr. Cortelyou. The history of the nation's advances in international responsibilities during the period makes good reading, but possibly the author's best service is in his depicting the strata of American society represented by McKinley and those nearest him.

Mr. Bradford's *Union Portraits*, like those he made of Confederate leaders, are an unusual and successful effort to combine clear pictures with intelligent evaluation. The studies of Hooker and McClellan have been most challenged since first they were printed in the *Atlantic*. The former sketch has been modified by further investigation, but not the latter. In addition to these Meade, Thomas, Sherman, Stanton, Seward, Sumner and Bowle are included in the series.

*Personal Recollections of Abraham Lincoln*, by Henry B. Rankin. Putnam. \$2. *Abraham Lincoln, the Lawyer-Statesman*, by John T. Richards. Houghton Mifflin. \$2.50. *Abraham Lincoln*, by Daniel E. Wheeler; *Ulysses S. Grant*, by Lovell Coombs. Macmillan. 50 cents each. *The Life of William McKinley*, by Charles S. Olcott. Houghton Mifflin. 2 vols. \$5. *Union Portraits*, by Gamaliel Bradford. Houghton Mifflin. \$1.50.

### POEMS OF THE BROTHERHOOD

It is with a painful sense of tragic background one reads the slender volume of *Poems of the Irish Revolutionary Brotherhood*. Thomas MacDonagh, P. H. Pearse, Joseph Mary Plunkett and Sir Roger Casement have paid the last reckoning for their heroic but futile uprising, and, in the words of Padraic Colum, whose admirable introduction preludes their poems, they "have passed away from our sight . . . to become part of the memory of Ireland." Mr. Colum does not attempt to appraise the poetic value of the verses he and Edward J. O'Brien have here edited, nor need we. To many the book will be a reliquary in which precious memorials of the dead are kept apart, and which criticism at this hour would only violate. The lyrics are somber, elegiac, high in their moods, shot thru with faith and hope, but looking to another world for their joys and triumphs.

*Poems of the Irish Revolutionary Brotherhood*. Boston, Small, Maynard. 50 cents.

### THE TRAGEDY OF POLAND

The recent devastation of Poland by the battling armies of Russia and Germany has renewed our interest in the tragic history of that repeatedly stricken country. W. Alison Phillips' volume on *Poland* in the Home University Library gives just the information desired about the origin, expansion, decline and partition of the Polish state.

The trials of the people during the last hundred years, the relations they have sustained to Russia, Prussia and Austria are ably discussed. It is worthy of note that this distinguished historian, in analyzing the causes that led to the downfall of Poland, finds that "the chief of them was the spirit of conquest and domination by which the Polish state was from first to last informed." The state itself succumbed

not because of external attack and aggression, but from internal dissension, weakness and political oppression. The author believes the "Polish question" can only be solved by Russia herself, enlightened and redeemed, restoring to the Polish people a free and wholesome life. Professor Phillips holds that the triumph of the Allies will lead toward this desired end.

Quite different is Monica Gardner's *Poland, a Study in National Idealism*. She writes for English readers and opens with a short impassioned record of the last hundred years. This is followed by sympathetic studies of Polish poets, leaders of national thought, and translations from their writings, powerful and strange, all aglow with a fiery and mystical devotion to their native land.

*Poland*, by W. Alison Phillips. Holt. 50 cents.  
*Poland*, by Monica Gardner. Scribner. \$1.25.

### MEN AND WOMEN

The value of timeliness characterizes the appreciative biography of *Mrs. Percy V. Pennybacker*, by Helen Knox, as its gracious subject retires from the presidency of the General Federation of Women's Clubs, and her able and most successful leadership of two million women. (Revell, \$1.)

*The Journals of Lady Knightly of Fawley*, edited by Julia Cartwright. Agreeable but rather too numerous extracts from the journals and letters of a woman who had unusual opportunities for meeting English royalty and celebrities during the later half of the nineteenth century. (Dutton, \$4.25.)

The life of *Samuel W. McCall*, present Governor of Massachusetts, is written by his friend and admirer, Lawrence B. Evans. The book consists largely of citations from the speeches of Mr. McCall when a member of the House of Representatives, and thus affords a tolerably complete survey of his political philosophy. (Houghton, Mifflin, \$1.25.)

Such a work as Thackeray would have loved is *Lord Granville Leveson Gower, Private Correspondence, 1781-1821*. Almost entirely with the Countess of Bessborough, it touches amazingly little on public affairs. But one does get pictures of society in Russia, England and Ireland with now and then touches of politics. (Dutton, 2 vols., \$10.)

A vivid picture of the impression R. L. S. made on an enthusiastic observer opens Charlotte Eaton's *Last Memory of Robert Louis Stevenson*. But what a day, with conversation so classically erudite as to require footnotes! And why return to "a scrapbook in a Duluth attic" for one of Stevenson's best known poems? (Crowell, 50 cents.)

### MATTERS OF BUSINESS

In *Capital Today*, Herman Cahn, a business man as well as an economist, considers the complex foundations of financial security, both theoretically and practically, beginning with the Marxian theory of value, and closing with a study of the unlooked for developments caused by the present war. (Putnam, \$1.50.)

*The Port of Boston*, by Prof. Edwin J. Clapp, is an account of the natural and commercial advantages of that outlet, not only for the commerce of New England, but also for a considerable area north and west, and of the various commercial handicaps which have permitted so much of that trade to seek other ports. It is illustrated by numerous maps and plans. (Yale Univ. Press, \$2.50.)

That any one could write four hundred pages about *Holders of Railroad Bonds and Notes* and name no road nor cite any decision is very remarkable. Yet Mr. Heft does this and in a book packed with in-

## Which Woodwork Do You Prefer?

Dark or light Mahogany, one of the various Oak tones, Silver Gray, Mission Green, Natural or

## White Enamel?

Whatever your choice of decorative schemes

# Arkansas Soft Pine

Supplies a thoroughly satisfactory base upon which the desired effect may be carried out. Moreover, the material may be had at moderate cost, due to an abundant supply. This feature combined with the wood's beautiful figure, fine texture and adaptability make it a most desirable interior trim for pretentious homes or cozy cottages.

Homebuilders Book containing a complete description of the wood and eight individual plans will be sent free on request to those seriously interested. Architects should ask for our manual. It is confined to facts of interest to the profession. White enamel and stained samples also free on request. Address Department I.

Arkansas Soft Pine is Trade Marked and sold by dealers. See that yours supplies it. He can.

# Mythology of All Races

Under the General Editorship of LOUIS HERBERT GRAY, M.A., Ph.D.

Late Associate Editor of Hastings's Encyclopaedia of Religion and Ethics

"May safely be pronounced one of the most important enterprises of this age of co-operative scholarship." — Prof. George F. Moore, LL.D., Harvard Univ.

**YOU CANNOT APPRECIATE** Art, the greatest in Literature and Music, Aesthetics, without an acquaintance with the literature of mythology, which furnishes the burden of our daily conversation, imagination, thought and inspiration. *This is the first exhaustive and authoritative work on the subject in the English language.*

**YOU CANNOT AFFORD** to miss the opportunity, now presented for the first time, to have in your own library material which has heretofore been available only to scholars, who, at infinite pains, have only been able to get it, bit by bit, in foreign languages.

The labors of many men and the expenditure of many thousands of dollars have, with the finest art of the engraver, the typographer and the binder, combined to give you a set of books which will be an ornament to your home and a mark of your appreciation of the best in literary values, both educationally and commercially. For only \$4 A MONTH YOU CAN HAVE all the volumes now published in this monumental work NOW, and each succeeding volume will be delivered to you, as issued, by express, prepaid. *In 13 volumes, with more than 800 beautiful illustrations (many in color) from native sources.*

THE MARSHALL JONES COMPANY, Publishers  
212 Summer Street, Boston, Mass.

Please send me, charges prepaid, the new volume in "Mythology of All Races," this without any cost to me or obligation. If satisfied I will agree to pay \$6 on receipt of each volume as issued, or \$4 per month until \$7.8 has been paid. Name and address in margin below.

Back Spacer  
Tabulator, etc.

Without one cent advance payment and without the slightest obligation on your part, express charges prepaid. Equipped with the late improvements—two color automatic ribbon, back spacer, tabulator, etc. You do not pay for the machine until you have thoroughly inspected and tried it out, then you remit our special cash price of \$43.85 (less than one half manufacturer's price) and the machine is yours. Easy payment plan arranged if desired.

Every machine guaranteed for 5 years.

The quantity is limited—so write today.

**METRO TYPEWRITER CO.**

70 Front St., Brooklyn, N. Y.

formation. But it must be read with care. "Generally," "usually," "the court may" are danger signals, for trouble comes with the specific, not the usual. For example, we have had to pay income tax on coupons: Mr. Heft says the corporation does it. (Dutton, \$2.)

*The Federal Reserve* is a full and much needed account of the new banking system, containing much allied information on our banks. The author, Henry Parker Wells, the secretary of the Federal Reserve Board and the author of "American Banking," is an authority. (Doubleday, Page, \$1.)

*Economics*, by Henry Clay, is a convenient manual for the general reader who wishes a clear and well-rounded introduction to the subject, tho written primarily for an English public with illustrative data drawn mostly from English conditions. The relationship of economics to the allied sciences of politics and ethics is consistently emphasized. (Macmillan, \$1.10.)

## MOSTLY ADVENTURES

*The Light of Parnell*, by John W. Appel, is an interesting story of the underground railway, John Brown's raid and the Civil War, tho told in a curiously stilted and amateurish manner. The setting is Meersburg and southern Pennsylvania. (Philadelphia: Heidelberg Press.)

A hill-farm in Georgia is the scene of Mr. Harben's new novel, *Second Choice*, a homespun story of genuine people. A touch of humor relieves the gloom of the hero's persistent hard luck, which lifts when he has the good sense to make a wise "second choice" of a wife. (Harper, \$1.35.)

An entertaining tale, exciting and amusing and just a little tragic, is *The Heritage of the Sioux*, by B. M. Bowen. It tells some of the adventures of the Flying U Feature Film Company in New Mexico, cinema adventures and real ones, too. (Boston: Little, Brown, \$1.35.)

*Clover and Blue Grass*, by Eliza Calvert Hall. Pleasant, homely tales of women in a little Kentucky town. Tho not extraordinary in any way, they are written with a humor and a sound knowledge of human nature which makes them very agreeable reading. (Boston: Little, Brown, \$1.25.)

All Western stories are cut on much the same pattern, but *When a Man's a Man* is just a little different, and Harold Bell Wright knows the life he writes of. He knows, too, how to tell a story, tho this one is somewhat overful of "mates" and "woman hearts." (Chicago: Bk. Supply Co., \$1.35.)

*The Cross of Heart's Desire*, by Gertrude Pahlow, is the sort of book which is written about New York and about life by a person who does not know either New York or life very well. There is idea and plot, but the characters are too obviously drawn from imagination rather than observation. (Duffield, \$1.30.)

*The Girl at Big Loon Post* is a good story. To be sure there are quite a number of miraculous escapes and convenient coincidences and the villain is very villainous indeed, but George Van Schaick writes delightfully of the Canadian wilderness where men trap and trade for the Hudson Bay Company. (Small, Maynard, \$1.35.)

An historical tale which is interesting both for topic and story is Emerson Hough's *The Magnificent Adventure*. The adventure is the Lewis and Clark expedition. The principal characters, all well drawn, are Meriwether Lewis, William Clark, Thomas Jefferson, Aaron Burr and his daughter, Theodosia. (Appleton, \$1.50.)

Following her own successful example in "The Story of Julia Page," Kathleen Norris has written a similar and equally entertaining novel, *The Heart of Rachel*. Its setting is ultrafashionable and its characters concern themselves chiefly with social festivities and marital crises. Most of its readers will be women. (Doubleday, Page, \$1.50.)

**BOSTON  
UNIVERSITY**

Law • Medicine  
College of Liberal Arts  
Theology • Graduate Department

The College of Liberal Arts now occupies the new building next to the Boston Public Library and offers the advantages of a modern college course. The building is equipped with laboratories, Department Libraries, and has full use of the Boston Public Library. For professional schools located in the heart of the city and offer the ideal course of instruction but without unusual opportunity for full support and for the practical training in the social professions. The Graduate School offers exceptional opportunity for research work.

LEMUEL HERBERT MURLIN, President  
Copley Square, Boston, Mass.

## PEBBLES

"Wanted—a young butcher to drive a Ford car."—*Hudson Observer*.

Can't German scientists invent a substitute for Austria?—*Brooklyn Eagle*.

"Hughes Finds Wilson Wanting." What makes it worse is that Hughes is wanting the same thing.—*The Masses*.

One must approve the strategy of the Bulgarians. Before occupying Drama they grabbed a lot of passes.—*Boston Herald*.

Much of the fugitive verse that is cluttering up magazine-columns these days apparently is fugitive from justice.—*Newark News*.

In the Republican preserves there is more joy over one Progressive that repenteth than over ninety and nine regulars who never strayed off the ranch.—*Chicago Daily News*.

Pat a cake, pat a cake, baker man,  
Bake me a loaf as light as you can.  
Label it plainly "Twelve Ounces," and then  
Sell it to me, tho it only weighs ten.  
*Brooklyn Daily Eagle*.

The Man Who Names Pullman Cars sprang at The Man Who Names Collars.  
"Wshdgcvtfhgdf," he hissed.  
"Gbevdfrseujk," was the withering reply.  
"Come, come, boys," expostulated the gentle-voiced keeper, "you were not to talk shop, you know."—*Puck*.

As you may have read with considerable emotion, President Wilson signed the eight-hour law with four pens, which he presented to the four Brotherhood chiefs. A gentleman called us on the telephone to inquire whether the dear peepul will get the blotter.—*Rocky Mountain News*.

Tommy had been playing truant from school, and had spent a long, beautiful day fishing. On his way back he met one of his young cronies, who accosted him with the usual question, "Catch anything?"

At this, Tommy, in all the consciousness of guilt, quickly responded:  
"Ain't been home yet."—*Harper's Magazine*.

A downtown city restaurant has made its reputation upon one waiter who has never yet been found wanting in translating an order into a language of his own, and he and the cook understand each other absolutely.

"One order of pea soup," one customer will say.

"Splash of split peas," cries the waiter.

"Couple of doughnuts and a cup of coffee without cream," another will order.

"Two submarines and a mug of muck—no cow!" orders the waiter.

"An order of ham and eggs," says a customer.

"Reast two on a slice of squeal!" the waiter shouts into the tube.

"Red stew and a cup of tea for me," a new arrival says.

"Boog in a bowl—boiled leaves on the side," sings the waiter.

"A dozen raw oysters," orders a busy business man.

"Twelve alive in the shell!" shouts the waiter.

"Where's my eggs on toast?" complains a man who has been waiting.

"Hush the babies on a raft!" cries the waiter.

"I want a rump steak rare," orders another man.

"Rub of nose, let him chew it!" the waiter calls.

"I want a bowl of tomato soup," ordered one man, a plate of beans, bread and butter, a piece of apple pie and a glass of water.

The waiter seemed puzzled for an instant, then he shouted into the tube:

"One splash of red nose, platter of Saturday night dough balls gone with cut to cake, five with the lid on and a chaser of Adams' ale!"—*Ladies' Home Journal*.

## Russian Koustar Art Needlework

Reg. Trade Mark

We have recently contracted with the Imperial Russian Government through its Department of Agriculture to act as its sole agents in the United States for the sale of all articles of Koustar (Russian peasant) manufacture on Linen, and we now have pleasure in announcing the arrival of a considerable shipment of this work by steamer Mogileff from Archangel.

This work comes from districts as widely separated as Courland, Novgorod and Kiev. Much of it is from the Schools which are under the Royal patronage of the Princess Golitzin and Princess Lvov.

All of the goods are made on hand-woven Crash, ranging in weight from a sheer, filmy fabric to the heavy and firm grades familiarly known to art needleworkers as Russia Crash. Much of the work is done in White, but there are many wonderful specimens in color, in which the softness of tone and artistic blending of color are very remarkable.

But not only is the Russian peasant a skilful needleworker and an artist in the blending of color; he is also a designer of no mean ability. The needlework, the color blending, and the designs in these goods are a characteristic expression of Russian Art, which we believe will be a surprise to many people.

Another feature of this work which is not least in importance is its very moderate price. Among the various articles shown are Table Covers and Scarfs of many different sizes, Doilies, Luncheon and Tea Cloths, etc.

Mail Orders receive our prompt attention.

New York

## MR. PURINTON'S EFFICIENCY QUESTION BOX

327. Mrs. R. M. P., Kansas. "Where can I obtain the literature of some reliable nutrition specialists? I will be grateful for this information."

Most food specialists are honest, but one-sided in their views. If by "reliable" you mean infallible, we cannot refer you to any such experts, and believe there are none. A specialist becomes dangerous when he assumes to think for you. Get his facts, but do not necessarily follow his opinions.

A number of food experts have done fine work, and present conclusions worthy of your study and trial. Among these are Dr. J. H. Kellogg, Dr. Harvey W. Wiley, Dr. H. Lindlahr, Professor Chittenden, Horace Fletcher, Bernarr Macfadden, Eugene Christian, Prof. L. B. Allyn, Dr. E. H. Dewey, Prof. A. Lewanzin, Dr. Benedict Lust, Alfred W. McCann. Obtain particulars from Efficiency Publishing Company, Woolworth Building, New York.

328. Miss M. H. S., New York. "(a) Will you kindly suggest work for a college graduate needing an outdoor life? What of the possibilities of summer camp work with girls? What of religious educational work? (b) How much time usually elapses before the answer to a Question Box query is printed?"

(a) Write Camp Fire Girls of America, 461 Fourth Avenue, New York; also Woodcraft League, Greenwich, Connecticut; also look up girls' schools and camps offering summer features—advertised in educational numbers of The Independent, The Literary Digest, and other periodicals. As for religious educational work, obtain from your pastor details of the summer conferences held at Lake Geneva, Wisconsin; at Lake Mohonk, New York; at Northfield, Massachusetts; at Chautauqua, New York; and other outdoor places—then plan how to get a position such as you desire.

(b) No fixed time possible, but several weeks usually. Among the hundreds of letters we receive continually, the importance of query and priority of date will determine sequence of answer in Question Box.

329. Mr. T. L. R., Texas. "I desire to master paragraph structure by home study. How can I obtain assistance by mail? I have new text books in rhetoric, but not one analyzes or summarizes paragraphs to the extent of making the matter intelligible."

A course in business English, or public speaking, or commercial correspondence, or modern advertising, should teach you how to understand, create and use the forceful paragraph. Books on these subjects would be helpful—obtain list from Efficiency Publishing Company, Woolworth Building, New York.

Study the work of the strongest newspaper writers; excellent paragraphing methods are shown by Dr. Frank Crane in the New York Globe. But your message is the real thing—not your style. Fuse your heart and brain at a white heat, and your paragraphs will drive home.

330. Mr. N. D. S., New Jersey. "I am twenty-nine years old, graduate of Pierce Business School in bookkeeping and shorthand, have been assistant to the president of a large concern. Was compelled to leave on account of health. I like farming, am the son of a farmer, but lack the capital to proceed. (a) Is it possible to get connected with the movement for farm cooperation; if so, how? (b) Would the study of law at home accomplish anything? (c) Can you suggest some other course probably more beneficial?"

(a) Write the U. S. Department of Agriculture at Washington; also the College of Agriculture of nearby state universities, beginning with your own; also the editors of farm journals, with which you are doubtless familiar; also Prof. L. H. Bailey, Ithaca, New York; also the farm efficiency bureaus in New York, Farm Efficiency Bureau, 30 Fifth Avenue, Frances' Bureau, 150 Nassau Street; Farm Service Bureau, 503 Fifth Avenue. You might become editor or manager of an agricultural journal—and your

wife could help, as you say she is a college graduate. Or you might become a "farm manager" or trained farm operator, or farm efficiency expert. Or you might work with a college of agriculture as an extension specialist or a country agricultural agent, or as a teacher and demonstrator.

(b) Very little.

(c) Better devote your spare time and money to getting a position where your business knowledge will support you while you train for larger work.

331. Miss E. L., Kansas. "Will you kindly tell me of a reliable concern which handles the sale of manuscripts?"

We do not guarantee the reliability of any concern. Write several agencies, and place your manuscript with one that gives well known people as references. Among the popular concerns are these: United Literary Press, 123 Fifth Avenue, New York; The Labberton Service, 569 West 150th Street, New York; American Literary Bureau, Leonia, New Jersey; Writcrafters, Lowell, Massachusetts; Literary Bureau, Hannibal, Missouri. Investigate also *Cosmos Magazine*, Stewart Building, Washington, D. C., and *The Editor*, Ridgewood, New Jersey.

332. Mr. L. W. E., Minnesota. "As I view the matter all true efficiency rests upon concentration; and joy and efficiency walk hand in hand. Would like to know what you think of my *Definition of an Artist*, copy of which I enclose. *An Artist is one who knows how to do one thing well, takes a life-giving interest in his or her work, and is capable of renewal.*"

We like your definition. We like it especially because you must be in the poultry business, as you say in print your "hens are all artists";—and a chicken fancier who is also a philosopher combines a trade and a temperament in a very happy manner.

However, the artist must do his one thing not simply "well," but better and better; he must take a life-giving interest in the work and destiny of his neighbors also; and he must be capable of expansion, humility, drudgery, sacrifice, grit, poise, faith, and other great qualities, along with his "renewal." An artist is a man so lost in his work that all you see is the work.

333. Mr. J. B. M., Missouri. "Will you kindly suggest to me some effective ways of building up a copious vocabulary?"

Take a correspondence course in public speaking. Buy and study several books on business English—write Funk & Wagnalls, 354 Fourth Avenue, New York; also A. W. Shaw Company, Wabash Avenue and Madison Street, Chicago, for lists of such books. Read *Correct English* magazine, Evanston, Illinois. Form a debating club. Get Pennam's "Word Book," and rewrite a short editorial in *The Independent* each week, using synonyms or equivalent expression; ask some literary friend to criticize your effort. Study a foreign language at home by the photographic method, now taught by several schools of language. Learn to write forceful letters; get a book on commercial correspondence, and compare with your own epistles. Read thoughtfully and continually the masters of modern prose—such as Emerson, Carlyle, Stevenson, Hawthorne, Eliot.

334. Mr. C. E. F., New York. "I am a young man of twenty-four, German-French, alone here in America, earning \$11 a week as bookbinder. I dislike this work, have paid over \$140 for art instruction, am eager to attend an art institute, if I can only save enough. All my dream and ambition is to be an illustrator. Portraits which I painted have received my teacher's praise, and I hope to win a scholarship next year. Please advise me."

You are of the stuff that great men are made of. Stick to your present line of work and study, and you will realize your dream.

Look up Question Box answer 264 in *The Independent* for June 19, 1916. Obtain copy of *Student-Illustrator*, Schwartz Building, Washington, D. C., and try for some of the prizes offered. Learn possibilities in show-card and sign painting, for quick money making; write Wendinger School of Lettering, Toledo, Ohio, also Detroit School of Lettering, Detroit, Michigan, for details of this chance. Obtain books of drawings by Gibson, Coney, Cox, Remington, other famous artists, and improve your technique. Investigate work of Art Alliance of America, 45 East Forty-second Street; Art Students League of New York, 215 West Fifty-seventh Street; Art Contracting Company, 218 East Twenty-ninth Street; Art Drawing Works, 314 East Twenty-fourth Street, all of New York.

## Zyrians Are In Type! A Great Work is Now Complete

When the galley-proofs containing the article on Zyrians went to the editors for final revision there was marked the completion of a great work of reference that instantly took its place far in advance of all other encyclopaedias. From the first article on Aachen to that on Zyrians this encyclopaedia contains more subjects of human interest than are to be found in any other known book of reference.

## The NEW INTERNATIONAL ENCYCLOPAEDIA SECOND EDITION

is now completed and ready for immediate delivery. Because of this the necessity for raising the price is pressing. But for one month—and one month only you may have *The New International* at the present low, easily paid pre-publication price.

## On November First the Price Goes Up

To take advantage of this real dollars and cents saving you must act and act at once. Tear off the coupon in the corner and let us send you full particulars.

To own *The New International*, to have it in your home where you can turn to it for the answers to the

problems that come into your life every day, means that you take your place in the world of intelligence as one whose opinions are respected. For your children *The New International* is a liberal education—a treasure trove of information about the wondrous times they live in as well as all that has gone before.

## The New International, Second Edition Contains

**80,000 articles**—(30,000 more than in any other encyclopaedia) written in compressed, readable style by the highest authorities.

**American subjects**—treated by Americans, to be found in no other encyclopaedia.

**War articles**—*The New International* is the only encyclopaedia written since the Great War made a new World. The new problems are authoritatively handled.

**Profuse illustrations**—works of art in colors and black and white covering every important subject.

**Maps**—that have been compiled from the latest data—accurate and up-to-date.

**Bibliography**—providing for the student a complete list of books for farther reading.

**Key to pronunciation**—a unique and invaluable feature.

**Thin paper**—durable and easily handled. For school, college and library use a special binding of library buckram is provided.

Send me full information regarding your Second Edition of the *New International Encyclopaedia*, with details of the special price, etc.

**GEORGE FROST COMPANY  
MAKERS BOSTON**

ADOLPHUS VAN NORDEN

ware & Hudson, shows, as a result of his latest inquiry, that in the one and one-half years between February 1, 1915, and August 1, 1916, American railroad securities owned abroad and having a par value of nearly \$1,300,000,000 were sold, leaving a remainder of \$1,415,000,000. These totals do not include industrials. When the British Government used \$100,000,000 of its American securities as part of the collateral for the recent loan of \$250,000,000, there were some indications that the continuous and somewhat depressing liquidation had been checked. It was understood that other similar securities would be held for use hereafter in the same way. Many believe that the selling has been stopped. Their belief affects our market, whose movements tend to support it.

### GREAT EXPORTS

Reports for August show a new high record for exports. These in February last exceeded \$400,000,000 for the first time, and in May they rose to \$473,500,000. There was a slight decline in the two months immediately following, and it was generally expected that the shipments of May would not be surpassed. But now we see for August the extraordinary total of \$510,000,000. At the same time the excess of exports over imports, or the balance in favor of the United States, \$310,752,000, was much larger than ever before. At this rate, the excess for a year would be \$3,729,000,000. In the fiscal year that ended with June it was \$2,135,775,000. How great the change has been is shown by the fact that in August, two years ago, there was an excess of \$19,000,000 on the other side of the account. There has been a marked decline of imports since June.

Our receipts of gold are growing steadily. In August the net gain of gold was \$29,000,000, and for the calendar year thus far it has been \$410,000,000. Last year's net gain was \$146,000,000, and the change is shown again by the record for the preceding year, when there was a net loss. More than \$300,000,000 has come in by way of Canada since the first week of May, on British account. Exports of commodities are so large, of course, mainly because we are selling to the Allies great quantities of munitions, metals, other war supplies, and foodstuffs. Payment is made in part by the gold we receive.

### THE LOAN TO PARIS

A loan of an exceptional character has been added to the long list which now shows a total of about \$1,700,000,000 borrowed here by foreign nations or cities since the beginning of the war. The great banking house of Kuhn, Loeb & Co. has loaned \$50,000,000 to the City of Paris. The term is five years, and the bonds to be sold here will bear interest at 6 per cent. Principal and interest are payable in gold. This is the first external loan ever negotiated by that city. Heretofore it has obtained at home what it needed. It is the second European municipal loan made here since the na-

## When Nature Turns Outlaw

*"Blow, winds, and crack your cheeks! rage! blow!—  
You cataracts and hurricanes, spout . . . . ."*

Thus King Lear, in Shakespeare's tragedy, defies the elements. But man, even today, cannot challenge nature with impunity.

The unsinkable ship goes down like a rock from the impact of an iceberg. The fireproof building is burned. The monument, built for unborn generations, is riven by lightning or shaken down by an earthquake.

There are storms which make train service impossible, which delay the mails and which close the public highways to the usual traffic. Even in the cities there are times when the street cars do not run, and neither automobiles or horse-drawn vehicles can be driven through floods or high-piled snowdrifts.

Such conditions increase the dependence on telephone wires, which themselves are not exempt from the same natural hazards. Fortunately, however, the Bell System has faced these dangers and well-nigh overcome them. Masses of wires are buried underground and lonely pole lines, even the most stoutly built, are practically paralleled by other lines to which their business can be transferred.

Each year the lines are stronger and the guardians of the wires are prepared to make repairs more quickly. So each year increasing millions of subscribers find their telephones more dependable and, within the limits of human power, they count upon their use in storm as well as in fair weather.

## "You Get The Job"

"We've been watching you, young man. We know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want in this firm's responsible positions. You're getting your promotion on what you know, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man *trained to hold it*. He's watching you now, hoping you'll be ready when the opportunity comes.

The thing for you to do is to start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools. Over 5000 men reported advancement last year as a result of their I. C. S. training.

The first step these men took was to mark and mail this coupon. Make your start the same way—and make it right now.

tions began to fight. The first, recently negotiated, was one of \$6,400,000 to the Metropolitan Water Board of London. But several Canadian cities have borrowed here.

Owing to the attitude of Kuhn, Loeb & Co. toward loans for war purposes, their announcement concerning the ways in which this money is to be used has been read with interest. "This loan," the bankers say, "is made to reimburse the city of Paris for very heavy expenditures made by it for the alleviation of suffering caused by the war, and to provide for additional similar expenditures, and for other municipal purposes." A part of it may be expended in the construction of hospitals and in general relief work. The banking firm was consulted, of course, in the course of the negotiations for the Anglo-French loan of \$500,000,000 and other similar undertakings, but it declined to participate in any of them. It desires that investors shall know that the money loaned to Paris will not be used for the purchase of arms or munitions, but will be devoted exclusively to the amelioration of human suffering.

### LARGE ORDER FOR COPPER

Negotiations for the largest single order for copper ever known were closed a few days ago, and contracts were signed on the 23d ult. The British, French, Italian and Russian Governments have bought here 200,000 tons, or 448,000,000 pounds of the metal. While the price has not been officially disclosed, it is in the neighborhood of 27 cents a pound, and the sum to be paid is about \$125,000,000. The same purchasers took nearly 150,000,000 pounds in one order last April. On one side in the recent transaction was J. P. Morgan & Co., and the sellers were the Anaconda and the American Smelting and Refining Companies, each of them representing several producing corporations. There will be shipments of 75,000,000 pounds a month, beginning in January.

The quantity purchased is about one-fifth of a year's output, which the demand for munitions has recently increased. Refining capacity is now 2,225,000,000 pounds for a year; twelve months ago it was 1,600,000,000. In value this order exceeds that of our entire exports of copper in any year before the war, except 1913. If this copper had been bought a year and a half ago the sum paid would have been less by \$50,000,000. In 1915 the average price was about 17½ cents; buyers are now paying 28 cents. It is plain that the mining companies' profits must be large, for the reported cost of production in recent years has been from 6½ to 10 cents. In the last few months many extra dividends have been declared. There has been a strong demand for the metal at home, from brassmakers and others engaged in the manufacture of ammunition. It is said that domestic orders for 200,000,000 pounds have been placed in the last three weeks. And American consumers must pay a high price for anything made of copper or brass.

## Indoor Closet

More Comfortable,  
Healthful, Convenient

Eliminates the out-door privy, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

### ABSOLUTELY ODORLESS

Put It Anywhere In The House

The germs are killed by a chemical process in water in the container, which you empty once a month. Absolutely no odor. No more trouble to empty than ashes. Closet absolutely guaranteed. Write for full description and price.

## ROYAL ARCANUM

There are so many worthy people who are members of the Royal Arcanum, and they have been so loyal to it thru all its varying fortunes, that I am disinclined to express any opinion respecting its future which would run counter to their hopes; but it is difficult with the evidence before us to place the same degree of confidence in it as a permanent and stable insuring institution that they do.

In 1905, when, for the second time, a readjustment in its rates was made, the order assured its members that the problem of financial sufficiency had been successfully solved. "No more haphazard assessments," said they; "no more readjustment of rates or assessments, no more re-rating of members at their attained ages, no more questions about the future cost of protection, and no more question as to how long the order can possibly live."

Eleven years later this is a proved mistake. Very recently the rates have undergone another recasting, resulting in an increase running from 5 cents a month per \$1000 at age 18, to \$2.33 per month at age 65. From three-fourths to four-fifths of the membership will be affected by these advances in monthly cost. At age 30 the "Regular" rate per month per \$1000 is increased from 72 cents to 91 cents; at age 35, from 83 cents to \$1.06; at age 40, from \$1.01 to \$1.25; at 45, from \$1.26 to \$1.55; at 50, from \$1.55 to \$1.91; at 55, from \$1.89 to \$2.42; at 60, from \$2.29 to \$3.14, and at 65, from \$5.36 to \$7.69.

It will be observed that the advances are very heavy on the older ages, and yet expert testimony is to the effect that they are still inadequate. For many years the losses on ages above 60 have been largely in excess of the premiums yielded by them, a deficit which has been met by using the receipts from members younger than 50.

E. N. R., Florence, Ala., American National Insurance Company, Galveston, Texas, is eleven years old, has \$61,500,000 insurance in force, assets of \$3,510,070, and a net surplus of \$588,078. Last year it received premiums of \$2,096,105 and a total income of \$2,594,154. Total disbursements were \$2,122,277. A weak spot in its assets is the item of real estate, \$895,820, the interest earning on which was but 1 1/2 per cent. The company seems to be controlled by W. L. Moody, Jr., of W. L. Moody & Co., private bankers and cotton factors. The underwriting and financial methods are sound, investments generally yield good returns, management expenses high, mortality rate high (probably due to industrial business, which is large). Writes new participating policies only since March, 1916. Has \$43,174,333 deferred dividend, \$11,197,000 non-participating and \$37,114,622 admitted insurance in force.

# The Secret of Fast Typewriting

New method enables anyone to write 80 to 100 words a minute without mistakes.

It's all in the FINGERS!

## Doubles and Trebles Salaries

New, for the first time, has an idea been discovered which puts speed—great speed and accuracy—within the reach of every typewriter user. Almost overnight it has revolutionized the whole typewriting situation.

Stenographers who formerly never exceeded 30 to 40 words a minute are writing 80 to 100 words with less effort and with far greater accuracy than ever before. And their salaries have jumped from a meagre \$8 to \$15 per week to \$25, \$30, and even \$40.

## Amazingly Easy for Anyone—Only 10 Lessons

No matter how low your present speed, no matter how labored your efforts, no matter how weak or clumsy your fingers now seem to be, no matter how little or how much experience you have had, no matter what other courses you have taken, this new method will positively bring you the desired results, as thousands of stenographers—and ministers, lawyers, reporters, and writers as well—have already proven. There are only 10 lessons amazingly easy and fascinating. A few short weeks of spare time study is all that is required and the work is simply fascinating.

## Trained Fingers—The New Way

European music teachers, when training their pupils for the piano, invariably give special finger exercises. This is because the untrained way is not the right way. The best results cannot be obtained—the fingers simply cannot be used correctly—unless the student develops and strengthens the proper muscles.

This training is even more essential to expert typewriting. The reason that so few people can write more than 20 to 40 words a minute is because their fingers are not flexible or nimble

enough. This new easy method overcomes this at once—develops finger strength and flexibility by simple, easy exercises away from the machine—trains the fingers beforehand for their work on the machine—and the results border on the miraculous.

## Valuable Book Free

We have prepared a book which tells all about the wonderful gymnastic finger exercises and explains the course in complete detail, which is free to those interested. It is a big 48-page

book, brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers strong and dextrous, bring them under perfect control, make them extremely rapid in their movements—how in ten lessons, in a few short weeks you can transform your typewriting and make it easy, accurate and amazingly speedy—all this and much more is told in detail. No instruction book ever written, no matter what its cost, ever told so plainly the real WHY and HOW of expert typewriting.

If you are ambitious to get ahead—if you want to make your work easier—if you want to get more

money in your pay envelope—don't wait a single moment before sending for this book of information and proof.

This new method is bringing such marvelous results to others—is proving itself to be so sure a means of quickly increasing salaries—that you will be doing yourself a big injustice if you fail to write for it at once. Tear off the coupon now, or write a postal or letter, before you turn the page.

Gentlemen: Please send me your free book about the New Way in Typewriting. This incurs no obligation on my part.

## An Income for Life

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

4 to
5 1/2

### Safe and Sure

Pays better than Government bond and makes safe. Accepted by Government as security for Postal Savings Bank's United States Government Bonds for United States Bonds of our Country. 1914

Box First National Bank, Dept. 16, Columbus, O.

### A SOUND INVESTMENT

Our Annuity Blue Book explains a sure income ranging from 4 1/2% to 5 1/2% on one life and 4 1/2% to 5 1/2% on two lives. This plan makes you your own creator and immortalizes your money after you have enjoyed a sure life income. These bonds are of special interest to Baptists and others who wish their money at last to help Christianize America. Forty years' experience. Write for our booklet.

The American Baptist Home Mission Society,  
Department 1, 23 East 29th Street, New York.

# JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

O O D morning, Brother Sinnick," said the Genial Philosopher, beaming down upon the recumbent figure of the Cynical Sciolist sprawled on an inviting divan. "I hope the world is sufficiently discombobulated to satisfy your thirst for gloom this glorious morning?"

"It's discombobulated, all right," growled the Cynical Sciolist. "War in Europe, chaos in Mexico, strikes in the air, whole universe standing on its head and gyrating wildly into the bargain! Glad you came in. Just been having a hot talk on this Eight-Hour Day business, and like all hot talks it has landed us in the happy Land of Nowhere. What do you think about it, Smiley?"

"Well," demurred the Genial Philosopher, "it's a large question to be answered offhand, but on the whole I think I approve of it, only I believe that as a sword it should be two-edged. When the law says that a man shall not be required to work *more* than eight hours a day I think it ought to go further and say that he shall be required to work *not less* than eight hours a day as well; and in order to obviate any suspicion that it is class legislation it should be made to apply to every grade of human society in the country. Moreover, since it is alleged that the movement is solely for the social, spiritual, and physical regeneration of the race, and has no sordid considerations in the way of a squalid wage-scale mixed up in it, and the principle fully stated is *eight hours' work, eight hours' play, eight hours' sleep*, I believe that in addition to making people work eight hours per diem it ought also to make 'em sleep and play eight hours a day. When we go in for remedial legislation we ought to see to it that everybody gets the benefit of its compulsory features as well as of its indulgences. It ought to be mandatory, and not permissive. The Ten Commandments were every one of them mandatory, and held not the slightest taint of class legislation. It was *thou shalt* and *thou shalt not* all the way thru, and I think any Eight-Hour Law we put on our statute-books should be similarly phrased. Like this, for example:

Eight hours shalt thou labor, and do all that thou hast to do; and eight hours shalt thou play for the delight of thy soul and the relaxation of thy spirit; and that thou mayest give to the world the best that is in thee, eight hours shalt thou sleep for the refreshment of thy body, the restoration of thy strength, and the reinvigoration of thy right arm.

"It listens well," said the Cynical Sciolist.

"It does, indeed," said the Genial Philosopher. "And it would work well.

It's the kind of a three-ply eight hour day I'd like to see for the general jacking-up of our people. Let it hit everybody, irrespective of race, creed, color, or previous condition of social servitude. By Jove, Brother Sinnick, when I think of the possibilities of a triplicated eight-hour day like that it rejoices my soul. Take its effect upon that group of alleged clever Alexanders that we call the Smart Set, for instance. Glory hallelujah, but it would work wonders with Willie, and Reggie, and Suzanne, and Jeannette! It would turn Palm Beach, and Newport, and other centers of idleness into Industrial Communities, bee-hives of effort, instead of merely the gathering places of the lazy fair—or is it *laissez faire*? Anyhow, whichever it is, it would do great things for them, greater than they will ever be able to do for themselves. We'd all become producers under such a system of compulsory work, compulsory play, compulsory sleep.

"Ha!" jeered the Cynical Sciolist, with his arctic laugh. "What on earth could you get in the line of useful work out of these deckel-edged Porch-Sitters and Beach-Combers? There's enough jerry work in the world without watering the stock of Industrial Incompetence with a wave of Social Boobery."

"It would work rather slowly at first, I grant you," returned the Genial Philosopher. "But if we were to compel our various Smart Sets to go thru a sort of Montessori System of Training for a while they'd ultimately pull thru into the beginnings anyhow of a life of usefulness. You can teach any kind of a creature almost anything you want him to learn. Hagenbeck has proved this. I once saw an educated pig at the circus who could drink beer and play poker with all the frigid imperturbability of a university graduate. I have also seen a troupe of highly finished Fleas, each one a star-performer, drawing a miniature cab, driven by another accomplished Flea, and occupied by a sister Flea of aristocratic bearing, who sat back on the cushioned seat with all the lofty hauteur of a squillionaire dowager on her way to Court. Now surely if by patience and perseverance you can teach a pig and a whole family of fleas to do these things, you need not despair of these scions of American leisure. I know a lot of them personally, and I am everlastingly sorry for them. They are not happy in their idleness. Superficially they appear frivolous, and useless. Underneath they are good stuff, but unlike the children of the pavement, *they have never had a chance*. Their fathers and mothers have been too busy with business and bridge to give them anything but money. But a compulsory eight hours of daily work applicable to these unfortunates, as well as to the others—ah, my friend,

what problems would it not solve! These poor, denied, little and big children of the rich would at last have their chance.

"And then at the other end we should encounter a similar, tho a reversed, difficulty. Just as we have had to teach the leisurely to work, so shall we have to *teach the toiler how to play*, for alas, Brother Sinnick, *he does not now know how!* Next to the ignorance of the Joy of Effort among the leisurely the saddest sight I know of, socially speaking, is the ignorance of the poor in the matter of play. Their present diversions are for the most part what we call *rough stuff*. Their idea of fun is a survival of a period when the fundamental principle of humor was hostility and malice, involving the suffering of another. Somebody has to be the *butt* of their jokes, and when they themselves become that butt bad blood is bred, and anger is their portion. In all the games they play they are boastful winners, and bad losers. I am not indicting them for it. I am stating a fact, and that fact is that the *toiler knows no more about real play than the social idler knows about real work.*"

"And how about those of us in between who do know something of both?" queried the Cynical Sciolist. "Are we too to become victims of your arbitrary statute?"

"Not victims, Brother—beneficiaries," returned the Genial Philosopher. "We need the intervention as clearly as any of the others. We consider ourselves normal human beings, but are we, really? We think we know how to work, and we think we know how to play, but as a matter of fact *not one man in a hundred knows how to preserve the just proportions between the two in his daily living*. Most of us work too much or too little. Many of us play too much or too little. Some of us don't play at all, and dull jacks we are! And that lack of a sense of proportion has strewn the world with failures and filled graveyards full before their time.

"And then that sleep proposition! My Lord—what a blessing that would be in a land lacking in efficient sleepers! We are too wide-awake for our own good, Brother Sinnick. Take it from me, we don't get enough sleep in this country these days. Some of us get so little that we're not more than half awake when we are awake, and are only *half asleep* while we sleep. So I say—let's have it. Hereafter my slogan is to be—

Eight hours work, eight hours play,  
Eight hours sleep, each passing day.

Eh? What?"

But the only answer was a snore. The Cynical Sciolist was evidently in strict accord with the Genial Philosopher's views on sleep, and what is more he was proving himself an efficient master of the art.

Incorporated with The Independent May 22, 1916

THE CHAUTAUQUAN

Incorporated with The Independent June 1, 1914

The Independent is owned and published by the Independent Corporation, at 119 West Fortieth Street, New York, William B. Howland, president; Frederic E. Dickinson, treasurer; Hamilton Holt, editor; Harold J. Howland, associate editor; Edwin E. Slosson, literary editor; Karl V. S. Howland, publisher. The price of The Independent is Ten Cents a copy; Four Dollars for one year. Postage to foreign countries in the Postal Union, \$1.75 extra; to Canada, \$1 extra. Writers who wish their articles returned should send stamped and address envelopes. No responsibility is assumed for the loss or non-return of manuscripts. Entered at the New York Post Office as Second Class matter. Entered as Second Class matter at the Post Office Department, Ottawa, Canada. Copyright, 1916, by The Independent. Address all communications to The Independent, 119 West Fortieth Street, New York.

CONTENTS FOR OCTOBER 16, 1916

Volume 88, Number 3541

## EDITORIALS

The Independent Has Acquired the Countryside Magazine .....	89
The Great War Comes to Our Shores .....	90
Class Psychology in America...	90
Prosperity .....	91
Viscount Bryce's Plea .....	91
For an Oriental Commission....	91
Many Rivers, But One Sea....	92
The Mayo Brothers, Masters of Efficiency .....	92
The Superiority of the Past....	92
Dr. Charles H. Mayo (Portrait) ..	93

## THE STORY OF THE WEEK

Exploits of the "U-53" .....	94
The German Pledge .....	94
Republican Rally at Union League .....	94
Wilson Explains His Foreign Policy .....	94
Progress of the Milk Strike ....	95
Industrial Troubles .....	95

## J U S T A W O R D

Did you ever stop to think how seldom publishers of magazines talked about the poetry they were going to print? Somehow verse falls too easily into the category of "filler" and doesn't get into the headlines. But we have ready for publication a long poem from a man whose work expresses so vividly this generation's poetical instincts that it interests us especially, as it has already interested our readers on several occasions when we have been fortunate enough to print some of it. Wilfrid Wilson Gibson writes with great vigor and no little psychological insight of periods of emotional stress. The poem we shall soon publish is entitled "The Shaft."

Joyce Kilmer, whose quiet, genial verse and whose sympathetic criticism are both familiar to Independent readers, has written a little article on "The Most American of Poets." Of course we shall not say now who the poet is, but Mr. Kilmer's judgments are based on wide reading, and what he has to say will be worth watching for.

## T H E N E W P L A Y S

"It just perfectly is jolly," as "the Flapper" would say. Every part well acted, lots of funny situations and really clever lines. *His Majesty Bunker Bean* preaches success and practises it. (Astor.)

*Under Sentence*, by Roi Cooper and Irvin S. Cobb, begins in high tragedy and ends in farce. Well done serio-comic play of high finance, prison horrors and Tom Osborne regeneration. (Harris.)

*Miss Springtime* has two singable tunes, which is a high average for musical comedy. The costumes, what little there is of them, are beautiful and the stage settings attractive. (New Amsterdam.)

"Hush," said mid Victorians if you dared mention a baby before it was born. So that's the title of a delicious, artistic, keen satire on both mawkish prudery and blatant pseudo-frankness. (Little Theater.)

*Firing Sister*, comedy of high New York life. William Hodge as the good brother "Tom Kansas City" saves sister and sweetheart from the clutches of bogus English lord. Capital play capitably acted. (Maxine Elliott's.)

## REMARKABLE REMARKS

ED. HOWE—Paris is one thing and Potato Hill another.

GOVERNOR MCCALL—The hen is the bulwark of our civilization.

SENATOR SHERMAN—The present tariff law is a mongrel pup.

CHAMP CLARK—Perhaps President Wilson has made some mistakes.

THOMAS A. EDISON—You can't get 100 per cent efficiency in a democracy.

EDNA K. FORBES—Glasses usually add from three to ten years to a woman's age.

WINSTON CHURCHILL—Look after the war and "after the war" will look after itself.

WOODROW WILSON—Self-government is not a thing that can be "given" to any people.

DAVID BELASCO—I try not to dictate too much in the matter of dresses to my actresses.

GERTRUDE ATHERTON—I am more susceptible to manners than to anything else in the world.

H. G. WELLS—In November the Germans will begin to squeal, and in seven months the end will come.

ADMIRAL DEWEY—I can conceive of no greater madness than to put the navy in the power of a naval group.

LUKE MCLUKE—A man might wear a wig and get by with it. But a woman never fools anybody when she paints her face.

ALFRED NOYES—The sinking of unarmed fishing boats was one of the favorite amusements of Fritz in the earlier stages of the war.

SECRETARY BAKER—The entire army of the United States from the commanding general to the last private does not desire war.

WALTER PRICHARD EATON—Petticoated privilege entrenched behind its calling cards, is prepared to defend its frontier to the last tea-cup.

HENRY FORD—It is revolting to observe the leadership of a once great party contending that everything that the President has done is poorly done and wrongly done.

REV. W. H. VAN ALLEN—There was a day when Boston was the art and literary center of America. Today the régime of Charlie Chaplin and the ten cent magazine has come in.

S. S. McCLURE—In two years the Zepelins have killed in Great Britain just about the same number of people as are killed by accident every two months in New York City.

JOHN COWPER POWYS—Down in the depth of my being lurks, like a physical craving for air, a longing for vast, uninhabited, untraversed regions, where even God never comes.

FRANK HARRIS—King Edward was loved by the English because he had all the aristocrats' vices; whereas King George is despised by them because he has all the middle class virtues.

CHARLES W. ELIOT—The fate of idolized men like Fremont, Blaine, Bryan and Roosevelt suggests that with American voters "personal magnetism" is not so engaging as has been supposed.

THEODORE ROOSEVELT—The administration has displayed no more feeling of responsibility for American women who have been raped and for American men, women and children who have been killed in Mexico than a farmer shows for rats killed by his dogs when the hay is taken from the barn.

CONGRESSMAN ASWELL OF LOUISIANA—Compare such an insincere, trimming, minnow class, cheap politician as the Republican candidate proves by his own words himself to be, with the scholarly, brilliant, courageous, non-partizan, frank, purposeful, consecrated world citizen, Woodrow Wilson, the candidate of the Democratic party.

# When the Whistle Blows

The healthy toiler who is properly nourished is not trying to see how little he can do for his wages. He drops his work when the whistle blows with the satisfaction and pride of having put in a full day's work. Health for the toiler with hand or brain comes from an easily digested food that is rich in muscle-building, brain-making material.

## Shredded Wheat

is the most perfect ration ever devised for men and women who do things, because it contains the greatest amount of body building nutriment in smallest bulk, with the least tax upon the digestive organs. It contains all the body building material in the whole wheat grain, including the bran-coat which is so useful in keeping the alimentary tract clean and healthy. It is the favorite food of the outdoor man and the indoor man.

Two shredded wheat biscuits with milk or cream for breakfast will supply all the nutriment needed for a half day's work or play. Also deliciously nourishing for any meal when served with sliced bananas, baked apples or other fresh or preserved fruits.

Made only by

**The Shredded Wheat Company, Niagara Falls, N. Y.**

# The Independent

WITH WHICH IS INCORPORATED  
**HARPER'S WEEKLY**  
*A Journal of Civilization*

## THE INDEPENDENT HAS ACQUIRED THE COUNTRYSIDE MAGAZINE

**T**HE INDEPENDENT takes great pleasure in announcing that it has purchased, from the Suburban Press, *The Countryside Magazine*, one of the best known publications of its kind in the country. Less than six months ago *The Independent* absorbed *Harper's Weekly*, which had been in existence fifty-nine years. Two years earlier *The Chautauquan*, with a record of forty years of influential educational activity, was absorbed by *The Independent*, which then became the periodical feature of the famous Chautauqua Reading Course.

*The Countryside Magazine* was founded twelve years ago, and has had an interesting and notable career. Among those who have been intimately associated with the magazine, either in an editorial capacity or as contributors and counselors, may be mentioned Dr. Liberty H. Bailey, Dean of the Agricultural Department of Cornell University; Mr. J. Horace McFarland, President of the American Civic Association; Mr. Enos A. Mills, explorer of the Rockies, and Ernest Harold Baynes, naturalist and lecturer.

Until two years ago *The Countryside Magazine* was known as *Suburban Life*, a phrase that then became a sub-title to the present designation. Mr. Frank A. Arnold, who has been President and General Manager of the Suburban Press for many years, now severs his connection with the magazine in order to take up other important work.

*The Countryside*, under its new ownership, will continue the spirit of service to country and suburban dwellers that has so definitely characterized the magazine from the beginning. Broad plans will shortly be announced for editorial and business development. The Christmas number will be the first to be issued under the new control.

That the Independent Corporation should acquire *The Countryside Magazine* is peculiarly appropriate in view of the active interest which its President has taken for many years in journalism affecting the life of suburban and country people. As the founder of the *Outing Magazine*, a generation ago, he showed his interest in the kindred field of outdoor recreation.

In its editorial and business policy the magazine will be controlled by the Board of Directors of the Independent Corporation. Mr. Karl V. S. Howland, the publisher of *The Independent*, will, in addition, devote his attention to the active management of *The Countryside Magazine*, with Mr. Geddes Smith as Managing Editor.

*The Countryside* will be published from the offices of *The Independent*, and the printing will continue, as for many years, at the well known establishment of J. Horace McFarland at Harrisburg, Pennsylvania.

## THE GREAT WAR COMES TO OUR SHORES

SIX ships have been torpedoed by German submarines almost within sight of the American shore. The gun that warned one of them is indeed said to have been heard by the people of Nantucket. Fortunately no lives were lost, but one of the ships—the “Stephano”—had many American passengers, including women and children, who were compelled to embark in small boats to secure such safety as was possible.

This event brings grave apprehension that the whole submarine issue with the German Government will have to be reopened. The proximity of the newest operations of the German submarines to our own shores does not make them technically any more our business than if they were being carried on anywhere else on the high seas. But it does make much more vivid for the people of

the United States the actuality of their continuance.

The occurrence raises such important questions as these:

Is the United States ready to admit—as it would not admit in the “Frye” case—that putting passengers into open boats out of sight of land is ensuring their safety as required by international law?

Will the United States be willing to permit the main traveled waters about its coasts to be made the scene of warfare carried on under exceedingly doubtful methods of procedure, with all the possibilities for mistakes and accident that that involves?

Shall the United States endeavor to prevent these mistakes and accidents before they occur, or defer action in the hope that they will not happen?

## CLASS PSYCHOLOGY IN AMERICA

IN the reactions of public opinion to the railroad eight-hour legislation, the fact that stands forth conspicuously is the strength of class feeling. Incidentally it throws light upon the essential characteristics of American class psychology, which is different in various ways from class psychology in Europe.

For the enlightenment of readers who believe that “class psychology” is a phrase to which no reality attaches, we may remark that they, and not those who use the term, are overfond of generalization. It is true that the human mind is very much the same the world over, and in all generations, and especially is it much the same thruout each race and nationality. It behaves differently, however, in different circumstances. The Protestant Episcopal bishop of a New England state said that when he went afoot he felt a deep sense of the original sin of automobilists, but that when he rode in a car himself his conscience did not bother him. Men and women who work for wages get into the habit of looking at life in a certain way. Men and women who have plenty of money, a good many luxuries and all sorts of comforts, and who employ wage-earners, get into the habit of looking at life in another way. These mental habits are very real facts, and they have become big facts in America. It is nonsensical to deny that we have developed here a class psychology, or to ignore the part that it plays in our politics.

In America, however, as elsewhere, class psychology takes on a specific color or quality, which is no essential part of it, but which does affect its political functioning. In England, the class psychology of the well-to-do gets its distinctive quality from aristocratic institutions and traditions. Inherited lands and titles, the close association of county family life with the respectabilities of the Church of England, are no part of the essentials of English class psychology, but they are inseparable coefficients of it. These coefficients were cut out of American social organization more than a hundred years ago; and it is because they were that many Americans deny the existence here of any true social classes at all.

They are wrong. They have strangely failed to observe the most significant social fact that American history has contributed to our knowledge of social evolution. It is, that class feeling and ideas may organize themselves about natural ability as readily as about

rank or name. Heredity is quite as effective an agent of social differentiation as hereditament is.

It is not every kind of ability, however, about which class psychology organizes itself in America. It does not organize itself about scientific, or professional, or artistic ability, as, to a certain extent, it does in France, where intellect is supremely admired. Class psychology in America organizes itself about business ability, and in America the coefficients which correspond to land, title, and church in England are wealth in any form, financial responsibility in any form, and the creed of protectionism, which is the nearest American equivalent to an established religion elsewhere. Any man or woman in America who has recognized business ability, who has property, who occupies a position of financial responsibility or trusteeship, and who never doubts the miraculous efficacy of the tariff, is a member of the “respectable” class. The “masses,” by contrast, are miscellaneously made up. They include the wage-earners, the ne’er-do-wells, the failures, the bohemians, and all sorts of economic infidels and sceptics.

These distinctions must be grasped by any one who wants to understand the play of political forces in the United States.

No one party in our history has consistently represented either class or mass, any more than either of the great parties has consistently represented extreme solidaristic tendencies on the one hand, or extreme individualistic tendencies on the other hand. At the beginning of our national life, the Federalists, led by Hamilton, on the whole represented class and solidarity, while the Republicans, led by Jefferson, on the whole represented mass and individualism. That there were inherent contradictions in these segregations was demonstrated in practise and they are clearly apparent to logical analysis. Similar contradictions developed in the growth of the Democratic party before the Civil War, with its controlling slave and plantation owning aristocracy of the South and its relatively poor immigrant adherents in the cities of the North. The Republican party, since the Civil War, has on the whole represented class and solidarity much as the Federalists did a hundred years ago, but its Mugwump and Progressive elements have often attacked privilege and championed mass interests.

In like manner, no one industrial or business group in the population has consistently adhered to any program or tendency. The wage-earners have wavered back and forth between a socialistic solidarism and endlessly varied anarchisms, among which the I. W. W. movement has been a recent example. They have split, too, between adherence to the protectionism of the Republicans and the mass sympathies of the Democrats. The farmers, also, have divided, but in a different way. A majority of them has swung at one time toward the Republican party, at another time toward populists or the Democrats, and this movement has been in a rough way correlated with the ups and downs of prosperity. Apparently, the prosperous, property accumulating farmer tends to ally himself to the Republicans, the unsuccessful and heavily mortgaged farmer to ally himself to the Democrats.

It is these manifold contradictions, complications and shiftings that often hide the general drift of political tendency in the United States and obscure the play of forces that are inherent in our class psychology. Nevertheless these general tendencies are real, and in the long run they dominate. The probabilities are that the November election will again reveal them, and that the voting when analyzed, will afford convincing evidence that class feeling and ideas, as we have here described them, have been decisive.

### PROSPERITY

SINCE the war began our exports have vastly increased to all the Allies except Rumania and to all the neutrals except Holland. They have decreased to the Central Powers almost to the vanishing point. The total increases are over \$2,075,000,000 and the decreases are nearly \$450,000,000. The difference, or net increase of American exports, is exactly \$1,626,419,876.

The greatest material problem affecting the American people is whether this increase is to continue or not after the war. If we were Germany we would have a government commission on the job to forecast and make suggestions which would be adopted as to what course of action to pursue. But being the United States we shall probably leave all these matters to the college professors to theorize about and Wall Street to "practicalize" about.

### VISCOUNT BRYCE'S PLEA

NO more significant statement has come out of Europe since the Great War began than Viscount Bryce's plea, published last week in the special American number of the *Manchester Guardian*, that the United States aid Europe after the war is over in bringing about a durable peace. But the author of the "American Commonwealth" goes farther. He says Europe cannot succeed without us, and he urges as the program to be adopted, the plan of the League to Enforce Peace, of which Mr. Taft is president and which has now been endorsed by President Wilson, Mr. Hughes and many other leaders of thought and action in America.

We have long known that Viscount Bryce was the leading spirit of a group of distinguished Englishmen close to Premier Asquith and Sir Edward Grey engaged in working out the specifications of a plan of

world organization to be established at the conclusion of the war. The fact that he has now discussed the project in the open undoubtedly means that the British Government thinks the time is ripe for public opinion to concern itself with other than the military aspects of the war.

The idea of the League to Enforce Peace, first given to mankind at the meeting in Independence Hall, Philadelphia, June 17, 1915, is now spreading around the world. It is the one constructive idea born out of the war's universal destruction.

We rejoice that The Independent was the first American journal to suggest the basis of a League of Nations and the first to espouse the cause of the League to Enforce Peace.

### FOR AN ORIENTAL COMMISSION

AFTER three years of backing and filling, of war and the threat of war, the United States and Mexico are now trying to compose their differences by the appeal to reason. The Joint Commission whose labors began a few weeks ago in New London and are now being continued in Atlantic City, is so sensible and statesmanlike a method of dealing with international disputes that one wonders that it is not invariably tried when difficulties first arise.

The Japanese problem has been a thorn in the flesh of three administrations, and like all other real problems of human rights it will not be settled until settled right. Apparently our diplomacy has failed, for the United States has not made any reply to Japan's last note presented to our State Department over three years ago. Fortunately Japan has not pressed for an answer, and it is understood she will not while the Great War lasts.

But the Oriental problem still persists. Why not, then, appeal it, too, to reason? This, we rejoice to see, is the suggestion made by a group of returned missionaries from China and Japan who joined with mission board secretaries and some distinguished laymen in a conference in New York last week to discuss Oriental problems.

The decision reached was to urge the President and Congress to establish a commission to take up Oriental problems before they become acute. It was suggested that the Governments of both Japan and China shall be invited to appoint similar commissions and that the American commission shall go both to Japan and to China to meet those commissions in their respective lands, study the problems separately in the atmosphere of each country and then report suggestions for action by our government and people.

The conference also urged legislation by Congress which would give the Federal authorities power to carry out our treaty pledges to protect aliens. A bill for that purpose has already been carefully drawn by the American Bar Association and should be endorsed by every important group of citizens in the United States. The failure thus far to give the administration adequate power to perform our treaty obligations may be explicable historically—but the glaring defect of our laws should be remedied by the next Congress.

We often hear about the friction and irritation between America and Japan, but few Americans realize the unsatisfactory character of American relations with

China. If China were prepared to protest as Japan is we should be receiving more insistent requests for the abandonment of our humiliating race treatment and race legislation than we have yet received from Japan.

Our relations with these lands of mighty potentialities should be set right and voluntarily—before they grow more difficult. Matters should not be allowed to drift. Should they by some relatively trivial incident suddenly grow acute, peaceful solution might be very difficult.

### MANY RIVERS, BUT ONE SEA

**D**AVID LLOYD GEORGE, tho he be Minister of War, has not forgotten how to preach. In addressing the Welsh volunteers at the Mametz training camp he used the following metaphor:

The only way you can attain national unity is by recognizing that there is a variety of faiths and creeds, and that unity is only possible by recognizing each one in its own channel and giving fair play to all. I looked at the rivers as I was driving up today from Criccieth—each running in its own channel, running thru many valleys, running in different directions to all appearances; some running to the east, some to the west, some to the north, and some to the south, and yet somehow all were making for the same great sea. If you dig deep enough down in your faith you will find that that is the real example of it. I was born next to the Baptist river, some of us were born next to the Methodists, others next to the Anglicans, and others next to the Catholics, and we have got into those waters, which are running apparently in different directions, flowing in different channels, and yet you will find that all faiths, tho flowing in different courses, are making for the same great ocean, the same great eternal home. That is the first lesson in tolerance.

This lesson in tolerance was emphasized by the fact that it was given in a big building erected for the religious needs of the soldiers by the joint efforts of four denominations, the Calvinistic Methodists, Baptists, Wesleyans, and Congregationalists.

### THE MAYO BROTHERS, MASTERS OF EFFICIENCY

**W**HEN Emerson—or whoever it was—said, "If a man write a better book, preach a better sermon, or make a better mouse-trap than his neighbor, tho he build his house in the woods, the world will make a beaten path to his door," he put the secret of efficiency and its reward into words that will be remembered till men cease to believe that doing your own peculiar task well is worth while. It is no mere coincidence that these words are inscribed on a card hanging in an unpretentious doctor's office in the little town of Rochester in Minnesota. It is precisely the spirit of this maxim of the Concord sage that has caused Dr. Charles H. Mayo to be elected president of the great American Medical Association for the coming year, just as it caused his brother to receive the same honor several years ago.

The world *has* worn a path to the door of the Mayo brothers—they are really one in work and purpose, and one in reputation and preëminence—precisely because they have set themselves to do one thing surpassingly well. The path has been worn so deep that their judgment in determining to carry on their work far from the beaten track in the obscure town where fortune put them to live has been amply justified. Patients come to them from the four corners of the United States, and beyond. The surgeons of the world journey to their country oper-

ating room to watch the work of these two "country doctors" and to learn from them. The confidence of their fellow practitioners in the skill of the Mayo brothers is illustrated by a story which is too good not to be true. A certain New York surgeon of prominence fell ill. Leaving word for all inquirers that he had gone to Europe for three months, he went to Philadelphia to seek treatment from a friend of equal prominence in the surgical profession. There he met with the information that his friend had "gone West for a holiday." So he went on to Chicago to another surgeon of his acquaintance who also had a high reputation. But he too had gone away, "South for a vacation." Hearing then of the work of the Mayos, he went on to Rochester. There he found to his amused surprise that, as he himself was about to go into the operating room, his Philadelphia friend was just leaving the hospital and his Chicago confrère was well on his way to recovery in one of its rooms. Such confidence surgeons have in the Mayo brothers. More convincing witness to their ability could hardly be adduced.

What is the secret of their success? Nothing spectacular, nothing revolutionary. Just doing the ordinary thing in the extraordinary way. They have that transcendent capacity of taking trouble that Carlyle believed to be the distinguishing mark of genius, and which certainly constitutes a good basic recipe for efficiency. A recent writer, one of those other surgeons who has made the pilgrimage to their country clinic, has said it thus: "Their excellence and greatness do not seem to be especially in any great thing. . . . It is the small things in every single department that could possibly contribute to the doing of the best work, from the initial diagnosis to the use of the knife, that contribute most to their phenomenal success."

Then they have open, eager minds. One or the other of them has from the beginning been often on the road to some point where new knowledge is to be gained, fresh light on old problems is to be found. They refuse to be fettered by precedent, they are always ready to give over old habits of work when new truths are revealed to them.

What is perhaps the greatest ingredient of all in their astounding success is the utter absence of self-seeking. Every consideration in their work is made to give way to the interest of the patient. They try to heal first, and to learn afterward—to gain renown and applause not at all. To quote again from the same observer of their work, "It is the real secret of all success—the obliteration of self—the life that is lived for others."

### THE SUPERIORITY OF THE PAST

**W**E hear from the best authorities that the classics are not studied as they used to be. This does not surprise us, because it has been equally true of every age. For instance, Bishop Berkeley, discoursing in 1744 "On the Virtues of Tar Water" and other things that came into his mind, said:

In these free-thinking times many an empty head is shook at Aristotle and Plato as well as at the Holy Scriptures. . . . In these days that depth of that old learning is rarely fathomed.

This reminds us of the political debate in a corner grocery where one of the village sages remarked: "Bryan is not the man he used to be," and another responded, "No, and he never was."

CHARLES H. MAYO: MASTER OF EFFICIENCY

DR. MAYO IS THE PRESIDENT-ELECT OF THE  
AMERICAN MEDICAL ASSOCIATION

# THE STORY OF THE WEEK

Exploits of the "U-53" over the fate of the submersible merchantman "Bremen," which was recently reported as on its way to America, given place to items of later interest when Germany again sent a submarine messenger to remind us that the road between Germany and the United States is still open beneath the surface of the Atlantic. On October 7, at two o'clock in the afternoon, the German submarine "U-53" bobbed up out of the waters of Narragansett Bay for a three hours' call at Newport, Rhode Island. Unlike the "Deutschland" and the "Bremen" this was no peaceful trader, but a ship of war, and its presence in American waters gave added emphasis to the preparedness argument that the Atlantic is no longer a defense against possible European aggression on this continent. By international law, the "U-53" was privileged to remain for twenty-four hours in our neutral ports, but it stopped only long enough to deliver official mail for the German ambassador, and the commanding officer, Lieutenant-Captain Hans Rose, was the only member of the crew to go ashore. The submarine was of the largest and newest type, more than two hundred feet in length and armed with torpedo tubes and two guns of large calibre. Altho it had just completed a continuous voyage of seventeen days, the submarine required no repairs and no supplies for its return voyage.

After leaving Newport the commander of the "U-53" placed his vessel in the main avenue of transatlantic traffic a few miles from the Nantucket lightship and waited for his victims like a cat outside a rat hole. The first ship stopt on Sunday morning was the

American steamer "Kansan," which encountered the submarine at half past five. The "Kansan" was not attacked, but the British freighters "Strathdene" and "West Point" were sunk as soon as their crews had entered the lifeboats. In the afternoon the submarine halted and sank the British passenger ship "Stephano," the British freighter "Kingston," the Dutch steamer "Bloomersdijk" and the Norwegian tank steamer "Christian Knudsen." Each of the doomed ships received sufficient warning to ensure the safety of those on board. American destroyers picked up the occupants of the lifeboats and took them to port.

The amazing boldness of the "U-53" in sinking so many ships within a few miles of the American coast has given rise to the belief that several German submarines are now actively engaged in commerce raiding in the Atlantic. Many ships belonging to the Allied powers have postponed their sailing, and instructions have been issued to ship captains to avoid the customary sea routes until the British fleet can clear the Atlantic of the raiders or send warships to escort munition ships thru the danger zone. It is probable that the British Government will make a protest at Washington against our permitting German submarines to visit American ports.

## The German Pledge

The sinking of two neutral steamships and the entrusting of their crews to lifeboats by the German submarine "U-53" recalls the German pledge of November 29, 1915, made in reply to an American protest on the case of the ship "William P. Frye":

The German navals will sink only such American vessels as are loaded with abso-

lute contraband, when the pre-conditions provided by the Declaration of London are present. In this the German Government quite shares the view of the American Government that all possible care must be taken for the security of the crew and passengers of a vessel to be sunk. Consequently, the persons found on board of a vessel may not be ordered into her lifeboats except when the general conditions, that is to say, the weather, the condition of the sea, and the neighborhood of the coasts afford absolute certainty that the boats will reach the nearest port. For the rest the German Government begs to point out that in cases where German naval forces have sunk neutral vessels for carrying contraband, no loss of life has yet occurred.

## Republican Rally at Union League

The meeting of prominent Republicans at the Union League Club in New York City on October 3 was ostensibly for the purpose of giving a cordial welcome to the candidate for President, but what attracted the attention of the press and the public was the presence at the meeting of the only two living ex-presidents. Mr. Taft and Colonel Roosevelt both made brief speeches commending the position taken by Mr. Hughes on the issues of the day and emphasizing the importance of the forthcoming election to good Americans. Mr. Roosevelt said in part:

Fifty-odd years ago there were men in this country who were too proud to fight, but they were not found in this club and they did not vote for Abraham Lincoln. Fifty-odd years ago there were men in the nation that were too proud to fight—that is, to fight a foreign foe. I won't say a "foreign foe." That was a wrong statement of what occurred. "Too proud to fight" the foe of the nation, but they were perfectly willing to fight the police and the draft riots.

And now in the greatest crisis for the world as a whole that the world has seen since the Napoleonic wars, it is our duty and privilege to stand once more for the principles for which the men of the early sixties who founded this club stood, to stand for peace honestly and sincerely by every honorable expedient, but to stand for it in that effective way which means that the man standing for it asks it as a right, in the spirit of justice, and does not cringe for it as a favor to be granted contemptuously by a wrongdoer.

At this moment we are informed that in the German Reichstag there is a debate going forward as to whether or not they will resume what they call the U-boat warfare—what I call the murder on the high seas of men, women and children. And you can guarantee that there would be no debate on that subject if they knew that we had as President of the United States a man who would not tolerate any kind of action of that sort.

## Wilson Explains His Foreign Policy

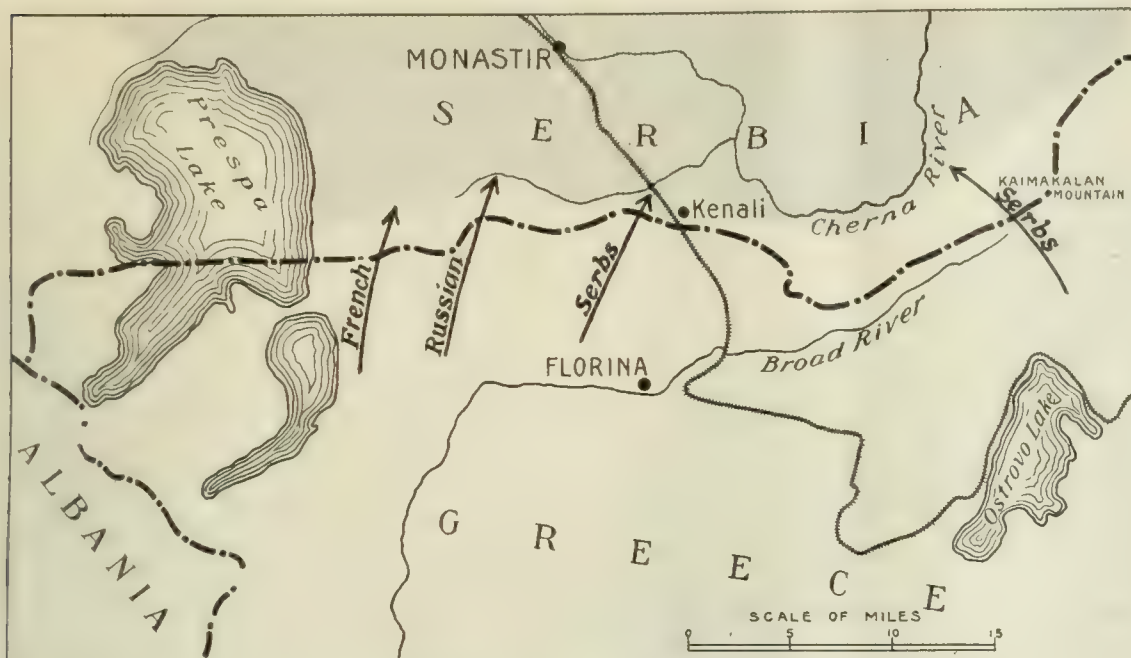

The speech of President Wilson at Omaha, Nebraska, on October 5, altho not referring directly to the criticisms which ex-President Roosevelt and Mr. Root have made on his foreign policy, evidently had them in mind. President Wilson has been charged with placing peace above honor and with callous indifference to the moral issues involved in the Great War. The President denied

GERMANY'S NEWEST SURPRISE

The war submarine "U-53," which dropped casually into Newport harbor the other day and shortly went out and sank several British and neutral merchantmen not far from Nantucket.

## CLOSING IN ON MONASTIR

The fighting in Macedonia is chiefly concentrated in the corner where the Serbian, Albanian and Greek boundaries meet. An Italian force is moving eastward thru Albania toward the city of Monastir now held by the Bulgars. A Russian and a French contingent are advancing along Lake Prespa from the south and the Serbs have taken Mount Kaimakalan and driven the Bulgars back of the Cherna River.

that he thought that America should refuse to take an active interest in the affairs of Europe, but he intimated that he did not see his way clear at present to any intervention in the present conflict. He said in part:

It will take the long inquiry of history to explain this war. But Europe ought not to misunderstand us. We are holding off, not because we do not feel concerned, but because when we exert the force of this nation we want to know what we are exerting it for. . . .

Nothing that concerns humanity, nothing that concerns the essential rights of mankind, can be foreign or indifferent to us. But in fighting for these things, my fellow citizens, we ought to have a touchstone. We want to have a test. We ought to know whenever we act what the purpose is—what the ultimate goal is.

We want all the world to know that we are ready to lend our force without stint to the preservation of peace in the interest of mankind. What disturbs the life of the whole world is the concern of the whole world, and it is our duty to lend the full force of this nation, moral and physical, to a league of nations which shall see to it that nobody disturbs the peace of the world without submitting his case first to the opinion of mankind.

## Progress of the Milk Strike

There has been much discussion as to whether the citizens of Berlin are or are not suffering from a milk famine as a result of the food blockade established by the British fleet. But there is no question at all that New York and neighboring eastern cities are subject to a partial famine as a result of the refusal of the Dairy-men's League to supply the milk dealers at the old prices. Probably one-half of the usual supply of milk has failed to come to market during the farmers' strike. Every endeavor has been made to lessen hardship by giving preference to mothers with children and by distributing to all customers but at a diminished rate.

The dairy strike has resulted in no small degree of violence on the part of the strikers and of those suffering from the milk famine. The pickets of the Dairy-men's League have not always confined themselves to peaceful

persuasion; in several instances they seized the milk cans of farmers who were carrying milk to market and emptied the milk out on the road. Nevertheless a considerable amount of "non-union" milk continues to reach the consumers. The militant members of the Dairy-men's League are pursuing tactics similar to those of the striking tobacco growers several years ago who sent "night riders" about the country to destroy the crops of independent tobacco farmers. In both cases the ready resort to violent methods was the natural result of the fact that farming is the most decentralized of all industries (except housekeeping) and the "scab" or independent producer is usually in a position to market his goods without difficulty unless forcibly prevented from doing so.

The paramount demand of the 17,000 farmers organized in the Dairy-men's League is for a six months' contract with the milk dealers at an advance in price to the farmers of forty-five cents a hundredweight of milk. The large dealers, following the action of the Borden company, agreed to the increase in price but limited it to the month of October. The dairymen refused to agree to a thirty-day contract and the strike continued. Several of the smaller dealers have already accepted the farmers' full demands, including the six months' agreement.

## Industrial Troubles

The more pressing inconvenience of the milk strike is causing New Yorkers to forget that the traction strike is still on, especially since the attempt of the strikers to tie up the elevated, subway and surface lines of the city has not met with any great degree of success. Infuriated at the employment of strike-breakers and the failure of the strike to tie up the city's traffic, some of the car men have systematically attempted to terrorize the traction companies by violent methods. Hardly a day has passed without some stone throwing or other disorder, but the net effect of all

the violence hitherto has been inconsiderable. The most notable riot was provoked by the labor agitator known as "Mother" Jones, who incited some five hundred women strike sympathizers to a raid on the trolley lines of the East Side. The police charged the rioters and clubbed them into submission.

The trainmen on the Hudson River tunnel lines have threatened to punish the Hudson and Manhattan Railroad Company by a strike for discharging a number of union men. The local union is affiliated with the nation-wide railroad brotherhoods which recently extorted the eight-hour law from an intimidated Congress, and will have their powerful support in case of trouble. The ferrymen are also threatening to quit work, thus completely isolating New Jersey from New York City. G. W. W. Hanger, Commissioner of the Federal Board of Mediation and Conciliation, has undertaken to compose the difficulties between the employers and the disaffected trainmen and ferrymen.

#### THE MAN WHO TAKES OKUMA'S PLACE

Lieutenant General Count Seiki Terauchi has been appointed Premier of Japan. He has been Minister of War and Resident General in Korea. He is thought to be something of a militarist

It is announced that President Wilson has selected General George W. Goethals, Commissioner Edward E. Clark, of the Interstate Commerce Commission, and George Rublee, of the Federal Trade Commission, as members of the board created by Congress to investigate the railroad eight-hour law. Besides investigating the working of the eight-hour day, the commission will carry on an investigation of the general relations of common carriers and their employees, and will report its findings to Congress not more than nine nor less than six months after the eight-hour day goes into effect. Until thirty days after the presentation of the report the railroads are forbidden by federal law to reduce the wages of their employees affected by the new time schedule.

The eight-hour day is still so recent an innovation in American industrial life that the speech of John P. White, president of the United Mine Workers of America, suggesting a seven-hour day for mine workers, comes with a certain shock of surprise. The recommendation was made at the Miners' Day celebration held on October 7 at Bellare, Ohio. The change, said Mr. White, was necessary to conserve the

economic and social welfare of the miners and was made feasible by the increased use of mining machinery. Such a proposition, however novel in the United States, would not seem strange to Australians, who heard much, before the Great War cast new burdens on industry, of the possibility of a six-hour day for many classes of labor.

#### Settling Mexico's Difficulties

The conference which is attempting to adjust the difficulties between the Mexican Government and the United States is making progress very slowly on account of the magnitude and complexity of the issues involved. The American representatives at the conference insist upon the inclusion in the discussion of the entire question of the political, financial and industrial stability of the present government before agreeing to the withdrawal of American troops from Mexican territory. An official statement issued by the joint commission on October 4 described the situation as follows:

The morning session of the American and Mexican Joint Commission was devoted to the presentation to the Mexican commissioners by their American colleagues of the importance of giving consideration to

certain questions which have a distinct international bearing because of their effect on the status and the rights of foreigners resident in Mexico and of foreigners who have invested their capital in Mexican enterprises.

The position taken by the American Commission is that the satisfactory solution of these questions is an integral and necessary part of a general program, the purpose of which is to assure to Mexico the resumption of her normal position among the nations of the earth.

It is understood, however, that the withdrawal of American soldiers from Mexico will only be a question of time, perhaps of a very short time.

#### Premier Okuma Resigns

A change in administration that is likely to affect foreign policy has taken place in Japan. The aged Marquis Okuma has resigned the government and the Emperor has called upon Lieutenant General Count Seiki Terauchi, his political opponent, to form a cabinet. Count Terauchi was Minister of War from 1902 to 1911, when he was made Governor General of Korea. Here he put down the incipient rebellion and secured the annexation of the country. He was born in 1852 and entered the army at the age of 19. The military party looks upon his appointment with favor, hoping that he will build up a stronger army and navy and pursue a more vigorous foreign policy in securing Japanese rights in the United States and extending Japanese control in China. It is thought by this party that Marquis Okuma has been too considerate of the feelings of the United States and has neglected the opportunities in China afforded by the eviction of the Germans and the absorption of the British in the Great War.

It is reported from Peking that Japan is taking advantage of the recent clash between Japanese and Chinese soldiers at Cheng-Chiatun in Inner Mongolia to press her demands for administrative control and commercial preference. Besides apologies and damages for the outrage, the Japanese Government is said to insist upon the Chinese army in southern Manchuria and Inner Mongolia being placed under Japanese military advisers.

#### Serbs Invade Serbia

Before General Sarraill's composite force of eight nationalities can advance up the Vardar River he must clear out Bulgars who have ensconced themselves on his flanks. On his right they have possession of all Macedonia east of the Struma River including the port of Kavala, the fortresses of Demirhissar and the cities of Seres and Drama. To the British contingent has been assigned the duty of clearing the Bulgars out of eastern Macedonia and it is suggested that having done this they may keep on across Bulgaria until they reach Constantinople from this side, since they failed to get it by way of the Dardanelles. In such a march along the Aegean shore they would of course have the support of the fleet. But such a campaign, if in prospect at all, is a long way in the future and for the

### THE GREAT WAR

October 2—Russians renew attempts to reach Lemberg. Fourth Zeppelin brought down in England.

October 3—British take villages east of Struma River. Italians drive out Greeks from Albania.

October 4—Serbs reach Cherna River. Russians defeat Turks west of Trebizond.

October 5—Rumanians driven back across Danube. Fifth German loan brings in \$2,600,000,000.

October 6—Italians take peak 8000 feet high in Cismon Valley. Austrians regain Kronstadt.

October 7—British take Le Sars. "U-53" visits Newport.

October 8—"U-53" sinks British steamers "West Point," "Strathdene," "Stephano," and "Kingston," the Dutch freighter "Bloomersdijk" and Norwegian freighter "Christian-Knudsen."

present the British are finding it hard to establish themselves on the east side of the Struma.

On the left flank of the Allies there is greater evidence of progress. The reorganized Serbian army has been successful in driving the Bulgars nearly out of Greek Macedonia, into which they had penetrated some twenty-five miles beyond the Serbian border. The next objective is the city of Monastir, ten miles inside Serbia and the terminus of the railroad from Salonica. The French and Russians are advancing toward this point from the south between Florina and Lake Prespa, and the Serbs from the southeast. The capture of Kaimakalan, a mountain of more than seven thousand feet on the Serbian border, has given the Serbs entrance to their own country from this, and they have advanced as far as the Cherna River. Following up the railroad they have taken the station of Kenali.

The War in the Dobrudja The Danube River, instead of running on east to the Black Sea, makes a turn at Silistria and runs north for a hundred miles before it turns east again to the Sea. This leaves a strip of some six thousand miles between the river and the sea which has been the battleground of many wars, since it is the only pathway from northern Europe to Constantinople that avoids the mountains. The Romans barred out the barbarians by erecting a wall at the narrowest part of the Dobrudja, where it is only 30 miles wide. This is at the port of Constanza, so named in honor of Constantia, the sister of Constantine the Great. As the Byzantine Empire weakened, the Russians came down by this old route to Constantinople, and their efforts have continued for a thousand years. In the nineteenth century they made four invasions of the Dobrudja, in 1810, 1828, 1854 and 1878. At the conclusion of the Russo-Turkish war of 1878, Russia entrusted part of the Dobrudja to Rumania and at the conclusion of the Balkan war of 1913 Rumania took another slice of it for herself from Bulgaria, including

the fortress of Silistria, "the key to Bucharest."

Now again Russia is fighting for Constantinople, and this time England, which formerly stood in her way, is helping her to get it. Her plan of campaign was the same as in her previous efforts, that is, a march thru the Dobrudja and along the Black Sea coast to the Bosphorus. The way was opened when Rumania declared for the Allies, but there seems to have been some mistake in the calculations, for the Russian troops which had been massed in Bessarabia did not have time to occupy the Dobrudja from the north before the Bulgars and Germans entered it from the south.

The Rumanians, relying upon the Russians to defend the Dobrudja, had left weak forces there, so the Bulgars and Germans took with little resistance the Danube fortresses of Turtukai and Silistria, and swept the Russians and Rumanians back forty miles to the Great Wall of Trajan at Constanza. But as the Russians received reinforcements from Bessarabia they renewed their advance, and on the side of the sea where they have the protection of their fleet they have gained ground.

Last week the Rumanians attempted to aid them by striking at the invaders from the western side by crossing the Danube on a pontoon bridge between Turtukai and Silistria. But forces were sent along the river from both these places, so the Rumanians were struck from both sides, while at the same time

their pontoons were smashed by artillery. So the Rumanians, numbering some 15,000, fell largely into the hands of the enemy. On the Transylvanian side, too, the Rumanians have been unfortunate.

**On to Lemberg** The great Russian offensive that was started June 1 made rapid progress at first in two sectors. The southern end of the line swept over Bukovina to the Carpathians and then up to the Dniester River fifty miles south of Lemberg. North of Lemberg the line was pushed forward in a salient curve about Lutsk of more than fifty miles in depth. But by this time the Austrian armies had been reinforced by German troops and put under the command of German generals and the Russians were held in check for several weeks. Now, however, it seems that the Russians have recovered their strength and are resolved to take advantage of the presumed diversion of German forces to the Rumanian frontier. Starting the first of October strong attacks were directed against the German and Austrian trenches northeast and southeast of Lemberg. The success of the efforts is still problematical. The Russians claim gains on the Zlota Lipa River southeast of Lemberg with the capture of five thousand men in five days fighting. The Germans on the other hand report the repulse of Russians northeast of Lemberg altho the artillery preparation was "extraordinarily intense" and the

ROMANIA ATTACKED FROM BOTH SIDES

The Rumanian armies that invaded Transylvania in September have been defeated and the Austrians have regained the frontier towns of Petroseny, Hermannstadt and Kronstadt. A body of Russian troops slipped around secretly behind the Rumanian troops at Hermannstadt and cut them off by capturing Rotenturm Pass. The fifteen thousand Rumanian troops that were sent across the Danube into the Dobrudja were similarly cut off by Bulgarian forces from Ruschuk and Turtukai. The Russians who had got as far as Bazardjik were driven back by the Bulgars to the Constanza line, but are now again advancing. These operations are indicated by the arrows on the map and discussed in the adjoining columns as well as in the editorial department.

#### ENGLAND'S WAR LORD IN A CAPTURED GERMAN DUG-OUT

Lloyd-George, on whom England chiefly relies for the direction of her share in the war, has been visiting the lines in France. The grin on the faces of the assembled Atkinses may perhaps be a clue to the way in which Lloyd-George has climbed into the position of great public confidence which he holds

charges repeated indefatigably. One corps advanced twelve times and two others seventeen times in one day. According to the German account the Russian artillery was turned upon their own trenches to force the Russians forward. Three thousand Russians are said to have been taken prisoner and many more killed. The importance attached to this battlefield is shown by the recent visit of the Kaiser to the front.

According to German estimates the Russians have lost a million and a quarter men this year, and Danish calculations are said to make their losses in the first two years of the war over six million, allowing for wounded returning to the front.

The battle of the Somme has now passed into its fourth month and there are yet no signs of its coming to a decisive termination. The Germans have lost ground continuously from the start and such positions as they have regained by counter-attacks they have in all cases lost again a few days later. The British have advanced a twelve-mile section of their front by about five miles at the farthest from where it stood on the first of July and the French have done much the same.

The territorial gain or loss does not mean much to either side in itself, since it does not include any fortresses or points of strategic importance, tho it was doubtless more strongly fortified than the new entrenchments to which the Germans have had to retire. The real deciding point is which side can stand punishment the longer. The battle has resolved itself into a simple test of endurance and on this question it is impossible for the outside world to form a valid opinion. Obviously the Germans can stand losing a mile a

month for several years without being much worse off, but how long can they stand losing three thousand men a day? And how long will the British be willing to pay this terrible price for thin strips of French territory? Or assuming no failure of men or determination on either side may there not be a fatal lack of some essential in the munitions now being expended at such

an enormous rate? Sir Douglas Haig, the British commander-in-chief, summarizes the situation at the end of September as follows:

Since the opening of the battle on July 1 we have taken 26,735 prisoners and engaged thirty-eight German divisions, of which twenty-nine (about 350,000 men) have been withdrawn exhausted or broken. We hold the half moon upland south of the Ancre, occupy every high of importance and so have direct observation ground to the east and northeast.

Our aircraft have shown in the highest degree the spirit of the offensive. They have patrolled regularly far behind the enemy's lines, and have fought many battles in the air with hostile machines and many with enemy troops on the ground. For every enemy machine that succeeds in crossing our front it is safe to say two hundred British machines cross the enemy's front.

The British also report the capture during the three months of 29 heavy guns, 92 field guns, 103 pieces of trench artillery and 397 machine guns.

The French have taken more than 30,000 unwounded and 4,500 wounded prisoners as well as 144 guns and 500 machine guns.

The British losses, including killed, wounded and missing, for the three months are officially reported as follows: July, 59,675; August, 127,945; September, 119,549; total, 307,169. These are mostly in the Somme field. The French losses are not reported, but are supposed to be considerably less than the British. Probably the Germans, since they are acting on the defensive, have not lost so heavily as the French and British on the Somme, but the Germans have also suffered in the fighting in Russia and Rumania.

On account of the rainy weather there has been little fighting on the Somme during the past week but the British have cleared up the country beyond Thiepval and Combles which they took last week, and have taken the village of Le Sars.

#### SIAMESE AND A HARVARD MAN

Prince Mahillo, brother of the King of Siam, wants to make Siam healthy. He is here to study public health at Harvard as a means to that end

# THE CANDIDATES IN COLLEGE

IN THE DAYS WHEN "TOMMY" WILSON EDITED THE "PRINCETONIAN" AND  
"CHARLEY" HUGHES WAS CLASS PROPHET AT BROWN

BY DONALD WILHELM

**T**WO boys who were destined to be the most talked of Americans in the world in the autumn of 1916, set out for college in the seventies.

They were quite unknown then to the whole of these United States. In fact tradition has it that the upper-classmen at Madison College, now Colgate, challenged one of them, a lean and delicate lad of only fourteen years, before he was half up college hill—challenged him with a roar calculated not to welcome but to speed the coming guest.

"My name," explained this undistinguished boy, "is Charles Evans Hughes, Jr. I'm from Brooklyn, New York, sir."

Which is without doubt much more than the other youth said, because he was older and Scotch-Irish. At any rate he passed into the sacred bounds as "Tom" Wilson, which became "Tommy" when he made the college baseball team.

Thus the two candidates entered college—one of them, Thomas Woodrow Wilson, at Davidson College, in Mecklenburg County, North Carolina, in 1873, at the age of seventeen; the other at Madison, in 1876, three years younger. Candidate Wilson, in short, had a great advantage in years when the two set out, all unwittingly, on one of the best Marathon races in the history of America—a race to end on Election Day, 1916. He was older—six years older. He was stronger. If he had possessed the mental power of the other there would have been no race—Candidate Wilson would have been thru college and law school before Candidate Hughes had got started from his paternal doorstep.

But Candidate Wilson did not have the mental power of his young opponent. Wherefore a race, a very interesting race with the younger Hughes pushing the older Wilson all the way down thru the long lane of the years, with Wilson having won so far by the length of a long Scotch chin.

They started college with advantages in many respects strangely similar.

Both had been born in little homes in side streets of small towns—which is the proper place for presidential candidates to be born. And both were sons of ministers—one, Wilson, son of a "Methodist minister and Democrat," the other, son of a journalist and Baptist minister, a Welshman who came to America in the fifties—

a thin, sparsely bearded, fervent scholar of a man whose only child inherited such of his gifts that tho promoted again and again in the early schools, he nevertheless complained again and again that he "had to go over the same things in school too much." At last, when he presented to his parents a paper entitled "A Plan of Studies for Charles Evans Hughes, Jr.," his mother herself took his education in hand.

**B**UT whereas Freshman Hughes, at the head of his college path, was an extremely precocious boy, with mental rather than personal force, Freshman Wilson was a true scion of two Southern academies, a true grandson of "Old Doctor Woodrow, radical," and a true minister's son of a stanch and vigorous father with an insatiable love of words and their exact meanings, instead of the booming of old-time double-gesture oratory. Young "Tommy" in other words was anything but precocious mentally or delicate physically. He was rather an outdoor boy ready to get "on his mark," "to get set" and to be off at the crack of a pistol in any race for anything he wanted.

He was rather accustomed to shots and struggle. His first memory, it is said, was of a conversation beside a dusty road. Said one man: "Lincoln's elected." Said another: "That means war!" And it meant war, and subdued lights even in Augusta itself where the Wilsons were living, and waiting and watching and lessened rations and even privation, the sight of soldiers marching and of cripples healing and the sight of prisoner Jeff Davis paraded by.

In the nature of things it seems these memories, these experiences and the wider sympathy that comes usually with such experiences ought to have proven an advantage to a man racing with another, up and up in the confidence of their countrymen.

And in the nature of things it seems that having been born in a very small town Staunton, Virginia—ought to have proven an advantage to the young Southerner also, along with having been raised for the most part in "the open," an advantage in a race with a Northerner born not till 1862, near the metropolis, destined to be raised and to spend virtually all his life, and even his college life, within 150 miles of New York, and many of his years within the city itself. The great

Americans have come usually from wide places with limitless sky and fields, where there is no large-city over-legislation to restrict their imagination. They have come from farms and from little towns with an even level of contentment and prosperity where there is not so common and necessitous a consecration to the pursuit of merely material things.

And yet the strange thing about this situation is that the two candidates in college were not at all what, it seems, they "ought to have been."

"Tom" Wilson—he was "Tom" until he became "Woodrow" by raising a mustache and side whiskers in his senior year at Princeton—was not the liberal of the two. "His chin was too long," says one of his classmates. "He was too determined." And young Hughes, perhaps because he was much younger, perhaps because he was a tall, soft-spoken, scholarly youth, Welsh instead of Scotch-Irish, *was* the liberal, if either man was. In fact "Charley," his fellow undergraduates say, was something of a dreamer, a youth who, like a poet, gave promise of leaping the teens and lingering forever in the thirties—unless he studied law. On one hand, says a classmate, "it is fairly well established that Charley was a fine student with a wonderful brain, whom we never expected to be a Governor." On the other hand there is ample agreement to the effect that "Tom Wilson was the best mixer in the world when he wanted to be; nevertheless a young aristocrat, perhaps because he came from the South. He was a man of intense dislikes. He loved the idea of democracy, yet strictly he was not democratic."

**A**T any rate, behold both of them coming swiftly to realize that college required the philosophical attitude. Behold "Charley" Hughes, with bobsled attached to him, climbing the Colgate hill with upper-classmen behind him—so that said upper-classmen could ride luxuriously down again. And behold "Tom" Wilson hailed and hustled out of bed every morning by the necessity of getting water from the neighboring well, of getting wood from the neighboring wood-pile—and of getting to chapel before the absences could be noted; taking out his divine discontent by joining the Eumenean Literary Society, there to discuss often the institution known as "college," to condemn it perhaps. And behold them

Photograph from the Brown Alumni Monthly

"CHARLEY" HUGHES, BROWN '81

both probably—and behold Mr. Hughes certainly, for he himself says it was so—drawing closer to good fellows as the winter wore on, for the reason that the windows had holes which the president of the college either could not or would not have fixed, with the result that the colder the world the nearer one another, and the stove, gathered the philosophical.

It is thus, apparently, that Presidents are made.

IN Yale, a little ahead of these two, in the class of '78, a round and rubicund man dubbed "Bill" Taft, from Ohio, was, by dint of experiences something like these, qualifying for the highest office there is. And at Harvard there was another—a near-sighted youth weighing less than one hundred pounds—discovered often in hidden corners studying bugs, along with a great deal else, even a young lady or two; discovered in the gymnasium one day pulling strenuously and breathlessly on an exercizer, announcing himself to a neighbor "My name's Roosevelt—what's yours?"

These four, curiously, from four major Eastern colleges, were in successive classes, '78-'81, with Mr. Hughes the last of them and at graduation the youngest. If he should be elected we shall have had them as four Presidents in succession, tho not in the same succession.

Wilson and Hughes changed colleges. They tasted the "regular course" at Madison and Davidson with doubt before and after. Before a year had been completed Candidate Wilson quit Davidson and went back to his mother and father, then assigned to Wilmington, North Carolina, there to read and to write incessantly and to be a true minister's son,

while preparing to enter Princeton. And Candidate Hughes likewise quit Madison, tho not till he had finished his sophomore year successfully and had, with his roommate Pendleton, been admitted to Brown, at Providence, Rhode Island.

Thus to some extent the younger Hughes overcame the lead held by his older opponent, for he was able to enter the sophomore class at Brown in full standing as the result of two years of college work and "Tom" Wilson's college work down to this point, so far as college credit went, was good for nothing at all. But Wilson was still well in the lead. For tho Wilson did not qualify as a sophomore till he was twenty and Mr. Hughes qualified as a sophomore at sixteen, the Southerner actually entered upon his sophomore year three years ahead of his competitor—in 1876—for the simple reason that he was six years older.

One went to Princeton, then consisting of "Old Nassau," with its nicks from two wars, with East and West Colleges, Reunion, the Gymnasium and the main buildings, with Witherspoon nearly finished. The other went to Brown, in its earliest traditions a scion of Princeton, set high on College Hill under the elms, there to work during the first year, while living, as Wilson also did, until he moved to Witherspoon, outside the campus, then to move to West College, a dormitory, for his junior year, into a nest of mischief-makers excelled, it is said in "Memories of Brown," nowhere on the campus and nowhere in the college history. He lived with the same roommate in room No. 4, the room nearest the pump, a well-established point of departure for devilish undergraduates who used to bring President Robinson, with his skull cap on and his long white hair and coattails flying, swiftly across the lawn. "You come here," the old educator is recorded as having said once, "with your heads rolling like a newborn babe's—I'll steady them for you."

AT the beginning of his senior year, perhaps because there was no cellar under West College, Hughes and his roommate moved to Room 22, on the second floor, in the middle section, facing the front, where they were ringleaders in many an undergraduate frolic, where they kept their own fire, dumped their ashes on the hallway floor, like all the rest, carried their own water from the pump and, when the only drain got plugged or frozen, yanked up one of the rattling window frames and shot all surplus water into the air with the customary haloo of "Stand out from

Pack Brothers, Photograph from the Senior Class Album

"TOMMY" WILSON, PRINCETON '79

under!"—which haloo is reputed usually to have arrived some fifteen minutes late.

There was chance for individuality in such atmosphere, surely, even tho the *Princetonian*, with Wilson as an editor, insisted that a "college should be literary in its tastes, in its ambitions. Well-developed animality ought scarcely to be made an end"; even tho Roosevelt, in terms of "justice," "righteousness," "college honor" in the *Harvard Advocate* was preaching the evangel of Harvard athletics, expressing not only his deep gratification that Yale had been defeated in baseball by Brown, but deep chagrin that Harvard had been defeated by Brown also.

He cared little that Brown had Richmond, the "southpaw" pitcher, sometimes said to have invented the curved ball, who, according to current rumor, says President Faunce of Brown, "could pitch a curved ball so that if it were sent between two upright posts, it would go to the right of the first post, to the left of the second and again to the right of the third." From such college atmosphere, by the way, in full dress clothes, Theodore the Terrible marched one night, by order of a club, into the gallery of the Boston Theater, to participate in a performance of the tragedy "Medea," by applauding in all serious scenes, by keeping on applauding until the ushers put him out.

And it was in such college atmosphere, at Princeton, that Mr. Wilson learned from the Latin or from Lord Chatham, who used the expression noted below in Parliament in 1775, or from Sumner, who used it in 1862 in the Senate in connection with the Trent affair, the old proverb "non

dimicare est vincere," which means "not to fight is to conquer," or, as the nation got it not long ago, "too proud to fight." And it was also in this same atmosphere that keen young Charles Evans Hughes, Jr., the only match in mind for "Prexy" Robinson, who openly despaired of poor intellects, following hard on the words of this professor in philosophy, caught him up and earned his undying love by explaining, after the profound teacher had used the expression "reductio ad absurdum," that the absurd need not be feminine.

Perhaps this witticism will placate some anti-suffragists; at least it will exasperate some. And it is a good theme for campaign orators. Perhaps this witticism was merely gallantry, for something—it is believed, however, to have been the awkward diffidence of young Hughes—got him the pseudonym of a "lady-killer" while in college—he was a "Potato Mash-er," as a college periodical has it. At least these fateful words merit attention, because in those days of "Pinafore," of bicycling, of side whiskers, canes and the grand manner, when college had no usages except for the studious aristocratic few, when masculine oratory was a virtue and masculine judgments the higher rule, consider well what the *Brunonian* said in an unchallenged editorial called "Sex in Education":

To the properly conservative mind, nothing can appear more alarming than the persistent demands of women for admission to the higher institutions of learning. It will be sad indeed if we become so soon unmindful of the precepts which our ancestors have transmitted to us and fail to recognize their wisdom in seeing "the three R's" as the limits within which might be obtained all the development necessary to the feminine intellect. . . . Women no longer confine themselves entirely to those household duties for which alone the superior intelligence of man has declared them fitted. A pernicious habit of reasoning has seized upon

them—tho we all understand that women's proper condition is one of ignorance and dependence. . . .

Was it any wonder thus that college students in the old days constituted themselves a race apart, with nary a radical I. W. W. among them? Was it any wonder that they turned to college work, and college mischief, with a vengeance, and that Messrs. Hughes and Wilson, like Roosevelt and Taft, were fervent supporters of their college athletic organizations?

Hughes and Wilson were alike in that—tho neither won by actual playing any kind of varsity insignia. They were like the other two also in that each was sure of his religious beliefs. They were like each other in that each had a wide range of associates, that each was on his college paper, tho Wilson was managing editor of his in his senior year; that each was an essayist and debater of distinction. But Wilson stood alone among all the four in some respects. He stood as an authority in a special field not strictly of college work, and as a result in his senior year did the very exceptional thing of having the *International Review* accept an ar-

ticle from him on a subject of public concern, an article called "Cabinet Government in the United States," a vigorous essay of considerable length that became later the heart of his book *Congressional Government*.

Hughes was indisputably the better scholar. He was chosen in the first group for the honorary fraternity, Phi Beta Kappa; he was something of a leader in Delta Upsilon, an "open" fraternity then. He had a part in the Junior Commencement, had the Classical Oration and Prophecy at commencement, in rank fourth from highest and in years the youngest—nineteen—in his class, and later was first in his class at Columbia Law School, the largest class then in America. Wilson got no such honors for scholarship. He was thirty-eighth in his class, aged twenty-three at graduation. He failed to finish his course at Virginia Law School, failed in the practise of law in Atlanta. But he won numerous prizes in his special field.

Thru college Hughes was the better scholar; Wilson was the man with a mission. All they did illus-

trates this contrast. The younger was anxious to please his fellows. The elder was anxious to please Woodrow Wilson. Wilson refused to debate for a prize that surely was his because he preferred reading history to Ben Jonson. Wilson, champion of Whig Hall, was put forward to debate Clio Hall for the College championship. Hughes would have been delighted. Wilson on the morning of the debate drew lots for sides. The college community learned he had drawn the wrong side—that he was assigned to debate for protection instead of for free trade.

He refused to debate.

"Pig-headed," his friends raged.

"Conscientious," he replied.

He would not budge an inch.

*New York City*

HUGHES WAS A LEADER IN DELTA UPSILON

In 1895 he served on the Installation Committee of the Lafayette Chapter. Left to right, standing, are: Otto Endlitz, Cornell '21; Fred Crockett, New York '21; Marcus Allen, Colgate '21; seated, Edward Bassett, Amherst '24; Robert Endlitz, Cornell '25; Charles E. Hughes, Brown '21.

# WALL STREET AND THE GERMANS

BY NORMAN HAPGOOD

CANDID minds agree on the lineup of forces for the November decision: for Hughes, Wall Street, the inertia of the normal Republican plurality and the Germany-first vote, —a formidable combination. For the President, his record and the welfare of the many,—a combination, I believe, more powerful still. Let us not belittle the power of a Wall Street that is united as never before since the days of Hanna. The insolent boasting of the disloyal Germans and their few Irish lieutenants deserves but the contempt shown by the President. More than ever, the election will be decided by a silent mass from whom little has yet been heard. However conservative the American people may be (and it is the most conservative among modern nations), it does not, if it is fully awake to the issue, desire Wall Street to be restored to power. It does not desire a malignant triumph for the hyphens who detest the President. It is, indeed, difficult to picture an American farmer or laboring man walking to the polls to cast a vote that shall please most keenly the predatory minority of wealth and those among the foreign born who are lacking in loyalty to the country of their adoption.

Henry Ford is a Republican; he knows what fair and enterprising business means; and he is for Wilson. He has explained why he believes in free business instead of in the Hanna combination of politics controlled by business. Thomas Edison is a Republican; he understands business; and he is for Wilson. Charles R. Crane is an independent; his life has been associated with a great business that asks no favors. He has supported many progressive Republicans in the past; and he is for Wilson now. William Kent, first a Republican and then an independent, is a man of large wealth and extensive investments; he is for Wilson. The three ablest and best informed editorial pages in the country are in the *Springfield Republican*, the *Christian Science Monitor*, and the *New York World*—all three for Wilson. The ablest progressive Republican paper, the *Philadelphia North American*, has been as nearly for Wilson as keeping its Republican tradition permits. The most creative and eminent college president of our time, Charles William Eliot, has come out powerfully for the President. The leading independ-

ent writers on public affairs, such as Ida Tarbell, Ray Stannard Baker, Walter Lippmann, Will Irwin, Samuel Hopkins Adams, Lincoln Steffens, Walter E. Weyl, are for Wilson. She who stands, without question, at the head of American women, whose life has been a precious heritage to this nation, is for Wilson. Who is for Hughes outside of those with Republican pasts? Surely few of any distinction.

It is interesting to consider why Mr. Hughes changed his mind about leaving the Supreme Court. A correspondent asks me whether or not it is true that Mr. Hughes said in 1912: "The man who, being on the Supreme Court of the United States, would consider any other office is fit neither for the office that he holds nor for the one to which he aspires"? As that report is merely oral, I cannot answer, and we must, therefore, give Mr. Hughes the benefit of the doubt, but there is plenty of other evidence of his frame of mind. In 1912 he said, "The Supreme Court must not be dragged into politics and no man is as essential to his country's welfare as the unstained integrity of the Court." In 1913, Mr. Taft said to the American Bar Association, "One of the great debts which the American people owe to Mr. Justice Hughes is the example he set in the last presidential campaign when the most serious consideration was being given to naming him the candidate of the Republican party. He announced his irrevocable determination not to enter the political field because he had assumed the judicial ermine."

Now I am not one of those who would deny to Mr. Hughes the right to change his mind. The cost to our traditions was such, however, that we must ask, for what did he change his mind? To "reunite" the Republican party is the favorite answer. Reunite it, as the cat and the canary are united. Destroy the Progressives. Add respectability to the eternal effort of special money privilege to keep its feet in the trough. Swing the forces of materialism and big money control into their most effective battle array. Is that the service that Mr. Hughes planned when he cast his robes aside?

The eight-hour fight looked for a time as if it were going to give Mr. Hughes a passionate issue to last him until November. Even there, however, the expected punch fails to keep up. Again the terrific Teddy leaps into the arena and tells how HE never

yielded to pressure. Oh, didn't he? Just put on your thinking cap, T. R. Do you remember the Tennessee Coal and Iron case? Yes, you do. You remember that representatives of J. P. Morgan & Co. and the Steel Trust gave you just twenty minutes, after which powerful reflection you, as President of the United States, told them to go ahead and complete their monopoly and you would see that no harm befell them. Twenty minutes! It may be an awful crime to grant the eight-hour day in order to prevent a nation-wide strike, even tho the eight-hour day is nationally accepted as right, and even tho it is only for six months, to get the best of evidence, by experience, of how it works; yes, and even tho it is coupled with a full plan for preventing tie-ups hereafter. That may all be very, very dreadful, but is it worse, O Teddy, than to allow a few men in Wall Street to put over on you the threat that if you did not give them immunity for committing an outrageous suppression of useful competition they would hand you a fancy little hand-made panic?

The truth is, the principal difficulty I find in composing this series of articles on the campaign is that I can't find any arguments worth combating. Perhaps I can enliven this one a little by informing Teddy that one of the beneficiaries of his trust gentleness offered to raise a million dollars in a week, for the Wilson campaign fund, if he could have a much more moderate assurance than T. R. gave in the Tennessee Coal and Iron case. But he didn't get any assurance.

Wilson is a man who acts. History will ring with that truth. Some people realize its force already. Says the German conservative organ, the *Reichsbote*: "Our attitude toward America should have been different and firmer from the beginning of the war. In that case much would have been made easier later on, perhaps. Wilson would not have dared to interfere in our affairs in so high-handed a manner. We should have spared ourselves humiliation and should have been able to wage the U-boat war unrestrained."

In short Wilson has known how to prevent piracy without going to war. He has known how to help Mexico progress without shooting up her people. He has known how to correct the currency and the tariff without even momentarily upsetting business.

And therefore Wall Street and the Germans want to get his scalp.

## WILSON'S MEXICAN FAILURE

BY JACOB GOULD SCHURMAN

WHEN once a President has been installed the foreign affairs of the country are conducted by him and by the Secretary of State whom he has appointed. Of course, treaties must be ratified by the Senate and Congress alone can declare war. But our ordinary relations and intercourse with foreign nations are exclusively in the hands of the President and his Secretary of State, who also negotiate treaties and even shape those policies which may lead to a declaration of war.

It is the laudable practise of good citizens to support the chief executive between presidential elections in his foreign policies unless these should be against conscience or seriously and obviously injurious to the best interests of the Republic. The President's policies are for the time the nation's policies. General criticism would embarrass him in carrying them out. And there is a presumption in favor of the President's course because he knows all the facts better than any one else. Acting on the patriotic duty of standing by the President in foreign affairs I said, when President Wilson in the winter of 1914 refused to recognize Huerta, that in this policy, which was based on grounds higher than the requirements of international law, the President should have the support of the nation, "whether individuals may or may not agree with his ideas." And there can be no doubt that hosts of American citizens during the term of President Wilson's office have, in their desire to stand by their own government, either silently acquiesced, or doubtingly supported him in his Mexican policies contrary to their own better judgment.

But when the President appeals to the American people for election to a second term it is at once the right and the duty of the voters to pass upon the merits of the foreign policies which the administration has adopted.

What then shall we say of President Wilson's Mexican policy?

Like the overwhelming majority of his countrymen of all parties President Wilson felt genuine compassion for the Mexicans in their miseries, deplored their chaotic national conditions, deprecated intervention, earnestly desired their economic and political and social rehabilitation and reorganization, and sympathized deeply with all their legitimate aspirations for liberty, popular education,

and a just share of the good things of life. His humanitarian impulse was strong and genuine. And his confidence in his ability to solve the Mexican problem was as boundless as his altruism. His view was that the great need of the Mexicans was a constitutional government, and he determined to give it to them.

But international law and American policy place upon the President of the United States in his dealings with foreign nations a duty and a right which take precedence of everything else. The duty is to respect the independence of other nations and to abstain from all interference with their domestic concerns. The right is to secure protection for the lives and property of Americans lawfully resident under foreign jurisdiction.

In his enthusiasm for his program of establishing a constitutional government in Mexico Mr. Wilson ignored these primary obligations of the President of the United States. He did the thing he ought not to have done: he violated the sovereign independence of Mexico and interfered in her internal affairs. And he left undone the thing he ought to have done: the securing of protection for the lives and property of Americans in Mexico.

It is not a question of the recognition of Huerta. True, Huerta was de facto president of Mexico and claimed to be the constitutional president. In the territory ruled by him comparative peace and order prevailed and the lives and property of Americans and other foreigners were protected.

Yet to drive Huerta out of power became the outstanding feature of President Wilson's Mexican program. He insisted that Huerta should not be a candidate for election to the Mexican presidency. To this request Gamboa, Huerta's Secretary for Foreign Affairs, replied on August 16, 1913, in the following terms:

The request that General Victoriano Huerta should agree not to appear as a candidate for the presidency of the republic in the coming elections cannot be taken into consideration, because, aside from its strange and unwarranted character, there is a risk that the same might be interpreted as a matter of personal dislike. This point can only be decided by Mexican public opinion when it may be expressed at the polls.

The Mexicans, it seemed, were not to be persuaded to accept liberty and constitutional government thru President Wilson's diplomatic intervention in their internal affairs. Well, if persuasion failed coercion re-

mained. And, as Mr. Hughes has recently discovered, President Wilson instructed John Lind, his personal representative in Mexico, to say to the minister of a foreign nation that

Huerta will be put out if he does not get out; that it is the preference of the President that it be accomplished by domestic means, if possible, but if it cannot be done by domestic means, other means adequate for the purpose will be resorted to.

Those "other means" were soon forthcoming. True, the American people were misled. They were told that the administration sent the war vessels to Mexico for the sake of compelling Huerta to salute the flag. They now know they were misinformed. We have the categorical statement of Mr. Lane, President Wilson's Secretary of the Interior, as follows:

We did not go to Vera Cruz to force Huerta to salute the flag. We did go there to show Mexico that we were in earnest in our demand that Huerta must go, and he went before our forces were withdrawn.

Huerta having been driven out by President Wilson, Carranza, in spite of the claims of the arch-bandit Villa, was set up in his place. But the liberty and constitutional government with which President Wilson desired to endow Mexico are as remote as ever. One military dictator has merely succeeded another and rival bandits conspire to take his place. Chaos continues, crimes—certainly crimes against Americans—have increased. We have had the Columbus attack and the Carrizal murders and barbarities. Our military forces have been for months in Northern Mexico, and on the border we have now gathered the largest army ever assembled in the United States since the Civil War.

Had President Wilson at the outset of his administration recognized that fundamental and imperative obligation to protect American citizens in Mexico, how different would have been the subsequent history of our relations with that country. But Mr. Wilson abandoned that primary duty of the President of the United States in his zeal to interfere in the domestic politics of Mexico. The nemesis of his unwarranted conduct has been the destruction of some billion dollars' worth of American property, the impoverishment of thousands of American citizens, the murder of hundreds of American men, and the outrage bitterer than death of an uncounted number of helpless American women.

# VERS LIBRE

BY JOHN W. CUNLIFFE

ASSOCIATE DIRECTOR OF THE SCHOOL OF JOURNALISM IN COLUMBIA UNIVERSITY

FREE from what, and for what? Poets discard one law only to adopt another, for no verse can be entirely lawless, and the vers libristes protest against the accusation that they are anarchic. Their rebellion is against the bondage of tradition—the tradition of meter—and the new law they uphold is that of cadence. "Vers libre," says this year's Anthology of the Imagist Poets, "is a verse-form based upon cadence." They claim, moreover, to have a tradition in English poetry, enlisting under their banner Dryden, Milton, Matthew Arnold, Henley and even Chaucer, tho the last name rests upon an interpretation that is, to say the least of it, doubtful. They protest, too, that they have "the greatest admiration for the past and humility toward it. But they have been caught in the throes of a new birth." Their immediate descent is, they say, by way of the French Symbolists, and their motto, taken over from Remy de Gourmont, is "Individualism in literature, liberty of art, abandonment of existing forms."

To their program as it is now set forth there can be no objection on theoretical grounds. Poetic tradition is not like the laws of the Medes and Persians; it is constantly changing, and now and again undergoes a revolution. Every poet worth the name tries to say something new or to say it in a new way, and every innovator has to encounter the "This will never do," of the established critics.

Conscious that changes must come, and ought to come, in verse as in every living art, we should give the vers libristes a fair hearing—so far as we can. The coldness of their reception is due in part to the inveterate traditionalism of the human race,—for we are all more or less conservative—and partly to the fact that the free versifiers are not all poets. Mr. Skipwith Cannell writes in "Others":

I am tired of old colors  
and old sounds,  
I will make new sounds with my mouth  
and they shall be music.  
I will make new sounds  
and new jumps and gestures.

Some of the new poets make new sounds with their mouths, but they are not music—at any rate, not to our ears—and some of their efforts seem to be mere "jumps and gestures." It is by their achievement that they must be judged, by their appeal to the ear and to the mind. They claim, fairly enough, that a cadenced poem must be read aloud for its rhythm to be felt, and that it must

be judged as a whole, not by detached lines or fragments. Upon rhythm they insist as "the most important quality in their technique," and they have a righteous scorn for the reviewers who accuse them of discarding it.

It is upon this point that the public has instinctively seized, and its instinct is sound. When the ordinary reader exclaims that vers libre is not poetry, what he means is that no rhythm is apparent to his ear. "Vers libre is a difficult thing to write well, and a very easy thing to write badly," Miss Lowell justly observes, and no doubt some hasty judgments are formed, not upon examples of free verse, but upon the numberless parodies of it, most of them foolish enough. Cadenced verse, in addition to the unfamiliarity of the form to the average man, is subject to the further restriction that it demands greater subtlety of rhythmical perception both on the part of the reader and on the part of the hearer. The new poets must reach their public by making their music felt. The Imagists say themselves that "it is not what they write about which makes them hard of comprehension; it is the way they write it." The ear will become more sensitive to the new rhythms, partly by the study of such explanations of the effects which the vers libristes are trying for, as that from which the above sentence is quoted, and chiefly by the study of the poems themselves. Miss Lowell's "Patterns," for instance, is admirably fitted to make way for the new verse, first by its vivid imagination and striking perfection of form, and secondly by its clever combination of rime and free measures. It may be that in this modification of metrical tradition—by neither altogether rejecting rime nor submitting slavishly to its bondage—the path of progress really lies. Certainly the general public will be much more quickly won by such a deviation from its accepted traditions than by what appears to be an absolute break with them.

Miss Lowell's combinations of verse and rhythmic prose—after the manner of Paul Fort—are less successful. As printing verse in broken lines does not make it poetry, certainly printing it in solid paragraphs does not, and while the Imagists are no doubt right in their claim that they appeal to the ear, we read books with the eye, and the line arrangement is a long-established convenience, the absence of which merely causes annoyance. The spring poem

beginning, "The day is fresh-washed and fair, and there is a smell of tulips and narcissus in the air" appears to me, for the most part, neither good verse nor good prose.

What the new poets have to say does not differ radically from the kind of thing their predecessors have said. They can hardly be said to have a common manner beyond their verse medium or a common point of view. Miss Amy Lowell classifies them as realists, fantasists, nature poets, and what she calls the "lyrico-imaginative type." The last group, of which Mr. John Gould Fletcher is the leading representative, seems to me to fail from lack of sufficient imaginative and emotional intensity, but the things they attempt are interesting. The realists—Mr. Carl Sandburg, for example—are more successful in the achievement of the effects they are striving for, tho sometimes—as in the case of his ghastly poem entitled "Becker"—it is a question whether the thing is worth attempting at all. Mr. Richard Aldington's realism is conscientious enough, grim even, but it is not so brutal, and it is none the less effective.

Fortunately some of the realists are not without a saving sense of humor, which should go far toward winning popular attention and favor. The public can hardly fail to understand Mr. Robert Carlton Brown when he says:

I love anything ostentatious;  
Simpler things I despise.  
I like to hear a nose blown with a bang,  
See teeth picked with a flourish,  
Watch a fat lady wobble her cargo of  
flesh  
As tho it were worth a thousand dol-  
lars an ounce.  
I think ostentation of any sort  
Is just *grand*.

Equally effective in its irony is the conclusion of the same poem:

Fly speck,  
You are such a neat, tidy, unimportant  
Little thing  
That no one takes offense  
At sight of you  
Or mention of your name.  
But you irritate me  
With your polite little airs of decency.  
Why don't you grow up  
And be something?  
Even a fly speck  
Can aspire to be  
A manure heap.

If the public can be convinced that the vers libristes have something to say worth attention, it will have more sympathy for their way of saying it, and the opening wedge will come by way of amusement as well as by that of high seriousness.

New York City

# BREAD 'N' MILK

BY HAROLD HOWLAND

I WAS in bad temper this morning. There was no cream for my coffee. Now, black coffee in the expansive moments after a good dinner is one thing, but alongside bacon and eggs and hot rolls at the unsociable hour it is quite another. So my peerless disposition cracked under the strain. When my gruff request for a glass of milk as a substitute for the ruined coffee was met with a simple *non possumus* I knew it was all over for the day. I should be cross until my after-dinner pipe and slippers. I curst in my wretchedness all dairymen and milk companies, all farmers and distributors—all those selfish, greedy men who would not agree among themselves and let me have cream in my coffee.

Oh, but I was cross.

Not so Mrs. Severn when I climbed the five steep flights and sat me down in her little four-room tenement over on New York's East Side for a chat. She is a little bird of a woman, who cannot say three words without the sparkling smile that flashes in and out. She sat there across the table alert and cheery, and, all unconscious of what she was doing, read me a lesson in submissiveness and the philosophy of life.

Life in the tenements is a great teacher of philosophy.

"No milk at all this morning," she said. "Two bottles we get every day. But yesterday the man could let us have only a pint; and to-day not any. It's hard on the children." She sighed a little, but the hide-and-seek smile strangled the sigh in mid-career. There are four of those children, I know, fifteen, thirteen, eleven and eight—with the appetites of those growing years.

"I try not to give 'em tea and coffee," she went on; "I know they're not good for 'em. They have cocoa instead. But what can I do without milk? I tried makin' it with water last night, an' puttin' the can o' condensed milk on th' table, but they don't like it that way."

"They're not used to it, you see," she hastened to add, defensively. "They're awful good

about it. We was talkin' about it this mornin', an' Sally said, 'But what're we going to do, mummy, without any milk, an' with everythin' goin' up like this?' But Jimmy—he's the oldest, you know, an' a fine steady lad, too—he said right away, 'It'll be all right, mamma, we'll all just have to stop eatin' so much.'"

"He meant it, too, and they all chipped in and said that was right. But I knew how it would be, an' I says, 'That's what you say now, when you've just had your breakfast. But just wait till you come home from school hungry and want a slice o' bread 'n' butter, or a glass o' milk or somethin'. That'll be different,' I says." The smile twinkled in and out.

"You see," she began again. "It's not only the milk. It's the bread, too. That's gone up again. Just look at that loaf." She pulled it out of its bag and set it on the table. "That's a six-cent loaf now. It used to be five, an' bigger at that. What'll that look like when my four have got thru with it?" What indeed! It looked not much bigger than a good-sized French roll.

"But it's not so bad for us." That irrepressible smile would not let her look on the dark side a minute

longer. "But the woman next door has a baby. It's a bottle baby, you know; just seven months old. It *must* have milk, and there was none left for her this morning, and she can't get any at the store. They keep the little they have for their regular customers. This morning I gave her the few drops I had left from my pint of yesterday—but what she'll do after that I'm sure I don't know. The baby must have milk, you see."

The thought of that baby somehow hurt—and I had complained of my creamless coffee this morning!

Now, my income is sufficient to give my family plenty of the luxuries of life and many of the necessities. But Mrs. Severn's is right on the ragged edge. She is a widow, and she not only takes care of her home and lively family, but makes something like \$2.50 a week at pasting the red tissue paper on little Christmas bells. Twenty cents a gross she gets for them, and it takes an hour and a half to finish a gross. Her income is supplemented by a widow's allowance from a charitable society, and that, you may be sure, is calculated down to a razor edge. Sixty dollars a month her allowance is, and the way the society's experts figure that

should be spent is thus: Rent, \$13; Food, \$29.75; Fuel and Light, \$3.25; Clothing, \$12; Sundries, \$5. If Mrs. Severn keeps close to this schedule, she has her own \$10 a month for luxuries—such as movies, doctor's bills, junkets, church contributions, Sunday newspapers and baseballs and dolls and roller skates, accidents and emergencies. Not a generous margin, is it, for five very human beings?

But what happens when even that margin is cut into? That estimate of \$29.75 for food was based on last winter's figures; at the prices she must pay to-day her food expenditures jump to \$35. Her \$10 margin is more than cut in half at a stroke.

Now if bread goes up a cent a loaf that precious margin now shrunk to \$4 will lose another sixty cents. When milk goes up a cent a quart it slashes

Drawn for The Independent by W. C. Morris

GOING UP!

ninety one cents out of that precious hoard.

What—I ask you as Sally asked her mother in the beginning—are they going to *do*?

I too asked Mrs. Severn that searching question. She gave the only answer that I can think of.

"We 'poors' will have to stop eating, I guess." The smile was still there, but a trifle rueful now.

As I tramped down the five flights again, my soul was filled with righteous wrath, and, good American that I am, I forthwith began to cast about to see whose fault it all was. *Somebody* must be creating the conditions that pressed so hard upon the "poors." What wicked men should we pillory? I must find out.

So I confronted in his lair the head of a great company that makes bread not by the loaf but by the ton.

"Why," I asked him sternly, "are you putting up the price of bread and making the 'poors' to suffer?"

He did not hang his head in shame, but looked me straight in the eye. Then he turned and pointed without a word at a long narrow chart on the wall with a curious wriggling black line that ran from end to end of it. It began, that line, at the lower left hand corner of the chart and went on up and up till it ran off the chart before it reached the other end. I looked closer and discovered that the nervous line represented the course of the price of wheat for the past two years or so. The figures that marked its upward way were portentously illuminating. On August 1, 1914, when the Great War was about to break, wheat sold for 95 cents a

bushel. A year later it had climbed to \$1.45 a bushel. Today it is selling for \$1.72. An eighty per cent increase in two years! What wonder that bread has gone up—for bread is two-thirds flour. But that isn't all. Bread dough, as the baker mixes it, contains flour, condensed milk, sugar, lard, malt extract, yeast, salt and water. Yeast and water cost no more now than before the war; but everything else is soaring. Flour is up 80 per cent, sugar 70, condensed milk 23, lard 50, malt extract 33, salt 15. Why shouldn't bread cost more? It costs more to make it at home, with flour at \$9.75 a barrel instead of \$5, whether the cook knows it or not. Why not to make it at the bakery?

The sternness softened from my eye. Evidently the baker was not the dreadful ogre who was making the "poors" to suffer. He was only a man himself, conducting his business under the heavy thumb of economic laws which he can no more control than he can stop the Great War that did so much to begin it all.

But—the thought would not down—the "poors" ought not to suffer. What shall we do about it? I racked my brains, but no better answers came than Stop the war; Make the poor richer; Make the wheat crop not to fail.

Then I thought of the baby across the hall, and the milk it could not get, and I wondered why. So I looked abroad thru the countryside and I saw the farmers of a state united—most of them—into a league to fight for higher prices for their milk. I saw them refusing to sell their milk to the city dealers at the old price,

and pouring it out on the ground rather than accept the lower figure. I saw them organizing vigilance committees to hold up their neighbors who had not joined their league and overturn the cans of milk they were hauling to the station.

In the city I saw the great milk dealers declining to pay more for the farmers' milk and more strenuously refusing to deal with them as an organization.

Both sides contended fiercely that they could not do what the other side demanded and live—much less prosper. For everything, the farmers said, that we must buy has gone up in price and what we sell must go up too. But the dealers said, We cannot pay you more for your milk, for our expenses have gone up too, and we dare not raise the price of milk to the people again.

But I soon saw that the farmers would win—and before long the "poors" would have to pay more for their milk, and that precious surplus would bear the brunt again.

And I said in my righteous anger: Something must be done about it. We must put somebody into office who will set these matters right. I shall vote for the men who will do this thing for us.

But, lo and behold, there was no such man on any ticket. There were many who shouted that the other fellows were responsible. But there was none to say, Elect me and I will do thus and so, and the "poors" will have cheaper bread 'n' milk.

So perhaps I shall play golf on Election Day. But anyhow I shall stop grumbling about my coffee.

SO THE "POORS" HAD NO MILK THAT DAY

# EVERYMAN'S WORKSHOP

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

**T**HERE are more efficiency facts in an efficient factory than anywhere else in the world. Apart from the intrinsic value of factory study to the factory worker, the subject is of remarkable interest and benefit to the student of personal achievement. For he will find the great, modern factory a liberal education in ambition, production, economy, regularity, precision, loyalty, responsibility, courtesy, thoroughness, grit, cooperation, machine power, money power, man power.

If I were a college president, I would urge the passage of a law requiring every candidate for graduation to spend three months in factory work; to analyze factory methods, principles, tools, machines, costs, aims and products; then to write a monograph on the subject, with the main purpose to apply the lessons he has learned from the factory to the life of the man. This would be a good start toward efficiency in education.

If I were the head of a religious denomination, I would put in every theological seminary a plain-facts course on the system of welfare work and human helpfulness carried out by the really big factory owner; and I would compel every theological student to be a welfare worker for a time, under such a man, before obtaining a license to preach. This would be a good start toward efficiency in the church.

## MAKING MEN

**W**HY open thus an article on factory efficiency? Because, after long and thoro study of the matter, I am convinced that the educational, social and moral power of the factory in a community is the greatest potential force of any institution we have—not excepting the college or the church; that this power is wholly unsuspected by the average community, and largely unused by the average factory; that waste power is the first thing to correct in efficiency study; and that the business of an efficiency engineer is to regard community-building and man-building the outstanding features of his work. The newest and best million dollar factories are founded squarely on this fundamental principle: *To make money, you must make men first; and to make the most money, you must make the biggest men.*

Now that we have the fundamental principle in mind, let us get down to

facts. The most important fact is that hundreds of books, and thousands of magazine articles, have been recently published, applying to every department of factory management, suiting the needs of every owner, builder, official or employee, and solving almost any problem that could arise in factory operation. Many a plant has saved hundreds, even thousands, of dollars by installing a new method or device for economical production, learned from a modern book or magazine.

Every factory should elect an efficiency board from its leading officers and workers; to investigate, consider, compile, discuss, and distribute to the various departments all the current news of better, faster, cheaper, methods. This board has five sources of knowledge: (1) recent books by factory experts; (2) articles and advertisements in technical magazines; (3) bulletins and reports from national engineering societies; (4) campaign literature of other companies in the same field; (5) laboratory studies and shop tests in its own plant. Further, we recommend serious consideration of the efficiency engineer plan, which lately has been adopted by so many factories, and which has proved so highly beneficial.

Cases in point: A tool factory, by modern efficiency methods, increased the average output of the employees from sixty-seven per cent of the maximum to ninety-one per cent. A pulp mill, designed to produce twelve tons a day, was made to produce thirty-six tons. A belt plant so reduced time and labor that a standard job formerly taking 322 machine hours and costing \$37.50 in wages now requires only 188 hours and wages of \$20.09. A motor car factory has spent \$5,000,000 on efficiency development, has installed more than two thousand special machines, has lowered ten thousand costs, and now manufactures automobiles for just half the original factory expense, claiming to undersell all competitors, and to have gained a volume of business that more than pays it for the original five million dollar investment in factory efficiency.

How are such things done? The answer would be a large library. We can here but outline, roughly and briefly, a number of plans and devices lately found profitable, and suggest a trial where they are adaptable.

They are grouped under seven principal headings, tho certain of the items overlap.

## BUILDINGS AND SURROUNDINGS

**P**LAN ahead, in detail, before breaking sod. Plan each building in relation to every other, to all the operations and costs under its own roof, to future developments of the plant for a hundred years, and to the special difficulties and problems that your experience has not yet overcome. Read standard books on scientific management, and the catalogs of a score of architects and builders. Employ an expert designer, outside your own concern, to draft your structural plans. Tell him all your needs and problems, fully and minutely, but leave actual control with him. Don't skimp on quality of materials—a slight defect may cost you thousands of dollars later; also, upkeep is less for high-grade buildings, and character of work in them better. Choose the type of building—there are seven chief types—to fit your need exactly; the loft type, of steel or reinforced concrete, with concrete or brick walls, being usually most economical of space and labor, yet by no means universally best. Make window sash of steel, to increase light and diminish fire risk. Have interior walls in form of movable partitions, to shift as development requires; with columns uniformly spaced—from sixteen to twenty-five feet. Order special machine foundations, centralized in building, for heaviest machine tools. Gage height of roof so that belt lengths will be right, and readjustment in countershafting needless. Paint white lines on shop floors, to mark off routing aisles. Construct shipping platform under same roof with assembling floor. Save work space by running electric wires and exhaust pipes under floors. Halve trucking costs by putting a mezzanine floor in the packing rooms, for cases. Shorten transmission lines by centering power plant among other departments. Conserve health of employees by installing an air heater, washer, humidifier and distributor; with excess heat utilized where possible.

Consider these items, now available: mill white gloss paint to reduce light bills and increase the workers' efficiency thru saving their eyes; fire proof, thief proof and mischief-proof fence; unbreakable wood block floors; non sweating gypsum

roof tile; coal breaker storm-proof and fire-proof yet 93 per cent glass; automatic ventilators; automatic rolling doors; rust-preventing graphite paint; chemical hardener for cement floors; maintenance-cutting wire glass; all steel fire doors; dumb-waiters with automatic brake; one-man window sash operating device.

MACHINERY AND EQUIPMENT

HERE is a prolific source of loss, from a multitude of trifling defects or neglects, whose aggregate will be thousands of dollars wasted. A few suggestions. Don't equip on a friend's opinion, or even an expert's advice. Look up advertising directories in foremost engineering magazines, write all concerns of possible advantage, study and compare literature (you will have hundreds of documents) and don't decide on specifications till you are sure of the best equipment. Don't despair if your building is old—a rearrangement of machines can always be made, given the knowledge of new methods. Find first your power leaks, in engine, boiler room, shafting, belting. Save loss of power by having regular inspection of shafting and belting, to keep in line and in order, and thus reduce friction load. Make quarter turn drives with ropes instead of belts. Have your belt lacings of standardized measurements, to fit each

belt width. Cut down friction losses by seeing that blowers, fans, air-compressors and centrifugal pumps are not overpowered. Investigate the possibilities of electric meters in measuring power. Install a system of power house records, and compare with standard costs. Prevent accidents by safety shields and guards, safety matches only, guaranteed emergency stops, the pulmotor and other life-saving devices, medical apparatus for emergency use, and so forth; a man's life in your factory is worth \$2500 to \$7500 by law, and a few hundred dollars in precautions will be a good investment. Locate probabilities of money loss from defective parts, and ensure against it; thus, a pipe-line blow-out due to a faulty gasket may cost you several thousand dollars (one plant figures a \$1400-an-hour loss would result from one such mishap), therefore, a gasket warranted by supreme tests under oil, acid, alkali, temperature, is the only safe and economical one, whatever the first cost. Look into such modern equipment features as the following—ask yourself how many your factory needs: pulley-hugging, power-saving belt with no shut-downs; one-man trucks of seventy-two case capacity; self-aligning motor ball bearings with normal thrust 5000 pounds; heat and power conservation thru asbestos materials;

unit steel bins, lockers and shelving for twenty-five per cent more storage capacity; automatic drill grinder ensuring proper edge; patent swivel, noiseless truck casters; industrial trucks with special battery to increase work 300 per cent; noiseless gear driving; electric portable tools; portable, one-motion belt lacer; long-life leather lubricator; boiler setting to overcome air infiltration losses; ice-barrel "bubble" drinking fountain for health economy; metal hose to end hose troubles and reduce costs; non-valve, non-pulsation air compressor and vacuum pump; automatic and special machines to reduce overhead; free counsel on sanitation problems; free book on power transmission equipment; current list of supply houses that you might investigate to your advantage, with no obligation.

MANAGEMENT AND SUPERVISION

HERE is the weakest point in general factory operation. To handle right the man who handles the work is to double the work, the pleasure, the profit, the all-round satisfaction. But to manage men at high speed for large returns you must be a trained psychologist as well as commercial engineer—or must employ an efficiency man who knows brain-building as a fundamental of business-building. Managerial power is men-

EFFICIENT FACTORY TEST

FOR ANY FACTORY OWNER, DIRECTOR, MANAGER OR DEPARTMENT CHIEF

DIRECTIONS. First read Mr. Purinton's article, "Everyman's Work Shop." Then grade yourself on these questions fairly, but too low rather than too high. Where answer is Yes, write numeral 5 in space opposite. Where answer is No, leave space blank. Add numerals for approximate efficiency percentage of your factory. Queries and problems, with requests for names of books, magazines or institutions, will be answered so far as practicable by Mr. Purinton, when address care of Independent Efficiency Service, 119 West 40th Street, New York.

1. Were your buildings specially designed for you by expert industrial engineers? .....
2. Is all space utilized on principles of scientific management? .....
3. Do you know power and transmission are at minimum standard cost? .....
4. Did you investigate a score of equipment companies before buying from any? .....
5. Have you a complete modern system for locating leaks, wastes and losses? .....
6. Are your safety-guards and accident-preventives up to modern regulations? .....
7. Have you put in each department time-study, motion-study, tool-study, book-study, man-study? .....
8. Do all your employees aim to improve both quality and quantity of product? .....
9. Are your officials technically trained in the science of management? .....
10. Have you personally read at least five modern books on factory operation? .....
11. Do you frequently consult national efficiency engineers on various problems? .....
12. Is an efficiency board of your own working scientifically and satisfactorily? .....
13. Has your accounting system been approved by recognized authorities? .....
14. Are your buying, manufacturing and selling costs decreasing proportionally, every year? .....
15. Can you always borrow money from a bank, on showing your balance sheet? .....
16. Have you in the past three months answered at least fifty advertisements in technical magazines? .....
17. Does every employee know that he will always get a square deal from you? .....
18. Can your average workman do twenty per cent more work than he could a year ago? .....
19. Are you regularly informed by trade journals, trade associations, book lists, bureaus of statistics, and the Federal Trade Commission? .....
20. Have you made a thoro study of the home lives of your employees, and offered coöperation on lines of health, economy and enjoyment? .....

Total equals approximate grade in per cent of your factory efficiency

# Are YOU Making \$5000 a year?

## Don't Merely Think it Over — Put it Over!

Get This **FREE**  
**BOOK**

The huge growth of business in America has created thousands of high grade positions paying \$1,500 to \$5,000 or more a year. The need is for men with executive training—men who are experts, who have specialized in some important department of business. A recent advertisement in a big daily for a \$15 a week man brought one hundred and seventy one (171) answers. An advertisement for a \$5,000 man on the same page did not bring a single applicant—NOT ONE. You can see, therefore, that the \$15 a week man had one hundred and seventy other men competing for the same job. The \$5,000 a year position went begging. One big captain of industry recently said, "Our great difficulty is to find men who are properly trained for responsible positions."

### We Train You By MAIL for Executive Positions

Big employers have come to learn that "the school of experience" alone, cannot begin to supply the men needed for high-grade positions. For that reason there is hardly a state in the Union where employers are not urging ambitious men to take the short cut to executive training offered by the various courses of the LaSalle Extension University. Manufacturers, corporations, railroads, mercantile and banking institutions are always in need of department and business managers, legally trained men, auditors, expert accountants, traffic managers, business and sales correspondents, and high grade office men to fill permanent positions with handsome salaries.

### Earn While You Learn

You can keep on drawing your present salary while we train you for an executive position. You can learn in your spare time, in your own home. Our courses are thorough in every feature—simple, easy, and quickly mastered. The cost is small. Easy monthly payments. There is no reason in the world why you cannot advance yourself now, if you are ambitious, will use some of your spare time and are willing to invest a few dollars in brain power and self capitalization.

Big employers know that LaSalle training is thorough; that behind the LaSalle courses stand assets of over \$2,000,000, and an organization of more than 300 business experts, professional men, text writers, instructors and assistants, including recognized authorities in all departments.

## Get This Valuable Book "Ten Years' Promotion In One" **FREE**

Hundreds of men who have read this book say it does more to inspire the ambitious man for big things than any other book they have ever read. A prominent Chicago business man recently made this statement regarding it: "Your book, 'Ten Years' Promotion In One', presents a big, practical object lesson which should profit 99 of every hundred men in this country. It would pay every person of ambition to get and carefully

read this remarkable book even if he has to pay \$5 for a copy—the moral of success contained in it is so plain, so true and convincing."

We will send this book without cost if you will indicate your interest in promotion by using the coupon below and naming position for which you wish to qualify. We will also send along free, complete literature explaining how you can train for your chosen work without interference with your present duties.

## Earn \$35 To \$200 A Week

Which One of These Positions Would You Like To Fill?

### Business or Office Manager

This course and service gives that broad business training for the higher executive positions which require administrative ability and that general knowledge necessary to manage department heads, minor executives, or a complete business organization—lays the foundation for advancement to the highest business positions available.

### Executive Accountant

(C. P. A.) 500,000 firms provide unlimited opportunities for expert cost and administrative accountants and auditors. Only 2,000 certified public accountants in the U. S. to do the work. Our training prepares you for expert accounting work or C. P. A. examinations.

### Traffic Manager

Recently enacted rate laws and Interstate Commerce regulations have created thousands of high-salaried positions with the railroads and big industrial shippers. Our training is endorsed by leading railroad officials and traffic experts, and prepares you to hold an important railroad or industrial traffic position.

### Banking

30,000 banks constantly need men with banking and financial training. New banks, trust companies and financial institutions are being organized daily. Our training will assist you to climb quickly to any position requiring a thorough knowledge of modern banking practice.

### Legal Counsellor or Attorney at Law

Legally trained men win high positions in business and public life. Our course is of University grade. The 14 volumes of text books supplied free, are edited and written in plain, comprehensive language by noted legal experts, judges and famous

law professors. Degree of I.L.B. conferred. We guarantee to coach free until successful, any graduate failing to pass any state bar examination.

### Business and Sales Correspondents

There is always a big demand for good correspondents who have a command of effective, business-getting English. Our course offers an opportunity to train quickly for a high-grade position as expert sales and collection correspondent, or copy writer. There is hardly an employee who cannot profit largely by taking our course, Effective Business English.

## Act Today!

Make up your mind now to train for a position of dignity and good pay. We have made the way easy for you. Our

corps of expert instructors will direct you step by step, and give you unlimited personal guidance.

tal influence. Whatever the material adjuncts, the mind relationship is first. Get a few books on mental engineering, and learn how to gear up the most powerful, and most delicate, machine ever built—the human brain. Learn what your men are *thinking*, about their work, their future, their personal and industrial efficiency. Cut out the class-and-mass prejudice, make every worker feel himself a partner in the business. Create in every man the upright mental attitude of success—and the required willingness to study, labor, sacrifice, as much as may be necessary. Equip and maintain a planning room with expert staff in charge, for designing, comparing, correlating, details of work in advance—this room is to your plant what your brain is to your body. Train from out your present organization, or add to it, an efficiency board or engineer, whose function will be to set up ideal standards of performance, to devise practical ways of keeping to them uniformly, to prepare each worker for greater achievement by education, equipment and incentive, and to clear away difficulties that prevent maximum attainment. Find how much you are losing by needless motions; by faulty equipment; by haphazard arrangement; by slow, untaught, unfit, workers; by antiquated methods; by flimsy ideals. Quit guessing; put a trained investigator with a stop-watch on every piece of work, and let him show you the one best and quickest way, by modern principles of intensive industry. Form the habit of submitting your problems to a manufacturer's service bureau, and obtaining scientific, practical, impartial advice. Look up such aids to better management as these: automatic call system, to find men at once; daily comparison book for classified reports from all departments; mechanical devices for standardizing work—temperature indicator and hardness tester, for example; inter-department help, such as the new gravity conveyer system; books, libraries and courses on manufacturing principles, methods, and problems.

#### MATERIALS AND SUPPLIES

**Y**OU can buy more cheaply by following hints like these. Learn the minimum required—then by systematic distribution keep down the reckless use; for instance, cotton waste per man per year should be had for about \$1.15, but often costs twice that, from faulty standardization and careless distribution. Make a study of scientific testing, keeping and forecasting of stock. Have all requisitions taken from the planning department, no orders initiated in

the store-room. Classify materials and supplies according to specific use; label with letters of the alphabet; group together, indexed and vowelized, on a space unit floor-plan; devise a stock-blank for each class of stores, giving record of those ordered, those delivered, those assigned, those available; and by these blanks ensure against deficiency or excess of materials. (Only an expert can do this right.) Coöperate with other manufacturers, if possible, to develop a new source of raw stuff more cheaply.

Find other fabrics in place of those now becoming more expensive; thus, corrugated pasteboard for small packing boxes may be generally used in place of wood; and veneers and built-up parts often substituted for wood in the product itself. Keep your finger on the pulse of the market; and check up your methods of purchase by a modern book on the subject. Items worth considering: automatic coal sampler, to determine heat units paid for; pencils adapted to work and writing of user; non-smudging, quick-filing, standardized tracing cloth; sheet metal fabric that resists decay, rust, corrosion; energy-saving solid belt dressing; factory lighting system that reduces spoilage from errors of vision; scout-plan to locate bargains in buying; reward-scheme for material suggestions from workers.

#### ESTIMATES AND COSTS

**L**ET me here quote a recent statement from the new Federal Trade Commission:

"Only ten per cent of our manufacturers know the actual cost of manufacture and sale of their products; forty per cent estimate their costs; fifty per cent have no method, but price their goods arbitrarily. There were 22,000 business failures in the United States last year. The first and greatest need of American manufacturers is for better methods of cost accounting."

To supply this need is a main purpose of the Commission, and we urge every manufacturer, corporation accountant, industrial engineer, to follow up the work and seek the aid of this national clearing-house of business counsel. Other helps: Learn what your trade associations have done to investigate the costs of running your kind of business, and adopt a uniform system. Judge your costs by your credits—when you can always borrow money from a bank on showing your balance sheet, you may know that your costs are in a healthy condition. Study the standard methods of bookkeeping and cost accounting—don't pin to an unsafe custom because it is a custom.

Get a firm of certified accountants who are also expert industrial engineers to examine your books periodically, and if necessary change your whole scheme of cost-process. Obtain from a national bureau of statistics all the pertinent information on your special line of manufacture, with forecast of probable trade conditions for the next few years—particularly those resulting from the Great War.

Investigate the new plans to increase production by increasing pay; in one case a manufacturer cut costs thirty-two per cent, and raised output eighty-nine per cent, by paying twenty-eight per cent more wages and getting three times that increase of work! Learn how to look for leaks—a half dozen modern books on solution of cost problems should be worth a hundred times their price. A few aids to cost reducing: arc welder that saves sixty-three per cent from old-fashioned methods; automatic counter that prevents mistakes and lost time; electric truck; patent hoist that enables a man to lift a ton by a thirty pound pressure; new device for measuring production scientifically; cost-keeping time recorder, that prints time in modern terms of decimal fractions of hour; standardized stock room equipment, to speed production and diminish overhead; power analysis chart indicating power needed for unit of production; boiler system of feeding, ninety per cent cheaper than pump; automatic furnace to handle fuel more economically; safety insurance by stop and check valves; guaranteed gages, thermometers, testers and scales of many kinds; bibliography of cost-reducing methods.

#### LABOR AND OUTPUT

**F**IRST law of industrial mathematics: An ounce of quality weighs more than a pound of quantity. Second law: Neither quality nor quantity should be sacrificed to the other. You can teach your employees to do first better work, and then faster work, and you can also increase their wages and your profits, together. How?

Train your men! Do it by science, and the experience of others. Instinct never taught a man how to work. This job—the hardest job—a specialist must handle. First, engage your expert. Have him go over each item of investigation and standardization leading to the one best way of doing every bit of work. Then have him teach the workers, one by one, how to change their methods and conform to the ideal schedule. With units of time and motion firmly established you can set a bonus for each worker, on some of the various modern plans,

## The Expression of Quality In a Motor Car

**Q**UALITY, in a motor car, expresses itself in appearance as well as in performance.

It announces itself unmistakably—as good breeding discloses itself in a man or a woman.

You scarcely know why a woman of refinement always seems exquisitely gowned, no matter how simple her attire.

But the moment she enters a room, she is the quiet center of observation.

You scarcely know why you instantly recognize a well dressed man—nothing about him intrudes itself, but everything about him is impressive.

You cannot tell why a silent room speaks to you in eloquent tones of the taste and refinement that designed and decorated it.

True artistry in the attire of a man or a woman, or in the appointments of a room, or in the design of a motor car, consists in blending many small beauties into one beauty.

Judged by this difficult criterion, we believe the new Cadillacs will exceed your highest and most critical expectations.

Cadillacs are beautiful cars to look upon.

The simplicity of design and grace of contour are unmarred by anything which savors of the tawdry or freakish.

The crown fenders blend harmoniously with the pleasing lines of the bodies.

Running boards are clear of encumbrances which mar a clean-cut exterior.

Spare tires are carried at the rear.

You enter the car and alight from it through doors of liberal dimensions.

Door handles are easy of action and so designed that they are not apt to catch the clothing.

Entrance to the driver's seat is facilitated by the hinged steering wheel which swings downward, but is held securely when driving.

The tonneau entrance is illuminated at night by an electric light.

As you enter the car you are impressed with the roominess of the interior arrangement.

The simple luxury of the appointments is inviting.

Cadillac upholstery is truly a revelation. It represents the most modern developments in thorough comfort-giving qualities. The covering material is plaited over specially designed deep coil springs.

Extreme inequalities of the road are reduced in their effects, to the lowest minimum, while the lesser inequalities are lost in its soft resilience.

Auxiliary seats—in cars so equipped—fold snugly into recesses, out of the way when not in service.

There are convenient pockets in the doors.

In every detail there is striking evidence of the forethought to provide every comfort, convenience and facility which the most exacting could demand.

And, as you relax and rest from the strain and fatigue which motoring may heretofore have imposed, you appreciate more and more the delight and inexpressible charm of owning and driving a Cadillac.

The Type-55 Cadillac will be available with a complete variety of body styles, as follows: SEVEN PASSENGER, PHAETON, ROADSTER and CLUB ROADSTER, \$2080. CONVERTIBLE STYLES: SEVEN PASSENGER, \$2675; VICTORIA, \$2550. ENCLOSED CARS: COUPE, \$2800; BROUGHAM, \$2950; LIMOUSINE, \$3600; LANDAULET, \$3750; IMPERIAL, \$4750. Prices include standard equipment, F. O. B. Detroit. Prices are subject to advance without notice.

Cadillac Motor Car Co., Detroit, Mich.

## "Turn on the Sun"

If you could take the roof off your plant, if you could let the sun shine into every gloomy corner of your factory! At once the efficiency of your employees would be increased greatly. Your lighting bills would be reduced and you would be able to utilize floor space now useless for fine work.

You cannot take off your roof. But you can add 19% to 36% more light to your buildings and lengthen your hours of daylight from  $\frac{1}{2}$  to  $\frac{3}{4}$  of an hour.

"Barreled Sunlight"—Rice's Gloss Mill White, applied to ceilings and walls will increase light in any building from 19% to 36%. Actual tests by the Electrical Testing Laboratories of New York City have proved this beyond a doubt.

Today, Barreled Sunlight is used in over 3,000 leading plants in America. It is the only oil paint giving a glossy tile-like finish at the cost of lead and

**U. S. Gutta Percha Paint Co.**  
30 Dudley Street, Providence, R. I.

Before—  
After treatment with  
Barreled Sunlight

oil paint. It remains white longer.

It is as clean as it is bright—can be washed like a piece of white china! By Rice's Method, Barreled Sunlight can be applied over cold water paint. Rice's is made by a special process discovered and owned exclusively by the makers. There is no substitute.

Barreled Sunlight is made also as a flat wall paint for office and hotel use. Users are protected by the Rice Guarantee.

On Concrete Surfaces—Rice's Granolith makes the best possible primer for Barreled Sunlight, retarding the progress of moisture in the wall—Rice's Granolith.

Write for our Booklet, "More Light," and Sample Board.

Sold by the barrel or by the gallon.

Reg. U. S. Pat. Off.

**THE ORIGINAL—THERE IS NO SUBSTITUTE**

## The Independent Investor's Service

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

whereby he is rewarded in cash for his gain in proficiency.

Don't be satisfied with any hereditary wage plan, it is almost sure to be defective. But don't spring a new one on your men till you have spent months in careful, scientific study of its minutest features—the overcoming of prejudice and inertia is a difficult problem, and you mustn't go to it unprepared. Investigate the new time card systems, whereby each man virtually pays himself. Put high-grade men at the costly machines, to save unproductive machine-time. Determine piece-prices accurately, with the prevalent wage-cutting, price-cutting habits of old strictly abolished. Surround the employee with his tools and raw materials by a shelving system that saves time in handling. Devise instruction cards, with each man's work laid out to the last detail in the planning department. Also maintain a card-record history of each employee, with gains noted, and faults to be overcome. Develop the coöperative spirit, as recently shown by a famous factory whose descriptive booklet is entitled "Workers Together."

Learn how to move the product more quickly and cheaply, by such means as the electric traveling crane, the electric portable hoist, the iron duct and exhaust fan method, the trackless engine truck. Unite all departments by an interphone system of calls and signals, and work it to the limit. Find whether such helps as these would serve you: one man truck lifting up to 1200 pounds with no helper needed; machine to pile cases and barrels economically and safely; gravity conveying appliances for many transportation uses; wire-bound boxes that save fifty per cent on boxing labor and ninety per cent on nails; individual machine motor-drives to save lost work of line shaft drive; all-metal elevator that increases speed and safety; expansion joint that requires no watching; scale-elevating truck that finds short weights without rehandling; oil engine that cuts labor cost fifty per cent.

### HOME AND COMMUNITY

The zeal and skill of any body of workers will be largely increased by a healthful, comfortable, happy and progressive home life. The most successful corporations have found it "good business" to furnish their employees attractive homes at low rates and easy terms; to teach the women how to cook and sew and buy and plan and beautify their cottages; to help the men save money and provide for old age; to study out the family problems of sanitation, education, recreation, and to offer coöperation on a scientific, sympathetic basis, without charity or paternalism, but in a spirit of mutual advancement.

Furthermore, an employee will think better, feel better, work better, if he knows his company enjoys the admiration and respect of the community at large; hence the place your factory holds in the minds and hearts of the people outside may well occupy your attention. Have you asked the leading citizens to inspect your plant? Have you made your grounds and buildings worthy of civic pride? Have you taken

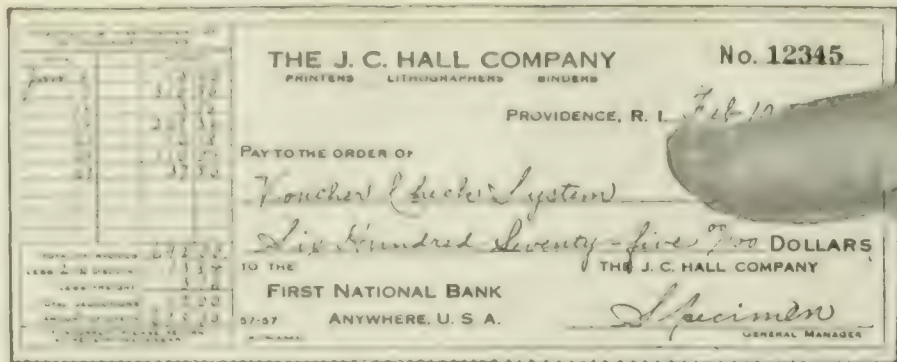

*"Quick! By five I must have a thousand copies of this letter ready to mail."* That's easy—with the mimeograph. From dictation to envelope is a mere matter of minutes. Handwriting too? Drawings? Diagrams? Illustrated letters and bulletins? Office and factory forms? No difference—you duplicate all quickly—*without cuts*. Most accurate, least expensive—as well as quickest—is the mimeograph process. *Exactly* duplicates the original. Gives clean, sharp impressions. Opens many doors to greater profits in any business office—factory—shop. Investigate the new dermatype waxless stencil method today. Interesting booklet "E" will tell you about it and its business uses. Send to the A. B. Dick Company, Chicago—and New York.

The Hall Mark of Efficiency

## THE CHECK THAT TELLS THE STORY

The Hall Voucher Check marks a long step ahead in business efficiency. On the face of the check is the whole story, in clear, concise form; dates of bills, amounts, discount, freight deduction, everything. A receipt in itself, the Voucher Check does away with the return of bills. A standard form that has proved its efficiency. Highest quality of paper and workmanship. A Quality Check backed by an enviable reputation of forty years' standing. Distinction depends on the appearance of your check. The standard form (V) is for every sort of business house. Another form (S) is used largely by individuals, clubs, societies, churches and other institutions. Remember these Voucher Checks are a genuine receipt when paying bills of department stores, gas, electric, telephone and other companies. An ordinary check does *not* constitute an adequate receipt.

### SPECIFICATIONS

Size of check—3¼ x 8½, stub 5½ in. long. Six colors of good bond paper—White, Buff, Blue, Green, Gray and Russet. Also three colors of National Safety Paper—Pink, Blue and Primrose. Perforated and numbered. Bound in books of 500 checks with stubs, 3 to the page. Imitation leather backs, flat stitched.

Also furnished for check writing machines without the line or word Dollars.

## Shakespeare's Portrait

While our limited supply lasts we will mail in a tube suitable for framing an excellent reproduction on heavy cameo paper of Leopold Flameng's etching of the famous Chandos portrait of Shakespeare. Send six two-cent stamps to cover cost of wrapping and mailing.

THE INDEPENDENT  
Shakespeare Dept., 119 W. 40th St., N.Y.

real interest in the welfare of your community, and given a hundredth part as much thought to making your factory a social center as you have to making it a commercial success?

You will never get the most and best from your employees till their home life means as much to you as you expect your factory to mean to them. While you skimp on sympathy, they will on service. Every great institution has, by virtue of its size, a great mission to perform. Don't neglect yours. A factory is a place where character is made. How big is your factory, on this scale of measurement.

### REMEMBERING LUTHER

At noon, October 31, 1517, Martin Luther, professor at Wittenberg University, nailed ninety-five theses upon the Castle Church door. He was conscious only of performing a duty incidental to his work. It was his turn to provide topics for discussion by students and teachers. But history calls this act the unconscious heralding of a momentous period. The new forces at work for a century and more now became effective and the subsequent movement is commonly called the Reformation.

The Lutheran Church is developing broad and constructive plans for the celebration of the Quadricentennial of this event next year. Five large bodies have created a Joint Committee and opened national headquarters in Philadelphia. In certain educational features all of the nearly four million Lutherans of America are working coöperatively.

Literature revised and new will be issued. A group of American scholars is translating the foremost works of Luther. A popular life of Luther by a widely-known writer is being produced. A life of the reformer for the juvenile mind is in press. Both the religious and the civic phases of the Reformation will be treated. Tableaux and pageants will be features; an anniversary medal is being designed; a motion picture film will probably be produced, presenting the more important events of the Reformation and the activities of Luther. Music of high order and churchly in character will be a prominent feature. Various compositions of Bach are to be produced by choruses organized and trained to render Jubilee musical programs. It is expected that an anniversary cantata will be produced by an American composer.

The various boards, such as the Educational, Missionary, and Ministerial Pension, have planned to raise Jubilee funds. The goal set by the Lutheran Church is \$10,000,000. The boards of education of seventeen Protestant denominations have combined in an educational and agitating campaign preparatory to raising large funds for Church colleges. Headquarters for this campaign are open in New York.

The spirit and purpose of these preparations for commemoration might be put in a sentence. To celebrate the Reformation of the Sixteenth Century and to hasten the Transformation of the Twentieth.

# Where five great organizations found their presidents

HUGH CHALMERS entered the National Cash Register Company as office boy. Was finally made General Manager. Resigned to become President of what is now the Chalmers Motor Company.

CHARLES M. SCHWAB entered the Edgar Thompson Steel Works driving stakes at \$1 a day. In less than a year he was made assistant to one of the superintendents. Today he is President of the Bethlehem Steel Corporation.

EARL D. BABST was an attorney, and later Vice-President of the National Biscuit Company. He resigned to become President of the American Sugar Refining Company.

GEORGE B. CORTELYOU was at one time stenographer to President Cleveland. Thru his ability to size up men and grasp business propositions of all kinds, he became Secretary to President McKinley and President Roosevelt. He is now President of the Consolidated Gas Company.

HARRY FORD entered the automobile business as Secretary of the Chalmers Motor Company. At the end of a year he was made Advertising Manager, and later resigned to organize the Saxon Motor Company, capitalized at \$200,000. In two years he has increased the capitalization to \$6,000,000.

Five presidents drawn from five different kinds of business, qualified by five different kinds of experience. Specialized training in any one branch of business did not carry these men up to the presidencies of the great organizations which they now represent. They won the highest success in their respective fields of business because they knew the *great fundamental principles which underlie all business*.

The whole broad field of business was theirs. When their opportunity came, they were prepared to seize it, even tho it lay in a widely different field.

It is just this grasp of the whole broad scope of business that the Alexander Hamilton Institute is giving today to over 46,000 men. Modern Business Course and Service trains you in the broad basic principles which underlie business enterprise. It is based on the experience of thousands of successful business men.

It gives you the knowledge that could otherwise be obtained only by years of bitter experience if at all.

Advisory Council

Business and educational authority of the highest standing

is represented in the Advisory Council of the Alexander Hamilton Institute. It includes Frank A. Vanderlip, President of the National City Bank; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Joseph French Johnson, Dean of the New York University School of Commerce, and Jeremiah W. Jenks, statistician and economist.

A HOUSE BOAT WAITING TO TAKE ON ITS MOTOR

The automobile is driven aboard, jacked up on the aft deck and connected with the paddle wheels by means of link chain belts

## AN AUTOMOBILE AT SEA

A Chicago man has hit upon a unique scheme of making his automobile furnish the motive power for his houseboat. This is accomplished by fitting spurred sprocket wheels to the hubs of the car's rear wheels, and keying similar but larger ones to the paddle wheels of the boat, and connecting them by means of link chain belts. When the automobile is jacked up so that the rear wheels are clear of the deck, and the engine of the car started, it will run at a rate of six miles an hour.

The automobile is guided on board by means of a couple of grooved runways which run from the shore to the gangplank and brought to a place on the aft deck immediately between the paddle wheels.

The boat has two rudders, but it may also be steered by means of the paddle wheels if desired. The paddles are constructed so as to be independent of each other, and when they are connected with the automobile, the emergency brake of the car is disconnected from one driving wheel and the foot brake from the other. In this way one of the paddles can be revolved while its opposite remains stationary. If the port paddle is turned, while the starboard is held still, the bow of the houseboat is shoved around to starboard, and vice versa.

## RABBITS TO THE RESCUE

England used to punish poachers for killing rabbits by transporting them to Australia. Now she hires the Australians, perhaps some of the descendants of the criminals convicted of that heinous crime, to kill rabbits for her soldiers. Here is a bag of two and a half tons about to be shipped from Tarana station, Australia. A few weeks ago the British steamer "Cumberland" stopped in at Norfolk, Virginia, for coal on her way from New Zealand to Liverpool with half a million rabbits for the English army. The Germans have put a stop to the custom of poisoning rabbits

to protect the crops. The rabbits must hereafter be caught or shot so they can serve for the famous German dish of *Hasenpfeffer*. Any meat is welcome now in the belligerent countries and they are not likely to repeat the grace said by the old English chaplain who thought rabbits were being served too often at his table:

Rabbits hot, rabbits cold,  
Rabbits tender, rabbits tough,  
Rabbits young and rabbits old—  
I thank the Lord I've had enough.

## TEN CARLOADS OF "SAFETY"

Just to show Missouri—and several neighboring states—what the United States is doing to increase public safety, Secretary of the Interior Lane recently arranged a city-to-city tour of a "Safety First" train, carrying ten cars filled with instructive exhibits.

During the first part of the tour, sent free of charge over the Baltimore and Ohio railroad, forty-three cities were visited where over 325,000 people saw a practical demonstration of the work that is being done by such organizations as the Red Cross, the Reclamation Service and the Coast Guard.

The success of the tour encouraged its extension over the Missouri, Kansas and Texas railroad and the hope has been expressed that it may ultimately cover a large part of the country. But meantime the rest of us will want to read about it.

The Reclamation Service and the national parks have the first exhibit: a 6 by 6 foot model of a typical irrigated farm, with canals, laterals, crops, and farm buildings; hand-colored photographs of scenes on the various projects, Arrowrock Dam, Elephant Butte Dam (the highest in the world), and the fourteen national parks.

The Weather Bureau, the Bureau of Animal Industry, and the Forest Service are all under the Department of Agriculture. An immense weather map, brought up to date daily, models showing methods of erosion of land and how it is reforested, and explanations of forest-fire prevention and storm-warning systems are their principal features.

The Navy exhibit is particularly popular just now: a big Whitehead torpedo, an auto-pilot, a machine gun that will fire 400 shots per minute, the Marine Corps equipment, and a working wireless telegraph. The Corps of Engineers of the Army explain their various tool outfits, models of wagons and surveyors' and drafting instruments. The Medical and Ordnance Bureaus of the War Department exhibit a complete field dressing station, stretcher appliances, and a complete working model of a modern 12-inch disappearing gun and carriage.

The Interstate Commerce Commission has diagrams and statistics to show how much it has reduced the number of railroad accidents. The Public Health Service exhibits a model of vermin-proof house. The Coast Guard explains its methods of life saving.

The "safety first" train is a tremendous success. At the rate of 100 to 1500 an hour, it is teaching the people who see it how they may help to solve some of our biggest national problems.

AUSTRALIA SENDS ITS RABBITS TO THE TRENCHES

# THE NEW ENLIGHTENMENT

**E**LECTRICITY comes to free the modern woman from the burdens of housekeeping.

It came into the home first as a source of light, setting a new standard of illumination.

But, electricity is destined to fill a still larger sphere of domestic usefulness; it now does the hardest tasks in the household. It reduces the necessary hours of labor and lightens the nature of the work itself, adding hours to the leisure, recreation, and broader interests that claim the modern woman's attention.

If your home is wired for electricity, are you making the most of it? Do you know the advantages of the electric washing-machine, and the electric iron? Do you know the convenience of the electric toaster and other heating devices for the easy preparation of food?

While other necessities of life are increasing in cost, electric current is steadily *decreasing*. The cost of using these small devices in the home (never so high as to constitute a serious objection) is now so small as hardly to be reckoned with.

In many parts of the country, rates for electric current are now so attractive as to bring the electric range into very general use for cooking—the greatest boon of all to the housewife.

There is now available for you a complete line of electrical devices bearing the well-known name

## Western Electric

### THE LEADER OF THE BOERS

*General Botha*, in the faithful study of the man and his career by Harold Spender, appears to possess the best qualities of both statesman and soldier. He is a man whose self control, foresight and sturdy honesty of purpose are not to be led astray by passion, persuasion or prejudice. He not only won victories for the Boers in the field, but saw clearly that when the end of such had come a greater victory in peace was still possible for his people. It was he who counseled moderation with the "Bitter-enders" in South Africa; persuaded the frigid British Colonial Secretary Chamberlain; and strove persistently for the goal of a union of South Africa. This was a path beset with difficulties and Mr. Spender shows that General Botha's eventual triumph was due in large measure to his ability to win enemies to his side.

At the outbreak of the great war General Botha's attitude was in conformity with his whole career. There was no casting of a backward thought, but a steady forward vision for the well-being and greatness of the united people of South Africa. Mr. Spender compares General Botha with William III of Orange and with Washington. Oliver Cromwell comes also to mind as a prototype by reason of what one may term the Puritan farmer strain in both.

*General Botha*, by Harold Spender. Houghton Mifflin. \$2.

### DEMOCRACY FORWARD

What may be called the historic mission of the United States is the underlying theme in Professor Sellars' book, *The Next Step in Democracy*. This mission is not primarily to Americanize the world, nor to extend our domination over the Seven Seas. For "the society of today in the United States is not democracy, it is plutocratic commercialism dominated by pecuniary values. Democracy is as yet a matter of vague sentiment and perplexed wishing." The development of institutions, the reorganization of our political and economic machinery to these are to constitute the next steps in democracy.

The author is in thoro agreement with the socialists in his emphasis on the human values and in his repudiation of our formal freedom of contract in favor of genuine liberty and opportunity for fullest individual development. He differs from the classic socialist in questioning the adequacy of the doctrine of "economic determinism," and in contrasting evolution with revolution. This is unfortunate, for it tends to divert attention from the main is-

# OFFICE EFFICIENCY

## Plan and Purchase Department of The Independent-Harper's Weekly Efficiency Service

THE Independent, in its Efficiency Number a month ago, invited its readers and all members of the National Institute of Efficiency to consult its new Plan and Purchase Department with regard to the selection and purchase of any equipment that may be desirable to attain the highest degree of efficiency in offices, factories or business buildings.

Impressive in quality and number have been the responses we have received for this first announcement of our new Service—so prompt and numerous in fact that we confess to a deluge of work in the preparation of special reports for a wide variety of business needs.

This new department is an expansion of the Efficiency Service and Question Box which The Independent has maintained for more than a year under the management of its Director of Efficiency, Edward Earle Purinton.

It is conducted in association with the National Institute of Efficiency, which recently chose The Independent as its official organ. It is the privilege of this department to enjoy the cooperation and counsel of the Institute's Committee on Office Efficiency, of which the President of the Efficiency Society, Melvil Dewey, is chairman, and of the Institute's Committee on Marketing, of which E. St. Elmo Lewis is chairman.

For a limited time this complete efficiency service will be supplied to any reader of The Independent, or any member of the National Institute of Efficiency, without any charge whatever.

Upon receipt of each request for information, the individual or business house is supplied with a requisition chart on which may be indicated the equipment problem of the business in any department.

Upon receipt of each chart, the Plan and Purchase Department, assisted by the National Institute of Efficiency, suggests the most approved appliances for arriving at a high degree of efficiency in the office, reducing labor costs, increasing output and generally speeding up production.

It is the aim of The Independent in inaugurating this Plan and Purchase Department to make The Independent-Harper's Weekly Efficiency Service still more efficient and helpful in a practical way; to make The Independent a clearing-house for everything that contributes to greater efficiency in business; to make The Independent not only the interpreting-house of modern efficiency ideas but also a free and unprejudiced aid to the purchase of equipment that leads to higher efficiency.

The attached coupon will receive prompt attention. Mail it to-day.

**Foster Rubber Co.**

105 Federal St., Boston, Mass.

Originators and Patentees of the Foster Friction Plug which prevents slipping

sues. It should hardly be necessary at this late day to point out that "economic determinism" does not exclude the power of religions, fashions, traditions and other psychic factors; nor that "revolution" means to the revolutionist not a method but an essence.

As a matter of fact Professor Sellars himself insists upon the necessity of changing the basis for our social and economic relations—which is revolutionary; and he points out very persuasively the dependence of our customs and values upon the economic organization. It is an unusually readable and suggestive book on the whole question of the spirit of democracy and of its universal extension.

*The Next Step in Democracy*, by R. W. Sellars. Macmillan. \$1.50.

### WHEN PEACE COMES

Already the great problems that will follow the war are agitated, and a welcome contribution to their consideration is *The Restoration of Europe*, by Dr. Alfred H. Fried, an Austrian, and winner of the 1911 Nobel Peace Prize. He is one of the foremost pacifists, yet he regrets the title of Baroness von Suttner's *Lay Down Your Arms*, because it gives the wrong notion that true pacifists believe that one nation could abolish all its armament while other nations still maintain theirs.

In his judgment the war grew from misunderstanding and mistrust (amounting to international anarchy) between the leading nations. For this he thanks the diplomatists, at the same time scourging the sensational press for exciting the people. He pays the highest tribute to Bloch, whose prophetic views of the increasing horror and calamity of war have been so thoroughly fulfilled. The romance of war has gone. Peace to be lasting should be first concluded by the hostile powers and then confirmed and revised by the representatives of all the great powers, including the United States and other neutrals, with the view to establishing a Coöperative Union of Europe ("a central bureau for her common interests"), modeled after the Pan-American, but meeting more frequently, thus bringing out from the war itself the cure of its cause—international anarchy.

*The Restoration of Europe*, by Dr. Alfred H. Fried. Macmillan. \$1.

### MAN A MACHINE

Modern science can afford to carry the stigma of being "materialistic" so long as scientists continue to write books like Dr. Crile's *Man—An Adaptive Mechanism*. Ignoring for practical purposes the classic distinction between "physical" and "psychical" Dr. Crile applies the method of the experiment to the study of various phenomena, such as fever, pain, fainting, associated with disease, and shows that these phenomena are as "normal" as the more familiar reactions of the organism that we are accustomed to think of as adaptations to the environment. This conclusion is not new—it was reached by

One can live without art  
—but not so well

## The Medici Prints The Old Masters in Color The Copley Prints Masterpieces of American Art

The above quaint and charming picture **THE FORTUNE TELLER** by Sir Joshua Reynolds is one of hundreds of beautiful pictures

### FOR GIFTS

and for decoration in your own home, published in The Copley Prints and Medici Prints—pictures of the very highest distinction.

#### The Medici Prints

"are the finest of all reproductions in color; their perfection is little short of amazing," says *The London Times*.

#### The Copley Prints

are masterpieces of American art, reproduced in rich sepia tone, some in color. For 21 years a hall-mark of good taste in pictures. Of our Copley Prints of the *Holy Grail*, Abbey himself said, "I could not wish better."

#### Prices

\$1.50 to \$10.00; also Medici Miniatures at 25 and 50 cents. Careful attention to appropriate framing. Above picture in the colors of the original, 23x18, \$10.00. Also in the "Miniatures"—framed \$1.50 to \$3.00.

#### Your Old Family Portraits

Reproduced privately in the Copley Prints,—daguerreotypes, old faded photographs, tints, etc.—make unique gifts to your relatives. At art stores or sent direct. Illustrated Copley and Medici Catalogues, practically handbooks of art, are 25 cents each, 50 cents for both (send stamps). From them select prints to be sent you prepaid on approval.

For both series address

or

**One Day?**  
(\$1.50 per 1000)

**Shorten your working days to hours by installing at once**

*This girl, by the old pen and ink method, can address hardly 1,000 envelopes in one DAY*

# THE ELLIOTT ADDRESSING MACHINE

with which the two largest mail-order houses in the world did last year a business of one hundred and fifty millions of dollars without a single salesman.

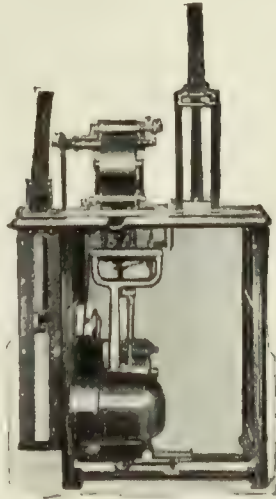

The smallest of the Elliott machines will address more envelopes in one hour than your stenographer can address in one day. The Elliott machine is noiseless. It uses an address card which

can be written on the typewriter by your stenographer. Blank cards cost 70 cents per hundred. Blank typewriter stencils cost \$7 per thousand. They come in eight different colors, allowing efficient classification of your list. The Elliott Automatic Multiple Selector will select and then print your names in your lists as you wish. The Elliott reproduces exactly your typewritten

address, prints 10,000 addresses from one card list, and takes the place of your card index files. The Elliott is an addressing machine of practical efficiency and cost saving. Its speed has made it famous no less than its low cost of operation. The hand machine prints 1,500 clear, perfect, addresses per hour. The foot machine prints 3,000 addresses per hour. The electric power machine prints 4,000 addresses per hour. A free demonstration of any one of the Elliott models will be cheerfully given in your own office without cost to you or obligation.

*Foot Addresser. \$100*

*Power Addresser. \$185*

CHICAGO, ILL.

the father of modern pathology. But Dr. Crile has brought together the results of experiments in harmony with the evolutionary outlook and with the mechanistic school of biology. He has a marked interest in what is distinctly human about men and women; his emphasis on the relation between iodine and an effective will, between mercury, sodium, nitrogen and other chemical elements on the one hand, and effective human living on the other is especially significant.

He points out that evolution has been from stable chemical compounds to more *labile* compounds—from brawn to brain, and that in the highest organism, man, the dominance of the most irritable compounds of the central nervous system is directly dependent upon physical and chemical reactions that follow the same mechanistic laws as obtain in the non-living universe. The style is unusually clear and the book will interest lay readers.

*Men—An Adaptive Mechanism*, by G. W. Crile. Macmillan. \$2.50.

## SHAKESPEARE AND OTHERS

The bibliography of *Elizabethan Translations from the Italian*, by Mary A. Scott, one of the Vassar semi-centennial volumes, has, besides its surprisingly long list of books, with the scholarly descriptive notes, a very interesting essay on the Italian Renaissance in England. (Houghton, Mifflin, \$1.75.)

The humanity of Shakespeare's villains, of Oswald, of Caliban, of the King of Denmark, for instance, is partially the theme of a very interesting and suggestive paper called forth by the tercentenary celebration—*Shakespeare*, an address delivered at Harvard by George Lyman Kittredge. (Harvard Univ. Press, 50 cents.)

A volume of *Select Prose of Robert Southey* has been edited by Jacob Zeitlin. The introduction is a critical summing up of Southey's work in history, criticism, economics and Spanish literature. The selections that rescue some interesting passages from oblivion are mainly from "The Doctor," "Bayard" and "The Peninsular War." (Macmillan, \$1.50.)

A charming bit of erudition, prepared, we may be sure, just for the pleasure of it, is *Shakespeare and Precious Stones*, by George Frederick Kunz. In its attractive pages are gathered all sorts of curious information as to the jewels worn in Elizabeth's day, as well as a study of all mention of such gauds by the dramatist. (Philadelphia: Lippincott, \$1.25.)

## NEW STORIES

*The Kingdom of the Blind* is another war story by E. Phillips Oppenheim. The British War Office, the open-eyed German spy, with a few abnormally blind Englishmen, make a lively situation. (Boston: Little, Brown, \$1.35.)

*The Beloved Son*, by Fanny Kemble Johnson. A somewhat painful but strongly drawn story of a young man inheriting an appetite for drink, and saved by the great love between father and son. (Boston: Small, Maynard, \$1.35.)

It is hard not to guess that Henry Kitchell Webster saved the left overs of "The Real Adventure" and used them for *The Painted Scene*. The short stories are decidedly inferior to his earlier work, but they prove in entertaining fashion that chorus girls are people. (Bobbs, Merrill, \$1.50.)

William Atherton Du Puy, in *Uncle Sam Detective*, sets forth in story form much as to the recent methods of the Government Secret Service. The feature of this book lies in the timeliness of the cited cases. The

In striving for home cleanliness, it would seem better economy and more effective to keep your rugs and carpets clean *all the time* rather than to let the dirt accumulate for a grand, periodic cleaning. BISSELL'S VACUUM SWEEPER, used regularly, will preclude dust-saturated carpets and rugs and keep them looking clean and new. With its pure bristle brush and its self-adjusting suction nozzle which glides lightly over the carpet, Bissell's is truly the efficient, carpet-saving, easy-running and economical machine for the home.

## BISSELL'S

Vacuum Sweeper

Carpet Sweeper

For the frequent brushing up which is necessary in every home, BISSELL'S CARPET SWEEPER, because of its extremely light weight and large brush capacity, will always be the most convenient of all devices. It is the standby of women everywhere, a household necessity for over 40 years. Both machines sold by the better dealers everywhere. Booklet on request.

Vacuum Sweepers \$7.50 and \$9.00. "Cyclo" Roll Bearing Carpet Sweepers \$8.00 to \$5.50. Slightly higher in the West, South and Canada.

## "A Train Load of Books" What Clarkson is Doing for the Book Buyer

IN several hundred thousand Libraries in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all the standard authors in De Luxe Sets artistically printed and bound—almost every book was bought from me. WHY? Because, I have no agents and sell you just the books you want—all new—many at saving of from 50 to 90 per cent—you examine the books in your own home for five days before paying for them. If not satisfied, return at my expense—and owe me nothing.

**Sample Prices:**  
Where a Man's Man. Publisher's price, \$1.35. My price, 90c.

Here are De Luxe Sets, Morocco bound, complete works, many of them at less than 25 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson, and scores of others.

## Get My Big, New Catalogue

My new catalog, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, the author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed.

I sell more books direct to the booklover—the individual reader—the rich man who insists upon his dollar's worth—the man who watches his pennies—and sell them for less money than any other man in America. Every book new and fresh, and guaranteed to please you—you to be the judge. I do not quibble, and would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

adventures of "Billy Gard." in working up his assignments, becomes appealing reading, gaining much by its verity. (Stokes, \$1.25.)

*Skinner's Dress Suit* and what came of living up to it is the text of Henry Irving Dodge's lively and amusing tract for business men. (Houghton, Mifflin, \$1.)

To see how many different beginnings you can make for sentimental love stories with exactly similar settings, middles and ends must be quite an amusing game. It is a pity, tho, for Walter Prichard Eaton to waste his time in writing books like *The Bird House Man*. (Doubleday, Page, \$1.35.)

*The Pictureland of the Heart*, by William Allen Knight, is a collection of little sermons under the guise of stories of a country town. They are neither very original nor very striking, but they are very sincere and they are illustrated by charming photographs of Palestine. (Boston: Pilgrim Press, \$1.25.)

In Naples there stands a little museum filled with odd relics of the seventeenth and eighteenth centuries from France, Spain, Italy, England. *In Shadows of Yesterday* Marjorie Bowen tells, and tells with skill, the dramatic stories in which some of these faded pictures, fans and dresses played a part. (Dutton, \$1.50.)

Edward C. Booth writes with a curious and pleasing originality of style. He looks at life keenly, quietly and sweetly, both the humor of it and the tragedy. *Fondie* is a tale of a Yorkshire village, the wheelwright's son, the vicar's daughter, the young gentleman and other unusual but very real people. (Appleton, \$1.40.)

### ALL SORTS OF GUIDES

Ramsey and Weston's *Manual on Explosives*, an English book, explains explosive mixtures and their application, with a chapter on poisoning among workers, and legislation regarding explosives. (Dutton, \$1.)

A very complete and clear *Automobile Handbook* is that by J. E. Homans, on the gasoline motor car. There are diagrams showing construction, explanations of difficulties and directions for driving and repairs. (Sully & Kleinteich, \$1.)

An admirably informative little volume is *An Introduction to Metal-Working*, by J. C. Pearson, written from an English standpoint. The student reader is given a comprehensive, if preliminary, idea of chipping chisels, scrapers, callipers, lathes, forging, etc. (Dutton, 60 cents.)

A host of beautiful examples of Roman letters, Uncial, Gothic, script, fills *Lettering*, by Thomas Wood Stevens. Any one dealing with designs or printing, as well as the beginners for whom the advice as to methods and the historical study of varieties is meant, will welcome this book. (Chicago: Prang, \$2.)

If one have tender memories of bread sauce, gooseberry tarts, meat pies, buy the *One Maid Cookery Book*, by Mistress A. E. Congreve, First Class Diplôme. This is not as its title suggests to us an "efficiency" manual for serving three maid meals in one maid flats but a collection of characteristic English receipts. (Dutton, 50 cents.)

To meet the needs of home mission study classes there comes from a Southern pen, that of John M. Moore, a broad-minded account of various agricultural, manufacturing, educational, religious features of *The South of Today*. Such handbooks would be far more useful if indexed. (Missionary Ed. Movement, 60 cents.)

*The New International Yearbook* for 1915 ought to have a larger sale than its predecessors because it is a crucial year in the world's history and because of the larger scope of American interests. This is the only annual that covers equally the American and the foreign fields in politics, science and art, and it is indispensable to any reference library. (Dodd, Mead, \$3.)

## Scribner Fall Publications

### The Melancholy Tale of "Me" My Remembrances

By E. H. SOTHERN

This is a volume of autobiographic reminiscences of the celebrated actor, in the pages of which are presented, with an extraordinary sympathy and skill, most of the leaders in the dramatic world of, say, the last half-century, including, of course, the author's famous father.

*Profusely illustrated.* \$3.50 net.

### A Sheaf

By JOHN GALSWORTHY

Author of "The Freeland," "The Patrician," "The Dark Flower," etc., etc.

Under this title Mr. Galsworthy has gathered another volume of his thoughtful, sympathetic, and beautiful essays and sketches—fellows of those which in "The Inn of Tranquillity" and "A Motley" have attracted to him readers as warmly attached as those of his fiction. \$1.50 net.

### Poe's Helen

By CAROLINE TICKNOR

A book, based largely upon new material of value, devoted to the romance between Edgar Allan Poe and Mrs. Sarah Helen Whitman, their engagement, its breaking, etc.—in short, the whole Whitman episode in Poe's life. *Illustrated.* \$1.50 net.

### Financial Chapters of the War

By ALEXANDER DANA NOYES

Financial Editor of the N. Y. Evening Post

This book discusses, in a manner free from technicalities, what actually happened on the world's financial markets when the war began; how the belligerent powers have raised their stupendous war loans; what the depreciation of exchange rates on their markets means; how far and why New York has displaced London as the financial center of the world; what will be the financial condition of Europe and America after the war. \$1.25 net.

### The Navy as a Fighting Machine

By Rear Admiral BRADLEY A. FISKE

Admiral Fiske gives a vivid picture of the navy as a whole. He shows that all the ships and shore stations, and all the officers and men who handle them, are only parts of a great machine. He proves that its effectiveness depends, not only on its size, but also on the skill with which it is designed, prepared, and operated. He shows what a satisfactory navy must be able to do, and explains the principles that must control its management. No book of this character has ever been written before in any language. \$1.25 net.

### A Book About the Theater

By BRANDER MATTHEWS

An expert on the dramatic art and play production has here given a most informing and popular book about every aspect of the art and business of the stage.

*Illustrated.* \$2.50 net.

### The Passing of the Great Race

By MADISON GRANT

With a foreword by Henry Fairfield Osborn

An interpretation of history in terms of race—race implying heredity, and heredity implying all the moral, social, and intellectual characteristics and traits which are the springs of politics and government—a history of Europe written in terms of the great biological movement which may be traced back to Galton and Weissmann.

*With maps.* \$2.00 net.

### General Joffre and His Battles

By RAYMOND RECOULY (Captain X)

The author of this volume is on the staff of a great French general; he reveals the personality of Joffre and his great plan for the Battle of the Marne; describes the right and left hands of Joffre—de Castelnau and Foch, the great Champagne Drive, and what is known as "the battle in the forest," in Argonne and Verdun.

\$1.25 net.

### Fiction

### The Eternal Feminine

By MARY RAYMOND  
SHIPMAN ANDREWS

The stories here grouped are among the cleverest she has ever written and are linked together by playful satire of feminine weaknesses and whims which characterizes each of them. *Illustrated.* \$1.5 net.

### Unfinished Portraits

Stories of Artists and Musicians.

By JENNETTE LEE

These stories of some of the greatest of the world's artists and composers are pure fiction, though in some cases based upon rumored or legendary incidents of their lives. \$1.25 net.

### Souls Resurgent

By MARION HAMILTON CARTER

A novel of the West whose courage and versatility in presenting typically American situations and conditions give it a national significance. \$1.5 net.

### F. Hopkinson Smith's

Last Novel

### Enoch Crane

A story of New York City, planned and begun by the author of "Peter," "Forty Minutes Late," "Kennedy Square," "Felix O'Day," and completed from an elaborate synopsis by the novelist's son.

F. BERKELEY SMITH

*Illustrated by Alonzo Kimball.* \$1.35 net.

### Xingu and Other Stories

By EDITH WHARTON

This volume is a brilliant successor to "Men and Ghosts," Mrs. Wharton's last group of stories. It includes "Xingu," "The Long Run," "The Triumph of Night," "Kerfol," "Coming Home," "Other Times, Other Manners," "The Choice," and "Bunker Sisters." The title story is a humorous one, satirizing a community of literary and artistic souls. \$1.50 net.

## Independent Opinions

Letters on the political campaign are now so numerous that we can do no more than quote a few sentences from some of them:

Wilson and Congress are accused of cowardice! Did not they, in passing that eight-hour bill, go up against the greatest combination of capital on earth? and at a time, too, when he could ill afford to incur their or its enmity?

I agree with you that this is a fore-runner of the coming of government ownership, for that is the only possible sure preventative of future trouble.

F. S. LEWIS, M. D.

Port Angeles, Washington

You (as well as the Republican candidate for President) attack President Wilson because he asked Congress to pass the so-called eight-hour law. But you (and he) neglect to state what Wilson should have done in the matter. Was there anything else Congress and the President could have done to avert the threatened strike, or should they have allowed the terrible calamity to fall upon the country at a time when it was unprepared by any sort of legislation to meet the calamity when it came? If a man points a gun at you with the command, "Stand up and deliver," are you going to assert your recognized right of property and refuse to hand over your cash, or are you going to obey and later do what lies in your power to prevent the situation from occurring again? It seems to me to be a poor time to argue fine points of right and wrong when you are held up and you have no means of defense.

Herscher, Illinois GEO. E. BODIN

In the article "The Flagrant Issues" in The Independent for September 18, Mr. Hapgood makes out that at the beginning of the war Mr. Roosevelt held the same views with regard to Belgium that Mr. Wilson holds, and he supports his claim by quoting from an article of Mr. Roosevelt's in the Outlook for September 22, 1914.

If Mr. Hapgood had read Mr. Roosevelt's article thru carefully he would have discovered some expressions in it that could not be accepted with much rejoicing by Mr. Wilson's supporters as an endorsement of his views. For example:

"Neutrality may be of prime necessity in order to preserve our own interests. . . . But we pay the penalty of this action on behalf of peace for ourselves, and possibly for others in the future, by forfeiting our right to do anything on behalf of peace for the Belgians in the present.

"We can maintain our neutrality only by refusal to do anything to aid unoffending weak powers which are dragged into the gulf of bloodshed and misery thru no fault of their own."

But it is a grim comment upon the professional pacifist theories as hitherto developed that our duty to preserve peace for ourselves may necessarily mean the abandonment of all effective effort to secure peace for other unoffending nations which thru no fault of their own are dragged into the war.

D. A.

To those people who have a feeling in their bones that Hughes, honest and intellectually competent, as he undoubtedly is, would be hindered in his work as chief executive of the nation by a certain academic narrowness, his definition of the object of education should be enlightening. In 1909 in a lecture to a group of Yale students Mr. Hughes said:

"The primary object of education is to

## FOX TYPEWRITERS

### Ask For Free Demonstration

Ask our representative in your city to show you the New Model Fox. The typewriter which combines features hitherto unattained in like degree in any other typewriter—extreme compactness, tremendous manifolding qualities, perfect line cutting, remarkable economy in ribbon costs, unlimited speed, beautiful finish, keyboard and type suitable for any profession or business.

### Fox Agency in All Cities

Orders will be filled direct from our factory or nearest agency from localities where we do not have a local representative. If there is no Fox Agency in your town send us any amount you can spare from \$1.00 up as a first payment, and pay the balance \$6.00 monthly, or send \$10.00 with order and get our \$4.00 Fox Model Oak Typewriter Table Free. Purchaser must pay transportation. Price \$100.00 less 5 per cent for all cash. Dealers will find our new selling contract to be a revelation. For more territory given. Catalog free. In replying don't fail to mention "The Independent" for October.

emancipate; to free from superstition, from the tyranny of worn-out notions, from the prejudices, large and small, which enslave the judgment."

Not even the most advanced advocate of modern educational methods could voice a definition of greater breadth or of more liberal vision.

E. M. PRICE

The Farnsboro, Washington, D. C.

In politics I am an independent, voting with one party as readily as the other as my conscience directs; but I have been shown nothing by you that convinces me that I should support Mr. Hughes; on the other hand your attitude has convinced me that I should support Mr. Wilson.

E. V. PALMER

Gilbertsville, New York

I desire to both compliment and congratulate you upon the tone of your magazine. Have just read two articles in issue of July 24 discussing the personalities of Wilson and Hughes.

Your word picture of Wilson and Hughes was charming, and I believe very correct. We do not have to choose between two evils, thank God. Hughes, governed by cold, calm reason; Wilson by intuitive judgment of a peculiar correctness, and possess of more imagination, also warmth of heart. A few have the brain without the heart. Lincoln had both in a superlative degree.

A. J. KINNEAR

Martinsville, Indiana

Evidently many of our readers like to have labor questions handled from the human side instead of from the statistical or economic standpoint. The "Story of the New York Street Car Strike" brings us such letters as these:

I want to thank you for printing that article, "My Home," by Donald Wilhelm—or was it Michael Kaiser?—in The Independent of September 25. Why don't you print more human documents like that? Such a "confession" as this is worth whole reams of editorial discussion and comment on the strike.

"You're haunted all the time by this injustice. It gets in on your work. You know that your word doesn't count."

There is the secret of the discontent of today in working for big corporations in America. And there is no appeal. That is what starts strikes, riots and bloodshed.

JAMES C. MOFFET

Louisville, Kentucky

The question arises, why can not the writer see that primarily the men are the cause of their misfortunes by their propensity to flock to the cities, one does not hear such tales in the smaller towns or country districts; further, his wife and Jeannette could live a much healthier and more comfortable life with future possibilities that are unimaginable where they are.

THOMAS M. ARNOLD

Rainelle, West Virginia

I am very much impressed with the article in the current number of The Independent—"My Home." If that motorman's story is even approximately true, I say with Saint Paul, "Brethren, these things ought not so to be!"

If the officials of the street railways in New York City do not voluntarily reply to the statements and charges in that article, I hope that you will request them to do so.

I am a small holder of the securities of some of the railroad companies, both steam and electric; and, if necessary, I, for one, shall gladly approve of a reduction in the dividends therefrom, if thereby this motorman and such as he may obtain such wages and such conditions in their work as will enable them to live a more nearly normal life.

With James Russell Lowell I believe emphatically in "—giving to the hand, not so large a share as the head, but a larger share than hitherto in the wealth they must combine to produce." JOHN DOE

## "My Check's Been Raised—and You Don't Even Know Who Cashed It?"

BANKER—Of course not. It's payable to "Bearer." Anyone could cash it.

DEPOSITOR—But I never drew a check to "Bearer" in my life.

And there you are! Somebody took this man's check, raised it to ten times the original amount, then erased the payee's name with acid and substituted the word "Bearer." It was his genuine check, with his own signature. He hadn't a chance in the world.

# MOTOR PROGRESS

*Conducted by John Chapman Hilder*

EDITOR OF "MOTOR LIFE"

**S**LIPPERY weather is in the offing and with it comes the need for unusual caution. Skidding, the blackest bête noir in the motorist's category, should be anticipated and prevented before it happens. In order to prevent your car from skidding, you ought to know what makes it occur. Therefore, in case you don't know, let me hint that the whole cause of skidding is revealed by three words: Loss of traction.

When your tires no longer grip the road or pavement, they skid, or slip over it. This happens when the road is wet, or oily, or sometimes when it is covered with thick sand. If you have ever enjoyed the experience of stepping briskly onto a small rug in the middle of a highly polished floor, you will easily recognize what is meant by loss of traction.

The obvious preventive, then, is to see to it that your tires are equipped so as to have positive traction at all times. And the only possible way you can do this is to use tire chains on all four wheels at the first indication of slippery weather. I say *four* chains, in spite of the fact that few people use that number, because front wheel skids are more dangerous than rear wheel skids, for the reason that they are more difficult to check. In case you use only two chains, it is better to put one on a rear wheel and one on the opposite front wheel than to put both on the rear.

Should you happen to be caught on treacherous roads without chains, you can do a good deal toward preventing skidding by being careful in your application of the brakes. The big thing to remember is never, never to put on the brake so suddenly and so hard that the wheels are locked. Locked wheels can only move by skidding. You cannot control their course. And if, as is frequently the case, your brakes are not properly adjusted, a sudden, hard application may lock one wheel while the other is still rotating. The effect of this will be immediately to slew your car sharply to one side.

When you have reason to believe that the road over which you are driving is slippery, apply your brake in a series of short motions, alternately pressing and releasing the pedal. This is the only safe way.

When you feel the car skidding at the rear, turn the front wheels in the direction that the rear wheels are sliding, and apply the brakes in the manner described above. And don't forget to throw out the clutch. When the front wheels skid, stop the car as quickly as possible without jamming the brake on hard, and straighten them.

Sometimes a car will skid when you are turning out of a rut or a greasy patch in the road. Skidding on these occasions may be obviated by throwing out the clutch and allowing the car

to coast onto the good road, instead of letting the wheels drive it.

To revert, for an instant, to chains: do not think they damage tires. This is a fallacy. Chains damage tires only when they do not fit or when they are carelessly put on. Chains are a first-class form of life insurance and you should consider them an investment rather than an expense.

Here are two true little stories which point a moral:

An advanced class for women in an automobile school were led to a car and requested to find out why it refused to go. They examined every part, and bit their nails, and tore their hair, and finally reported complete failure. In their anxiety to show their profound grasp of the mechanical details, they had overlooked one thing. There was no gasoline in the tank.

A friend of mine told me the other story. He has an almost new touring car of excellent make. Until quite recently it had given him absolutely no trouble. Suddenly, however, it developed a rattle—a disturbing, tinny rattle. It sounded like a dozen cans tied to a dog's tail. He took it to the service station and the tester said the noise was caused by the brake bands. But two days later, after the experts had adjusted the brakes, the rattle was still in evidence. A country garageman assured him the trouble lay in the springs; that the clips were loose and the leaves were clashing. But after the springs had been fixed the rattle was still in evidence. Back at the service station once more the tester said that the plates inside the muffler had broken loose. But when the muffler had been investigated, the rattle was still in evidence. Further examinations showed that the brake rods, muffler connections, mudguards, tire irons had nothing to do with the noise, and my friend was becoming convinced that the car was bewitched.

Then an up-state mechanic solved the mystery. He lifted the rear seat cushion. In the compartment beneath it were two tire chains and a starting handle, lying there loose. They had caused the rattle by banging against the back of the tonneau.

The moral, it seems to me, is obvious.

The average motorist is much too

indifferent about the appearance of his car.

To keep the body of a motor car clean is to practise economy. As you probably know, the modern car is finished with from four to twenty coats of paint, varnish and enamel. This finish is applied for two reasons: first, to enhance the machine's appearance; second, to protect the metal—all bodies are metal nowadays—from corrosion, and the ravages of dust-laden air, water and the sun. In the making of some cars, the body is dipped into vats of color, with others the paint or enamel is sprayed on. Then it is baked. With still other cars—the more expensive ones—the colors are applied by hand, one coat at a time, and laboriously rubbed after each application. In all cases, however, the finished surface is delicate, and unless it is properly cared for it soon loses its luster, its attractiveness and its protective value. Another point to remember is that should you wish to sell your car or trade it in for a new one, its cash value will be based largely on the condition of its paint. Second-hand car dealers have often told me that repainting adds about \$200 to the price they can obtain for a machine.

Cleaning a car is not an arduous task, provided you do it often and do not allow the dirt to accumulate and become caked. In dry weather, washing is really seldom necessary. There are several preparations on the market which enable you to clean your car quickly and without transferring the grime from the car to yourself. These are liquids that you spray on, which remove all dirt when you wipe them off with cheesecloth. They contain certain ingredients which loosen the adhesive matter and other ingredients which fill the pores in the body finish and keep it fresh and elastic.

It is a good rule never to use water on the body of your car, unless you must in order to remove caked mud. When you do use it, however, use it the correct way.

First take your hose and play it on the running gear, the wheels, mudguards, frame, etc. Clean from the bottom up. Then play the hose in a gentle stream over the body working from the rear and hosing the hood last. In conjunction with the hose use a big, soft, wool sponge and be sure that it is clean before you start. Keep the water running through the sponge all the time. When the mud is washed off, take a clean, soft chamois and dry the whole body thoroly. Never allow water to dry on the body, it ruins the finish. When you are sure the body is dry, spray it with one of the liquids already mentioned or rub it down with a good automobile polishing wax.

The folding top and celluloid windows are best cleaned with luke warm water and Ivory soap.

*Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product*

# PEBBLES

SAME OLD POEM

Same old pumpkins, same old plums;  
Same styles in chrysanthemums.

Same old hunters, same old quail;  
Same old brown October ale.

Same old football, same old haze;  
Same old short-length remnant days.

Same old red leaves in the mall.  
Same old chestnuts; same old fall.

—William S. Adkins, in *Life*.

"Isn't that a pretty big bill, doctor?"

"Well, living costs more than it used to, you know," returned the man of medicine.  
—*Life*

Perhaps after all this tumult is over the President will suggest that he, too, is entitled to an eight-hour day.—*Charleston News and Courier*.

"Look at the great cities of antiquity," exclaimed the lecturer. "Where are they now? Why, some of them have perished so utterly that it is doubtful if they ever existed."—*Boston Transcript*.

"I'm afraid you went to sleep during that learned discourse," said the woman with a strong sense of duty.

"Yes," replied her husband, "when it started I was afraid I wouldn't."—*Dallas News*.

Widower McGurk—"Tis a big price to pay for a coffin!

Undertaker O'Brine—A big price! And munny's the married man wud pay twice as much for th' same privilege and jump at th' chance!—*Life*.

Soph.—Say, it was so dark out last night that you couldn't see your hand three inches from your eyes.

Frosh.—Huh! that's nothing. It was so dark night before last that the coal-pile in our back-yard looked like a snow-drift!—*Lehigh Burr*.

"I see you have a new man at the head of that important department. I suppose he came to you highly recommended?" "Yes, indeed. He is a graduate of one of the best-known prisons in the country, and has the best recommendations from several other wardens."—*Baltimore American*.

The lecturer had been describing some of the sights he had seen abroad.

"There are some spectacles," he said, "that one never forgets."

"I wish you would tell me where I can get a pair," exclaimed an old lady in the audience. "I am always forgetting mine."—*New York Times*.

The late Gilman Marston of New Hampshire was arguing a complicated case, and looked up authorities back to Julius Caesar. At the end of an hour and a half, in the most intricate part of his plea, he was pained to see what looked like inattention. "Your honor," he said, "I beg your pardon; but do you follow me?"

"I have so far," answered the judge, shifting wearily about in his chair, "but I'll say frankly that if I thought I could find my way back, I'd quit right here."—*Argonaut*.

Let prices ever upwards soar

For beef and bacon, veal and mutton;  
Let cheese and butter cost no more,

I do not care a single brass.

My debt of gratitude, indeed,

To kindly fate grows ever deeper.

So long as these glad words I read:

"Onions are noticeably cheaper!"

O' precious globes, O' pearls of price

O' quite incomparable flavor,

There is no need to ask me twice

When I inhale your gracious vapor.

Let tradesmen swell their awful bills,

Unless they bid me do without you,

Whom I so worship that it fills

My eyes with tears to think about you.

—*London Evening News*.

## When Physician Meant "Physic—Dispenser"

IN Shakespeare's time, if you were sick and I went to a doctor he did one of two things. He either bled you or "physicked" you.

Physicians no longer practice bleeding. And the leaders of the profession are equally opposed to the indiscriminate use of laxative and cathartic drugs. In fact, the habitual use of laxatives is now known to be one of the most fruitful causes of constipation.

Physicians of the highest standing prescribe Nujol because it relieves constipation without any bad after effects and without forming a habit. It acts in effect as an internal lubricant, preventing the bowel contents from hardening, and in this way facilitating normal movements.

All druggists carry Nujol. Avoid substitutes. Write today for booklet, "The Rational Treatment of Constipation" using coupon below.

Acceptances of drafts payable at a future date or author- ized by commercial letters of credit .....	1,449,999.92
Other liabilities, viz:	
Reserves for taxes .....	243,517.19
Accrued interest entered on books at close of business on above date .....	821,433.34
Accrued interest not en- tered on books at close of business on above date	260,392.64
Estimated unearned dis- counts .....	140,212.44
Total .....	\$190,401,329.00

# The Market Place

## RAILROAD LOAN TO CHINA

A contract was signed on the 30th ult. by the Chinese Government and an American company which virtually involves the negotiation here of a loan of more than \$60,000,000 to China. In this contract the Siems-Carey Railway and Canal Company, which is owned jointly by the American International Corporation and the firm of Siems & Carey, railroad builders, of St. Paul, undertakes to construct in China 1500 miles of railroad, on a percentage basis, and takes an option for the construction of 1500 miles more. The money required for the first 1500 miles, something more than \$60,000,000, will be obtained by means of Chinese Government bonds, to be issued in this country by the agency of the American International Corporation, a new company of great strength which is planning trade and industrial undertakings in Russia and other foreign countries. The work is to be done under the direction of George A. Kyle, an American engineer who constructed 600 miles of road in Alaska, and Americans will hold the offices of traffic manager and auditor.

The course of the road has not yet been marked out, but it will not interfere with existing agreements to which foreign governments or banking groups are parties, or lie in the northern provinces affected by the recent treaty with Japan. That country, so far as can be learned, has raised no objection, altho it must have known that a preliminary agreement was signed last May. China has only 6000 miles of road. The contracting company has also undertaken the dredging of the Grand Canal. While the bonds will be issued by the American International Corporation for the Chinese Government, the security is to be exclusively the railroad property. China failed to borrow \$30,000,000 here a short time ago because the money was to be used for what might be called political purposes, and the terms were not sufficiently attractive. The railroad project is in strong hands, however, and success is confidently predicted. It appears to dispose of recent assertions that Japan would insist upon control of all foreign investments or undertakings in China. Probably the rails and rolling stock will be bought here.

Books for Kuhn, Loeb & Co.'s loan of \$50,000,000 to the city of Paris were open for only one day. The bonds were in great demand, and subscrip-

## Journalism As An Aid To History Teaching

By **EDWIN E. SLOSSON, Ph.D.**  
Literary Editor of The Independent  
Associate in the School of Journalism  
Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to THE INDEPENDENT, 119 WEST 40TH ST., NEW YORK.

### DIVIDENDS

## American Telephone and Telegraph Company

A dividend of Two Dollars per share will be paid on Monday, October 16, 1916, to stockholders of record at the close of business on Saturday, September 30, 1916.

G. D. MILNE, Treasurer.

## AMERICAN LIGHT AND TRACTION COMPANY

The Board of Directors of the above Company, at a meeting held October 3, 1916, declared a Cash Dividend of one and one-half (1 1/2) per cent. on the Preferred stock, a Cash Dividend of two and one-half (2 1/2) per cent. on the Common stock and a Dividend at the rate of two and one-half (2 1/2) shares of Common stock on every one hundred (100) shares of Common stock outstanding, all payable November 1st, 1916. The Transfer Books will close at twelve o'clock noon on October 14, 1916, and will re-open at ten o'clock A. M. on November 1, 1916.

C. N. JELLIFFE, Secretary.

# Dioxogen

**After you shave—**  
—do you neglect your face altogether—do you slap on sweet smelling toilet water or powders—or do you do the logical, hygienic thing and bathe your face with Dioxogen?

Dioxogen takes away the smart, disinfects and heals scratches, stops cuts from bleeding and leaves the face clean and fresh, cool and smooth.

**"The Key to Success"**  
**Efficiency in Concentration**  
By A. B. JOHNSTON  
Success comes only through CONCENTRATION which enables one to do one thing WELL. Persons who "can do anything" are not in demand to-day. Big business demands men who can do some one thing well through power of Concentration. A worthy successor to "A Message to Garcia." To read the last paragraph on page 5 should be worth many hundreds of dollars.  
12 mo. Cloth. Price, net, 50c postpaid.  
At All Bookstores or  
**THE SHERWOOD COMPANY**  
19 JOHN STREET, N. Y.

tions or applications were for more than three times the amount. Applicants must be satisfied with only 30 per cent of the quantities they desired. The offer was made at 98 3/4, and there have been sales at 99 5/8.

## COTTON PRICES

Within a short time the price of cotton has advanced from 13 to 17 cents a pound in the New York market, the government having reduced its crop estimate from 14,266,000 to 11,637,000 bales. The price is very high. One year ago it was less than 12 cents. Planters in the South are now urged to hold their cotton until they can get 20 cents for it. Each state has a Farmers' Union. The presidents of these associations at a recent meeting passed a resolution advising the members to do this. But there can be no effective holding movement without agreement and concerted action. A beginning has been made in South Carolina, where the president of that state's union has issued a call for a holding conference. He says:

Somebody is going to sell cotton before the next crop comes in at 20 cents and up, and why not the man who makes it? With our state warehouses, money at a low rate of interest, and cheap storage and insurance, there should be no reason for the majority of farmers here to depress the market by selling now. The world may be facing a cotton famine. To reap the harvest we must act together. Unorganized we can never bull the market.

The history of similar projects in the past warrants a prediction that this one will not perceptibly affect the price. Too many planters, tempted by the high figures, will yield and sell. Those who urge them to force the price upward to 20 cents cannot win the approval of the millions of Americans who are now paying high prices for cotton goods.

## THE STOCK MARKET

With a slight reduction of daily share totals, the market for securities has continued to show exceptional activity and breadth. Friday, the 6th, was the twenty-fifth consecutive full day in which more than 1,000,000 shares were sold on the New York Stock Exchange. On that day the upward movement was checked by a decline, due to reports that Ambassador Gerard, who was to arrive at New York on the 10th or 11th, would submit to President Wilson peace propositions suggested by the Kaiser. For some time an average of transactions in fifty representative railway and industrial stocks had shown steady gains, with a slight interruption on September 30 and October 2. For the eight days ending on the 5th the net average addition had been about 3 points. On the 6th a considerable part of this was lost.

Thruout the week the price movement had been irregular and erratic, but with an upward tendency. The government's cotton crop report on Monday, showing the extremely low condition of 56.3, and reducing the yield to 11,637,000 bales, apparently had no effect. In the three days immediately thereafter railroad shares were firm and rising, partly for the reason that the earnings of several companies

# This Cigar Must Be Good Or I'd not be in business

A cigar could not be put to a more severe test than is given the first few of my cigars. Every one of those first cigars is smoked in a super-critical mood, for men cannot understand how I am able to offer the cigar I do, at the price I do. I have no way of influencing their verdict—no show windows, no salesmen. Not only must my cigars be superior to any they have ever smoked at anywhere near the price but they must be of such a quality as to create the desire to re-order, for it is only on re-orders that I make my profit.

Over 18,000 smokers who use over 2,000,000 of my cigars each year are convinced of the quality of the J. R. W. cigar. What I want to do is to get you to try my cigar once. I know you'll re-order. To induce you to try my cigar I make you this special offer.

## My Offer Is

Just send me ten cents for packing, postage and revenue with your letterhead or business card. Then I'll send you these cigars. *Smoke five with me.* If you like them send me a check for \$2.60 for the full fifty. Write today and enjoy this delicious smoke.

## Your Health

is largely in your own hands.

## Your Weight

can be reduced or increased, as you wish.

## Your Poise

can express uprightness, or downright negligence, which affects your health.

I have helped 79,000 of the most intelligent, forceful women of America to regain health and keep it. This magazine would not have advertised my work for fifteen years if I had not "made good."

Tell me your defects in health or figure. If my work is not suited to you, I will direct you to the help you need.

I will also send you a booklet free which tells you how to stand correctly, and gives many points of interest to women.

**SUSANNA COCROFT**  
Dept. 19, 624 Michigan Blvd., Chicago

Miss Cocroft has well been called the "Health Engineer" for women.

## "You Get The Job"

"We've been watching you, young man. We know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want in this firm's responsible positions. You're getting your promotion on what you *know*, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man *trained to hold it*. He's watching you now, hoping you'll be ready when the opportunity comes.

The thing for you to do is to start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools. Over 5000 men reported advancement last year as a result of their I. C. S. training.

The first step these men took was to mark and mail this coupon. Make your start the same way—and make it right now.

AMERICAN CORRESPONDENCE SCHOOL OF LAW  
Dept. 2481 Manhattan Bldg., Chicago 40

for August had been published. Comparison was made with August a year ago, when marked improvement began to be seen. The New York Central's gain in net earnings was nearly \$3,000,000, with an addition of \$28,500,000 for the eight months that ended with August. A great increase in gross and net was shown by the Pennsylvania Company's reports. Those who compared the figures with those for the year immediately preceding the war saw a gain of 36 per cent in net. Reports from the Union Pacific and Northern Pacific were not less favorable. On account of these statements, railroad shares were leading the industrials when the reaction took place on the 6th. The average daily business was about 1,170,000 shares.

The report about impending peace overtures did not reach the market until an hour and a half before the close on Friday. It came from bankers whose names were not made known, and had some support in conservative afternoon newspapers, altho telegrams of disapproval, diplomatic or otherwise, from official sources in Washington were published. Some expected that it would be shown that the story had no foundation in fact; others reasoned that recent warnings from London to neutrals against interference in the interest of peace might have been suggested by secret information about the Ambassador's mission. War order stocks declined, and railroad and copper shares followed them in the downward movement. Overtures for peace from Germany would, of course, tend to cut down the profits of munition manufacturers and the railway earnings gained in part by carrying war supplies to our ports for shipment to Europe.

### METALS AND WHEAT

In the iron and steel industry prices are still rising. Additions for several products were made last week. September's output of pig iron was 3,202,000 tons, and the total for twelve months has been 38,400,000. The record for exports was broken in August by the shipment of 598,129 tons of steel manufactures and iron. Since the recent purchase of 448,000,000 pounds of copper by the Allies, at about 27 cents a pound, the price has advanced to 29½ cents. The average for last year was 17½. Something has been added to the rates for several other metals.

In the Chicago market there have been sales of wheat at \$1.60 a bushel. Higher prices for flour, compelling additions to the price of bread or reduction of the size of the loaf, have caused complaint, excited much discussion, and led certain public officers and associations of citizens to seek an embargo forbidding the exportation of wheat. Exports from this country and Canada have recently averaged about 7,500,000 bushels a week, altho we can spare not more than 100,000,000 in the current crop year, and Canada has harvested only 168,000,000 bushels, against last year's yield of 376,000,000.

## A DEFERRED DIVIDEND RESULT

Commending views exprest in this department in connection with the deferred dividend system of life insurance as timely, because "agents of companies issuing this form are still finding many victims," a reader in Cleveland, Ohio, takes occasion to describe briefly an experience he is just concluding under such a contract with a western company. When his application was taken he was assured, he says, that the estimated surplus was calculated on a conservative basis; and so confident was the agent that the predicted results would be realized, he gave the insured a rate book containing the figures. This was nearly twenty years ago. The policyholder preserved the book with the policy, and, upon remitting his twentieth premium this year, made inquiry of the company as to the amount the dividend would be at maturity of the policy a year later. The company answered that it would be about \$230 per \$1000 of insurance. Its estimate when the application was taken was \$449 per \$1000.

I am without two essential facts here—the insured's age and the amount of his annual premium, but believe I take no risk in asserting that the estimated tontine dividend was predicated upon some actual annual dividend result achieved by that or some other company, and that the policyholder would have received a sum equaling, perhaps exceeding, \$449, if his insurance had been written in one of the leading annual dividend companies. In this case the insured "paid and stayed"; he is supposed to have received his just share of the dividends earned and forfeited by those who died and lapsed; and yet his reward is only half the amount the company conservatively estimated he should have.

R. E. R. Wake Forest, N. C.—United Life and Accident Insurance Company, Concord, N. H., organized April, 1913; began business July, 1914; authorized capital \$500,000; paid-up capital at end of 1915, \$410,000. On January 1, 1916, the financial condition was: admitted assets, \$740,490; total liabilities (including \$410,000 capital), \$459,144; net surplus, \$281,346. In 1915, the premium income aggregated \$43,506; total income, \$143,590, of which \$70,662 was premium on capital. The disbursements were \$11,884 agents' commissions; \$21,273 other agency expenses; \$3,600 claims paid; \$25,924 home office salaries, medical fees, etc.; and \$19,531 other disbursements; total, \$87,236. The board of directors is composed of reputable and responsible persons; the company's investments are high grade; excellence of management reasonable; underwriting methods sound; mortality rate high.

## New York Life Ins. and Trust Co.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest bearing an income for the future. Address the Company at its Home Office, No. 271 Broadway, New York City.

### WHERE THE MONEY GOES

Mr. Perley Morse, a widely known New York accountant, author of "The A. B. C. of the Government of the United States," and a corporate member of the National Institute of Efficiency, is calling attention to a number of administrative reforms that would make for greater national efficiency. Special interest and value attach to Mr. Morse's suggestions because of the fact that, thru his organization, he has investigated many of the Departments of our Government, including the Quarantine Station of the State of New York, the New York Public Service Commission (leading into all the Public Service Corporation finance in Greater New York) and the New York State Banking Department. Briefly, Mr. Morse contends that the Federal Government has not kept up with the development of modern business methods. "Where private business has been built up by the application of scientific methods, getting a dollar's worth for every dollar expended, the Government is pottering along in much the same way as a country storekeeper." It is haphazard, spending more than it should here, and exercising false economy there. It will stretch a public work over half a dozen years or more that should be done in two years; it uses obsolete tools and buildings at great cost, and buys articles of great value, such as guns and warships, without providing for their maintenance, upkeep and obsolescence. An article is simply bought, and when it is worn out another is bought, no system existing by which the real value of the article—its cost minus depreciation—can be ascertained at any given time.

The departments overlap and duplicate services. All need much the same kind of supplies, and each buys its own in spite of the enormous cost of maintaining various sets of officials. This work might well be combined in one bureau—note the buying economy of the chain stores. Superannuated employees should be retired on pensions, instead of clogging the departments with them, and the standards of the private corporations should be brought in. There are now too many employees and too many sinecures—some do not earn their pay and others are underpaid. Positions which are rewards for political services and which carry with them no duties should be abolished; skill and competence should be the factors determining the appointment. The Government should get money's worth for the people by abolishing useless army posts and navy yards.

Much good would be done, Mr. Morse believes, if the powers and duties of the Comptroller of the Currency were extended so that in this office would be kept general books of account, showing the entire assets and liabilities of the Government and the

entire receipts and expenditures, with a controlling account with each Government Department, which should be kept in balance with the books of these departments. The Comptroller's Office should audit continuously all the departmental accounts of the entire Government and render reports that could be used by Congress as a basis for making up budgets for the ensuing year.

### CHEMISTRY THAT PAYS

The attitude of American industry toward chemical research has been one of immediate expediency. The future has been expected to take care of itself, and it is only since the war that people have begun to perceive the relation of scientific research to industrial prosperity. All the more important and interesting, therefore, is the work that is being done at the Mellon Institute, attached to the University of Pittsburgh, whose activities are attractively set forth by Mr. Garet Garrett in a recent article in the *New York Tribune*. The Institute offers to a manufacturer the opportunity of simply and cheaply endowing intensive chemical research in his own exclusive benefit.

There are now more than forty five fellowships and a corresponding number of problems awaiting solution. One laboratory is seeking a formula for perfect bread; another treats phosphate rock to obtain a commercially feasible formula for chemical fertilizer; linoleum that will neither stretch

nor shrink is the aim of a third. Others are at work on dental cement, chewing gum, varnish, acetylene gas, candy. There is a chemist running a miniature steam laundry for the purpose of finding whether there is ground for the complaint that clothes steam laundered go to pieces faster than when washed by hand; nearby a valuable formula for aspirin has been discovered. Everywhere, save in the department of "pure chemistry," existing knowledge is being applied to practical problems, and the results should do much to stimulate commercial efficiency.

### OUR NATIONAL PARKS

The National Institute of Efficiency has been able to arrange for each of its members to receive a copy of the recently published *National Parks Portfolio*. Issued by the Department of the Interior with the object of spreading exact and comprehensive knowledge concerning the great natural "playgrounds" at the disposal of Americans, the *Portfolio* is incidentally a profusely illustrated and peculiarly attractive volume. Evidence is already at hand that the members of the Institute are finding the *Portfolio* not only a valuable book of reference along the line of more efficient nationalism, but also a source of great pleasure by reason of its many delightful reproductions and equally vivid descriptions.

### AFTER THE WAR

Mr. Edward N. Hurley, Chairman of the Federal Trade Commission, provided a striking stimulus to national efficiency in an address which he recently gave before the Ohio Banks Association. It is a mistake, he said in effect, to imagine that Europe is being altogether devastated by the war. Under the stress of the struggle she is reorganizing her industries. France, which has been preëminently the land of small-scale, highly individualized production, is applying American systems of manufacture to secure large-scale production. England, industrially the land of yesterday, has been compelled to make thirty years of industrial progress in as many months. Germany, efficient as she was, will emerge from the war, whatever the military outcome, years ahead of the Germany of 1914. "Almost before we know it we shall find a new Europe competing against us with war-sharpened brains and war-sharpened muscles." Discussing the relation of the banker to American trade development, Mr. Hurley said the United States was almost without foreign trade banks, while England alone has fifty-seven overseas banks, with a greater capital and surplus than that of her domestic banks, with their 8000 branches. In this connection it is noteworthy that at least one New York bank is endeavoring to stimulate, in coöperation with Columbia University, the training of young men for service in foreign fields.

## J U S T   A   W O R D

Along with the bulletins of battles and the hints of peace comes discussion of the important problem of trade adjustments after the war. In an article soon to be published in The Independent, James Davenport Whelpley, author of *The Trade of the World* and *American Public Opinion*, asks the significant question, "Can Europe Scrap Economic Law?"

In the national hothouse of new ideas, the city where government reforms are tried out with all the enthusiasm of a Broadway manager for a new star, two kinds of progress—woman suffrage and commission form of government—have united to make "A City Mother" of Mrs. Estelle Lawton Lindsey, who will be introduced to Independent readers in an early issue. But we won't torture your curiosity until that time. The city is Los Angeles.

Presidential elections and submarine issues are well enough in their way, but even the conscientious voter has his "sporting tendencies." With the world series out of the way, football takes first place. What Yale will do to Harvard—but perhaps you put it the other way—can only be forecast from a study of the numerous college teams and the games they are now playing. Herbert Reed, an authority on college football, will discuss the season's prospects in the next issue of The Independent.

## R E M A R K A B L E   R E M A R K S

ED. HOWE—I don't care for the Boy Scouts.  
CHARLES E. HUGHES—I deplore feminist agitation.  
THEODORE P. SHONIS—We are thru with the union.  
ELLA WHEELER WILCOX—What will the superwoman be?  
THOMAS A. EDISON—Neutrality is a mighty trying policy.  
GERTRUDE ATHERTON—American women hate carrying things.  
DR. T. B. HYSLOP—The insane artist is usually in dead earnest.  
AUGUSTUS THOMAS—Why are there so many bad plays in America?  
SECRETARY REDFIELD—Many scales of provincialism have fallen from our eyes.

PERCY MACKAYE—Self-sacrifice in itself is not necessarily a noble or useful quality.  
MRS. CHARLES DANA GIBSON—I have to apologize for the way Maine has been acting.  
DAVID BELASCO—It is much easier to appeal to audiences thru their senses than thru their intellects.  
LORD DERBY—I wish I could pick one of my horses as a winner with the certainty of victory for the Allies.  
MICHAEL MONAHAN—Der Tag—The Day—has now prolonged itself into the third year. What of the night?  
GENERAL MALLETERRE—The victory of the Marne was an event which, from a military standpoint, is without precedent in history.  
VICE-PRESIDENT MARSHALL—The issue is whether or not Theodore will be able on March 4 next to start for Berlin by way of Mexico.  
KAISER WILLIAM—My life must not be risked in the foremost line of battle, where my feelings, if unrestrained, would carry me swiftly.  
ALFRED NOYES—There is a sense in which New England is more English than anything in our own Celt-complicated United Kingdom.  
NORMAN HAPGOOD—The most creative and eminent college president of our time, Charles William Eliot, has come out powerfully for the President.

## O L D   W O R L D   F R A G M E N T S

The world was astonished at the continuous delays in the final rupture between Germany and Italy. One of the contributory causes might have been the fact that the Kaiser and his former university chum and present foreign secretary, von Jagow, are two of the largest shareholders in the Italian mercury mines of Monte Amiata.  
We still remember General von Bernhardi's slogan, "World Dominion or Downfall." A prominent French economist, Ernest Sosa, in his "La Vérité sur la Guerre" (The Truth About the War) proves statistically that Germany had practically conquered the European markets. Her enormous and ever-growing overproduction imperiously demanded new capital and new fields. She was near suffocation and had to unbutton her collar.  
Neither China nor Japan has a very developed musical life; even large cities such as Kobe, Peking, Hongkong and Han Kow are satisfied with occasional concerts under the direction of native dilettanti. Tientsin and Yokohama are exceptions. In both cities German musicians occupy leading positions. They are also represented on the teaching staff of the Conservatory of Music in Tokio, and the city bandmaster of Shanghai hails from the Fatherland.  
The war with Japan has curtailed to some degree the musical activity of the German artists, altho as a general proposition the Germans residing in Japan hardly are aware of the "state of war" officially existing between the two countries. Even members of the English Embassy used to attend German concerts and the German music professors continue to draw their salaries from the Japanese Government in spite of the patriotic recriminations of their countrymen in the old country.  
In 1492 the Jews were expelled from Spain, taking refuge in northern Africa and other parts of the Turkish Empire. A good third of the present inhabitants of Salonica are descendants of those refugees. They still speak Spanish among themselves. There is a movement on foot in Spain in behalf of a Jewish resettlement. The appointment of Dr. Yahuda to the chair of Jewish history and rabbinical literature at the principal university of Spain and his audience with King Alfonso bear a really romantic character.

## How Present-Day Parents Keep the Hat-Rack Filled

### No Extra Room Needed

Brunswick Tables are scientifically built. Accurate angles, fast, ever-level billiard beds and famous quick-acting Monarch Cushions. Beautiful oak and mahogany richly inlaid—masterful cabinet work throughout.

"Quick Demountables" can be set up anywhere and taken down easily. "Convertibles" serve as perfect Library or Dining Tables when not in play. Celebrated "BABY GRAND" Brunswick—a home-size regulation table. Send for our color-photo book today.

THESE are times when the Home must win against a host of outside allurements. Yet it can eclipse them—and Carom and Pocket Billiards played at home are doing it.

You should send for our free color-book and learn the life-time charm of playing billiards; learn the delight of parents, boys and girls.

## \$5 Brings a BRUNSWICK HOME BILLIARD TABLE

*\$2.50 Monthly Soon Pays the Balance*

As the nights grow longer, let your sons and daughters entertain at home. Let carom or pocket billiards brighten your own leisure hours, and bring you perfect health.

You can afford a small payment now as well as later. So why postpone these hours of merry conquest? Complete high-class Playing Outfit of balls, cues, etc., included without extra cost.

### Send this Free Coupon

Don't mistake toy imitations for scientific Brunswicks. If you are not sure which store in your town supplies the genuine Brunswick, see these tables in our beautiful color-book, "Billiards—The Home Magnet." **It's free.**

Full details, play as you pay plan and free trial offer all fully told. Write or send this coupon at once.

## WHERE DO THE PEOPLE COME IN?

**N**EW YORK CITY'S "milk strike" is ended. The milk distributors have capitulated. The farmers are to get a cent more a quart for their milk for the next six months. Ultimately, of course, the public will pay the extra cent. For that is its chief function and privilege as "ultimate consumer."

For several weeks now the people of New York and surrounding towns have been sadly inconvenienced by the stoppage of a good share of their usual milk supply. The inconvenience has among the poor—who are wont to get the heaviest blows from any dislocation of industrial and commercial processes—risen to the point of actual suffering.

It was not a "strike" at all. It was a refusal on the part of an organized group of milk producers to sell their milk except at an advanced price. This action met head-on the counter refusal of the companies who distribute the milk from door to door to pay the increased price. There are three great milk companies in New York that dominate the distributing business. It does not appear, so far as we are aware, that they acted in combination against the demands of the farmers. But for several weeks they continued to take the *same* action; and when one company finally yielded, the others did the same immediately. They were in effect allies, even tho there were no articles of agreement between them.

The public stood by, helpless, and suffered while two groups in the community fought out their commercial differences. The situation was precisely similar to that which occurs when an industrial strike takes place, with business man and farmer taking the place of employer and workingman.

In both cases the method of settling the dispute is intolerable.

The interests of no group in the community are more important than the public interest. The well-being of all should never be permitted to suffer because some special portion of the whole is seeking its own well-being in its own way. The public should never be put in the position of the "innocent bystander" at a street fight, who often receives the severest injuries.

The welfare of the people is paramount. Of course, farmers are people as well as tillers of the soil and herders of cattle. Of course, also—tho it takes a little more temerity to assert it—the managers and stockholders of milk companies are people as well as distributors of a necessity of life. So their welfare cannot be ignored, if

we would. But, after all, there are more people who are consumers of milk than people who produce it and distribute it. It is their welfare that must be the community's first and highest thought.

The problem, then, is to find some method of settling disputes between producers and distributors of the necessities of life that does not cause the public inconvenience and suffering. The community, whether it be the city, the state, or the nation, must compel the disputants to settle their differences peaceably. It must make it its business to see that the producer obtains justice while the distributor does not suffer injustice, just as it must see in the industrial field that the workingman obtains justice while the employer does not suffer injustice.

The state in the past has attempted to look after the well-being of the people by discouraging organization among all kinds of business interests. It might as well have tried to discourage the rising of the sun. Before the irresistible tendency of the age toward concentration and combination the regulative force of competition stands powerless to perform its time-honored function of conserving the public interest.

Business men will unite when their own interests point the way; laboring men will unite when they see good for themselves in that direction; farmers will unite when they believe they will prosper better if they do. Legal prohibitions against combination and coöperation are futile. They ought to be futile. For coöperation is a finer thing than competition. It is better for men to work together than to fight each other.

What is needed is to recognize the value of coöperation and encourage it; but at the same time to regulate and control it. Just as the public interest is the highest, the public power is the greatest. The people can compel any section of the community to deal justly and act fairly if they are willing to make the effort. The next great public problem is to work out the means by which organized groups of individuals, whether they represent labor and capital, or production and distribution, or merely rival interests in a single field, shall be compelled to settle their differences peaceably, to accord justice to each other, and to observe the rights of the people. It is not a simple or an easy problem; few vital problems are. But if the solution of the problem is not found, the tendency toward government ownership and operation of all sorts of indispensable businesses will be rapidly accelerated.

## MUDDLING THRU THE MAILS

THE British censorship of neutral mails has fortunately its amusing as well as its annoying side. The people of the Danish West Indies are naturally anxious to hear from the mother country now that the question of their sale to the United States is in the balance, but they have to wait for their mail, even when shipped by Danish vessels, until the British censors have read it over. They would not mind the delay so much if the censors had cleaner hands and neater ways. Three of the missing mails from Denmark that had been taken by the British from the Danish liners "Frederick VIII" and "Hellig Olav" turned up eventually but in a state described by the *St. Thomae Tidende* as follows:

The original tidily arranged letter-bundles had naturally been taken apart and each letter opened, and as the task of rearranging them must evidently have proved too onerous, or perhaps it was only to "save time," anyhow the letters, etc., in utter confusion were chucked back—dirty, torn, and oil-smeared. The mail presented the appearance of having been handled by people "who didn't know the difference between a monkey and a cabbagehead."

This was not amusing, but the islanders did have a laugh when they found that a bag carefully labeled *A réexpédier sans retard*, contained a heap of old Danish newspapers and more than a hundred letters from Portugal for Holland! The poor censor must have a hard time of it, reading everybody's letters in all languages for hidden meanings, but he should be reminded that mail to be despatched promptly from Lisbon to Amsterdam ought not to be sent via the West Indies.

## THE EUROPEAN POLICY OF AMERICAN PARTIES

A REVIEW of the platforms of the Republican and Democratic parties since the formation of the former show that their concern with European affairs has been greater than is sometimes assumed.

No question of foreign policy has yet been made the dominant issue on which the election turned, as has often been the case in England, but almost every platform has contained some reference to such questions, and declarations of sympathy with oppressed peoples, for instance the Cubans, Mexicans, Irish, Boers, Armenians, and Jews, are not uncommon.

Beginning our survey in 1856 we find the Democrats advocating an aggressive policy of expansion in the Gulf of Mexico and the Republicans bitterly opposing. Buchanan, the Democratic candidate, was one of the three authors of the Ostend Manifesto, which declared that if Spain refused to sell Cuba the United States ought to seize it. But this is more a question of Pan-American than European policy, so we will leave it out of the present survey. The Democratic platform of 1856 declares "in favor of free seas and progressive free trade thruout the world" and calls upon the American people "by solemn manifestations, to place their moral influence at the side of their successful example."

In the elections of 1860 and 1864 slavery and secession absorbed the attention, but in 1868 both parties had strong planks in favor of maintaining the right of nationalization against Great Britain and other European powers. In 1872 the Republicans congratulate themselves on "the doctrine of Great Britain and other European powers concerning allegiance—'once a subject always a subject'—having at last thru the efforts of the Re-

publican party been abandoned." But the Republicans were premature in congratulating themselves on settling the question of citizenship, for almost every later platform takes it up and the present war has shown that the European powers are by no means ready to concede the American contention.

The foreign plank in the Democratic platform for 1872 is a model of meaninglessness, hard to match even in American political literature, and one wonders if it could have been written by Greeley, the presidential candidate:

We hold that it is the duty of the government in its intercourse with foreign nations to cultivate the friendships of peace by treating with all on fair and equal terms, regarding it alike dishonorable either to demand what is not right or to submit to what is wrong.

The Democratic platform of 1884, on which Cleveland ran, arraigns the Republicans for their pro-British policy in the following vigorous fashion:

Under a long period of Democratic rule and policy our merchant marine was fast overtaking, and on the point of outstripping, that of Great Britain. Under twenty years of Republican rule and policy our commerce has been left to British bottoms, and the American flag has almost been swept off the high seas. Instead of the Republican party's British policy, we demand for the people of the United States an American policy. Under Democratic rule and policy our merchants and sailors, flying the Stars and Stripes in every port, successfully searched out a market for the varied products of American industry; under a quarter of a century of Republican rule and policy—despite our manifest advantage over all other nations in high-paid labor, favorable climate, and teeming soils; despite freedom of trade among all these United States; despite their population by the foremost races of men, and an annual immigration of the young, thrifty, and adventurous of all nations; despite our freedom here from the inherited burdens of life and industry in the old world monarchies, their costly war navies, their vast tax-consuming, non-producing standing armies; despite twenty years of peace—that Republican rule and policy have managed to surrender to Great Britain, along with our commerce, the control of the markets of the world.

In 1888 the Republicans, being then the outsiders, accuse the administration of being pro-British and denounce "its weak and unpatriotic treatment of the fisheries question and its pusillanimous surrender of the essential privileges to which our fishing vessels are entitled in Canadian ports." The Democrats offset this by declaring their "sympathy with the efforts of those noble patriots who, led by Gladstone and Parnell, have conducted their grand and peaceful contest for home rule in Ireland."

By 1892 the Democrats had extended their sympathies beyond Ireland to Russia:

This country has always been the refuge of the oppressed from every land—exiles for conscience' sake—and, in the spirit of the founders of our government, we condemn the oppression practised by the Russian Government upon its Lutheran and Jewish subjects, and we call upon our National Government, in the interest of justice and humanity, by all just and proper means, to use its prompt and best efforts to bring about a cessation of these cruel persecutions in the dominions of the Czar, and to secure to the oppressed equal rights. We tender our profound and earnest sympathy to those lovers of freedom who are struggling for home rule and the great cause of local self-government in Ireland.

The Republican platform of 1892 also expresses, tho in briefer fashion, its sympathy with Irish home rule and its protest against the Russian persecution of the Jews.

In 1896, when Bryan ran for the first time, the Democratic platform denounces gold monometalism as "a British policy" that has "brought other nations into financial servitude to London" and threatens to over-

Drawn for The Independent by W. C. Morris

ANOTHER INNOCENT SLAUGHTERED

Morris

throw the political independence proclaimed in 1776. The Republican platform of that year favors the acquisition of Danish and Hawaiian islands and gives the Monroe Doctrine an unprecedented extension northward as follows:

We hopefully look forward to the eventual withdrawal of the European powers from this hemisphere, and to the ultimate union of all English-speaking parts of the continent by the free consent of its inhabitants.

The Republican platform of 1896 also contained the following Armenian plank:

The massacres in Armenia have aroused the deep sympathy and just indignation of the American people and we believe that the United States should exercise all the influence it can properly exert to bring these atrocities to an end. In Turkey American residents have been exposed to the gravest dangers and American property destroyed. There and everywhere American citizens and American property must be absolutely protected at all hazards and at any cost.

In 1900 the two parties differed about the Filipinos but agreed about the Boers. The Democratic plank reads as follows:

We especially condemn the ill-concealed Republican alliance with England, which must mean discrimination against other friendly nations, and which has already stifled the nation's voice, while liberty is being strangled in Africa. Believing in the principles of self-government, and rejecting, as did our forefathers, the claim of monarchy, we view with indignation the purpose of England to overwhelm with force the South African republics. Speaking as we do for the entire American nation, except its Republican officeholders, and for all freemen everywhere, we extend our sympathies to the heroic burghers in their unequal struggle to maintain their liberty and independence.

While the Democrats in 1900 accused President McKinley of an "ill-concealed alliance with England," the Republicans commended him for "releasing us from the vexatious conditions of a European alliance for the government of Samoa," which we had ruled in partnership with Germany and England. The Boer plank of the Republican platform is similar in purport but, as we should expect, expressed in different language:

The provisions of The Hague convention were wisely regarded when President McKinley tendered his friendly offices in the interest of peace between Great Britain and the South African republic. While the American Government must continue the policy prescribed by Washington, affirmed by every succeeding President, and imposed upon us by The Hague treaty, of non-intervention in European controversies, the American people earnestly hope that a way may soon be found, honorable alike to both contending parties, to terminate the strife between them.

The platforms of 1904, 1908 and 1912 are silent on the relations of the United States with the European powers except for the repeated insistence upon the right of expatriation and the protection of American citizens abroad without regard to race, religion or previous political allegiance. Both parties approved of the abrogation of the treaty with Russia because that country refused equality of treatment to Americanized Jews. It is interesting to note that the platform upon which Mr. Wilson was elected stated that:

The constitutional rights of American citizens should protect them on our borders and go with them thruout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government, both for himself and his property.

The platforms of the present campaign are familiar or at least accessible to all, so we need not quote them. They inevitably devote more space to foreign affairs than all the preceding platforms put together, but they are less outspoken and specific than formerly in their

references to European issues, evidently because it is realized that such expressions of sympathy and partisanship as used to be indulged in with impunity would now be taken seriously.

A study of these thirty-two party platforms, expressing as they do what have been regarded during the last sixty years as the most important political issues of the times, shows that on the whole European affairs have not interested the American people sufficiently to formulate a settled foreign policy or to make a decided difference between the parties. On such questions as the Monroe Doctrine, American citizenship and the freedom of the sea, both parties have agreed. Whenever the American people have been stirred by tales of persecution and oppression it has been, as we have seen, almost a matter of chance which party has been the first to voice their indignation. Neither party expected its candidates, if elected, to take any action in such cases, except perhaps the filing of a paper protest, for the tradition of non-interference with the other hemisphere is deeply embedded in the American mind. In regard to our relations with other American countries the case is different. On such questions the parties have been more clearly differentiated and traces of a distinct—tho not always a consistent—party policy are discernible.

## THE REFORMATION QUADRI-CENTENNIAL

THE four hundredth anniversary of the Reformation is to be appropriately celebrated next year. On October 31, 1517, Martin Luther nailed to the door of the Wittenberg Church his ninety-five theses, around which there soon flared up the fires of religious revolt which had been smoldering for some time. This act is rightly regarded as the most central and significant occurrence in the Reformation struggle. It has been wisely chosen, therefore, as the determining date for this quadri-centennial celebration.

Already preparations are being made by many churches and societies to observe the occasion in a fitting way. The Lutheran churches are naturally the leaders, but they will find enthusiastic coöperation in all communions, and even outside of church organizations. For the Protestant Reformation has touched all sides of Western civilization and affected deeply the course of its thought, its government and social structure.

In the history of religion the Reformation must be regarded as one of the three great epoch-making movements that have made Christianity what it is. The fundamental achievements of the Prophets, the work of Jesus and his immediate followers, and the revolutionary forces of the sixteenth century have given us our moral conception of God, our ideals of a kingdom of righteousness and peace on earth, and the sovereign responsibility of the individual conscience and the right of approach to God. We are beginning to understand more fully the depth and extent of that revolution, which, four hundred years ago, seemed to be little more than a local revolt against the unfortunate abuses of ecclesiastical authority. The influence of the Reformation is slowly permeating the most divergent forms of church life and organization, and is not even confined to Christianity. A restudy of its elements, its power and significance at this time will have a splendid effect upon our grasp of Christian essentials and our enthusiasm for religious ideals.

# THE STORY OF THE WEEK

## The New Submarine Situation

Altho the "U-53" has left the neighborhood of Nantucket for parts unknown, it has left behind it a very complicated international question. No new sinkings of merchantmen have occurred after the exploits of the first day, and the number of ships reported as lost may even be reduced by one, since the "Kingstonian," reported sunk, has come safely to port. Nevertheless, much Allied and neutral shipping has been held up to await an escort of British cruisers or other assurances of safety. It is probable, in spite of some conflicting stories, that due warning was given in the case of every ship sunk by the "U-53"; at any rate, the safety of crews and passengers was secured. On the other hand, it is a very great inconvenience to have submarine warfare carried so near the American coast, and the possibility is ever present that American lives may be lost if the present attacks continue, even if the passengers are allowed to take to boats, and a new crisis arise between this country and Germany. The Allies, on the other hand, are urging that German submarines be forbidden to visit neutral ports except to be interned.

In reply to a memorandum from the Allied governments asking neutral governments not to show hospitality to submarines and pointing out the danger that a neutral submarine might at some time be confounded with a belligerent, Secretary Lansing replied in a note dated August 31:

The Government of the United States has received the identical memoranda of the governments of France, Great Britain, Russia and Japan in which neutral governments are exhorted "to take efficacious

measures tending to prevent belligerent submarines, regardless of their use, to avail themselves of neutral waters, roadsteads and harbors." These governments point out the facility possessed by such craft to avoid supervision or surveillance or determination of their national character and their power "to do injury that is inherent in their very nature," as well as the "additional facilities" afforded by having at their disposal places where they can rest and replenish their supplies. Apparently on these grounds, the Allied governments hold that "submarine vessels must be excluded from the benefit of the rules heretofore accepted under international law regarding the admission and sojourn of war and merchant vessels in neutral waters, roadsteads or harbors; any submarine of a belligerent that enters a neutral harbor must be held there," and therefore the Allied governments "warn neutral powers of the great danger to neutral submarines attending the navigation of waters visited by the submarines of belligerents."

In reply the Government of the United States must express its surprise that there appears to be an endeavor of the Allied powers to determine the rule of action governing what they regard as a "novel situation" in respect to the use of submarines in time of war, and to enforce a compliance of that rule, at least in part, by warning neutral powers of the great danger to their submarines in waters that may be visited by belligerent submarines. In the opinion of the Government of the United States, the Allied powers have not set forth any circumstance, nor is the Government of the United States at present aware of any circumstances concerning the use of war or merchant submarines which would render the existing rules of international law inapplicable to them. In view of this fact, and of the notice and warning of the Allied powers announced in their memoranda under acknowledgment, it is incumbent upon the Government of the United States to notify the governments of France, Great Britain, Russia and Japan that, so far as the treatment of either war or merchant submarines in American waters is concerned, the Government of the United States reserves its liberty of action in all respects and will treat such vessels as, in its opinion, becomes the action of a power

## A CHAMPION IN HER TEENS

Miss Alexa Stirling, of Atlanta, Georgia, won the national woman's golf title at Boston last week. Like Bobby Jones, who at fourteen provided the sensation of this year's national amateur championship, Miss Stirling was taught her golf by Stewart Maiden, now a professional in Atlanta, and once "the prettiest golfer in all Scotland."

which may be said to have taken the first steps toward establishing the principles of neutrality, and which for over a century has maintained those principles in the traditional spirit and with the high sense of impartiality in which they were conceived.

In order, however, that there should be no misunderstanding as to the attitude of the United States, the Government of the United States announces to the Allied powers that it holds it to be the duty of belligerent powers to distinguish between submarines of neutral and belligerent nationality, and that responsibility for any conflict that may arise between belligerent warships and neutral submarines on account of the neglect of a belligerent to so distinguish between these classes of submarines must rest entirely upon the negligent power.

**What Hughes Would Have Done** In a speech delivered at Louisville, Kentucky, on October 12, Mr. Hughes made the most definite and significant statement upon the relations between the United States and Germany which he has yet given to the public. On many occasions Mr. Hughes had denounced President Wilson for his weakness in handling the question raised by the German submarine policy, but neglected to state, save in general terms, what he would have done in the President's place. Typical of these earlier pronouncements on the submarine issue, is the following extract from a campaign address at Philadelphia on October 9:

I repeat what I said in my speech of acceptance that had this government left no doubt that when we said "strict accountability" we meant precisely what we said and that we should unhesitatingly vindicate that position. I am confident that there would have been no destruction of

THE WOMEN CAMPAIGNERS FOR HUGHES MEET A COUNTER DEMONSTRATION

The Women's Hughes Campaign, having not had clear sailing by any means. The speakers, most of them who experienced some severe opposition at many meetings, and they have had to come out with demonstrations like this parade at Chicago, in which women were earnestly expected to

## THE END OF A FRIGATE

The "Franklin" burned at Eastport, Maine, by a salvage company. The copper in her was about all she had left that was of any present value

American lives by the sinking of the "Lusitania."

Unfortunately, such a statement left open to question just what Mr. Hughes himself meant by "strict accountability," and gave some support to the charges of persons politically unfriendly to Mr. Hughes that he was striving to hold the support of the German-Americans by deliberate vagueness of statement.

One of the Republican candidate's eight thousand auditors in Louisville evidently had this opinion. He inquired of Mr. Hughes what he would have done about the "Lusitania." Promptly and without evasion, Mr. Hughes replied that he would have broken off diplomatic relations with Germany if the German Government had disregarded the protest that he would have made when the "Lusitania" warning was first printed in the papers. Mr. Hughes answered the heckler in the following words:

I have said that I would have had the State Department equipped so as to command the respect of the world at the outset of the administration, and, next, I would have so conducted affairs in Mexico as to show that our words meant peace and good-will, the protection, at all events, of the lives and property of American citizens; and next—and next—when I said "strict accountability" every nation would have known that that was meant; and, further, when notice was published with respect to the action (the action threatened), I would have made it known in terms un-

equivocal and unmistakable, that we should not tolerate a continuance of friendly relations thru the ordinary diplomatic channels if that action were taken, and the "Lusitania" would never have been sunk.

**The President's** President Wilson has adopted one of the policies of the porch campaign. Large delegations from different states or from different groups of the community are visiting his home at Shadow Lawn to hear him on the issues of the day; while his opponent, Mr. Hughes, is repeating the tactics of Mr. Bryan in 1896 and is going to the highways and the hedges to compel the voters to come in. Mr. Wilson address his largest audience on Saturday, when three or four thousand Pennsylvanians gathered on the lawn. Mr. Wilson repeated the familiar accusation that the Republican party was still controlled by the reactionary Old Guard, both in the nation and in the State of Pennsylvania; pointed out that "a tolerably good new constitution" was defeated by an unprecedented majority in New York State because the voters distrusted the Republican leaders who had framed it; pleaded for a "final league of nations" which will confront an offending nation with the combined power of the rest of the world, and urged the voters to elect a Democratic Congress as the only way to make his next administra-

tion effective. His tribute to the present Congress is worth quoting:

There is something quite as important as the choice of a Chief Magistrate. I want you to remember that the real sources of action and the real machinery of obstruction is in Congress, not in the presidency. Do you suppose that anything could have been accomplished in the last three and a half years if there had not been a determined and willing majority in the Congress?

I have not led these gentlemen; I have gone forward with them. I call your attention to the fact that there is nowhere recorded a single Wilson policy. Everything that I have asked that Congress to do was written in the pledges of the party itself. And the only power I have exercised is the power of cooperation, the power that all men exercise when insisting upon the obvious duties of a great hour, when men take heart to do a great thing.

**The Last of the Progressives** On Saturday, October 14, John M. Parker accepted the Progressive nomination for the office of Vice-President. He virtually admitted that owing to the action of the party leaders in endorsing the Republican ticket his candidacy was little more than a farce. There are only half a dozen states in the union where Progressive electors appear on the ballot independently of other party tickets, and every attempt of the anti-fusionist Progressives to obtain a full national ticket has failed. Mr. Parker himself has abandoned the attempt to find a Progressive standard bearer to whom he could give his allegiance and urges his fellow partisans to support the candidacy of President Wilson. His speech of acceptance was equally divided between a vitriolic attack upon Colonel Roosevelt, Mr. Perkins and other Progressives who are now working with the Republicans, and a eulogy upon the progressive administration of Mr. Wilson. Mr. Parker has promised to stump the country for the Democratic candidate. He said in part:

True Progressives have lived up to their slogan "Pass Prosperity Around," and as an earnest, ardent Progressive I offer another slogan for 1916, "Leave Well Enough Alone." Feeling as I do, in every state where we have a ticket I urge every Progressive to step up like a man and vote it, and in those states where we have been betrayed by former leaders and by those who weakly carry out their orders, I appeal to every thinking man and woman interested in the material welfare of our country, devoted to their family and their future, to vote their honest convictions, and support Woodrow Wilson for President of the United States.

**Mexican Questions** The Joint Commission now engaged in unraveling the tangled affairs of Mexico has as yet reached no definite conclusions. It is conceded that American troops will soon be withdrawn from Mexico unless fresh outrages necessitate longer occupation of the country, but the American government will probably not take this action until more definite assurances have been received as to the future security of the American border. At present the American and the Carranzista troops are cordially cooperating to put down the Villista insurgents in northern Mexico, and it is believed that as soon as the American

troops are withdrawn their place will be gradually filled by Mexicans and the border will thus be still carefully policed. The Mexican government has requested financial assistance from the United States to help support the cost of the frontier patrol, but it is not probable that this demand will be granted. Villa is said to be now concentrating his forces in the Mexican state of Chihuahua for an advance northward thru the town of Madera. Eliseo Arredondo, the Mexican ambassador designate, assures the American government that the Carranza government is in no danger either from the Villista bandits or revolutionary conspiracies in other quarters.

**Riots in Bayonne** The industrial trouble center of the United States shifted last week from New York City, where the threatened strike on the Hudson River tunnel cars has been composed and where traffic on the elevated, subway and surface lines is rapidly approaching normal, to Bayonne, New Jersey. In that important industrial center some eleven thousand workingmen employed by the Standard Oil Company and various subsidiary corporations are on strike for higher wages; including in this number some who would work but are prevented from doing so because of the shutting down of the plants where they are employed. To call the strike disorderly would be a ludicrous understatement; there have been a number of pitched battles between the police and the strikers, resulting in the death of several persons and the injury of many. The city authorities are now thought to have the situation under control, but for a time it seemed that the mob might gain the upper hand and establish a reign of terror thruout the industrial districts of Bayonne.

(C) American Press

AMBASSADOR AND MRS. GERARD

They have just come back to this country for a much needed vacation from strenuous diplomatic duties in Berlin. Rumors that they bring information for peace negotiations disturbed Wall Street

The first victim was, as usual, an innocent bystander. On October 12, a Polish girl, Sophie Torack, was killed by a stray shot while watching a riot from the window of her home. On the following day Isador Nalitsky, a young lawyer, and on Friday Jacob Grauf, an ex-soldier, were accidentally killed. The number of strikers sent to the hospital with serious injuries was considerable, and several of them may die of the wounds they have received. The police, exasperated by assaults upon members of the force, used their clubs and revolvers with great freedom, dispersing crowds, clearing the streets,

and forcing strikers to go indoors. Both the strikers and the police raided the saloons, tho with different motives, the strikers out for general pillage and the police desirous to arrest saloon keepers who kept their places open in violation of the law. The local authorities did not invoke the aid of the sheriff or the militia. On Monday a thousand men employed by the Pacific Borax Company returned to work at an increase in pay of twelve and one-half per cent for those who had earned less than three dollars a day, and seven and one-half per cent for those who had earned more. This defection from the ranks of the strikers was offset by the news that eighteen hundred men employed at the Bayway plant of the Standard Oil Company in Elizabeth, New Jersey, had struck on Saturday in sympathy with the Bayonne strikers.

WHEN THE DUTCH CAME OVER THE RARITAN

Rutgers College at New Brunswick, New Jersey, is a century and a half old, and has been celebrating its cent in approved academic style with a pageant of town and gown history. This picture shows the Dutch settlers of New Brunswick being ferried over the Raritan in the picturesque and unapproachably tidy costumes that first settlers always wear

**The End of the Milk Strike** The milk famine no longer threatens New York City and its neighbor towns. The Dairymen's League has won as decisive a victory over the distributing companies as the railroad brotherhoods won over the railroads a few weeks ago, and for much the same reason, the ability of the strikers to put great pressure upon the general public. Since the first of October over eleven million quarts of milk have been withheld from consumers, at a loss to the dairymen of more than half a million dollars. Most of this milk has or will come indirectly to the market as butter or cheese; many quarts were simply poured on the ground to get rid of it. It is believed that the increase in the wholesale price of 45 cents a hundred-weight of milk will force all distributing companies to make a concerted rise in the retail price. The distributing companies, already operating on a small margin of profit for most grades of milk, will not only have to pay the

Paul Thompson

#### THE HONORABLE MR. ASQUITH IN THE MOVIES

The proposal to film the British Cabinet in session horrified England, and the plan was abandoned as an unforgivably undignified proceeding. But the tender prejudices of the British public were not outraged by the photographing of the ministers one by one, and most of them have now been "released" to the cinemas of the United Kingdom.

farmers more, but make up their heavy losses during the strike, and the public must therefore pay the bill.

Ever since October 6 the daily shortage of milk has decreased, but this was due less to an increase in the amount of "non-union" milk reaching market, than to successive capitulations of the small milk dealers. On Friday night representatives of the chief milk companies, except Borden's, agreed to the advance asked by the dairymen. They refused to sign a definite contract but made a gentlemen's agreement not to alter the new schedule of prices for a period of six months. A committee of five, consisting of two representatives of the dairy farmers, two of the milk dealers and a fifth member to be agreed upon, will, however, determine by investigation whether the price fixed by the agreement should be altered during any way for the last three months, January, February and March. On Saturday the Borden Company accepted the gentlemen's agreement and the strike was formally over. It required a day or two longer, however, to bring the milk supply back to its normal condition. It is said that the greatest fear of the dealers at present is an oversupply of milk at the new high prices which may leave a surplus for them to dispose of at a retail price that would allow them no profit.

#### British Censorship of Neutral Mails

In a note dated October 12 the British and French Governments return a polite refusal to the American protest of May 24 in which Secretary Lansing declared that the

Allies were guilty of "lawless practices" and exercising "an illegal jurisdiction" in holding up neutral mails and that "only a radical change, restoring to the United States its full rights as a neutral power, will satisfy this government." The Allied governments argue that Germany has made an improper use of the neutral mails to cover hostile correspondence and that it is impossible to examine the mails on high seas so the ships are brought into British ports for that purpose. As for the ships that "voluntarily" call at British ports, they come under the British censorship as a matter of course.

Since the American government called attention to the fact that the Hague Convention of 1907 prohibits interference with non-contraband commerce and mails the Allied governments point out that the Hague Convention has not been signed or ratified by six of the belligerent powers (Bulgaria, Italy, Montenegro, Russia, Serbia and Turkey), and so is not obligatory on any of the belligerents.

The American note cited the practise of the United States, Great Britain, Japan, Russia, and France in former wars in favor of its contention. These cases are considered in the Anglo-French note an evidence in rebuttal adduced. The practise of suppressing money orders and even lists of money orders sent to Germany is justified on the ground that it prevents the enemy from receiving financial aid. The note calls attention to the fact that Germany has not merely seized mail but has sent it to the bottom, ship and all.

**Peace Talk in the Reichstag** The week's session of the Reichstag was distinguished by a more outspoken advocacy of peace by representatives of various parties than had been hitherto voiced in the German parliament. Herr Scheidemann, the Socialist leader, spoke as follows:

Since Briand and Lloyd George have preached war until the bitter end the Chancellor is unable to talk peace. But we are free to do so. The nations want peace. If the contrary be said in any country, then it is absolutely untrue.

The French nation is kept ignorant by censorial prohibition of the fact that it could see its country as well as Belgium still free today of German troops without shedding one more drop of blood and without losing one more square foot of soil. What do these nations still fight for? That the French shall stay in France, that the Belgians shall stay in Belgium, that the Germans shall stay in Germany. This is the main basis upon which the coming peace will be constructed.

Dr. David, another Socialist, spoke in favor of a system of universal arbitration:

We hold that war is no adequate means of deciding disputes between nations. Legal forms must be created to dispose of such differences. Slandering reports have been circulated abroad that Germany declines such legal forms. We therefore greeted with joyful shouts the Chancellor's indorsement in his last speech of the idea of arbitration. If all civilized humanity shall adopt these views wars like the present one will be avoided and we can say in truth "Peace on earth."

Dr. David and also Dr. Friedrich Haumann, the author of the "Central Europe" scheme of reconstruction, reviewed the diplomatic negotiations preceding the war in order to prove that Russia and England were to blame for the war. They stated that on July 30 an agreement had been reached between the German Ambassador at London and Sir Edward Grey by which the war might have been averted. The German Chancellor had secured a promise from Austria to stop the advance against Belgrade until the powers could consider the Serbian question and the German Emperor had telegraphed to the King of England confirming this agreement when Russia's mobilization precipitated the war. England's guilt, according to speakers in the Reichstag, was that she did not hold back Russia as Germany did Austria.

Hugo Haase, Radical Socialist, said:

Millions are looking to the Reichstag for a glimmer of peace. We see everywhere an undecided battle. We wish to save what is possible from the wreck of international law. Our dream of domination in this war will never be realized. An agreement must be sought without hesitation in order to save the people from the worst.

Count Westarp, the Conservative leader, expressed his agreement with the Socialists as to the objects of the war but said:

We must have territorial integrity, political independence and free economic evolution for Germany, but what we conquered at the cost of our blood we will hold as long as necessary in order to assure the future of the German nation.

In the British Parliament on the same day Sir William Byles and Colonel Outhwaite attempted to speak in favor of opening peace negotiations but were howled down.

The Conquest of the Carso

Since the capture of the city of Görz, or as we should call it, since it has passed into Italian hands, Gorizia, the Italians have not undertaken any important operations, altho it was, of course, expected that they would renew their effort to reach Triest as soon as they had recuperated and made the necessary preparations. The date selected for this offensive was, it seems, about the first of November, but General Cadorna anticipated it by at least a fortnight in order to divert the Austrian troops from their invasion of Rumania. The Italian attack was launched on October 11 and appears to have taken the Austrians by surprize or at least unprepared, for the Italians report the capture of over six thousand prisoners in a single day. The Austrians claim to have taken 2700 Italians in their counter-attacks on the two succeeding days.

The Austrian forces are in a position to put up a strong defense, for between Gorizia and Triest stretches the Carso or Karst, a narrow, barren, rocky plateau which has given its name to similar geological formations anywhere in the world. Its caverns and cliffs afford the best of protection to artillery and troops. Nevertheless, the Italians ousted the Austrians from their shelters all along the line from Gorizia to the Adriatic. The Austrian troops on this front were said to have numbered 100,000, but reinforcements

have been brought in. The Italian attack was preceded by a nine-day bombardment, and toward the end of it shells were rained on the Austrian trenches at the rate of two per second. The Austrian front trenches now under attack extend along the edge of the Carso between the railroads running respectively from Görz and Monfalcone to Triest. The Italians are trying to drive a wedge in between these two railroads.

French Seize Greek Fleet

Vice-Admiral d'Artige du Fournet, commander of the Anglo-French fleet in the Mediterranean, issued a peremptory demand upon the Greek Government to turn over to the Allies the Greek fleet and forts by 1 o'clock on the afternoon of Wednesday, October 11. The Greek Cabinet, in consultation with the Chief of Staff, sat till midnight discussing the note and finally decided that there was nothing else to do except to comply and register the usual protest against this new encroachment upon the neutrality of Greece. In the morning it was seen that the Russian battleships had their guns trained upon the Greek fleet and that the French torpedo boats in the harbor of the Piraeus were ready for action in case the Greeks should offer opposition. But there was no resistance. The Greeks obeyed the order of their King to surrender the ships to the Allies, but not one of them availed himself of the King's permis-

THE GREAT WAR

- October 9—French try to encircle Chaulnes and the British to take le Transloy, in Somme salient.
- October 10—Italians start offensive in Carso. Venizelos organizes provisional government in Salonica.
- October 11—French seize Greek fleet. Italians take 6400 Austrian prisoners in single day.
- October 12—British Government refuses to modify censorship of neutral mails. British cut railroad between Seres and Demirhissar.
- October 13—Serbs on Cherna River repulsed by Bulgars. Bulgars attempt passage of Danube into Rumania.
- October 14—French assume control of Greek mails, telegraphs and railroads. Austrians drive Rumanians out of Transylvania.
- October 15—King Ferdinand takes command of Rumanian armies. Russians make strong attack between Kovel and Lemberg.

sion to remain upon the ship in the service of the Allies.

The officers took from their ships the Greek flag and the King's portrait, which hung upon the ward-room wall. Admiral Ipitis removed his flag to the "Lemnos" and shut himself up in the cabin in order not to witness the humiliating spectacle of his navy being towed away by the Allied tugs. The Greek marines packed up their kits and went quietly to barracks on land, where they will be converted into an army corps. French crews took possession of the Greek battleships, cruisers, gunboats, destroyers, etc., forty-five vessels altogether, except three vessels which Greece is allowed to keep on condition that they are disarmed. These are the cruiser "Averoff," the gift to the nation of the Greek millionaire of that name, and the two battleships, "Idaho" and "Mississippi," now called the "Kilkis" and "Lemnos," which the American Government sold to Greece in the early part of 1914 when Greece was expecting to wage war with Turkey.

The breech-blocks of the guns on the three warships left to Greece were removed and Allied guards placed on board. The forts of the Piraeus have been dismantled and the railroad leading from this port into the interior was taken over by the Allies. Admiral du Fournet also demanded the control of the Greek police and of the telegraph, telephone and mail systems of the country. The Greek Government has yielded on all these points.

In Salonica, now under the exclusive control of the Allies, ex-Premier Venizelos has set up a provisional government and is raising an army to fight the Bulgars. He declares that in refusing to go to the aid of Serbia when attacked by Bulgaria in accordance with the treaty with Serbia King Constantine violated the constitution and set up a Prussian conception of autocracy.

The King on his part says:

I prefer to lose my throne rather than to endanger Greece. I am convinced that in fifteen days Rumania will exist no more

THE NEW ITALIAN DRIVE

The Italians are planning another offensive directed toward Triest. They are now in possession of a wedge and are cutting the railroads between Görz (Gorizia) and about two miles east of Monfalcone.

If Greece went to war then after the conquest of Rumania the irresistible German forces would be directed against Greece and she would share the fate of Serbia and Rumania.

**To the Rescue of Rumania** Rumania seems doomed to share the fate of the other small nations that have espoused the Allied cause and to fall under the control of the Central Powers. Such at least is the opinion of the man who knows the most about it, the King of Rumania. King Ferdinand has sent out from Bucharest the following piteous appeal thru the *London Times*:

Rumania waited until she could act with reasonable assurance of protecting herself and having the support of her great allies. When she entered the war she staked her entire future upon the courage of her people and the support, economic and military, of her greater allies upon whom she depends for the preservation of her national life.

The Rumanians will not falter in the cause of the Allies nor can the enemy wean them from the faith. Yet Rumania prays her Allies, Great Britain, France, Italy and Russia, not to allow the affairs of Rumania,

who staked all in entering this conflict, to pass into the back of their minds and suffer her to meet the fate of Belgium and Serbia.

It is evident that the Rumanians in invading Transylvania made the same mistake as the French in invading Alsace, that is, they sacrificed military expediency to political aims. The motive in both cases was the same, the desire to acquire immediately the territory inhabited by their own race. Yet it is an open and indeterminable question whether the people of Alsace and Lorraine would have freely voted for annexation to France or the people of Transylvania for annexation to Rumania. The Rumanians in Transylvania were more prosperous than their kinsmen over the border, many of them in fact having crossed the mountains into Hungary for the purpose of bettering their condition. Whether the invading armies were welcomed by the Transylvanian of their race does not appear from the reports, but it is charged by the Austro-Hungarian authorities that the Rumanian soldiers looted the shops and homes of the Magyar and German inhabitants of Transylvania and inflicted horrible atrocities upon them.

At any rate the Rumanian troops were expelled from Transylvania as quickly as the French from Alsace in 1914, and like the French narrowly escaped wholesale capture. The Bavarians who took the Red Tower Pass tapped the wires conveying the orders from the Rumanian headquarters at Ploesci to the First Rumanian Army in Transylvania, and General von Falkenhayn was able to arrange his troops so as to defeat the First and Second Armies before they came together. The Rumanian officers apparently lost their heads in this emergency and their soldiers dropt their arms and scattered into the mountains.

King Ferdinand has taken the same action as the Czar a year ago when the Russian armies were driven out of Poland, that is, he has assumed the supreme command in person. What is doubtless more to the point he has called for Russian and French officers to come and undertake the reorganization of his forces to meet the expected invasions of the Austrians over the Transylvanian Alps on the north and of the Bulgars across the Danube River on the south. A French strategist, General Berthelot, has gone to Bucharest to assist in planning the defense.

**Closing in on Chaulnes** The British and the French on the Somme front continue their slow but persistent progress by the same tactics as they have been using. The next objective of the British is the village of le Transloy. Their capture of Combles gives them an opportunity to approach it from the south and their capture of le Sars enables them to attack also from the northwest, so le Transloy may soon be in their hands. This brings them within less than three miles of the city of Bapaume.

The French have renewed their efforts to extend their line to the

Underwood & Underwood

**ANOTHER NEW JAPANESE AMBASSADOR** Dr. Aimaro Sato has recently been accredited to our own Government as the successor to Viscount Sutemi Chinda

south by the capture of Chaulnes, and they are now fighting hard to get possession of the knot of hills overlooking that town on the north. The storming of the village of Ablaincourt in these hills brings the French lines in a semi-circle about Chaulnes.

The recent success of the Allies in smashing thru the German defenses near the Somme is largely ascribed to their use of gigantic armored automobiles, or "tanks," as the soldiers call them. A French correspondent, Georges le Hir, describes the effect of this new weapon of war in the following language:

My guide took me to the Ablaincourt Road near a small valley. From here the sight was still more terrible, everything being torn to pieces. There a farm had been, in which the Germans had entrenched themselves; at least so I was told, for nothing remained to prove the existence of the farm or the Germans.

This devastation was the work of one of the tanks. This new and terrible death machine had rushed upon the farm, passing the German sentinels, who fired at it, but could hardly scratch its iron hide. It passed quickly on, crashing over the farm, crunching and dislocating everything. Walls collapsed, slates of the roofs were splintered and scattered, the ground was deeply furrowed and trees were uprooted.

As to the Germans they were completely torn to pieces. All that remained disappeared under the monstrous wheels of the motor car, which leveled the ground leaving nothing but a waste, scarred with red splashes from which a leg or an arm emerges here and there, convulsed in a spasm of agony. The projectors throw a red theatrical light upon this dreadful field from which I have come back horror-stricken, but at the same time hopeful.

# THE DEMOCRATIC PARTY'S APPEAL

BY WOODROW WILSON

PRESIDENT OF THE UNITED STATES AND CANDIDATE FOR RE-ELECTION

WE are at peace with all the world. No one who speaks counsel based on fact or drawn from a just and candid interpretation of realities can say that there is reason to fear that from any quarter our independence or the integrity of our territory is threatened. Dread of the power of any other nation we are incapable of. We are not jealous of rivalry in the fields of commerce or of any other peaceful achievement. We mean to live our own lives as we will; but we mean also to let live. We are, indeed, a true friend to all the nations of the world, because we threaten none, covet the possessions of none, desire the overthrow of none. Our friendship can be accepted and is accepted without reservation, because it is offered in a spirit and for a purpose which no one need ever question or suspect. Therein lies our greatness. We are the champions of peace and of concord. And we should be very jealous of this distinction which we have sought to earn.

The future, the immediate future, will bring us squarely face to face with many great and exacting problems which will search us thru and thru whether we be able and ready to play the part in the world that we mean to play. It will not bring us into their presence slowly, gently, with ceremonious introduction, but suddenly and at once, the moment the war in Europe is over. They will be new problems, most of them: many will be old problems in a new setting and with new elements which we have never dealt with or reckoned the force and meaning of before. They will require for their solution new thinking, fresh courage and resourcefulness, and in some matters radical reconsiderations of policy. We must be ready to mobilize our resources alike of brains and of materials.

It is not a future to be afraid of. It is, rather, a future to stimulate and excite us to the display of the best powers that are in us. We may enter it with confidence when we are sure that we understand it—and we have provided ourselves already with the means of understanding it.

The message which all men of business ought to carry at their hearts is the message of preparation for peace.

*Two weeks ago Mr. Hughes set forth in the pages of The Independent what he conceives to be one of the most vital issues in the present political campaign. This week we present the appeal made by the leader of the Democratic party to the voters of the United States for continuance in power. Mr. Wilson is not taking an active part in the campaign in the sense of indulging in campaign tours and rear-end speech-making. But he has set forth with definiteness and vigor during the past months what he believes on the great issues of the hour. The following article is a compilation of his recent utterances selected and collated for The Independent with the approval of Mr. Wilson himself.—THE EDITOR.*

The oxygen that the lungs of modern business take in is the oxygen of the public confidence.

I feel that the mists and miasmic airs of suspicion that have filled the business world have now been blown away. I believe that we have passed the era of suspicion and have come into the era of confidence. Nobody is henceforth going to be afraid of or suspicious of any business merely because it is big. The conditions of confidence being established, nobody need think that if he is taller than the rest anybody is going to throw a stone at him simply because he is a favorable target—always provided there is fair dealing and real service. The Trade Commis-

© International Edition

sion, by substituting the milder processes of helpful counsel for the harsh processes of law, has transformed the Government of the United States from being an antagonist of business into being a friend of business. A few years ago American business men took up their morning paper with some degree of nervousness to see what the government was doing to them. I ask you if they take up the morning paper now with any degree of nervousness. And I ask you if they have not found the Federal Trade Commission to be put there to show the way in which the government can help them and not the way in which the government can hinder them? It has always been a fiction—I don't know who invented it or why he invented it—that there was a contest between the law and business. There has always been a contest in every government between the law and bad business, and I do not want to see that contest softened in any way; but there has never been any contest between men who intended the right thing and the men who administered the law.

I for my part congratulate the business men of America that some of their difficulties have been removed by legislation, that they have been fortified against certain forms of control which must have been intolerable to them, that they have had their real commercial strength put at their service by such acts as the Federal Reserve act, for example, and that now, if they think they can conquer the world, it is up to them to do it; and that nobody is going to assist them, because it is a thing in which they cannot be assisted by anything but their own brain. We are now out in the open, competitors for the confidence of the world, and there is only one way to get it, and that is to earn it.

It has been a very great grief to some of us, year after year, year after year, to see a fundamental thing like the fiscal policy of the government with regard to duties on imports made a football of politics. Party politics ought to

have nothing to do with the question of what is for the benefit of the business of the United States, and that is the reason we ought to have a Tariff Commission, and, I may add, are going to have a Tariff Commission. I would like to find men for the Tariff Commission who would find out the circumstances of American business, particularly as it changes and is going to change with perplexing rapidity in the years immediately ahead of us, without any regard whatever to the interest of any party whatever, so that we should be able to legislate upon the facts and upon the large economic aspects of those

Edwin Levick

energies of peace. No one who looks about upon the field of American business at the present moment can fail to realize that a new breath and spirit have come into the business of America.

There have been times when it looked as if America were interested only in herself, but in these recent years American business men have lifted their eyes to more distant horizons and have seen how the markets of the world were waiting for their service, and as they have sought and obtained entrance into these markets a new vision has come to them of what the development of the resources of America means.

There never was a time when the pulse of energy and success beat so strongly in the veins of American

business as it beats today. And yet I hope that all business men in America realize that we are only at the beginning of a new era. America has not played its proportionate part in the development of the trade of the world. I mean that it has not played a part proportionate to the gifts of Americans and the resources of America, and that in the times to come, partly because of the unhappy circumstances of recent years, but chiefly because America is now about to release her energies, the scope of American business will be what men have hitherto not dreamed of, if American men know how to take advantage of the opportunity.

The problems that are before American business are world problems rather than American domestic problems. America must understand the world in order to subject it to its peaceful service.

The Democratic party does know how to serve business in this country, and its future program is a program of service. We have cleared the decks. We

have laid the lines now upon which business that was to do the country harm shall be stopped and an economic control which was intolerable shall be broken up.

#### THE PARTY OF PROGRESS

THE Republican party is still a covert and refuge for those who are afraid, for those who want to consult their grandfathers about everything. You will notice that most of the advice taken by the Republican party is taken from gentlemen old enough to be grandfathers, and that when they claim that a reaction has taken place, they react to the reelection of the oldest members of their party.

Politics in this country does not depend any longer upon the regular members of either party. There are not enough regular Republicans in this country to take and hold national power; and I must immediately

add that there are not enough regular Democrats in this country to do it, either. This country is guided and its policy is determined by the independent voter; the instrument he needs

is the Democratic party, and it would be hopeless for him to attempt to use the Republican party. I do not have to prove it; I admit it.

What seems to me perfectly evident is this: That if you made a rough reckoning, you would have to admit that only about one-third of the Republican party is

progressive; and you would also have to admit that about two-thirds of the Democratic party is progressive. Therefore, the independent progressive voter finds a great deal more company in the Democratic ranks than in the Republican ranks. I say a great deal more, because there are some Democrats who are sitting on the breeching strap; there are some Democrats who are holding back.

Edwin Levick

#### COÖPERATE AND GO FORWARD

THERE was introduced in the House of Representatives recently a bill commonly called the Webb bill, for the purpose of stating it as the policy of the law of the United States that nothing in the anti-trust laws now existing should be interpreted to interfere with the proper sort of coöperation among exporters. Not for the purpose of exclusive and monopolistic combination, but for the purpose of coöperation; and there is a very wide difference there. I for myself despise monopoly, and I have an enthusiasm for coöperation. By coöperation I mean working along with anybody who is willing to work along with you under definite understandings and arrangements which will constitute a sound business program. There can be no jealousy of that, and if there had been time, I can say with confidence that this bill which passed the House of Representatives would have passed the Senate of the United States also. So that any obstacle that ingenious lawyers may find in the anti-trust laws will be removed.

There is a sense in which the business men of America represent America, because America has devoted herself time out of mind to the arts and achievements of peace, and business is the organization of the

What I want to point out—and I believe that this is what the whole country is beginning to perceive—is this, that there is a larger body of men in the regular ranks of the Democratic party who believe in the progressive policies of our day and who mean to see them carried forward and perpetuated than there is in the ranks of the Republican party.

How can it be otherwise? The Democratic party, and only the Democratic party, has carried out the policies which the progressive people of this country have desired. There is not a single great act of this present great Congress which has not been carried out in obedience to the public opinion of America; and the

© Underwood & Underwood

public opinion of America is not going to permit any body of men to go backward with regard to these great matters.

The Republican party is just the party that *cannot* meet the new conditions of a new age. It does not know the way and it does not wish new conditions. It tried to break away from the old leaders and found it could not.

They still select its candidates and dictate its policy, still resist change, still hanker after the old conditions, still know no methods of encouraging business but the old methods. When the Republican party changes its leaders and its purposes and when it brings its ideas up to date then only will it have the right to ask the American people to give it power again.

Washington, D. C.

## THE SUPREME OPPORTUNITY OF AMERICA

BY A. G. GARDINER

EDITOR OF THE LONDON "DAILY NEWS," AUTHOR OF "PROPHETS, PRIESTS AND KINGS"

**I**F Americans ever had any doubt as to the wisdom of the ideals of the founders of the United States, those doubts cannot have survived the blinding lesson conveyed by the calamity that has befallen Europe. This crazy fabric which has rested on mutually destructive ideas, on democracies and half-democracies, on despotisms and feudalisms, on secret diplomacies, on the oppression of subject races, on imperialism and republicanism, on artificial combinations, on armaments and militarism, has tumbled at last to the dust in immeasurable ruin. Had Napoleon remained faithful to the ideas of the French Revolution he might have swept the jumble of competing systems away and started Europe on a new path, but he was unfaithful, and, with his fall, the despots came back to power and the Vienna Congress reestablished all the old tyrannies, antagonisms and ambitions and paved the way for a more stupendous calamity. And when Europe emerges from that calamity it will ask one question: How can we save ourselves, our children and posterity from a recurrence of this maniacal self-destruction?

We cannot save ourselves. Left to ourselves we shall traverse the old path to ruin. The devil's instrument of secret diplomacy will start weaving its web on a new pattern, the old ambitions will take new forms, the despots will rearrange their alliances, the armaments rings will resume their international operations, the capitalist press will be their corrupt instrument, militarism will strangle the nations and the armed peace will end once more in a universal convulsion.

No, we cannot get out of this pit ourselves. We are the victims of our past and are carrying the burden of a thousand years. Europe's sons are dying in millions for an ancient tale of wrong, for things done long ago and crimes that are forgotten. We

want to escape from this old tangle of circumstance, but we do not know how.

America must come to the rescue. She must do it not in our interest only, but in her own. She has escaped the inferno this time, but she will not escape it again. She knows that her fate and future are involved in this war as well as the fate and future of Europe. The ocean has been annihilated and "splendid isolation" is, politically, as outworn a phrase in America as it is in England. Your horizon, like ours, is henceforth as wide as the earth. If you are going to preserve your ideals in America you must guarantee them in Europe and in Asia.

But if this meant that you were coming into the Old World system of competitive armaments as a challenger and a rival, that, after all, you were going to surrender to the ancient ferocities and insanities of Europe, then not hope but a deeper despair would come upon us. You would not have drawn Europe out of the pit: Europe would have dragged you into the pit with it. The ideals for which you stand and for which you have paid so great a price would have perished from the earth.

But if the mind of America has kept its balance in this reeling world, if its vision is true to its past, its course is clear. It is the course indicated in that momentous utterance of President Wilson at Washington to the League to Enforce Peace. There has been no more revolutionary doctrine propounded on this earth than that contained in the President's declaration that the task of the United States is to change the purpose for which force is used. You cannot eliminate force from the world's affairs, but it is in your power, and it is in the power of no other people, to turn force from the channels of war to the channels of peace.

London

# A BARRIER TO PAN-AMERICANISM

BY ROLAND G. USHER

AUTHOR OF "PAN-GERMANISM," "PAN-AMERICANISM"

THE European War has made clear as crystal the vital importance of race and blood in all of the closer administrative and political relations between large bodies of men. It has shown that there are inherited unconscious stimuli to action, unexpressed impulses toward union or antagonism into which men are born and which do govern their concerted action and which, in a large measure, geographical barriers and time are not capable of erasing. Whatever "race" may be, whatever part the physical and chemical constituents in the blood play in it, by it the British Empire has been held together and by it the Germans have been united thruout the world in one common bond of sympathy. Without this tie or something closely resembling it, an entire harmony between large bodies of men has ordinarily not resulted. Constitutions and courts, the pressure of armies, common economic interests have in such cases as Ireland, Poland, Finland and Lorraine proved entirely inadequate to supply its lack. Whatever it is, race is unquestionably one of the most potent impulses governing the affiliations of large bodies of men.

ONE of the most persistent notions championed in the United States today by a considerable body of idealists, sanctioned by the President, favored by commercial interests, is Pan-Americanism. No two men seem to agree in their use of the word and the type and closeness of the bond it denotes vary from an increase of diplomatic friendship to a definite Federal Government of all the American republics. Nevertheless, it must always include a greater sympathy and comity between citizens of the twenty-one republics in the western hemisphere (Canada always excluded). It tends to an implication at least of the exclusion of Europe and its affairs from this hemisphere and of a desirability and possibility of greater sympathy between inhabitants of the western hemisphere than they have with Europeans. This is the least which the idea can predicate. It must rest upon the definite possibility of an increase in friendly feelings between individuals in the various republics or it will have no democratic basis.

Yet the difference in race between the Latin-Americans and ourselves is an issue of which its advocates are unconscious or which they choose to neglect. Compared to the difference between the Latin-

Americans and the great majority of people of the United States, there are no racial differences in Europe; the Irishman and the Englishman, the Pole, the German, and the Russian, the Bavarian, and the Alsatian are in comparison identical in race. The vast majority of citizens in the United States are white, and they look upon the Negro and Indian strains as undesirable constituents to be segregated and minimized. The slightest trace of Negro or Indian blood is sufficient to create a social stigma in most parts of the country and makes impossible social life on an equality with white people. In Latin-America these very strains which we thus stigmatize are present in nearly all of the population. Pure white blood is rare. Many full-blooded Indians have attained prominent political offices; a good many full-blooded Negroes have in some republics done significant work; while the great majority of the population who are neither Negro nor Indian are a mixt race in which the white blood is the least prominent element. In such countries the question of blood does not arise; a man's education and ability are of greater consequence than his parentage; they live in accordance with those precepts which we proclaim. Of this ancestry of theirs and its difference from ours, advocates of Pan-Americanism seem scarcely conscious. Of the treatment which we have advisedly accorded the Negro and Indian in this country they are discreetly silent.

HERE is the true obstacle in the way of Pan-Americanism. Brotherhood, social equality, a friendly intercourse between the countries is impossible at present on account of the race feeling in the United States between the white and colored races.

The Indian, as such, has never been accorded legal status or privilege in the United States. A ward of the nation, he can neither own property, sue in the courts, nor become a citizen. This stigma on Indian blood must be washed off by naturalization precisely as if he were an alien, as if he had been born in Europe. As some of the better Indians have bitterly said, the scum of Europe are received with open arms, while the lords of the New World are thrust from their own firesides.

While the Negro has technically had legal and civil equality for more than one-half a century, a strenuous and successful fight has been waged in all those parts of the country

where the Negro is a significant section of the population to deny him all the outward appearance of social equality. He must ride in a separate street-car, sleep in different hotels, sit in different parts of the theater; intermarriage with the whites is in many states illegal; thruout the Southern states the Negro has been practically disfranchised; and when he commits a violent crime he is only too likely to be dealt with by a mob instead of by the courts. A sharp, definite line has been drawn between him and the white man.

THE difficulty would be less acute so far as Pan-Americanism is concerned if only we could discern some tendencies to soften this line, some probability that the determination of the white race to shove the Negro to one side was becoming less outspoken. Unfortunately the trend of events is to deepen the line between the races, to sharpen and emphasize the difference between them. The disfranchisement of the Negro is becoming more complete. The tendency to deal with him harshly in the courts is certainly not lessened. Most recent and most discouraging of all is a definite attempt in many cities to rob him of the right to acquire property, to choose his residence.

How is it possible that the advocates of Pan-Americanism should fail to appreciate the vital difficulty which our treatment of the Negro and the Indian creates in the path of an extension of brotherly relations with the Negroes, Indians and half-breeds of Latin-America? Do they not see that an equality of relations is not likely to be established on any basis which will not assure those peoples the same privileges in the United States which Americans expect to receive in Central and South America? No real friendship and comity will be possible until we shall advisedly alter our attitude toward the race question in the United States. At the present writing the probability of any such alteration in public feeling is so slight that the only aspect of Pan-Americanism likely to achieve importance as a practical issue is the extension of commercial relations and perhaps of judicial relations. Until we are ready to accord citizens of the southern republics social equality, all extension of relations with them will be diplomatic in character and neither fundamental nor permanent.

# COMING: THE COMMUNITY HOUSE

BY CHARLES MOREAU HARGER

PRESIDENT OF THE STATE BOARD OF CORRECTIONS AND FORMER PRESIDENT OF THE NATIONAL CITIZENS' LEAGUE FOR KANSAS

**D**ID you ever go into a strange town—one, say, of 1800 to 5000 population—and wander lonesomely around the streets, passing time during a long day and evening? Did you notice the half-grown boys dodging into alleys or chasing each other around the block? The half-grown girls, arms encircling waists, sauntering back and forth, past drug stores or giggling at the half-grown boys? The pool halls were alight and young men who ought to have been better engaged were spending their money for the privilege of pushing balls around a table. Cigaret smoke was thick and conversation crude. The picture shows were filled and boys from eight years up drank in the drama from front seats. If a license state, the saloons had a liberal patronage. Where else was there for the boys and girls to go? What other attraction did the town offer to the growing generation?

Perhaps there was a Y. M. C. A., but probably not, for in the average town of two thousand to five thousand population a Y. M. C. A. building with its secretary and other expense for upkeep is a difficult proposition. Even if established, it serves only a portion of the needs of the community. Yet it is recognized in every town that some provision should be made for the betterment of social conditions, and especially for the improvement of the lives of boys and girls who now run the streets. In most towns there is not a place where the boy from ten to eighteen

years old can spend his evenings or his time out of school except in the pool halls and the moving picture houses. It is very well to say that he should be kept at home, but conditions are as they exist; and many parents either can not or will not keep their children at home where they should be. As a result the streets are noisy with gangs of boys and thoughtless girls who are allowed their liberty and who are not controlled even by the curfew bell.

It is a real problem, in many ways the most important problem of the average town. It transcends in vital interest the obtaining of a new factory or the regulation of water meter rates. In the opinion of many forward-looking men and women who have studied it and sought a solution, the answer is the Community House, a social and recreative center that shall be so democratic as to attract the humblest, so wholesome as to appeal to the exclusive, so broad in scope as to bring youth, maturity and age into closer companionship with benefit to all.

**T**HE Community House fulfils the purpose of caring for all recreative and social community efforts. It is removed from the suspicion of religious endeavor, which, worthy as it is, often fails to attract the very class of boys and girls whom it is most desirable to reach.

The town of Marysville, Kansas, has tried out this plan in a practical manner, and the Marysville idea deserves careful study. It is especially

instructive because in this case the experiment was first launched under the auspices of a church, a wealthy banker furnishing \$19,000 for the erection of the building. Fully equipped and admirably managed, it failed as a social center because it was looked upon as a religious enterprise—tho not at all so intended. After two years of experiment it was turned over to the citizens of the town, who established a Community House Association, non-sectarian, non-partizan, with a managing board of eleven men and eleven women, with membership dues ranging from \$10 a year for men and boys to \$2.50 a year for girls, with trifling fees for the pool and skates. Its success was immediate, and it has become the center of social activity for all ages and all classes. This typical Community House is located in the central part of the town, which is the place where such a building should be located.

It contains a large reception room, with piano, reading tables and easy chairs. Off this is a dormitory where farmers' wives may leave their babies while shopping, a boys' room, a library, a county Y. M. C. A. secretary's room, toilet rooms, and a room for the women's clubs. In the basement is a white tiled swimming pool 20 x 50 feet with filtered water; shower baths are provided, and in the rear there is a large gymnasium whose floor is used also for a skating rink.

**A**FTER eighteen months of trial it has been found that the running expenses of such a building averaged \$174.12 a month. A hostess and janitor are included in this expense. These eighteen months have demonstrated what changes could profitably be made in such a building. In addition to the advantages offered, it should include a bowling alley, picture theater for educational films, and headquarters for the town's Commercial Club, which would bring the business men in closer touch with the institution. It should have also some apartments for single men, which would add an income without increasing the expense of management.

In this instance the entire community takes a personal pride in belonging to the association, and farmers' families for miles around make it their headquarters when on shopping expeditions. In it are held weekly entertainments, and the gym-

THE MARYSVILLE COMMUNITY HOUSE HAS A REST ROOM FOR FARMERS' WIVES

nasium is turned into a banquet room once or twice a year and the good of the community is discussed by men prominent in state affairs. It requires some effort to maintain the running expenses, and it has been necessary to overcome prejudice, but on the whole every boy and girl in town feels a direct interest in the Community House.

**I**N general it may be set down as fundamental that such a structure should be built by the united effort of the community. The ideal method would be for the entire town to pay the bill and provide for its people the advantages that such a structure would bring.

It may be roughly estimated that a community of three thousand population ought to spend \$15,000 to \$20,000 on such a building, and that its annual expense will be approximately 10 per cent of the cost. The maintenance is a problem that must be considered, and since in some states it is permissible to levy a tax for supporting the public library, for giving band concerts on the public square, and similar undertakings for the happiness or instruction of the people, there is no reason why a Community House should not be all that its name implies.

If this be not possible, the capital stock should be limited to not more than five shares to a single individual, and the shares widely distributed among the population. It is especially important that the women have a part in this work of organization and management.

**T**HE definite effect of such a Community House upon the small town is manifest chiefly in the added manliness and womanliness of that portion of its population which has been left to its own devices. A growing demand is for the opening of the schoolhouse twelve months in the year, and its use for town activities in the evening, but the schoolhouse is seldom in the most convenient part of the city, and it requires some effort to reach it. These activities outside of school hours can all be centered in one Community House, planned and equipped for just that purpose, far better than they can be incorporated as a part of our public school work.

In other words, it will centralize the activities which are not merely educational, but enter into the social and physical life of the community and bring them into a separate building and a separate organization; it will unite old and young in a spirit of usefulness that will give a larger life to the town.

AN ALL-TOWN PICNIC AT McPHERSON, KANSAS

The Marysville plan includes provision for the farmer and his family and seeks to break down the barrier between town and country. In an agricultural section an imaginary division between the farmer and the townsman exists—for which both are somewhat responsible. The townsman is eager and willing for fellowship, but does not know how to bring it about. Sometimes he succeeds in getting the neighboring farmers to join the commercial club and often carries out elaborate amusement enterprises, such as barbecues and free fairs, for the entertainment of the farmers and their families. But these are conscious efforts to placate an imaginary difference. The Community House opens a new channel of neighborliness. Put at the service of the farmer, he makes it his headquarters when in the village; his wife leaves the children in care of the hostess while she shops; the packages are delivered there; lunches are eaten in the reception room—it is his home whenever he visits the town.

**T**HE Community House is a haven of delight for the farmer's wife. In this particular alone it will serve a helpful purpose in bringing town and country in closer harmony. The farmers hold their institutes in it; they enjoy a swim in the pool; they find in it a provision for their comfort and for that of their families that brings a realization of the real friendliness existing for them on the part of the men and women in town. Women's clubs are extending into the country; rural clubs are being organized; the members in their visits to town find the Community House a home to which they are more than welcome.

These are some of the appeals it makes to a larger sympathy between town and country—of themselves a valid excuse for its existence, did it not serve another beneficent purpose in its relation to the rising generation of the town itself.

That the Community House idea will develop into a widespread movement may be expected. The people of the average community are realizing more than ever before their obligations toward the rising generation. While society is not to be held entirely responsible for individual action, it is willing to assume some responsibility for the young. Just so far as it can influence the rising generation toward the ways of decency, sobriety and good conduct, will it solve the problem of delinquency now so pressing in every state in the Union. It cannot do it entirely by preaching, nor entirely by enlarging the scope of its educational system. Those are two important factors, but unless the uncared for boy and girl are reached, a limit is set on the measure of helpfulness and the juvenile court is the place of later recourse.

The Community House will reach this class, and if it can be developed to include the supervision of town playgrounds and athletic enterprises, it will go a long way toward answering the question of what to do with our boys and girls. More than that it will interest the men and women of affairs in those who are to take their places in after years, and it will unite young and old in a spirit of enjoyment and goodwill under clean and helpful conditions that cannot fail to result in real community betterment.

*Abilene, Kansas*

# OUR BELIEVING THOMAS

A tribute to Thomas Mott Osborne, who has just resigned as warden of the New York State prison at Ossining because his efforts to give the Mutual Welfare League and its attendant reforms "a fair and full trial" at Sing Sing were hampered by "reactionary forces" higher up

BY EDWIN MARKHAM

AUTHOR OF "THE MAN WITH THE HOE," "THE SHOES OF HAPPINESS AND OTHER POEMS"

For years the brute they saw,  
Only the fang and claw,  
At Ossining.  
The lash, the chain, the cell;  
The dark, lone, silent hell—  
Only the crime, the misery, the shame,  
Were there before believing Thomas came  
To Ossining.

But now the man they seek,  
Now to the spirit speak,  
At Ossining.  
The patience and the trust;  
The inward voice "Thou must!"  
The kindly word instead of iron blame—  
These rule since our believing Thomas came  
To Ossining.

Honor the dare and deed  
That sow the golden seed,  
At Ossining.  
Where each one has a friend  
Unfailing to the end—  
A father and friend that every man may claim  
Since our beloved, believing Thomas came  
To Ossining.

Yes, now the man they find,  
And with affection bind,  
At Ossining.  
And there a brother-band  
Holds up both heart and hand;  
And Justice too that is Love's working name  
Dwells there since our believing Thomas came  
To Ossining.

No man has lost his chance  
To conquer circumstance  
At Ossining.  
"Fling the dead Past away:  
We stand upon Today!"—  
This was the faith that leaped to living flame  
In that great hour believing Thomas came  
To Ossining.

## MRS. KAMINSKY'S SOLDIER

BY GERTRUDE CHRYSTAL

THE colored poster outside the recruiting station immediately attracted me. I was fascinated by the pictured soldierly figures, surrounded by tent, motorcycle, telegraph apparatus, cannon, and background of open country. It all bespoke vigor and action, and raised in me a wild sense of envy that I was a woman.

I turned to go, but was stopped by Mrs. Kaminsky, who lives in the rear house next to the synagogue. From her shawled arm peeped forth a newspaper bundle. Of course, like a neighborly neighbor, she wanted to know what it was that interested me. Whereupon I proceeded—but not without interruptions.

"But you don't know what I had with my oldest boy," she said. "One day he got home, and he says that I should sign a paper—he joined a club.

"What's kind of club," I asked.

"It's nothing, just a club where they play ball, and have a gymnasium and swimming—I should only sign the paper."

"I did not know. I can read only Polish, but my husband can't write, so I went down to the candy store

man downstairs. He said it's nothing, just to join a club where they will have fun, play ball, and games, and things like that. Awright, I signed the paper. How should I know? To make a living is enough for me, nein? So I didn't bother more.

"About two weeks later, my boy comes and tells me that he must go way to be a soldier. I should get ready for him his things to take along. 'Who heard about soldiers, what kind of soldiers, and what for soldiers,' I wanted to know. By us at home, what don't we do to save a boy from the *militaire*. We buy him out, or send him to America. So I ran to Miss Rumblee, by the social service office in the hospital, and I tell her what should I do, and how will I live. My boy gives me three dollars a week from what he makes, and how can I get him out. And Miss Rumblee said, 'Why did I sign the paper, and why did I go down to the candy store man? Why didn't I come to her?'

"But she couldn't help me get my boy out. She's kind tho, for she gave me three dollars for license, so I can peddle, maybe with candies, or stockings—

"Not enough that they take him

away, I should yet make ready for him his things, and you know what that means!"

Yes, I knew, simply an additional drain on the all too slim purse for the boy's personal necessities, such as the comb and brush which helps adorn her family on the community plan.

"I said I would go to the captain," here she adjusted the shawl, "and tell him that I am a poor women, and I need my boy. So I rode to the judge, and I cried to him 'Give me back my boy. He is not strong, and I need his money. My husband can't work, and I peddle, and have four children to support. This boy what you take away he gives me three dollars a week, and I need him.' I cried, and I begged him, and he said he would do what he could—I should go home—and he said he would see. But I never heard again.

"Before my boy went away, he come home drest up like that, and all the children on the block hollered 'soldier, soldier,' and the people looked after him. But what do they know about me, and why my boy don't write, and about my house!"

# The Countryside

## SUBURBAN LIFE

Is Now Owned and Published by The Independent

THE new owners of The Countryside Magazine (Suburban Life) have had brief time for elaborate plans, but are able to present herewith a program in outline for the twelve issues of the magazine for the coming year.

Every family where The Independent is read contains potential readers for The Countryside, which we hope to make one of the most useful and one of the most beautiful of American periodicals.

During the twelve years since it was founded, The Countryside has made many thousands of friends whose good-will we hope to retain. These subscribers, the scores of thousands of readers of The Independent and all whose

special interests The Countryside serves, afford a constituency whose coöperation in developing broader plans and building a steadily improving periodical we confidently expect.

The Christmas Number will be the first to be created by the new owners. Each of the twelve numbers of 1917 will adapt itself to the seasonable wants and pleasures of the countryside and will inform, inspire, entertain and charm a group of readers who will, unless we fail to express in deeds our plans and hopes, swiftly increase in numbers and find steadily growing satisfaction in the magazine which reflects and illustrates the life and the varied interests of the American countryside.

## The Countryside in Nineteen-Seventeen

### THE SPECIFICATIONS

The twelve Special Numbers announced herewith constitute the frame-work of our broad plan for building The Countryside of 1917. They fit closely the plan which has been carefully worked out for what we hope will be the most definitely useful periodical aid to country living in America—and the most interesting. The editorial plan which is building around these twelve numbers is based on long and careful study and experience as to the needs and desires of the constituency of The Countryside and those country dwellers of taste and substance to whom our wider appeal, in 1917, will be made.

It will be the editorial purpose of The Countryside to reflect month by month the interests and activities of our most prosperous suburban and country residents as the seasons come round. The Countryside will serve four classes of Americans whose interests run closely parallel:

First, those who live in the suburbs of the great metropolitan centers.

Second, those who live on the outskirts of the smaller cities.

Third, those who reside in the best homes of the larger towns.

Fourth, those city people who spend their summers on the countryside—in the mountains, at the shore, on residence farms or in the village—or are looking forward to the time when they shall live in the country the year round.

The mission of The Countryside lies in well defined paths, and wide as is its field of service there is the closest relation between the several departments of its work.

### Announcing Twelve Special Numbers of The Countryside for 1917

January	- -	Winter Sports Number
February	-	Spring Building Number
March	- - -	Annual Garden Number
April	- -	Spring Planting Number
May	- - -	Little House Number
June	- -	In the Country Number
July	- -	Summer Sports Number
August	- - -	Country Club Number
September	-	Annual House Building Number
October	- -	House Furnishing Number
November	- -	Metropolitan Number
December	- - -	Christmas Number

### Twelve Master Covers

for The Countryside of 1917 are in preparation and will strike a distinctive note in periodical cover art. This new series will be introduced by Paul Bransom's painting for the Christmas Number in December, 1916, with a new decorative cover scheme by Edward Edwards. The January Cover (Winter Sports Number) will also be painted by Mr. Bransom, and other cover designs will soon be announced.

25 Cents a Copy

\$3 a Year

### Special Fields of The Countryside

#### THE NEIGHBORHOOD

The Countryside will discuss, in articles by those who know, the problems that directly concern the welfare, comfort and enjoyment of the country householder and resident of the suburban community. Good roads for his motor car, proper street lighting for his side walk, town welfare for his servants, the country club for his recreation, sanitary schools for his children, the suburban church for his worship, improved railroad stations and train service for his travel, more attractive approaches to his community, these are some of the things for which The Countryside stands and which it will help its readers to realize in their communities during the coming year.

#### HOUSE BUILDING

An important part of The Countryside's editorial plan calls for articles about the acquisition of land, selection of a building site, advantageous location of the house, scientific methods of construction, application of modern efficiency methods, purchase of the best building materials, choice of architectural plans and many other matters on which the dweller in the countryside needs advice and new information.

#### INTERIOR CONSTRUCTION AND DECORATION

The recent advances in this phase of house building open up a wealth of new information and a wide range of selection which calls for the authoritative and expert guidance which The Countryside will be prepared to give. Therefore, our editorial plan for The Countryside calls for authoritative articles, departments and pictures

setting forth what is new in flooring, wall coverings, mantels, bath room fixtures, heating, lighting and ventilation devices, in fact, everything that goes to make the inside of the house, from living room to kitchen, comfortable, beautiful, sanitary and efficient.

HOUSE FURNISHING

Here is the fascinating task of selecting what will make our life indoors complete and restful and a pleasure to the family and those who come to enjoy our hospitality. Rugs, curtains, hangings, furniture, pictures, china, glassware, pottery, book-cases, beds, bureaus, here is a maze of possibilities out of which The Countryside will lead its readers into the clear light of intelligent selection and harmonious, artistic arrangement. Four times a year The Countryside will issue special numbers with direct editorial emphasis on the building and furnishing of the house of luxury—be it large or small, colonial mansion or shore bungalow, suburban year-round residence or mountain camp. These special numbers are Spring Building Number (February), Little House Number (May), Annual House Building Number (September), House Furnishing Number (October). In every number of the year these needs of the reader will be remembered.

CARE OF THE GROUNDS

At the most appropriate times of the year, The Countryside will devote special attention to the preparation of the grounds surrounding the house, giving valuable advice, in articles and pictures, to the man or woman with average sized grounds, and equally suggestive and helpful counsel to those who are contemplating a scheme of landscape gardening involving the services of an expert and the purchase of trees and shrubs in large quantities.

THE GARDEN

Buying the best seeds and bulbs, planting the flower garden, choosing the most efficient implements, planning the most beautiful arrangement of flower beds, fertilizing the soil, cultivating the vegetable garden, setting out fruit and shade trees and preserving them from the ravages of pests, enjoying small fruits such as blackberries, raspberries and strawberries, all of these delights of countryside living will be dwelt upon in The Countryside by experts who write from close study and practical experience. These contributions will never be so technical that they may not be easily and clearly understood by all. They will always be authoritative and above all will breathe the fragrance and romance of the countryside garden.

SPORTS AND RECREATION

This department of country living will hold an important place in the editorial plan of The Countryside for 1917, because this is the contribution of the country itself to the health of its dwellers. Four special numbers devoted to this general subject are Winter Sports Number (January), In the Country Number (June),

The Countryside Shop

This is a new department. It will render practical assistance to every reader of The Countryside who wants to know how to get things, what to get, and where to get them. In the editorial pages, as the seasons come round, will be described and pictured The Countryside's selections of new and desirable purchases to be made in the following groups:

- Seeds, Bulbs, Shrubs or Trees
- Garden Equipment
- Out-door Decorations
- House Plans
- Building Materials
- House Furnishings
- Out-door "Toggery"
- Furniture and Rugs
- House Decorations
- Motor Cars and Accessories
- Poultry and Kennel
- Sporting and Out-door Goods
- Country Property

The Countryside Shop Service will aim to do for the readers of The Countryside what the Efficiency Service of The Independent is doing for its readers with its successful Plan and Purchase Department of Office Equipment, conducted in association with the National Institute of Efficiency. Readers of The Countryside are invited to send for catalogues, information and special reports regarding any article that pertains to countryside living. Any object described and priced in the editorial pages of The Countryside will be purchased for you by The Countryside Shop Service. There will be no charge for this service or for any information supplied.

Summer Sports Number (July) and Country Club Number (August). The men and women and children who live on the countryside like to play. Open air recreation is a big factor in their scheme of living. In close time with the seasons, The Countryside will present striking and picturesque articles on motoring, golf, tennis, riding, driving, skating, nature study, fishing, hunting, camping, with suggestions for getting the most out of the open air life that the countryside offers every day in the year.

HORTICULTURE

The Countryside is fortunate in being able to offer its readers a service in this department of unusual distinction. We have at our command exceptional sources of information whereby our readers may secure horticultural knowledge thru articles at once scientific and accurate as to fact and written in popular fashion, with pictures which are hard to obtain outside the pages of The Countryside. Beginning

in January there is a demand for correct information concerning the buying, planting, cultivating and growing of seeds, plants, and bulbs, which The Countryside will be prepared to satisfy in a specific and practical but popular way. Every number from January to May will be notable for its horticultural interest, with special emphasis on the Annual Garden Number in March and the Spring Planting Number in April. In January the subject of Garden Planning will be a feature. In the autumn special attention will be given to the planting of bulbs, the preparation of growing things under glass, installation of individual green-houses, and the use of hot-beds and cold-frames.

POULTRY

The raising of poultry for profit or part-time or household food supply has become so popular that The Countryside would not be complete without definite attention to this subject. Poultry interest begins right after New Years when eggs are fertile and when people along the countryside start raising chicks by incubator. By the time it has reached its height in April, The Countryside will have discussed this subject in a way that will have benefited every reader whose taste runs to poultry raising.

THE WOMAN AT HOME

The mistress of the countryside home has her own special occupations and this fact The Countryside will not forget. The average housewife delights in doing many things for herself. With this in mind The Countryside will keep its women readers in touch with the novelty, fashion and art, the new things in the shops of the big cities and all the metropolitan interests that apply closely to problems of country living and brighten the life of the woman who presides over the house in the country. The Metropolitan Number (November) and the Christmas Number (December) will devote special attention to these interests.

"The Best Thing in My House"

Readers of The Independent are invited to share with the readers of The Countryside in the opportunity offered by the first of a series of Reader Contests to be conducted by the editor of The Countryside during the coming year. The first of these contests "The Best Thing in My House" typifies an important phase of the idea on which The Countryside in 1917 will base its editorial scheme. In not more than 200 words, tell The Countryside what one object in your house you prize most highly and tell why. Send one photograph of the "best thing" to illustrate. Prizes of \$50 and \$25 will be awarded by The Countryside for the best and second-best answers. This contest closes on February 1, 1917, and the winning answers will be published in the April number.

# THE NEW BOOKS

## WAR AS IT IS

In *Battle and Other Poems*, by Wilfrid Wilson Gibson, is real poetry depicting real war. Not particularly pleasant reading perhaps, it is poetry none the less for it is always living, genuine, uncompromising and it has compactness, strength and color. Rarely is a word of more than one syllable used. Gibson's is good homely Anglo-Saxon language, the plain strong words of Tommy Atkins, or of Hans or Ivan or Jean for that matter.

The poet's chief business is to strip war of all its glory and show it as the cold machine-like tragedy it is. Often in a quatrain or in two small stanzas he recreates for us the life at the battle front. For sheer power and graphic realism these war poems have seldom been surpassed.

*Battle and Other Poems*, by Wilfrid Wilson Gibson. Macmillan. \$1.25.

## THE TRANSFIGURATION OF ENGLAND

The Great War so far has produced three notable novels, May Sinclair's *The Belfry*, Hugh Walpole's *The Dark Forest* and H. G. Wells's *Mr. Britling Sees It Through*. The greatest of these is the last. Yet it contains less of the fighting than the other two, only a few letters from the front. Mr. Wells is concerned with another aspect of the war, its effect upon the psychology of the Englishman. The book is divided into two parts, the first half is light, carefree and amusing after the manner of Wells's earlier romances; the other half is darkened by the war cloud and is written with more emotional power than he has hitherto shown.

Knowing Wells's habit of introducing autobiographical details into his romances, we inevitably surmise that Mr. Britling is himself. Mr. Britling is a writer whom "lots of people found interesting and stimulating, and a few found seriously exasperating."

He had ideas in the utmost profusion about races and empires and social order and political institutions and gardens and automobiles and the future of India and China and esthetics and America and the education of mankind in general. . . . And all that sort of thing.

This certainly reads like Wells's repertory of ideas. And to make the resemblance closer Mr. Britling writes a pamphlet, *And Now War Ends*, shortly after the war began—just as

Mr. Wells wrote *The War That Will End War*. At any rate we may be sure that the book reveals the changing moods not only of the author but of every thinking Englishman as the enormity, the awfulness, the all-pervasiveness of the war became slowly realized in the course of many months.

As a contrast to his typical Englishman Mr. Wells brings in an American, handled with more skill than British writers usually show in dealing with American psychology. The delight of his Mr. Direck at the recognition of the scenes and customs he had known from history and novels is well presented:

The Thames, when he sallied out to see it, had been too good to be true, the smallest thing in rivers he had ever seen, and he had had to restrain himself from affecting a marked accent and accosting some passer-by with the question, "Say! But is this little wet ditch here the Historical River Thames?" In America, it must be explained, Mr. Direck spoke a very good and careful English indeed, but he now found the utmost difficulty in controlling his impulse to use a high-pitched nasal drone and indulge in dry Americanisms and poker metaphors upon all occasions. When people asked him questions he wanted to say "Yep" or "Sure," words he would no more have used in America than he could have used a bowie knife. But he had a sense of rôle. He wanted to be just exactly what he supposed an Englishman would expect him to be.

Every American tourist in England

has felt this temptation. He also has the experience ascribed by Mr. Wells to his American of finding that England on closer acquaintance is not so antiquated as she looks. When asked what his impression of England is Mr. Direck answers:

That it looks and feels more like the traditional Old England than any one could possibly have believed, and that in reality it is less like the traditional Old England than any one would ever possibly have imagined. I thought when I looked out of the train this morning that I had come to the England of Washington Irving. I find that it is not even the England of Mrs. Humphry Ward.

To complete this study of national psychology there is also a German in the family circle at first, a tutor whose hobbies are Ido and internationalism and a universal index, traits drawn from Professor Ostwald apparently. He is not caricatured but we suspect that like Mr. Direck, the American, Herr Heinrich is affected by British expectations and appears more German than he is.

The book reëchoes all the passions of the war, love, hatred, courage, despair, meanness, sacrifice, heroism, selfishness, stoicism and mad wrath, but ends upon a clear religious tone such as has been heard but faintly in any work of Mr. Wells before. No one has "anticipated" the war more vividly

than he. We showed in parallel columns in our issue of December 27, 1915, that he had prophesied in detail thirteen years in advance the disaster that overtook the British army at Loos. But even his penetrating imagination could not equal the terrible reality. At least five of his earlier works deal with the impending war. *Anticipations* contains besides such striking forecasts as we have just mentioned some remarkable chapters on Franco-German rivalry. In *the Days of the Comet* includes a war with Germany. *The War in the Air* tells how German Zeppelins raided America and England. In *Social Forces in England and America* he points out the danger of a world-wide war destroying civilization and in *The World Set Free* he describes such a catastrophe. He has also dealt with the war in five books published since its outbreak, *Boon* in its last chapters "The Wild Asses of the Devil," *The Research Magnificent* in which the hero discusses German imperialism, *The War That Will End War*

Paul Thompson

MR. WELLS VISITS THE FRENCH LINES AT SOISSONS

and *What Is Coming?* both volumes of essays and now *Mr. Britling* which surpasses all these others.

*Mr. Britling Sees It Through*, by H. G. Wells. Macmillan. \$1.50.

#### EDMUND CLARENCE STEDMAN

Among the host of studies of New England village life, for delicacy, for subtle keenness, and for all pervading, whimsical humor, it will be hard to match *A New England Childhood*, by Margaret Fuller. The story is that of Stedman the poet and editor. A pathetic, droll, irresistible little figure is his as he lives his bewildered childhood in the midst of kindly intentioned kinsfolk. He was an imaginative, courageous, magnanimous little chap, showing from the beginning the qualities that made him the revered and beloved of three generations of American men and women of letters. The book is a beautiful record of the beginnings of a beautiful life, but it is something else; it is a vivid and charming and true picture of the New England of eighty years ago.

*A New England Childhood*, by Margaret Fuller. Boston, Little Brown. \$1.50.

#### THE VICTORIES OF FABIUS

*The History of the Fabian Society*, by Edward R. Pease, for twenty-five years its secretary, is an important contribution to the history of modern England. The influence of this organization in persuading the Liberal and Conservative parties to adopt increasingly radical measures of social reform and in altering the attitude of the British people as a whole in the direction of collectivism would be incredible if it were not incontestable. The Fabian Society has achieved its triumphs not by a direct entrance into the political arena, such as all other important Socialist and labor parties have made, but by the "indirect influence" of persistent, intelligent, systematic propaganda. The nature and scope of this influence can only be compared with the agitation for political and legal reforms of the Philosophical Radicals from Bentham to John Stuart Mill, and the work of the Abolitionists in the United States in the generation preceding the Civil War. In all three cases the propagandist element acted but as yeast to leaven the lump, being itself in an utterly insignificant minority; in all three cases such success as was attained was due to the personality of the men and women who took part in the work. It is hardly an exaggeration to say that at least one-half of the most original and effective social theorists who lived in England from 1883 to the present were at one time or another connected with the Fabian Society.

The internal politics of the Fabians, as related in this book, was naturally not always harmonious. The wonder is that so many brilliant and erratic intellects could work in common harness as well as they did. It will surprise many persons who think of Bernard Shaw as the very genius of caprice, to learn that he was usually a conservative force within the society and that his moderation and tact were frequently

## The Greatest Treasure House of Linens in America

### McCutcheon's

SIXTY YEARS of continuous growth and merchandising in Linens as a specialty have taught the Linen buying public to regard McCutcheon's as beyond doubt The Greatest Treasure House of Linens in America.

As you stand before our broad counters to-day, so far as abundant supplies are concerned, you will find it hard to realize that there has been the slightest difficulty in ocean transportation or any limitation in the supply of Linens as a result of the war in Europe.

Our stocks of Table Linens, Bed Linens, Towels, Fancy Linens of all kinds, Handkerchiefs, etc., are so varied and complete that our patrons need want for nothing in Linens.

Not only are our supplies abundant, but in accord with our usual custom we are showing many new designs in our various lines. In Table Linens for example, a goodly number of the designs are being shown now for the first time.

Our great stock of Table Linens includes hundreds of different designs—perfectly plain Damask, stripes of every desirable size and variety, Scroll and Floral designs, etc. The opportunity of finding just what you want in Table Linens as well as in all other household Linens, is almost unlimited.

Send for new catalogue "*Women's and Children's Wear.*"

# What is an Internal Bath?

By R. W. Beal

MUCH has been said and volumes have been written describing at length the many kinds of baths civilized man has indulged in from time to time. Every possible resource of the human mind has been brought into play to fashion new methods of bathing, but, strange as it may seem, the most important, as well as the most beneficial of all baths, the "Internal Bath," has been given little thought. The reason for this is probably due to the fact that few people seem to realize the tremendous part that internal bathing plays in the acquiring and maintaining of health.

If you were to ask a dozen people to define an internal bath, you would have as many different definitions, and the probability is that not one of them would be correct. To avoid any misconception as to what constitutes an internal bath, let it be said that a hot water enema is no more an internal bath than a bill of fare is a dinner.

If it were possible and agreeable to take the great mass of thinking people to witness an average post-mortem, the sights they would see and the things they would learn would prove of such lasting benefit and impress them so profoundly that further argument in favor of internal bathing would be unnecessary to convince them. Unfortunately, however, it is not possible to do this, profitable as such an experience would doubtless prove to be. There is, then, only one other way to get this information into their hands, and that is by acquainting them with such knowledge as will enable them to appreciate the value of this long-sought-for, health-producing necessity.

Few people realize what a very little thing is necessary sometimes to improve their physical condition. Also, they have almost no conception of how a little carelessness, indifference or neglect can be the fundamental cause of the most virulent disease. For instance, that universal disorder from which almost all humanity is suffering, known as "constipation," "auto-intoxication," "auto-infection," and a multitude of other terms, is not only curable but preventable through the consistent practice of internal bathing.

How many people realize that normal functioning of the bowels and a clean intestinal tract make it impossible to become sick? "Man of to-day is only fifty per cent. efficient." Reduced to simple English, this means that most men are trying to do a man's portion of work on half a man's power. This applies equally to women.

That it is impossible to continue to do this indefinitely must be apparent to all. Nature never intended the delicate human organism to be operated on a hundred per cent. overload. A machine could not stand this and not break down, and the body certainly cannot do more than a machine. There is entirely too much unnecessary and avoidable sickness in the world.

How many people can you name, including yourself, who are physically vigorous, healthy and strong? The number is appallingly small.

It is not a complex matter to keep in condition, but it takes a little time, and in these strenuous days people have time to

do everything else necessary for the attainment of happiness but the most essential thing of all—that of giving their bodies their proper care.

Would you believe that five to ten minutes of time devoted to systematic internal bathing can make you healthy and maintain your physical efficiency indefinitely? Granting that such a simple procedure as this will do what is claimed for it, is it not worth while to learn more about that which will accomplish this end? Internal Bathing will do this, and it will do it for people of all ages and in all conditions of health and disease.

People don't seem to realize, strange to say, how important it is to keep the body free from accumulated body-waste (poisons). Their doing so would prevent the absorption into the blood of the poisonous excretions of the body, and health would be the inevitable result.

If you would keep your blood pure, your heart normal, your eyes clear, your complexion clean, your mind keen, your blood pressure normal, your nerves relaxed, and be able to enjoy the vigor of youth in your declining years, practice internal bathing and begin to-day.

Now that your attention has been called to the importance of internal bathing, it may be that a number of questions will suggest themselves to your mind. You will probably want to know WHAT an Internal Bath is, WHY people should take them, and the WAY to take them. These and countless other questions are all answered in a booklet entitled "THE WHAT, THE WHY and THE WAY OF INTERNAL BATHING," written by Dr. Chas. A. Tyrrell, the inventor of the "J. B. L. Cascade," whose life-long study and research along this line make him the pre-eminent authority on this subject. Not only has internal bathing saved and prolonged Dr. Tyrrell's own life, but the lives of a multitude of hopeless individuals have been equally spared and prolonged. No book has ever been written containing such a vast amount of practical information to the business man, the worker, and the housewife: all that is necessary to secure this book is to write to Dr. Chas. A. Tyrrell at Number 134 West 65th Street, New York City, and mention having read this article in The Independent, and same will be immediately mailed to you free of all cost or obligation.

Perhaps you realize now, more than ever, the truth of these statements, and if the reading of this article will result in a proper appreciation on your part of the value of internal bathing, it will have served its purpose. What you will want to do now is to avail yourself of the opportunity for learning more about the subject, and your writing for this book will give you that information. Do not put off doing this, but send for the book now while the matter is fresh in your mind.

"Procrastination is the thief of time." A thief is one who steals something. Don't allow procrastination to cheat you out of your opportunity to get this valuable information which is free for the asking. If you would be natural, be healthy. It is unnatural to be sick. Why be unnatural, when it is such a simple thing to be well?

called upon to prevent extremists and faddists from splitting the Fabians into hopelessly divided factions. The most important internal quarrel, to which an entire chapter is devoted, was the attempt of Mr. H. G. Wells to reorganize and enlarge the society and to revise its creed to include the state support of children. The Old Gang (as Mr. Pease humorously describes himself and the other members of long standing) opposed some of these changes, and in consequence Mr. Wells resigned from the society, which he has since lampooned severely in several recent books. Bernard Shaw contributes some criticisms and amplifications of the narrative of Mr. Pease which are incorporated in the appendix.

*The History of the Fabian Society*, by Edward R. Pease. Dutton. \$1.75.

## SINGLE TAX

A complete and fair, but not controversial, review of the *Single Tax Movement in the United States* is by Prof. Young of Princeton. It considers the forerunners, the economic conditions surrounding Henry George in San Francisco, the various experiments, the present status and the general effects of the movement.

Much mention is naturally made of the Fels Commission under which much of the later work has been done, and which took its name from *Joseph Fels* who devoted his great fortune and the energy and enthusiasm of his later life to the spread of the Single Tax doctrine. His life, by his wife, Mary Fels, is an uncommonly well balanced and delightful biography, and an enlightening study of social and agrarian conditions in England, where most of his "back-to-the-land" experiments were tried.

His was a fiery and generous spirit and whether one agrees with his theory or not there is inspiration in his impatience of the salve of charity and his ideal of justice for all man.

*The Single Tax Movement in the United States*, by A. N. Young. Princeton Univ. Press. \$1.50. *Joseph Fels, His Life Work*, by Mary Fels. Heubsch. \$1.

## WALLACE AND DARWIN

On the same evening more than fifty years ago, Charles Darwin and Alfred Russel Wallace each presented a paper before the Linnaean Society in London in which was advanced the theory of evolution. Each had independently come to the conclusion that the forms of life were not severally created but had gradually developed under the laws of nature thru environment or other conditions. That evening introduced a discussion which convulsed the scientific and theological world. This doctrine we call Darwinism. Altho as original with Wallace as with Darwin, it is proper that it should bear Darwin's name, for in study, if not in publication, he anticipated Wallace by a number of years. The conscientious care with which each of these great scholars took pains that the other should not lose his full credit is among the choicest examples of generous truth, and of the genuine scientific spirit.

This volume is less a biography of Wallace than a collection of his correspondence, with the relations of Wallace and Darwin to evolution in the foreground. Wallace did not like the phrase natural selection, for, said he: "Nature does not select by preference, it simply eliminates," and he much preferred Spencer's term "the survival of the fittest." He looked upon nature not as a power aiming at something superior, but rather as Bergson describes it: "A stream pushing everywhere against its banks, and ready to break out anywhere."

There are peculiar contrasts between the life and thought of Wallace and of Darwin. Darwin began life with the intention of becoming a clergyman but slowly discarded religious belief, not so much as an unbeliever as an agnostic. Wallace began as a disbeliever. By slow degrees the wonder of life and the supremacy of intelligence convinced him that there is something, whether God or spirit, behind material forces. This brought him into close relation with the question of psychical research. He was not afraid of an unpopular cause, and he hated our present civilization as much as did Ruskin.

We should have been pleased had the story of his own development out of materialism into spiritual faith been more fully given, and we miss the correspondence with Mr. Gulick over Hawaiian shells. Mr. Marchant has provided, however, a most admirable historical work, and one cannot read its pages without admiring the character of one of the simplest and ablest of scholars.

Alfred Russel Wallace, by James Marchant. Harper. \$5.

## STORIES

*Unfinished Portraits*, by Jeannette Lee. Ingenious, well-written stories of great artists and musicians who think and act as Mrs. Lee would have done under similar circumstances. (Scribner, \$1.25.)

At least reminding the reader of the gallant leader of the Labrador Mission, Dr. Grenfel, are the stirring and earnest stories in Norman Duncan's latest book, *Billy Topkaid, M.D.* (Revel, \$1.25.)

*The Worn Doorstep*, by Margaret Sherwood. War as it affects an English village and a girl whose lover was killed in France. Simple, delicate and charming, but not unusual. (Boston: Little, Brown, \$1.25.)

*Beef, Icon and Wine*, Jack Lait's stories are of the newspaper office and the street. Now and then the "United States" hurts ears and eyes and needs a dictionary, but the tales are live and human. (Doubleday, Page, \$1.25.)

*Dead Yesterdays*, by Mary Agnes Hamilton. War as it affects the London intellectual. Interesting characters and situations. The author has a lot to say that's worth hearing but it takes her too long to say it. (Doran, \$1.50.)

*Cecily and the Wide World*, by Elizabeth F. Corbett. A very good novel. The old story of a husband and wife who grew apart, handled in a new way. The only unconvincing character in the book is the maid who refuses to leave. (Holt, \$1.)

If great scientists, Rhodes scholars, and their kin use such English as *Conno Hamilton* finds necessary to tell the unpleasant story of *The Sons of the Children*, we have something to reform in our schools as well as in our fathers. (Boston: Little, Brown, \$1.40.)

# The Money Value of Will Power

*What Will Power Is; What a Strong Will Has Meant to Thousands; Personal Experiences; How Anyone Can Develop Wonderful Will Power*

By Charles Sawyer

**A** MAN can have anything he wants out of life,—riches, power, pleasure,—if he has a powerful will. The difference between failure or only partial success, and the kind of success we envy, nine times in ten is only a difference in will power. Two people may have a million dollar idea—one hasn't developed his will to the point of ACTION, the other has; one remains a plodder, a victim of his own weak will—the other reaps the rich reward because he was strong enough to ACT.

These startling facts were forcibly brought to my mind recently in an interview with Mr. Albert L. Pelton, who is probably the greatest authority on self-development in this country today. "Scientists and psychologists," said Mr. Pelton, "have shown that the will is the driving force back of the brain. Without a strong, unflinching will a man's brain is like an automobile without an engine or a ship without a rudder, adrift on the sea of life. A man may be a bee-hive of ideas, yet if he lacks the strength of will to 'put them over' they might just as well be the idle thoughts of a child. Thousands of men have brains and ambition, yet earn but a bare living. Others not so brainy earn \$5,000 to \$50,000 a year. And the difference between them is only a difference in the strength of their will."

Then Mr. Pelton cited almost numberless instances of how men had developed their wills with remarkable success. One case was that of a man who for years had never earned more than \$25 a week. Almost discouraged at the prospect of doing big things he determined to cultivate his will power, and within two years from that day he was earning over \$1,000 a week—and with less work than when he was struggling to earn \$25! Another instance was that of a young man who worked in a big factory. He was bright and willing but seemed to get nowhere. Finally he took up the study of will training and in less than a year his salary was increased 200 per cent. Then there was the case of an old man who had been working on a proposition for years without making progress, who suddenly made \$30,000 as a result of the lessons he took in will training.

And so it goes, there are literally thousands of cases which Mr. Pelton can quote of how men and women have practically revolutionized their lives through a study of will development. But the most interesting fact brought out in my talk with Mr. Pelton was the

attention being paid to developing the will by men everywhere who realize the necessity of a powerful will if they are to increase their earning capacity.

Everyone knows that any of the senses, or any division of the mind, or any muscle of the body can be strengthened to any degree desired, by intelligent exercise and use. The blind man acquires a marvelous sense of touch through exercise. The blacksmith acquires muscles of steel through exercise. The man with a marvelous memory acquired it through exercise. And science has shown that Will Power can be strengthened by intelligent exercise and use, as easily as the muscles or the senses. The reason, as Mr. Pelton said, that most of us have weak wills is because we have not used or exercised our will power enough. Through sheer neglect it has become so "rusty" that now if we want to use it we cannot. If you carried your arm in a sling for two years it would become powerless to lift a feather. It is the same with that faculty we call the will. It must be trained, developed, made indomitable in its strength, by intelligent, well-directed exercise.

Mr. Pelton then told me about the system of will development discovered by Dr. Frank Channing Haddock, the noted scientist. It seems that Dr. Haddock's methods met with such unusual success that he finally wrote a complete course in 28 lessons, bound up in a 400-page book and called "Power of Will."

Some idea of the reception with which "Power of Will" has met may be gained from the fact that last year it is said over a hundred thousand copies were sold.

Among those who have read, used and praised this book are hundreds of prominent men, including Judge Ben B. Lindsey; Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieut.-Governor McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson of Wells-Fargo Express Co.; E. St. Elmo Lewis, the prominent business expert; Governor Arthur Capper of Kansas; Governor Ferris of Michigan; and thousands of others whose names head the list of business and financial giants.

From the fact that so many people have found "Power of Will" the secret of their success, it may be seen that it is not a book of idle essays. It does not merely tell you to strengthen your will but it gives rules and exercises that it seems actually do multiply your will power. Dr. Haddock devoted twenty years to the most profound analysis of the will in human beings and has made every step so interesting, so fascinating, and so simple that anyone can understand and apply the principles and rules at once, with noticeable results right from the start.

Because of the obvious value of the book Mr. Pelton, the publisher, is making an amazing offer. I am authorized to say that anyone who cares to see a copy of "Power of Will" may do so without sending any money in advance. Merely write to the Pelton Publishing Co., 23-S Wilcox Block, Meriden, Conn., stating that you would like to examine a copy and that you will either return it or send \$3.00, the small sum asked, within five days.

Some few doubters will scoff at the idea of a strong will being the fountainhead of wealthy position, power, and everything we are striving for. But the great mass of intelligent men and women will at least investigate for themselves by examining the book at the publisher's risk. I am sure that, if out of the 400 pages, you get but one idea for mastering yourself and controlling others, you will not part with the book for a hundred times its price. It is not even necessary to write a letter. Use the form below for convenience. This one act may mean the turning point in your life, as it has meant to so many thousands of others.

### Approval Form to be used by Readers of "The Independent"

Pelton Publishing Co., 23-S Wilcox Block, Meriden, Conn.

Please send me a copy of "Power of Will." I agree to either return it or send you \$3.00 for it within 5 days.

THE PULLMAN COMPANY

**Convenience.** Through the service

of the Pullman Company it is not only possible to secure in advance accommodations in a car never crowded beyond its normal capacity, but it is possible to enjoy, while traveling, comforts and conveniences usually associated only with the most modern hotels in larger cities.

By building its own cars the Pullman Company has been able to test every innovation which might add to the convenience of its passengers. Constant ventilation, comfortable temperature, electric lights, electric fans, modern plumbing and other distinctive features of the Pullman car have been provided in spite of the difficulties arising from the natural limitations of car construction, and the fact that these conveniences must at all times be available while the car is moving from place to place.

A brief comparison of the early Pullman car, with its oil lamps, coal stove and almost entire lack of conveniences, with the modern steel-armored sleeping or parlor car, sanitary, electrically lighted, automatically ventilated, steam-heated and supplied with every comfort and convenience that ingenuity can devise, testifies to the progress which has been made by the Pullman Company in fifty years of continuous service to the traveling public.

*A Little House in War-Time*, by Agnes and Egerton Castle, purports to be a chronicle of the everyday life of an average English family. It is really an irrelevant stringing together of little discourses, some pleasant, many overdone, on every conceivable subject from Belgians to butlers. (Dutton, \$1.50.)

In discussing *The Free Man and the Soldier*, Ralph Barton Perry, of Harvard, gives us a dozen brilliantly written essays on the reconciliation of liberty and discipline. Eight of these are on subjects brought up by the war and a strong case is made for universal military service. In vision and clarity, the work is at times reminiscent of William James. (Scribner, \$1.40.)

**SUNDAY SCHOOL AND CHURCH**

Dr. Jowett's last book is made up of fifteen sermons woven about Paul's description of *The Whole Armour of God*. (Revell, \$1.25.)

Concrete instances of soul winning make up the recent volume by John T. Faris, D.D. *The Book of Personal Work* is a series of narratives of adventures in the bringing of individuals to Christ. As illustrative material, this rich collection of anecdotes will prove of great value to ministers. (Doran, \$1.)

*The Christian Movement in the Japanese Empire*, the 1916 year book, includes besides the accounts of the year's work in almost every Christian organization save the Roman and the Greek churches, enlightening studies in child life, the villages, and industrial, educational and social conditions. (Missionary Ed. Movement, \$1.25.)

Dr. Zwemer's lectures at Princeton Seminary on what he hopes is the complete *Disintegration of Islam* from the Philippines to South Africa, is a call to missionary endeavor as well as a study of some conditions in the East. He writes with an authoritative knowledge of his subject, but with intense feeling that permits no dispassionate discussion. (Revell, \$1.25.)

Dr. Knight has made a constructive application of the best current experience in general educational principles to that belated field, the *Sunday School*. Teachers' meetings and training classes could well center about this book while individual parents and teachers will save themselves and the children much waste and weariness by a study of it. (Boston: Pilgrim Press, 75 cents.)

In *The Civil Law and the Church*, Charles Z. Lincoln has collected the principal judicial decisions affecting church problems by the courts of Great Britain, Canada, the United States and the several states. The volume is a reliable encyclopedia of religious law, useful, with its convenient arrangement and full indices, alike to clergyman and to lawyer. (Abingdon Press, \$5.)

*The Adornment of the Spiritual Marriage*, *The Book of Truth*, *The Sparkling Stone*, by the fourteenth century Flemish mystic, Ruysbroeck, are introduced by Evelyn Underhill. One wishes these included his advice on dress and other practical matters, which should prove as witty as his reply to some anxious for their soul's state. "You are as holy as you want to be." (Dutton, \$1.25.)

Kindergarten and manual training plans from paper tearing to book binding are described in A. G. Wardle's *Handbook in Religious Education*. Few of these are practicable for the Sunday school hour, in which, after all, surely less roundabout methods of teaching may be made interesting. They would be, however, useful for mid week work for the primary classes. (Univ. of Chicago Press, \$1.)

*The Christian Faith Under Modern Searchlights*, being the Stone Lectures at Princeton Seminary, by Prof. William Hallock Johnson, is an earnest apologetic for conservative theology. The author resists the encroachments of historical and biblical criticism, the doctrine of evolution, the advances of philosophy and com-

# What 15c Will Bring You from the Nation's Capital

The little matter of 15c in stamps or coin will bring you the *Pathfinder* 13 weeks on trial. The *Pathfinder* is an illustrated weekly, published at the Nation's Center, for the Nation; a paper that prints all the news of the world and that tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but \$1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the *Pathfinder* is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the *Pathfinder* on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. **The Pathfinder, Box 39, Washington, D. C.**

## WEBSTER'S NEW INTERNATIONAL DICTIONARY

G. & C. MERRIAM CO., SPRINGFIELD, MASS.

Whatever your question;—be it the pronunciation of a new term; the spelling of a puzzling word; the location of Nigeria, the meaning of tractor, white coal etc.—this New Creation contains a clear, accurate, final answer.

parative religion. The attempt results in little more than the assertion: "You have not driven us out—yet." (Revell, \$1.25.)

#### BOOKS FOR TODAY

A handy aid to campaign speakers is *Wit and Wisdom of Woodrow Wilson*. The quotations are chosen to fit today's topics and are arranged under convenient headings by Richard Linthicum. (Doubleday, Page, \$1.)

If any citizen be troubled by any doubts of the Republican party let him read *Republican Principles and Policies*, by Newton Wyeth. There will be view thru rose-colored spectacles the font of all political wisdom. (Chicago: Republic Press.)

A pamphlet by Capt. Remy Faesch, of the Swiss service, gives in the smallest compass precise and full information as to *The Swiss Army System*. It emphasizes the dependence on pre-military physical training of boys from seven to twenty. The pamphlet can be had in numbers at reduced cost. (Stechert, 155 W. 25th St., N. Y., 25 cents.)

A *Citizens' Army* describes the Swiss military system and adds comments as to its physical and moral effects by Swiss business and professional men. Tho its suggestions for adaptation in this country are superficial, and one wishes more stress had been laid on the compulsory athletic training of school boys, Julian Grande provides plain answers to many of our questions as to military training. (McBride, \$1.25.)

#### WE AND OUR NEIGHBORS

The short, crisp editorials from *Collier's*, collected into the volume entitled *National Floodmarks*, are often keen thrusts at some abuse or sham apparent in social life and custom. Careful discrimination, fresh treatment, and generous optimism mark these week by week observations on the passing show of life. (Doran, \$1.50.)

Truly forceful was the "Message to the Middle Class," by Seymour Deming. *From Doomsday to Kingdom Come* is less convincing in that it adopts the incoherence of the prophet as it paints the effect of the war on our thought, turning, but a little time ago, toward justice and opportunity for all men. (Boston: Small, Maynard, 50 cents.)

*Society: Its Origin and Development*, by Prof. Henry Kalloch Rowe, is sociology without terminology. It discusses in a broad and general way for the benefit of the average reader the practical problems of contemporary life under three main divisions: Life in the Family Group, Social Life in the Rural Community, and Social Life in the City. (Scribner, \$1.50.)

*The Function of Socialization in Social Evolution*, by Ernest W. Burgess, is an analysis of the human element in progress. The adaptation of the members of the community to each other is considered as of even more importance than man's conquest of his natural environment, since the latter is only secured by intelligently adjusted co-operation. (Univ. of Chicago Press, \$1.25.)

A *Capitalist's View of Socialism*, an anti-socialist argument against Socialism and in favor of social reform which does not go to that extreme, is marked by good sense and good temper; but the writer does not attempt to delve deeply into his subject; contenting himself with a guerrilla warfare against the Socialist party press and the newspaper orators. (Park, Austin and Lipscomb, \$1.)

In the chapters defending our constitution as it stands David Jayne Hill in *Americanism: What Is It?* would have made a stronger argument if he had recognized the causes of complaint that underlie recent demands for governmental changes. But in his discussion of Democracy as essentialism in relation to the present international complications he speaks freely of our intents, of our failures, and of what the future demands. (Appleton, \$1.25.)

# Why Your Health Depends on Your Stomach

By ARTHUR TRUE BUSWELL, M. D.

EUGENE CHRISTIAN

If you have ever lived on a farm you have heard of "balanced rations" and what remarkable results they have accomplished when fed to cattle and other animals. The United States Government has a department devoted to teaching farmers how to feed their stock so as to develop it to the highest point of health and efficiency.

Yet until recently I have never heard of "balanced rations" for humans or, in fact, of any serious attempt made to teach people what to eat and what not to eat. I was therefore greatly interested in the work of the Corrective Eating Society of New York City, founded by Eugene Christian, the eminent food scientist. It seems that this Society is dedicated to teaching people how to combine and proportion food for greater health and efficiency and their work is meeting with success so great that it almost seems too good to be true.

Twenty years ago Eugene Christian was at death's door. For years he had suffered the agonies of acute stomach and intestinal trouble. His doctors—among them the most noted specialists in this country—gave him up to die. He was educated for a doctor, but got no relief from his brother physicians, so as a last resort he commenced to study the food question, especially its relation to the human system, and as a result of what he learned he succeeded *literally eating his way back to perfect health* without drugs or medicines of any kind—and in a remarkably short space of time.

So remarkable was his recovery that Christian knew he had discovered a great truth which fully developed would result in a new science—the science of Correct Eating.

From that day to this he has devoted his life to telling others of the power of Correct Eating. From his research work he became convinced that 90 per cent. of the ills of mankind originate in the stomach and intestines. He found that these ills responded to corrective eating. Since then he has told 23,000 people how to eat, what to eat and what not to eat with the result that almost invariably they were brought back to a type of health that they never dreamed they could reach.

Very often good foods, when eaten in combination with other good foods, create a chemical action in the digestive tract and are converted into dangerous toxic poisons, which are responsible for nearly all sickness. In other words, good foods wrongly combined will cause acidity, fermentation, gas, constipation and numerous sympathetic ills leading to most serious consequences.

These truths have been strongly brought out by Professor Metchnikoff in his treatise on the "Prolongation of Life" and by many other modern scientists. But most efforts in the past have been designed solely to remove the effect, by cleansing out the sys-

tem and removing the poisons *after* they had formed, wholly disregarding the cause.

The Corrective Eating Society, however, has gone a step further. Instead of waiting until the poisons accumulate, they tell you how to prevent them. They have shown that just as some combinations of food produce slow consuming poisons that wreck the system, other combinations of food taken in the right proportions become the greatest tonics for health efficiency and long life ever discovered. And a wonderful feature of their method is that results come practically with the very first meal.

In order to help as many people as possible, not only those who are ailing but those who want to maintain their health, the Corrective Eating Society has prepared a book based upon Eugene Christian's 20 years' experience. This book, *Corrective Eating in 24 Lessons*, is being offered for free examination to those who are interested. This work was written expressly for the layman. Technical terms have been avoided and every point is explained so that there can be no possible misunderstanding.

But the lessons do not merely tell you why you should eat correctly and what the results will be, they also give actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness for all ages from infancy to old age and covering all occupations, climates and seasons.

Christian says that every thinking man or woman—young or old—well or sick—should know the science of correct eating. That most people dig their graves with their teeth is as true as gospel, in his estimation. Food is the fuel of the human system. And just as certain fuels will produce definite results when consumed in a furnace, so will certain foods produce the desired results when put into the human furnace.

Yet not one person in a thousand has any knowledge of food as fuel. Some of the combinations we eat every day are as inefficient and dangerous as soggy wood, wet leaves, mud, sawdust and a little coal would be for a furnace. No wonder most of us are only 50 per cent. efficient.

The relationship of health to material success is so close that the result of the Society's teaching is a form of personal efficiency which puts people head and shoulders above their less fortunate brothers. Everyone knows that the best ideas, plans and methods are worked out when you are brimful of vitality—when you feel full of "ginger." The better you feel—the better work you can do. I understand that the Corrective Eating Society's lessons have times without number been the means of bringing greater material prosperity to its students by endowing them with health so perfect that work seems like play.

If you would like to see the Book of 24 Lessons in *Corrective Eating* written by Eugene Christian out of his vast experience, merely write and ask the Society at the address given below to send the lessons for five days' free examination with the understanding that you will either return the lessons within that time or remit \$3, the small fee asked.

If the more than 300 pages contained in the course yield but one single suggestion that will bring greater health, you will get many times the cost of the course back in personal benefit—yet hundreds write the Society that they find vital health on every page.—Advertisement.

**I suggest that you clip out and mail the following form instead of writing a letter, as this is a copy of the official blank used and will be honored at once.**

**CORRECTIVE EATING SOCIETY, Inc., Dept. 410, 460 Fourth Ave., New York City**

Gentlemen:—You may send me prepaid a copy of *Corrective Eating in 24 Lessons*. I will either remit these to you in five days or send you \$3.

# La Petite Earfoné

## Le Supérieur Hearing Aid

Are your ears disabled—Is your hearing defective? Time lost before it is too late! The time to save your hearing is NOW. Are you practically deaf already? "Hear here!" Unless you were born deaf, there is every chance that you can hear again with the remarkable LA PETITE. It has just arrived, this greatest achievement of one of the world's foremost research laboratories—years ahead of any other invention for the deaf.

## DEAF

Now offered, with ten days' free trial privilege. All we ask is that you show it to your friends. If you wish to become our representative you can make money easily by taking orders for this new marvel! No matter how long you have been disabled—no matter what caused your deafness—no matter how often you have been disappointed in your search for help or how many other hearing devices have failed to overcome or relieve your affliction, you owe it to yourself, your family, your friends to test this new wonder at our risk. Remember, it costs you nothing to prove for yourself that *le supérieux* PETITE is the most powerful and sensitive instrument ever invented for the deaf.

## FREE TRIAL—No Deposit

Just mail this coupon with the names of two business men who know you. Send no money. No deposit of any kind—no obligations whatsoever. Do not be influenced by what others say in praising *le merveilleux* PETITE. Consider nothing but its own actual proof of what it will do for YOU. Take advantage of this liberal no-deposit trial offer. Send now. Just mail this coupon.

Franco-American Laboratoire Scientifique  
1330 Broadway, Room A3, New York, N. Y.

Send me, parcel post prepaid, a La Petite Earfoné. Also your offer to Agents. If I keep it I will send you \$2.50 after ten days' trial, and then \$3.00 a month for 11 months. This includes batteries free for one year. I enclose names and addresses of 2 business men who know me.

## INSTRUCTORS

About fifty per cent. more teachers have ordered quantities of The Independent for Class Room use this year as compared with the same period last year. You will find your English and History work much easier and more interesting by adopting our plan.

THE INDEPENDENT,  
119 W. 40th St., New York.

## Murphy's UNVERNISH

*As an interior varnish it is proof against hot water, steam, hot dishes, soap suds, alcohol or ammonia. On floors it does not crack under hard blows nor show heel marks.*

*As an exterior varnish it defies the sun and rain of summer and the wind and snow of winter.*

Murphy Varnish Company {NEWARK AND CHICAGO  
Franklin Murphy, Jr., President

## INDEPENDENT OPINIONS

From one of the soldiers now defending our southern frontier from Mexican invasions we have the following communication:

If press dispatches are true, Great Britain has repeatedly held up our ships and confiscated our cargoes, rifled our mails, requisitioned ships thus held up, and finally forbidden our trade with neutral countries except under regulations prescribed by her. Now, I make no claim to any knowledge of international law, but taking my guide from the many protests that have been made by the administration at Washington, I am forced to conclude, as I believe any other patriotic American will, that the course of Great Britain is wrong. If she is wrong then what I wish to be enlightened on is why do we submit? When I first noticed that the United States contented itself with protests against this high-handed course of Britain I felt that the President, like, I believe, most Americans, really felt that it was best for this country and for the world, for England and her allies to win this war, and of course, wanted her to win; and seeing that no attack by the Republican party has been made on President Wilson for his course in this matter, I was strengthened in this conclusion.

But if England really counts on our friendship it seems to me that with her overbearing manner, her conceit, her contempt of our pride, our traditions, she well shows that she cares little for it.

I have also, at times, felt that it was because of the inferiority of our navy that has kept us from resenting in a physical way these humiliations from England. The silence of the minority party has also strengthened this belief. I confess I don't know what is the cause, and wish to be told. I have talked this matter over with many comrades, men who want to know, and feel that they ought to know; but they, like me, are in the dark also.

Just recently the press dispatches stated that it was contemplated carrying the mails to the Philippines on army transports to prevent their being interfered with by British warships. This submissiveness does not square with our boasted traditions of not brooking insults.

I sympathize with the Entente in this war, but when it comes to interfering with our mails, regulating our commerce with neutrals—even with South America and German citizens in the Philippines—and taking German citizens off ships flying our flag, that is going a little further than "cutting off supplies and munitions from the Central Powers."

If we are to help England win this war should not England be made to respect our feelings? Or is the value of England's success in this war so great to us that we should smother our feelings and submit to any insult she may offer us?

Our correspondent answers his own question by his last question. The action of Great Britain in seizing our ships, rifling our mails and shutting off commerce between neutrals is altogether unwarranted and contrary to international law, as our Government has repeatedly pointed out in its protests. Such high-handed interference with American rights would undoubtedly have aroused indignation under other circumstances and might have led to war. In fact we did make war upon England for less flagrant interference with our commerce a hundred years ago

when the United States was much weaker than England. The reason why the country now does not more strongly resent such infractions of its rights is undoubtedly because the sympathies of the American people as a whole are very emphatically on the side of the Allies and they do not wish to embarrass Great Britain in her operations. The British Government is obviously not intentionally insulting or vexatious, but, while not conceding the justice of the American complaints or relaxing the rules it regards as necessary, it has shown a disposition to avoid provocation or wanton interference with American commerce. The last Congress put it into the power of the President to institute reprisals against Great Britain even to the use of the army and navy, but it is not likely that the present administration will make use of these powers.

I have read with great interest the articles in The Independent on the life of the late Dr. William H. Ward. Perhaps something of his early boyhood days may be of interest also to readers of the magazine.

Our fathers were ministers of the same faith in the same town, Abington, Massachusetts, and Dr. Ward and myself were members of the first class, that of 1849, of the Abington High School. He was the last male member of his class to survive. In languages he was far in advance of the entire school, and, altho one of the youngest pupils, was looked up to by all. It was the custom for the pupils to read in the Bible at the morning exercises. We often wondered why William Ward's reading varied so from that of the others. Curiosity was so strong that one day some pupils looked into his desk and to their surprise found a Greek testament. His seatmate said he never read from any other than the Greek. As a speaker and reader he led the school. All the pupils seemed to think it belonged to him to do so. He was always cheerful, could enjoy a joke, and see the ludicrous as well as the serious side of things. (Mrs.) ANNA PIERCE GLEASON

Rockland, Massachusetts

The Professor of Economics in Lawrence College and the author of the Wisconsin income tax law makes the following interesting comment upon the question of the lowest limit of an income tax:

Your issue of August 21 contains an editorial entitled "Everybody's Tax" which very properly criticizes the Democrats of the Senate for receding from their intention of lowering the limit of the exemption in the income tax. With your general position I quite heartily agree. But in the course of your argument you state that "The only limit of exemption ought to be the point at which it would cost more to collect the tax than the tax itself would amount to." The employment of the cost of collection as the basis for the determination of the exemption is inconsistent with both theory and practise. The cost of collecting an income tax is very little. For example, in 1912, the first year the Wisconsin income tax law was in operation it cost but \$1.28 to collect \$100 of tax. The cost of collecting the federal income tax, it is true, has been a little more. While the

expense of collecting a tax on a small income would be a somewhat larger per cent of the income, still it is evident that the application of the principle laid down in the editorial would allow virtually no exemption.

The net income, it will be kept in mind, is the gross income minus the expense actually incurred in its acquisition. The cost of feeding, clothing and housing the recipient of the income and his family is never considered a part of this expense. It is for the purpose of covering these items that the exemption is always allowed. To take from an individual a portion of his income in the form of a tax and then be obliged to return it to him in the form of charity is most unwise.

Therefore the basis of exemption in levying an income tax should not be the cost of collecting the tax, but rather the cost of maintaining the taxpayer and his family at the point of greatest economic efficiency. This conclusion is sustained by the practice of every nation at present levying an income tax.

D. O. KINSMAN

Appleton, Wisconsin

## PEBBLES

Tramp—What do you do with your old shoes, sonny?

Sonny—We keep a puppy.—*Life*.

Emperor William (telephoning to Heaven)—He don't answer! I'm afraid He is gone over to the Allies.—*L'Asino (Rome)*.

Chemistry Professor—What happens to gold when it is exposed to the air?

Student (after long reflection)—It's stolen.—*New York Times*.

Teacher—If angry with another little boy, what should you do?

Little Boy—Sit on him and count two hundred.—*New York Times*.

## THE UNIVERSAL MANIA

Lives there a man with soul so dead  
Who never to the world has said  
In thunder tones inspiring awe:  
"They really ought to pass a law?"

—*The Sun*.

"Well, there is one thing to be proud of; we have no class prejudices in this country."

"H'm! I guess you were never around when three or four sophomores got hold of a freshman."—*New York Times*.

"Madam, allow me to show you my patent hammer for the home. Now, on this side the head is made of the best quality steel for hitting the nail or tack. On the other side we have the best rubber for hitting one's finger or thumb!"—*Sydney Bulletin*.

Charles E. Edison, of Middletown, Ohio, says that this epitaph actually exists on a tombstone in Ozark County, Missouri:

"Here lies our wife Samantha Proctor, who fetched a cold and wouldn't doctor, she couldn't stay, she had to go, Praise God from whom all blessings flow."

*Cincinnati Inquirer*.

Said the Chemist: "I'll take some dimethylacetylaldehyde."

And I'll add just a dash of dimethylbenzoylformaldehyde.

But if these won't mix, I'll just have to be

Up a big powerful dose of triethylammoniumchloride."

*Cincinnati Inquirer*.

A few days ago a rather bashful young woman went into a store carrying three chickens. She inquired the price of chickens and at the same time put them on the counter. The clerk didn't know the chickens' feet were tied and asked if they would lay twice. She hit her handkerchief and said, "No, sir, they are roosters."—*Delphian Republican*.

# "How's Your Nerve, Today?"

By Charles F. Trick

In this year of America's greatest prosperity, wherever men pause for an instant in the great race for fortune to hail each other, this is their new form of greeting: "How's your nerve today?"

On your answer to that question depends your chance of making THIS day count in your fight for success. And THIS day may be THE day on which will come for you some big opportunity.

NEVER have the stress, strife and struggle for success demanded of men so much vital, nervous energy as in this year of our commercial history. The man whose nervous forces are exhausted cannot hope to escape defeat in these days of strenuous effort. Everywhere in the great world of trade, in the professions and industries, men are being speeded up to the very limit of their mental and physical powers. Few and fortunate are those who are cautiously guarding their vitality and stamina, taking for their motto "For what shall it profit a man though he gain the whole world yet lose his health."

One of these men is Bernarr Macfadden, one of the most talked about men in America. By reason of his own amazing success as a business organizer, educator, author and editor he has become one of the dominating personalities in American public life today. Mr. Macfadden frankly confesses that his remarkable achievements in the business and professional world are directly due to his own discovery of the power of nervous energy and a system for conserving and increasing it.

It was my pleasure a few days ago to meet him personally. The story of his rapid rise from obscurity to fame and prosperity I had heard told and retold a hundred times and I lost no time in questioning him. "Genius! Luck! Success!" he said, in response to my question, "they are all a matter of nerve, or I should say nerves. In my own experience I believe there is for thousands of others both the key to success and a warning that will save them from much misery. Mere bodily health, muscular strength, ambition, determination—all these are of little avail to the man whose nervous energies have been dissipated. The man who, by trying to do too much, has overtaxed his nervous system is entirely at the mercy of chance—a ready victim of illness and disease and in constant danger of both a physical

and mental collapse. Before he can hope to be free from this danger he must learn what I learned.

"He must learn to develop and command the power that lies latent within him—how to vitalize his nerves and charge them with that dynamic energy that distinguishes all those successful men who are seen everywhere forging ahead, smilingly cool and confident that their resources are ample to meet every demand. He must stop deceiving himself with the idea that a day of overstrain can be fully compensated for by a night's rest. Only when they are intelligently guided and directed can Nature's wonderful recuperative powers restore tone and energy to worn out nerves.

"It is to my discovery of a new and scientific method for vitalizing the nerves that I attribute every success I have won, as well as the successes of thousands of my friends who have followed my advice."

Out of his rich experience Bernarr Macfadden has written a remarkable course of training in Vitalizing the Nerves of the body and brain, giving all the secrets of that phenomenal health that is the wonder of all who meet him.

Written without technical detail, the course tells you how you can develop your forces back of your brain, how you can

make yourself absolutely master of your own destiny by acquiring a day in and day out type of health and vitality that will enable you easily to overcome the obstacles in your path and make your daily work a pleasure instead of a burden.

The publishers have just issued a little brochure that tells all about Mr. Macfadden's wonderful system and its new and different health-building and success-achieving methods, which I am authorized to say will be sent on request to anyone interested. A postal addressed to the Physical Culture Publishing Co., 3410 Flatiron Building, New York City, will bring you the brochure by return mail.

## TRAVEL AND RESORTS

The Independent invites inquiries from its readers pertaining to Travel for pleasure, health, or business, the best hotels, large and small; the best routes to reach them, and the cost; trips by land and sea; tours domestic and foreign. This Department is under the supervision of the BERTHA RUFFNER HOTEL BUREAU, widely and favorably known because of the personal knowledge possessed by its management regarding hotels everywhere. Offices at Hotel McAlpin, Broadway and 34th street, New York, and Hotel Stewart, San Francisco, Cal., where personal inquiry may be made. Address inquiries by mail to INFORMATION, The Independent, New York.

## The GLEN SPRINGS

WATKINS, N. Y.  
ON SENECA LAKE  
Wm. E. Löffingwell, Pres.  
OPEN ALL THE YEAR

A Mineral Springs HEALTH RESORT and HOTEL, known as THE AMERICAN NAUHEIM. In Private Park with miles of graded walks for Oertel hill climbing. On the Southern Tier Highway, all macadam. Attractive and well-kept Golf Course, Miniature Golf, Clock Golf, Tennis, Motoring.

THE ONLY PLACE IN AMERICA WHERE THE NAUHEIM BATHS ARE GIVEN WITH A NATURAL BRINE

**THE BATHS** are directly connected with the Hotel and complete in all appointments for *Hydrotherapy, Electrotherapy and Mechanotherapy.*

FOUR MINERAL SPRINGS. The Bathing Springs are similar to the waters of Bad Nauheim, in the proportions of Calcium Chloride and Sodium Chloride, but are about five times as strong. The Radium Emanation from Brine Spring No. 1 averages 68 Mache Units per liter of water and is due to Radium Salts in solution.

Unsurpassed advantages for the treatment of Heart, Circulatory, Kidney, Nutritional and Nervous Disorders; Rheumatism, Gout and Obesity.

Illustrated Booklets and Latest Reports on Mineral Springs Mailed on Request

### Ross Health Resort and Arborlea Inn Annex

Private Hospital

For Mental and Nervous Diseases

Comfortable, homelike surroundings; modern methods of treatment; competent nurses. 15 acres of lawn, grove, flower and vegetable gardens. Food the best. Write for booklet.

Sanford Hall, Flushing, New York

## MR. PURINTON'S EFFICIENCY QUESTION BOX

335. Mr. A. D. G., New York City. "Please suggest (a) list of recommended schools of automobile instruction, personal and correspondence; and (b) occupations for rather deaf man of thirty, previous experience bookkeeper mercantile house, and timekeeper contracting work."

(a) We cannot affirm the reliability of or comparative excellence of trade schools. Write Editor of *The Automobile*, 239 West Thirty-ninth Street; of *The Automobile Journal*, 51 East Forty-second Street; of the Automobile Directories Company, 1737 Broadway; also Secretary of the Automobile Club of America, 247 West Fifty-fourth Street; all of New York.

(b) Why change occupation, unless to broaden out and become a certified public accountant, or an efficiency engineer, or a buyer for a large concern? Your deafness should aid in concentration, but would suggest your working independently rather than in a business where many oral instructions were needed. Investigate the schools of accountancy previously mentioned here; some of them cooperate with their graduates in locating a position; make inquiries along this line.

336. Miss M. S., Maryland. "I have just completed an academic course at high school, and will soon take an English course at college, which requires a few hours of afternoon study. I should like to do some kind of newspaper work in the morning; had thought of becoming a reporter, but never studied shorthand. I shall greatly appreciate your suggestions."

The Chicago Correspondence Schools, Unity Building, Chicago, guarantee to teach shorthand complete in only thirty days. Write for particulars. Investigate also the new Stenotype system of shorthand—address the Stenotype Company, 220 West Forty-second Street, New York.

Doubtless the college you will attend publishes a weekly or monthly paper; why not try for a position on that, or at least write articles or news items for it? Get your English teacher to introduce you to the editor of a local newspaper, and ask his aid or advice.

The work of a reporter is extremely difficult—on a paper worth while, is poorly paid, and is often heart-breaking. Some other branch of literary pursuit would seem better for a girl of your age.

337. Mr. B. S. J., Kentucky. "The tobacco habit is ruining my health, and my doctor orders me to stop it altogether—heart has become affected. The men of our family have used tobacco for three generations, the craving seems in the blood, and I don't seem able to quit the thing. Can you advise me?"

Always we refuse to believe that a habit is stronger than a man. Several methods and books are now available, purporting to assist or effect a cure. Apply to Albros Society, 181 Lexington Avenue, New York, for details of MacLevy's book "Tobacco Habit Conquered"; also to Restoration Publishing Company, 101 West Seventy-second Street, New York, for general literature; also to Edward J. Woods, Station E, New York, for particulars of his method; also to Newell Pharmacal Company, St. Louis, Missouri, for booklet and description of their remedy.

338. Mr. L. R. A., New York. "I am purchasing agent for a large concern, using several thousand pencils a year in all its branches. On page 247 of your book 'Efficient Living,' I note your reference to a saving of 200 per cent on pencils yearly by using those costing one cent each, instead of five cents. May I ask which brand you refer to? I see here a chance for economy that should appeal to office workers generally."

Specific mention of any article we use personally might be construed as preferential endorsement. This we cannot give, as all our judgments must be impartial. But the penny pencils we use are manufactured by one of the following concerns—obtain samples from each, and make your own choice. American Lead Pencil Company, 220 Fifth Avenue; Joseph Dixon Crucible Company, 65 Reade Street, Eagle

Pencil Company, 377 Broadway; Eberhard Faber, 200 Fifth Avenue; all of New York.

339. Mr. E. M. K., Louisiana. "I am twenty-two years old, and am very much interested in aeronautics. Please advise me about the idea of taking this up as a business, by giving exhibition flights in Southern towns, thereby making sufficient capital to enter into business in a few years. What are some of the schools, books and manufacturers in this line? I thank you very much in advance for this information."

A man going into the flying business should learn it from the ground up. Why not first become an employee of an airship factory, a helper to an aviator, or some other apprentice to experts in the field? Secretary of the Aero Club of America, 297 Madison Avenue, or of the Aeronautical Society of America, 29 West Thirty-ninth Street, both of New York, would probably furnish addresses of manufacturing concerns and of professional aviators. Get copies of *Aeronautics*, 250 West Fifty-fourth Street, and *Aerial Age*, 120 West Thirty-second Street, both of New York; study the advertisements for clues to progress.

Write also these various concerns for particulars of their work: Patterson Aviators, East Jefferson, Detroit, Michigan; Thomas Brothers Aeroplane Company, Ithaca, New York; Health Aerial Vehicle Company, Chicago; Arrow Model Works, Grove Street, Brooklyn; Ideal Aeroplane Company, West Broadway, New York; Popular Mechanics Book Department, 6 North Michigan Avenue, Chicago.

340. Mr. D. D. K., Ohio. "I have seen many personal budgets outlined for married men, but never one for a single young man. During the last seven months I have earned \$443.10 and have kept a personal cash account. Please give me your opinion of the amounts expended: (1) Doctor bills 18.3 per cent; (2) Board and room 45.5 per cent; (3) Clothing 3.6 per cent; (4) Pleasure 4.7 per cent; (5) Insurance and savings 10.9 per cent; (6) Miscellaneous personal items 17 per cent. Doctor bills large because of a recent breakdown; miscellany covers 5 per cent for music lessons, but I have made enough from music to cover this fully. How can I save more?"

Prepare to earn more—study by mail in spare time and train for a better job, or a part of another man's job where you are. On your present income you are doing remarkably well. The only excessive amounts are (1) and (2). You can learn the science of health, and reduce your doctor bills to 5 per cent or less; and you can live on \$2.50 a week for food and \$2.50 a week for room. The saving on these items would come to \$150. or more, every year. And you might well put \$50 of this into clothing—we do not see how you can dress properly for business advancement on 3.6 per cent of your salary. Your example of thrift is a mighty good one, we recommend it to all our young men readers.

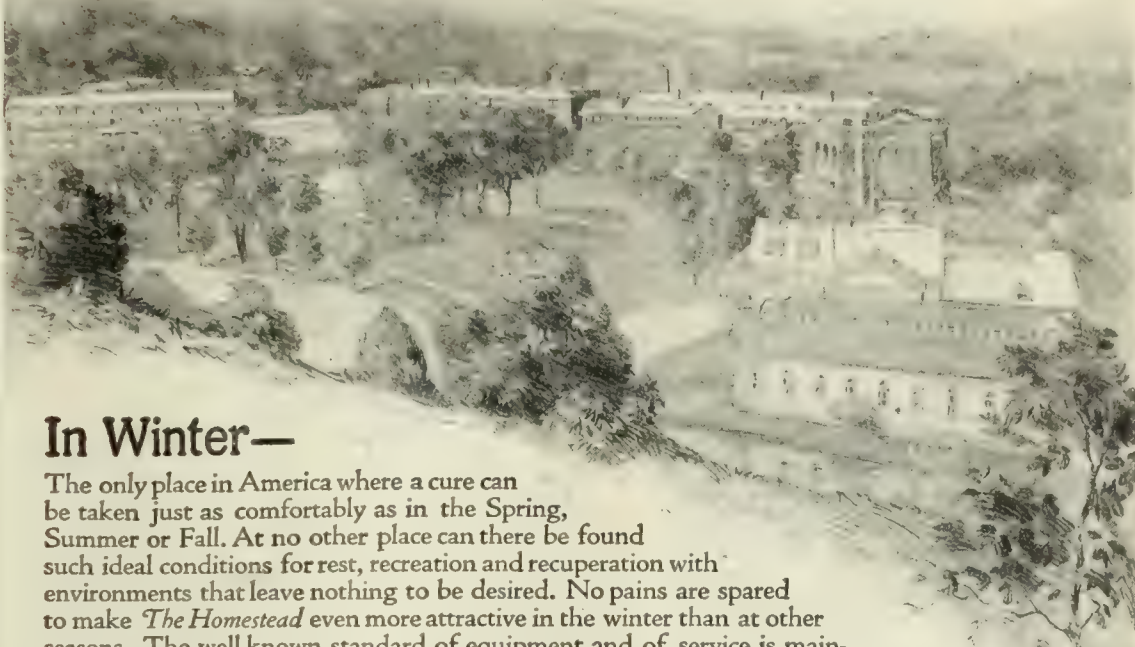

341. Mr. A. I. B., New York City. "I am a young man of nineteen, and would like to communicate a few of my ideas on personal efficiency which may be of invaluable aid to other young men. I walk a certain distance every day; carry my lunch, with me and use a Thermos bottle; do not smoke or drink or stay out late; have \$500 bank account and a \$1000 insurance policy; attend concerts and lectures, but not vaudeville or motion pictures. My Sunday program is as follows: 7 a. m., rise; 8 to 10, piano practice; 10 to 11, a four-mile walk in Central Park; 1 to 2, dinner and heart-to-heart talk with my parents; 2 to 4, meeting friends; 4 to 6, attend organ recital; 6 to 8, supper and family gathering; 8 to 9, attend public forum or lecture; 9 to 10, bath, exercise, bed. Will you kindly say whether you approve such ideas, and the Sunday program, for a young man?"

We do and we do not. You are analytical, systematic, organized, temperate, clean, thrifty, and have a model for young Americans. But our idea of efficiency is to forget it from Saturday afternoon till Monday morning, and you have got your Sunday all messed up with clocks and tape measures and pedometers and gymnastic stunts. When are you a human being?

Are you so good you never need to go to church? How can anybody have a heart-to-heart talk right after a Sunday dinner? Why have supper an hour too soon after dinner? Where is your place for social service or a Sunday-school class?

Your Sunday plan is far above the average; you are on the right track and more religion would make it ideal. Your other suggestions are good, but hardly necessary. We appreciate your interest.

# Virginia Hot Springs

## In Winter—

The only place in America where a cure can be taken just as comfortably as in the Spring, Summer or Fall. At no other place can there be found such ideal conditions for rest, recreation and recuperation with environments that leave nothing to be desired. No pains are spared to make *The Homestead* even more attractive in the winter than at other seasons. The well known standard of equipment and of service is maintained throughout the year. Situated 2,500 feet above sea level—Never any extremes—Agreeable mornings, cloudless skies, balmy noons, wonderful and incomparable sunsets—Magnificent vistas—spacious rooms, corridors and verandahs.

## Famous Healing Waters

Truly Wonderful—Naturally Heated—106°

In the waters at Hot Springs is found more radio activity than at any place in the world—a fact so fraught with importance that it is almost startling to suffering humanity. At none of the celebrated places in Europe are the natural waters so charged with all their gases and other health giving qualities—At no other place is the temperature prescribed for hot baths, that at which the water actually emerges from the earth in the natural springs.

The famous Spout Bath for Gout, Rheumatism, Nervous Diseases, Sciatica, Nervous Prostration, Liver Troubles and Old Joint Injuries. Modern and complete bath equipment—Swedish Gymnastics, Massage and Hot Air Treatments—Needle, Spray, Electric, Medicated and other Baths—Physicians of international reputation—Experienced and careful attendants.

The Bath House is connected with the Hotel by an ornate, sunlit viaduct, so that the bather may go to and from his room without outside exposure.

## The Homestead Book

A lifelike photographic description of the Homestead Hotel and its surroundings, in natural colors. It tells of the 500 rooms—excellent cuisine—incomparable drinking water—attractive ballroom—fascinating drives—interesting trails and bridle paths—Golf courses and Tennis Courts. This book, together with the treatises on the therapeutic value of the waters, should be read by everyone looking for an ideal winter resort for rest, recuperation and recreation. We will gladly send copies upon request.

## Why Pay Full Prices for Diamonds

It's not necessary, says an illustrious record of over 20 years' unimpeachable business record.

It costs you nothing to see for yourself—and no one need know your business. Get Our Bulletin and read about hundreds of bargain diamonds and at 40 to 50 per cent off market prices.

### Diamond Banking

We must sell the high-grade diamonds on which we originally loaned money. It is the plan of any bank to sell the security if the loan is not repaid—this buyer gets the benefit.

### Try to Match These Values

You should see this 7/8-3/32, 1/64 kt. superb blue-white diamond gem before you decide to buy. A perfect cut quality, magnificently brilliant, genuine diamond, mounted in brand new platinum top engagement ring. Try to match it at \$24. Guaranteed Cash Loan \$125. Unpaid \$148.50

Loan Price

This beautiful solitaire cluster set on approval. Genuine diamonds set closely in platinum dome top, exactly resembling a large solitaire cluster of 2 1/2 kt. weight in high setting engagement ring. Try to match at \$35. Unpaid \$39.85

Loan Price

Don't pay full price before examining this 5-3/32 kt. wt. genuine diamond. Sparkling, brilliant, blue-white, perfect cut gem in 14 kt. solid gold massive tooth ring. Try to match at \$125. Guaranteed Cash \$79.25

Loan \$65. Unpaid Loan Price

21 jeweled Father Time chain adjusted five positions, mechanism, double roller jeweled and in genuine 20 year gold filled case. Guaranteed loan and new condition and to pass any rational inspection. Try to match at \$40. Unpaid Loan \$18.75

### Money Back Protection

You can't beat our guaranteed cash loan protection—you can borrow on your diamond without the surrender of title. You don't lose benefit of enhancing values. Our rating of over three-quarters of a million dollars is your insurance.

### Send the Coupon for the New Bargain Bulletin

Hundreds of special bargains are listed in the new bulletin. Not just one quality, but any quality diamond desired. Write for it today—your name and address on the coupon or a post card is enough. These bargains will not last long—and the number of bargain bulletins is limited. Write today—now.

## The Market Place

### THE MARKET FOR STOCKS

An active and eventful market on the New York Stock Exchange followed the sharp decline of prices on Friday, the 6th (the twenty-fifth consecutive full day on which more than 1,000,000 shares were sold), when the general advance was checked by the report that Ambassador Gerard, then crossing the ocean, was bringing to President Wilson from the Kaiser a message suggesting overtures for peace. Prices had been rising on account of large railroad earnings, the continuing very profitable business of war order companies, and the purchase of stocks by what brokers call "the public." Peace might sharply reduce the earnings of munition manufacturers and the railway carriers. On the 7th there was a slight upward reaction, due mainly to official denials that Mr. Gerard was bearing such a message. The prominent banker responsible for the report (Mr. Sabin, president of the Guaranty Trust Company) had not, however, said that the suggestions to our government were to be made by the returning Ambassador, altho he had reason to believe that they would be submitted by some agency. In the stock market the story lost its original weight.

But there was to be another and a greater fall of prices, caused this time, not by indications of approaching peace, but by events which, many thought, might draw our country into the war. News of the attacks of German submarines upon ships passing not far from Nantucket Light, bound in or out, was known to everybody on the morning of Monday, the 9th, and at the opening of the market that day there was great selling pressure. The first transactions in several securities showed losses of 6 or 8 points. Decline was hastened by the execution of stop-loss orders, and a great many of these came from the West, which has had a large part of the recent exceptional volume of Stock Exchange business. In the first hour a million shares were sold. Before the close a part, in some cases half, of the losses was recovered, but the record for fifty representative stocks showed an average loss of 2 1/2. The day's business was 1,906,000 shares, including 526,000 of Steel Corporation, whose net decline was 4 3/8 points. The break was greater than that which occurred the day after the sinking of the "Lusitania," but the market was in a vulnerable condition when the shock came.

## "You Get The Job"

"We've been watching you, young man. We know you're made of the stuff that wins. The man that cares enough about his future to study an I. C. S. course in his spare time is the kind we want in this firm's responsible positions. You're getting your promotion on what you know, and I wish we had more like you."

The boss can't take chances. When he has a responsible job to fill, he picks a man *trained to hold it*. He's watching you now, hoping you'll be ready when the opportunity comes.

The thing for you to do is to start today and train yourself to do some one thing better than others. You can do it in spare time through the International Correspondence Schools. Over 5000 men reported advancement last year as a result of their I. C. S. training.

The first step these men took was to mark and mail this coupon. Make your start the same way—and make it right now.

I. C. S., Box 4530. Scranton, Pa.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4530, SCRANTON, PA.

Master-letters from men who have the capacity of expressing much in a single sentence are studied in this course. Write Emerson Ext. University, Inc., Charleston, W. Va. for "A Pad of Letters" Free.

Evidence or reports that what had taken place gave no ground for complaint by our government led to some recovery on the 10th, when a slight net gain was shown for a majority of the stocks at the close; but on the 11th the decline was resumed, with a net average loss half as large as Monday's. The 12th was a holiday. On the 13th there were gains in the early part of the day, but a well-defined downward movement followed and there were considerable losses at the end. Steel shares fell to 108¾. Here the long series of million-share days was interrupted, for only 925,000 were counted. There had been twenty-eight of these days in an unbroken line. For this no precedent is found since 1901. While there was no real news of a disquieting character, the reported presence of submarines near our coast caused nervous fear.

Internal or domestic conditions have combined to be highly favorable. Manufacturers are very busily engaged, additional statements of railroad earnings show large increases, and labor is employed at high wages. But the stock market, on account of its exceptional breadth, recent advances, and the wide interest of "the public" in it, has become sensitive and is sharply affected by reports or events which may seem to threaten interference with the profits of production and transportation.

#### CROPS AND PRICES

Another reduction of the wheat crop estimate was made in the government's October report, from September's 611,000,000 bushels to 607,557,000, or not much more than half of last year's 1,011,500,000. The crop of spring wheat is the smallest in twenty-one years, and the entire crop is about 125,000,000 below the average for five years preceding the remarkable harvest of 1915. Little change is shown in the report's figures for other products. There is a general decline, in comparison with last year's yields, except for hay, tobacco and rice.

Our wheat shortage raises interesting questions. It is estimated by the Department of Agriculture that about 625,000,000 bushels are required for domestic consumption and seed, and that the surplus carried over from last year permits the exportation of not more than 100,000,000. But wheat from this country and Canada is going to Europe at the rate of more than 400,000,000 bushels a year, and Canada's exportable surplus probably is no larger than our own. The shipments for the last fifteen weeks have averaged 2,000,000 a week, and 2,400,000 a week for the last month. Evidently, at this rate, all that can be spared will be exported in the first half of the crop year. From this country alone Europe took 322,000,000 bushels in the first year of the war and 250,000,000 in the second. European crops, as well as our own, are short. The Allies intend to have as much wheat as they need, if money will buy it. Our shortage and their demand have raised the

## Make your fortune live after you

Many men during a lifetime of hard work have earned and accumulated a fortune which after their death has been dissipated through mismanagement, ignorance or extravagance.

You can guard against such a contingency and make your fortune live on after you have gone, make it perform your cherished wishes, by placing it in trust with the Bankers Trust Company.

If it is considered advisable to keep the estate under the supervision of a friend or a member of the family, this can be done by appointing the Bankers Trust Company as co-executor and co-trustee with the friend or relative, thus relieving him of most of the burden of work and responsibility.

A fact not generally understood is that the highly specialized and competent service rendered by this Company costs no more than the service of an individual.

The officers of this Company will be glad to correspond with you regarding any trust or banking matters you may have in mind.

## BANKERS TRUST COMPANY

Roxburgh Pub. Co. (Inc.), 61 Court Street, Boston

price here (at Chicago) to \$1.58 a bushel, and more than 50 per cent has recently been added to the price of flour. Similar advances are seen in Canada, where the increases since the beginning of the war have been about 60 per cent for wheat and 53 per cent for flour.

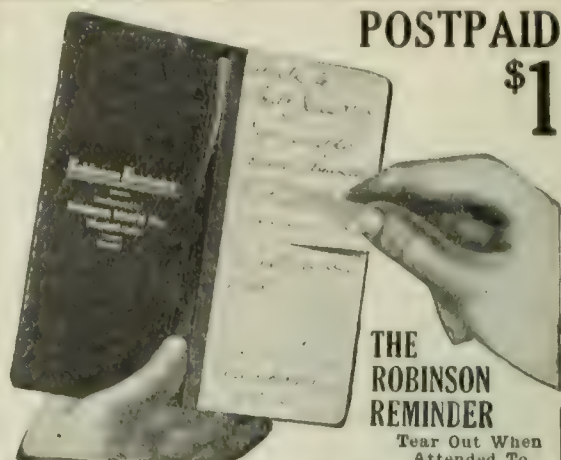

Last week the British, French and Italian governments decided to take the purchase of foreign wheat wholly from private hands. They will buy here and elsewhere by the agency of a joint commission, and the first purchase reported is one of 18,000,000 bushels in Australia. A Royal Commission in England has taken possession of stocks of wheat and flour and will control the distribution of imports. If the three nations set out to buy here as much as was taken by them last year, our people will see prices march upward as a result of a trade contest for possession of the quantity needed for home consumption. Some say that such an upward movement must discourage the use of wheat here in the usual quantities and thus cut down the estimate of 625,000,000 bushels. But our people are prepared to buy. Published interviews with leading wholesale dealers say there never has been such a demand for foodstuffs, altho the prices of all of them have been largely increased. They are turning down orders which they cannot fill. This demand is due to prosperity and good wages. Probably the prices paid by home consumers and foreign buyers will be higher in the near future than those now reported from the markets.

#### IRON AND STEEL

Steel mills and iron furnaces continue to show great activity, and further additions to prices have been made. Among the new orders is one from Russia for 1000 locomotives, the largest of its kind ever placed here. In the last two weeks our own railroads have bought more than 10,000 cars. There have been large sales of pig iron for export, Great Britain taking 20,000 tons. There is a remarkable demand for ship plates to be used both here and abroad. All the American shipyards have orders enough to keep them fully employed thru the year 1917. Great Britain and Australia are buying plates; Japan has paid a premium on an order for 5000 tons. One of the new prices is \$6 a box for tinplate, which may be compared with \$3.60 a year ago. Exports of tinplate are growing; last year they were 516,000,000 pounds, valued at \$18,704,000. Nearly half of this quantity went to the Orient, and there were large sales in the region from which the tin itself had been imported. Our annual output, which was nothing not many years ago, is now about 2,000,000,000 pounds. In one day recently 355,000 pounds were shipped to China.

The following dividends are announced:

American Light and Traction Company, preferred, 1½ per cent, common, 2½ per cent and 2½ shares common stock on every 100 shares of common stock outstanding, all payable November 1.

#### THE ROBINSON REMINDER

Name in gold 25c extra. If your stationer cannot supply you, send direct to us. Just the thing for advertisers.

ORDER NOW.

THE ROBINSON MFG. CO., Dept. D., Westfield, Mass.

### AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

## A MATHEMATICAL QUESTION

As observed on several previous occasions, an old line life insurance policy, with its mathematically correct premium, seems a bad bargain after one who has carried it for years hears the fascinating tale which the representatives of assessment companies and fraternal orders can tell. The man with a proper consideration of the responsibilities due to dependents then finds the contract he made with a legal reserve company irksome. Only those who have grown old and uninsurable in the service of reserveless life insurance actually suffer the disenchantment following its use.

One of my correspondents in South Dakota tells me of a contract he has recently made with the Guarantee Fund Life Association of Omaha. His age is 27, and he is promised \$4000 of life insurance protection for a total premium thruout life of \$41.04, or \$10.26 per \$1000. He asks if I believe it can be done. I do not. When such great life insurance companies as we have in this country, the underwriting, financial and mathematical integrity and ability of which are unimpeachable, not only insist that it cannot be done, but refuse to do it, I, and every other man open to conviction, may rest assured that the Guarantee Fund Life Association is mistaken. At that age a premium of \$10.26 is within \$2.07 of the tabular mortality rate; ten years later, at age 37, it is only \$1.03 more than the mortality rate; at age 47 the mortality rate is \$12, which is \$1.74 more than the premium paid; at 57 the mortality exceeds the premium by \$11.07; at 67 by \$37.38; and so on in a constantly increasing ratio each year to the end of life. The premium of \$10.26 includes nothing which, invested at interest, will serve as a reserve to provide for the increased cost due to advancing age.

My correspondent says that he desires life insurance, but wants something his beneficiary can collect. If he should die soon, there is no doubt his beneficiary would have no trouble collecting the amount due. But if he should live an average life time, he will probably find that his cheap insurance has advanced in cost prohibitively.

N. T. S., Monticello, Ark.—Best advice I can give you is that you consult a lawyer familiar with the insurance law of Arkansas and organize your association under his direction. You will also be aided by communicating or conferring with the Auditor and Insurance Commissioner of your state. As to underwriting or operating plans, forms of policies, methods of bookkeeping etc. why not consult the managers of the two associations to which you refer?

**FIRE INSURANCE.**  
THE Hartford Fire Insurance Company have appointed JONATHAN G. W. TRUMBULL, Esq., of Norwich, their Surveyor for said town, and its neighborhood—who is also authorized to receive proposals for Insurance against loss by Fire, in behalf of said Company.  
WALTER MITCHEL, Secretary.  
Hartford, Dec. 17, 1810.

## The First Hartford Agency

was established in Norwich on December 17, 1810, when J. G. W. Trumbull was authorized to underwrite insurance for the Hartford Fire Insurance Company. This agency at Norwich, through direct and continuous succession, is still writing Hartford Insurance. A few struggling states have developed into a great nation, and the Hartford has grown to an organization with agents at every important point in the United States offering to property owners the

## INSURANCE *Service* OF THE TWO HARTFORDS

The Hartford Fire Insurance Company and the Hartford Accident and Indemnity Company write practically every form of insurance except life insurance. For over a century Hartford losses have been fairly and promptly paid. That is why the Hartford has maintained for many years a position of supremacy in the amount of fire insurance written in the United States. Are you fully insured? Look over the list below and check the forms of insurance which interest you.

Ask your agent or broker to get you a Hartford policy, or write to us and we will tell you the name and address of an agent who can give you rates and particulars.

# A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

CHESS is the best of games, but it has one great fault, the stereotyped opening. The beginning of a game is always tedious, for the position of the pieces is fixed; the first move on both sides is almost invariably P to K4 and the succeeding moves are limited to a few settled sequences from which it is perilous to deviate. Any one who takes the trouble to commit to memory the standard openings has an unfair advantage over a player of superior ability who has not cared to cram beforehand, but depends upon his own brains instead of a book. Now in war, which chess aims to imitate, the skill of the tactician is shown in the way he places his troops at the beginning as well as how he manages them afterward. A battle well planned is already half won. Besides, a general has a chance to show his ability in guessing how the enemy's forces are placed. Even the aeroplane does not afford all the information desired. Hudson Maxim has added the aerial arm to his new form of chess, but in the ordinary game there is no aeroplane, yet the player knows in advance just where his opponent's pieces are put.

..

These defects can be overcome and the beginning of the game made as exciting as the end by the simple expedient of letting each player marshal his forces to suit himself and without the knowledge of his opponent. Hold a newspaper between the two halves of the board. The players then place their pieces wherever they please on the squares of the first three rows of either side, having the two middle rows vacant. Then take away the paper and play according to the usual rules. This "surprise chess," as I call it, is much more interesting than the ordinary game because it introduces at the start an incalculable element, not the blind chance of falling dice, of shuffled cards or spinning wheel, but the natural uncertainty that belongs in all human conflicts, the impossibility of knowing what the other fellow means to do, the thing that gives zest to true games and to real life.

..

The variations of the opening in surprise chess are infinite. The strategy begins before the first move. A clever and unexpected arrangement of pieces may carry one on to victory. Or, on the other hand, the best laid plan may lead to naught for when the screen is raised the opposing pieces may be found to be arranged in a disconcerting manner. The advantage of the first move is of course greater than in the ordinary game, but here again the new game comes closer to real warfare where the offensive has a like advantage. It is therefore more scientific than the old game and affords opportunity

for greater skill, yet is no more difficult to learn. Every player is partial to certain pieces. One prefers knights; another bishops. Some use the queen a great deal; others keep her in the background. In surprise chess one can employ his favorite tactics from the start and plan his campaign to suit his style of playing. It is a great delight to exercise one's ingenuity in setting the pieces. Any fixed rules are fortunately impossible, but after a little practice with the game one arrives at some general principles. The safest place for the king seems to be near one end of the "king row" with a vacant square adjacent to prevent smothered check and a double row of pawns in front. To double the castles and provide a clear space in front of them makes a very strong combination provided that you do not discover that your opponent has his doubled castles confronting them! The bishops must of course be placed on different colors and should be where they can come into action quickly. Place the knights well to the front and so they can bear upon as many other pieces as possible. Permit no piece to be altogether unprotected. The castles and queen must be put out of range of any possible position of the opposing bishops. Since White has the first move of course he will arrange his pieces for the offensive and Black for the defensive. It is quite likely that this simple expedient for getting rid of the tiresome sameness of the opening moves has occurred to others, but I never happened to hear or read of it.

..

I happened to see the other day a private letter which a student in the University of Atlantis had written to a friend abroad who had questioned his attitude on the war. Since he puts so clearly a point of view which is held by many Americans, I quote a passage:

You think that Prussia is the enemy; I don't. Prussia is (in spots) a very beautiful country. Prussians are (sometimes) the nicest people imaginable. The enemy is *Prussianism*, a political system and tendency, regnant in Germany to be sure but found sporadically in almost every other country. Among Treitschke the Czech, Nietzsche the Pole, Hobbes, Cramb and Houston Chamberlain the Englishmen, Napoleon the Frenchman, Macchiavelli the Italian, Gumplowicz the Austrian, Pobiedonostieff the Russian, Von Reventlow the German, Homer Lea the American, and forty other men from a dozen other countries I make no choice. All alike are faithful slaves of Him Who invented slavery. His Infernal Majesty, Satan the First, Emperor of Hell, King of Maelbolge, Prince of the Power of the Air, Archduke of Tartarus, Knight of *Weltpolitik*, Grand Commander of the Order of Birds of Prey, Defender of the Faith in the Omnipotent State. His reign will not be over even if the Allies should win. I care nothing for the issue as between England and Germany. I am interested in the war only in so far as it is a conflict between a more and a less liberal political system and spirit. Had the German revolution of '48

succeeded; had the liberal, democratic, national and peaceful union dreamed of by Kant, Schiller, Fichte, Stein, Jahn, Heine and Schurz ever come into existence; were France as predatory as under Louis XIV and the two Napoleons, or Great Britain as reactionary and feudal as it was before the reform bills of 1832 and 1867, I should be pro-German.

There is no nation, not even America, which I would rather love than Germany—if it would let me. But when to an oppressed Alsace-Lorraine, a strangled Schleswig, a martyred Poland, a gagged press, a servile social structure, an omnipotent military caste, a divine-right monarch, a misgoverned colonial empire and a consistently reactionary foreign policy is added a Serbia annihilated for offering to refer to The Hague a doubtful case and dubious Austrian claims, a Belgium laid waste for no fault but geographical location, the revival of obsolescent methods of warfare such as the wholesale killing of hostages and non-combatants in the neighborhood of each act of resistance, acquiescence in what is probably the greatest massacre in history still going on in Armenia and a yet raging lust for the territories of its neighbors, we are compelled to say to Germany: "Choose between a drastic revolution of your entire internal economy or being shut in forevermore by an iron ring formed by the hostile alliance of all the rest of the civilized world."

..

The reference librarian of the University of Atlantis was startled when one of the summer students came to her desk and said:

"I want an antidote."

"What for?" asked the librarian, reaching back of her in that peculiar way that librarians have and picking off the shelves a volume entitled "Ready Reference to Quick Remedies."

"The professor said I must have an antidote" replied the anxious looking schoolma'am.

"What for?" asked the librarian again, running a quick finger down the page from Acid to Arsenic. "What did you take?"

"I took English XIII," said the summer student, "and the professor said I ought to have an antidote to begin my theme with."

..

No milk on my dumbwaiter this morning! The striking farmers upstate are pouring the precious fluid out by the gallon on the unappreciative earth and there is only enough left for the children and the hospitals of New York City.

Backward, turn backward, O Time, in your hike.

Make me a child again, just for the strike.

..

Putting it succinctly the Central Powers began the war by a double movement: the *Drang nach Osten* on the one hand and the *Drang nach Ostend* on the other.

..

In India men worship beggars. In America the contrary superstition prevails.

## JUST A WORD

"Both Sides of the Presidential Campaign" have been presented, fully and authoritatively, in The Independent during the past three months. Norman Hapgood, speaking for the Democratic party, and Jacob Gould Schurman, the Republican spokesman, will sum up the important arguments for Wilson and for Hughes in the next issue of The Independent.

The next issue of The Independent will be the Annual Book Number, in which we plan to publish classified reviews of the important fall books—stories, histories, biographies, poetry, books about the theater, and religious books. Dr. Edwin E. Slosson, the Literary Editor, will discuss the remarkable change in the tone of world literature effected by the two years of war.

From the sociological treatises on "Conditions in N. Y. C." to the rag-time refrain "In the heart of the city that has no heart" people are fond of calling New York "heartless." But the man who ought to know more about it than anyone else—Marcus M. Marks, Borough President of Manhattan—speaks convincingly to the contrary in a sincere little essay "The Heart of New York," written for The Independent.

The editor's barometer, known to the uninitiated as "clippings of articles and verse reprinted from The Independent," indicated "increasing popularity" in the case of Morris Gilbert's poem "Germany," which we published on May 8, 1916, and which has been copied in magazines and newspapers all over the country. Mr. Gilbert has written another poem for The Independent, "Götterdämmerung. Before Verdun," to be published shortly.

## WORLD TIME

Instead of quibbling with schemes to set the clocks back an hour or to work out an Esperanto of the time notations in tide tables, astronomical charts and railway time tables, Dr. A. H. Mackay has suggested a plan for world-time—simple, efficient, and never out of order.

With our continental railways and telegraphs, transoceanic cables and omnipresent wireless, we should use the same time in every part of the world. For railway travel, telegraphic contracts, news and scientific observations it would be exact, simple and without danger of confusion.

Suppose, when the sun is vertical to the 180th meridian from Greenwich, every clock and watch in the world should point to the hour 0 at the beginning of "the day." When vertical to the meridian of Greenwich it would be 12 everywhere. When approaching the 180th meridian the clocks would be approaching 24.

Every locality would settle its most convenient time for breakfast—it may be at 6, 8, 12, 14, or 23 o'clock. From May 1 to October 1 we could henceforward with comfort adopt the unwritten law of fixing the events one hour earlier. Nothing to puzzle over—not necessary even to change your watch an hour four times in going from Halifax to Victoria. The telegram dates in the newspapers would give us the

true interval of time since the event without a calculation. Even the reductions of the diurnal temperatures of the meteorologist would be no more troublesome than they are at present under the so-called "daylight saving," time consuming attempt to deceive the public to its advantage.—*Nature.*

## THE NEW PLAYS

*Arms and the Girl* is the frothiest sort of play—tangling a Russian spy, a Belgian burgomaster, an American girl and a whole company of German soldiers in impossible funny situations. (Fulton.)

*Rich Man, Poor Man*, is handicapped by a trite plot; heroine transplanted from boarding-house to mansion renounces riches for love. But the acting is good, especially in the minor parts. (48th Street.)

New York "high society" raised to the nth power of frivolity and daring and supplied with scintillating conversation and artistic setting—life as it isn't *Upstairs and Down*. (Cort.)

It's a pity *Backfire* has but four acts. With a fifth none of our treacheries need have been left out. But another act would certainly have killed the one cheerful, if cheap, figure, the ubiquitous insurance agent. (39th Street.)

*The Washington Square Players* are giving a gay pantomimic play, "A Merry Death"; "Lovers' Luck," clever French company of German soldiers in impossible Sugar House"; the "Sisters of Susanna," whimsical farce in daringly colorful set. (Comedy.)

## REMARKABLE REMARKS

SARAH BERNHARDT—Love is the cure for age.

MOTHER JONES—No nation is stronger than its women.

PERCY HAMMOND—Chicago is the sewer of the inland seas.

EMPEROR WILLIAM—The Lord of Hosts will help us to victory.

ARNOLD BENNETT—The first year of marriage is the hardest.

REV. W. R. YARD—The soul, just for itself, is not worth saving.

WOODROW WILSON—Talking thru the hat ought to be a dead industry.

CHARLIE CHAPLIN—It is impossible to tell exactly how funny business is made.

THE BISHOP OF WORCESTER—England is at the dawn of a great religious revival.

REV. J. W. HEINIGER—The world is well nigh overrun with moth-eaten people.

ED. HOWE—Most persons say they have a favorite poet. I have not. I dislike all of them.

AUGUSTUS THOMAS—It won't do to suppress a play because evil things are done in it.

CHARLES WARREN FAIRBANKS—This prosperity is the prosperity of bloody murder.

MRS. CHARLES E. HUGHES—The joys of motherhood cannot be put into words. They must be lived.

JUDGE MAHONEY, of Chicago—The next time you're bothered by a man jab him with a hat pin.

JANE EDDINGTON—One could write rather an entertaining and useful booklet on the parsnip.

DAVID BELASCO—The greatest part of my success in the theater I attribute to my feeling for colors.

LILLIAN RUSSELL—Dressing should be done quickly, as slow, pattering dressing is a strain on the nerves.

CHARLES E. HUGHES—The view of the present administration is that a problem avoided is a problem solved.

ROBERT HERRICK—Ours is the country of quack medicine, quack thinking, quack legislation and quack religions.

# 1916 ATLAS With New War Maps Given FREE

To the readers of *The Independent* who take advantage of this offer now made in connection with

## Webster's New International

 **The Only Grand Prize** (Highest Award) given to dictionaries at the Panama Pacific International Exposition was granted to Webster's New International and the Merriam Series for superiority of educational merit.

A Journal of Civilization

## THE CLOSING CAMPAIGN

**I**T has been a clean campaign. It has been prosecuted with vigor on both sides—more especially on the side of the opposition. This is natural, for it is the opposition which must attack, while the party in power has only to stand upon its record. But the fire of the attack has been directed against Mr. Wilson as President, and not against Mr. Wilson as the man; while the fervor of his counter-attack has been aimed at his opponents as a party and not at Mr. Hughes himself.

The campaign has not brought forth any clean-cut issue like that of free silver or anti-imperialism. It is not the fact that the Republicans are for preparedness and the Democrats against it. The Democratic Congress and President passed such a huge program of military and naval expenditure in the closing days of the last session as to spike their opponents' guns pretty effectively. The tariff no longer appears as the gulf which separates irretrievably "good" Republicans and "good" Democrats; if a Republican administration is elected, it will not go into office with an unmistakable popular mandate to revise the tariff.

There are three high spots in the campaign. The first is the Democratic record of legislation—a record of unusual fulness and excellence. It is on this record primarily that the administration asks to be retained in

power. This record the Republicans have been chary of attacking.

The second is the administration's foreign policy. Here the Republicans, led by Mr. Hughes and Mr. Roosevelt, attack with horse, foot, dragoons and artillery. The Democrats counter with the slogan, "He kept us out of war."

The third is the railroad eight-hour law and the method of its passage. But even here the issue is not too clearly joined. Mr. Hughes criticizes strongly what he denominates the surrender of the principle of arbitration in labor disputes and the yielding to the threats of a part of a community. Mr. Wilson asserts his belief in the fundamental justice of the eight-hour working day and the propriety of acting quickly to avert the calamity of a nation-wide strike.

On the personal side of the campaign Mr. Hughes has disappointed many of those who would naturally support him, because he has been content with attacking and criticizing, and has not set forth a big constructive program of his own. Mr. Wilson, on the other hand, has done nothing but satisfy his supporters by his campaign utterances. He has had the easier task, for it is the record of his administration, its achievements and its spirit, that speaks for him.

## THE PROBLEMS OF THE EPISCOPAL CHURCH

**A**LTHO the total number of Episcopalians in the United States is only about a million—and this Church stands therefore only about in seventh place down the column of Protestant denominations—it has always exercised an influence upon forms of faith and modes of worship out of all proportion to its size. Consequently the Forty-fourth General Convention, which assembled in St. Louis on October 11, has attracted the attention of many far outside the bounds of this communion and the daily press has devoted large space to the questions there discussed.

There are really only two great fundamental questions for the Church in general to ask: First, What actually is her message? Secondly, To whom shall she address this message? Considering the latter first, it is futile to answer "Her message is to all the world." This is one of those generalities which are meaningless until they are resolved into particulars. What people in the world, and what kind of people in this part of the world, does the "Protestant Episcopal Church in the United States" expect and intend to appeal to during the next three and

the following years? There are two classes of people in particular whom members of this Church have need at this time to consider: First, the members of the other churches that surround them. These turn to her, in increasing numbers nowadays, not for "Faith" but for "Order." Secondly, there is that great and growing multitude of good men who hold themselves aloof from all churches. Time was when the problem was how to reach and win evil men; now it is how to hold the good ones. If this be kept in mind, it will save the Episcopal Church in particular from some mischievous acts of petty party legislation and it will help her to seize an important opportunity which just now seems to be hers in a high degree.

In dealing with the first class, questions of doctrine become of importance. But this is of far more concern to them than to her. Their churches are built up around doctrines, while the Episcopal Church rests upon order. On this point they are sensitive. If she can make it clear to them that no dogma of theirs is denounced and that no new doctrine of hers is imposed, she may count upon

a friendly hearing, but not otherwise. The Episcopal Church, therefore, is faced with this question: How far is she willing to revise her statements of doctrines, cutting out obsolete ones and relegating to their proper place those theories of order which she has elevated to the dignity of dogmas? Until something like this is done, openly and frankly, and by formal action of General Convention, this Church will appeal in vain to her next-door neighbors.

In the second category, however, there are even more to whom this Church ought to speak. Twenty years ago John Burroughs wrote: "The religious skeptics of today are a very large class, larger than ever before, and they are among the most helpful, intelligent, patriotic, upright and wisely conservative of our citizens. Probably four-fifths of our literary men are such; a large proportion of journalists and editors; half the lawyers; more than half the doctors; a large percentage of the teachers; a larger percentage of the business men; almost all the scientific men." If this was true then, it is still more true now. Nor must the term "skeptics" in this connection have any evil connotation. These persons are what they are here called in the sense that they doubt many things which they think the Church calls upon them to believe. Can the Church speak to them so plainly and directly as to convince them that they have largely misunderstood her? The answer is that she cannot convince them—while she retains in her formularies things which she herself only makes believe to believe. For these men stand upon a high level of truth and righteousness.

To both these classes, the Episcopal Church must speak honestly, if at all. Mere "Missionary Zeal" will not avail here. "Laymen's Forward Movements," "Nationwide Preaching Missions," "St. Andrew's Brotherhoods" and similar devices will touch the persons above mentioned no more in the future than they have in the past. The appeal must be carried by the Church's clergy. It must be spoken from the Church's pulpits. There must be a clear and coherent message which has the Church's imprimatur upon it. The supreme duty of the General Convention is to frame and issue such a message. God knows, the task is no easy one. But every man knows that when party interest, or blind conservatism, or cross-eyed radicalism, or easy-going custom are present, it cannot be done at all. Which is the reason these ought all to be eliminated. Not until this is done absolutely, can judgment begin again at the House of God.

### VOCATIONAL TRAINING FOR BULLIES

**A**T this season of the year the sophomores are taking great interest in a course not mentioned in the catalog but given with the tacit approval of the faculty, that is, field work in petty tyranny. They are authorized to indulge in one of most pernicious of human instincts, the abuse of power and the gratuitous interference with the rights of others. The student daily of the largest university of the world puts the common belief with brutal frankness:

That there should be a certain amount of animosity between the two lower classes is not alone natural, it is also desirable. The old adage that everybody loves a fight holds on the campus as it does elsewhere.

That "everybody loves a fight" is a genial explanation of the state of Europe and it is undeniably "natural" to delight in the annoyance of inferiors, but the campus

does not seem a suitable place for the deliberate cultivation of primeval viciousness. Recent regulations have done away with the grosser forms of hazing but have left the moral evil of it untouched. Saving the freshmen from the torture and danger of the old customs is doubtless desirable, but the net gain is slight, since the milder forms of tyranny meet with more general toleration and inflict more lasting injury upon the characters of those who impose them and those who submit to them. To tie a man to the railroad track, to bury him alive or brand him with silver nitrate are not pastimes in which one is apt to find delight after his sophomore days, but the habit of imposing one's will upon others in the matter of dress and conduct is not so easily outlived. A man who has been allowed to dictate to younger and less educated men what color neckties and socks they shall wear, what they shall sing and where they shall walk, is apt to carry into later life the belief in class distinctions and intolerance which his college training has given him.

### ROMANS AND RUMANS

**T**HE Rumans or Rumanians are proud to claim descent, in a more or less legitimate way, from the Roman legionaries who were stationed in their country, but they have yet to prove that they have inherited along with their language any of the military genius of the ancestors to whom they lay claim. In fact, their present set-back is due to their direct violation of Roman precedent in two respects. When the emperor Trajan undertook the same job the Rumans have now on their hands, that is, the conquest of Transylvania, he did not throw his troops recklessly across the mighty Danube on a pontoon bridge and so get them cut off like the Rumanian troops. No, he sent out in advance his best architect, Apollodorus, the same whose work the tourist still admires in Trajan's Forum at Rome. Apollodorus built a strong stone bridge over the Danube and a good solid road leading to it, carrying the road along the perpendicular sides of the defile in a covered wooden gallery supported by beams inserted in holes in the cliffs. After all this was done Trajan sent the Roman soldiers into the enemy's country—and they stayed there so long that all the people got to calling themselves Romans.

The Rumans showed good judgment in taking the roads that Trajan constructed by the Iron Gate to Orsova and by the Red Tower Pass to Hermannstadt, but they neglected to guard what the Romans were especially careful to look out for, their lines of communication to the rear. Consequently they have lost 3000 men in the west and 15,000 in the east.

Silistria, recently captured by the Bulgars, was the ancient Roman fortress of Durostorum, was one of the outposts of the Empire, and, because of its strategic importance, garrisoned by Legio I and Legio XI, the Italian and the Claudian Legions. But their suppositious descendants evacuated the stronghold without a struggle and when the Bulgars entered they found it deserted. Yet this old town has stood many stout sieges in the course of its long history, for it stands in the road of all who have tried to march to Constantinople along the sea. The inhabitants in the course of time had become accustomed to the sort of life now led at Rheims and Verdun and whenever the bombardments grew too hot they simply took shelter in the municipal cyclone cellar, a subter-

ranean cavern underneath the town large enough to hold them all.

The Romans fixed the northern boundary of the Empire on the line still marked by Trajan's Wall, the line followed by the railroad from Constanza to Bucharest. But the Rumans thought they knew better than their alleged ancestors so they advanced with their Russian allies some forty miles south to meet the Bulgars coming up thru the Dobrudja. Then the Bulgars beat them back, back to Trajan's Wall, which they would have known better than to leave if they had learned their Latin lesson.

It is an old board on which this game of war is being played and the best moves are often those made by the master players of the past. Joffre checked and held the invaders from Belgium just where Cæsar did on the line of the Marne at Rheims. The old Roman fortress of Verdun still stands them off.

It was by following the old Roman road into the Balkans that the Teutonic hosts conquered Serbia, and wherever a modern general picks upon a good place for entrenchment the shovels of his soldiers are liable to uncover Roman bricks and stones.

Anybody can fight. Fuzzy-Wuzzy could break a British square. But when Kitchener invaded the Sudan with a railroad, Fuzzy-wuzzy's day was done. The Romans fought with roads, bridges and entrenchments. They were the first to realize that war is simply a branch of engineering. What if Cæsar or Trajan had only had railroads and telephones? Or what if the Rumans only had a Cæsar or a Trajan?

## THE AMERICAN POLICY OF AMERICAN PARTIES

LAST week we discussed the "European Policy of American Parties" and quoted all the references to trans-Atlantic questions in the platforms of the two parties for the past sixty years. A similar survey of these thirty-two platforms with regard to what they have to say about the relations of the United States to the countries south of it shows that the two parties have reversed their attitude if they have not changed their principles. In the fifties the Democratic party was frankly and emphatically imperialistic, doubtless chiefly because the South wanted more slave territory. Great Britain, France and Russia were engaged in the Crimean War. Spain seemed likely to be drawn in on the side of the Allies. Russia was looking for the American navy to come to her aid. Russia and the United States signed a convention (1854) establishing the principle that "free ships make free goods" which England and France, then as now, refused to accept as international law. Since we could expect the support, if not the help, of Russia in a war with Spain, it seemed a good chance to get Cuba.

At the suggestion of the Secretary of State our ministers to England, France and Spain, who were Buchanan, Mason and Soulé, met at Ostend to devise means for carrying out the scheme. They recommended that the United States offer to buy Cuba at a fair price—\$120,000,000 was later suggested—and they held that in case Spain refused the United States would be justified by every law, human and divine, in wresting the island from Spain. In reference to this the first Republican platform, that of 1856 on which Fremont ran, says:

That the highwayman's plea that "might makes right" embodied in the Ostend circular, was in every respect unworthy of American diplomacy and would bring shame and dishonor upon any government or people that gave it their sanction.

The Democratic platform of 1856 makes only a veiled reference to the Ostend manifesto, altho one of its authors, Buchanan, was being run for President. Since this platform contains the most ambitious and decided policy on Latin-American affairs of any in our political history it is necessary to quote the chief resolutions:

That there are questions connected with the foreign policy of this country which are inferior to no domestic question whatever. The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade thruout the world, and, by solemn manifestations, to place their moral influence at the side of their successful example.

That, in view of so commanding an interest, the people of the United States can not but sympathize with the efforts which are being made by the people of Central America to regenerate that portion of the continent which covers the passage across the inter-oceanic isthmus.

That the Democratic party will expect of the next administration that every proper effort be made to insure our ascendancy in the Gulf of Mexico and to maintain a permanent protection to the great outlets through which are emptied into its waters the products raised out of the soil and the commodities created by the industry of the people of our western valleys and the Union at large.

It may be necessary to explain that "the efforts made by the people of Central America" referred to the Walker filibustering expedition in Nicaragua and "our ascendancy in the Gulf" meant the forcible annexation of Cuba.

Four years later the subject is dismissed in three lines as follows:

That the Democratic party are in favor of the acquisition of the island of Cuba on such terms as shall be honorable to ourselves and just to Spain.

Not until 1884 do Pan-American questions again appear in the platforms. Then the Democratic party comes up again with a claim to have always been the party of expansion:

This country has never had a well defined and executed foreign policy, save under Democratic administration. That policy has ever been in regard to foreign nations, so long as they do not act detrimental to the interests of the country or hurtful to our citizens, to let them alone; that as a result of this policy we recall the acquisition of Louisiana, Florida, California, and of the adjacent Mexican territory, by purchase alone, and contrast these grand acquisitions of Democratic statesmanship with the purchase of Alaska, the sole fruit of a Republican administration of nearly a quarter of a century.

We favor an American continental policy based upon more intimate commercial and political relations with the fifteen sister republics of North, Central, and South America, but entangling alliances with none.

Curiously enough Cleveland who ran on this imperialist platform tried later to haul down the American flag from Hawaii and restore the native queen to her throne. The Democratic platform of 1888 drops the expansion policy that it had so vigorously championed four years and the Republicans take it and declare that

The conduct of foreign affairs by the present administration has been distinguished by its inefficiency and its cowardice.

In the next election, that of 1892, the Democrats advocate the Nicaragua Canal while the Republicans ignore it. By 1896 the Democrats have forgotten the Nicaragua Canal but the Republicans include it in their ambitious foreign policy:

Our foreign policy should be at all times firm, vigorous, and dignified, and all our interests in the Western Hemisphere

place carefully watched and guarded. The Hawaiian Islands should be controlled by the United States, and no foreign power should be permitted to interfere with them; the Nicaragua Canal should be built, owned, and operated by the United States; and by the purchase of the Danish islands we should secure a proper and much-needed naval station in the West Indies.

The Democrats in 1896 merely extended their "sympathy to the people of Cuba in their heroic struggle for liberty and independence" but the Republicans went further and offered to aid them:

From the hour of achieving their own independence the people of the United States have regarded with sympathy the struggles of other American peoples to free themselves from European domination. We watch with deep and abiding interest the heroic battle of the Cuban patriots against cruelty and oppression, and our best hopes go out for the full success of their determined contest for liberty.

The Government of Spain having lost control of Cuba and being unable to protect the property or lives of resident American citizens or to comply with its treaty obligations, we believe that the Government of the United States should actively use its influence and good offices to restore peace and give independence to the island.

These four pledges of the Republicans were carried out so far as possible. The Hawaiian Islands were annexed and the Danish Islands would have been if the Danish upper house had not refused. An isthmian canal, tho at Panama instead of Nicaragua, was built. Not only Cuba was liberated from Spanish tyranny but Porto Rico and three thousand other islands in the Philippines as well. The two parties had now reversed the positions they had occupied in the beginning of their rivalry. The Democratic party, which was fifty years before urging the forcible annexation of tropical territory, devoted a large part of its platform of 1900 to the denunciation of the expansion policy of the Republicans in either hemisphere. We quote from the Democratic platform of 1900 the chief references to American affairs:

We denounce the Porto Rican law, enacted by a Republican Congress against the protest and opposition of the Democratic minority, as a bold and open violation of the nation's organic law and a flagrant breach of the national good faith. It imposes upon the people of Porto Rico a government without their consent and taxation without representation. It dishonors the American people by repudiating a solemn pledge made in their behalf by the commanding general of our army, which the Porto Ricans welcomed to a peaceful and unresisted occupation of their land. It doomed to poverty and distress a people whose helplessness appeals with peculiar force to our justice and magnanimity.

In this, the first act of its imperialistic program, the Republican party seeks to commit the United States to a colonial policy inconsistent with republican institutions and condemned by the Supreme Court in numerous decisions.

We are not opposed to territorial expansion when it takes in desirable territory which can be erected into states in the Union and whose people are willing and fit to become American citizens. We favor expansion by every peaceful and legitimate means. But we are unalterably opposed to seizing or purchasing distant islands to be governed outside the Constitution and whose people can never become citizens.

We favor the immediate construction, ownership, and control of the Nicaraguan Canal by the United States, and we denounce the insincerity of the plank in the Republican platform for an isthmian canal in the face of the failure of the Republican majority on this subject to pass such a bill in Congress.

We condemn the Hay-Pauncefote treaty as a surrender of American rights and interests not to be tolerated by the American people.

The Republicans on the other hand pointed with pride in 1900 to the accomplishments of the administration in the Philippines, Hawaii, Samoa and West Indies:

President McKinley has conducted the foreign affairs of the United States with distinguished credit to the American people. In releasing us from the vexatious conditions of a European alliance for the government of Samoa, his course is especially to be commended. By securing to our undivided control the most important island of the Samoan group and the best harbor in the southern Pacific, every American in-

terest has been safeguarded. We approve the annexation of the Hawaiian Islands to the United States.

In accepting by the treaty of Paris the just responsibility of our victories in the Spanish War, the President and the Senate won the undoubted approval of the American people. No other course was possible than to destroy Spain's sovereignty throughout the West Indies and in the Philippine Islands. That course created our responsibility before the world and with the unorganized population whom our intervention had freed from Spain to provide for the maintenance of law and order and for the establishment of good government and for the performance of international obligations.

The Democratic party in 1904 continued its denunciation of "colonial exploitation" and declares that "wherever there may exist a people incapable of being governed under American laws, in consonance with the American Constitution, the territory of that people ought not to be part of the American domain."

The Republican platform of 1904 congratulates itself chiefly on Panama:

The possession of a route for an isthmian canal, so long the dream of American statesmanship, is now an accomplished fact. The great work of connecting the Pacific and Atlantic by a canal is at last begun, and it is due to the Republican party.

Our foreign policy under his administration has not only been able, vigorous, and dignified, but to the highest degree successful. The complicated questions which arose in Venezuela were settled in such a way by President Roosevelt that the Monroe Doctrine was signally vindicated and the cause of peace and arbitration greatly advanced.

His prompt and vigorous action in Panama, which we commend in the highest terms, not only secure to us the canal route, but avoided foreign complications which might have been of a very serious character.

The platforms of 1908 and 1912 contain nothing whatever of importance on the subject, and the platforms of 1916, which deal at length with Mexico, we need not quote.

This comprizes the record of the foreign policy of the two parties in this hemisphere in so far as it has found expression in their quadrennial statement of principles. We have not thought it worth while to quote the kind words which it is customary to apply to the Monroe Doctrine or the usual vague references to the desirability of friendship and increase of commerce with our sister republics of the south, since these are common to both parties and mean little to either.

It is obvious that it would not be possible to write the history of American party policy from these official utterances alone. One would gather for instance that the Democratic party in recent years was opposed as a general rule to the extension of American control over new tropical territory; yet the most emphatic and extreme expression of the Monroe Doctrine—that "today the United States is practically sovereign upon this continent" (presumably South America)—came from President Cleveland, and President Wilson has carried American control into San Domingo, Hayti and Nicaragua to an unprecedented extent, has twice invaded Mexico and is now trying to buy the Danish islands. It will be seen that the expansion of the United States has been due to the party in power, whichever it happened to be, while the out party quite naturally tends to assume an attitude of opposition regardless of its traditions. It appears, then, that the foreign policy of the United States in America as well as Europe depends less upon the party which happens to be in power than upon the individual who happens to be President. The American people do not all agree as to our external politics, but their differences in point of view on such questions do not divide them on party lines.

# THE STORY OF THE WEEK

**Allied Gains** The Germans have delivered strong counter-attacks on both the French and the British lines, but in both cases they have been repulsed and have lost ground. The point of attack on the British sector was the Schwaben Redoubt, which forms part of the Thiepval system of fortifications, now in the possession of the English. The Germans charged the redoubt repeatedly during the week and on Saturday succeeded in entering the trenches at two points, but were immediately driven out leaving a large number of dead on the ground. In return the British launched attacks in the direction of Grandcourt, gaining new ground and taking a thousand prisoners.

The French in a brilliant charge captured the fortified village of Sallisel in a quarter of an hour. An eyewitness gives the following description of this brief but decisive engagement:

The infantry officers and the artillery officers had synchronized their watches and the infantry were ordered to attack at exactly 11:45 o'clock.

The moment arrived. The range of the artillery, which had been battering Sallisel,

- ## THE GREAT WAR
- October 16**—French occupy Athens. Austrians ten miles inside Rumanian boundary.
  - October 17**—Russians driven back from Halicz. Germans trying to regain Schwaben Redoubt.
  - October 18**—French capture Sallisel. Cunard liner "Alaunia," from New York, sunk by mine in British Channel; passengers and crew saved.
  - October 19**—Bulgars and Germans break Russian line in Dobrudja. Rumanians check Austrians in Transylvanian passes.
  - October 20**—Serbs take Brod on way to Monastir. French admiral takes command of Greek police.
  - October 21**—Austrian premier assassinated. Bulgars and Germans take Tuzla in Dobrudja.
  - October 22**—French gain in Chaulnes Wood. Russians defeated in Galicia.

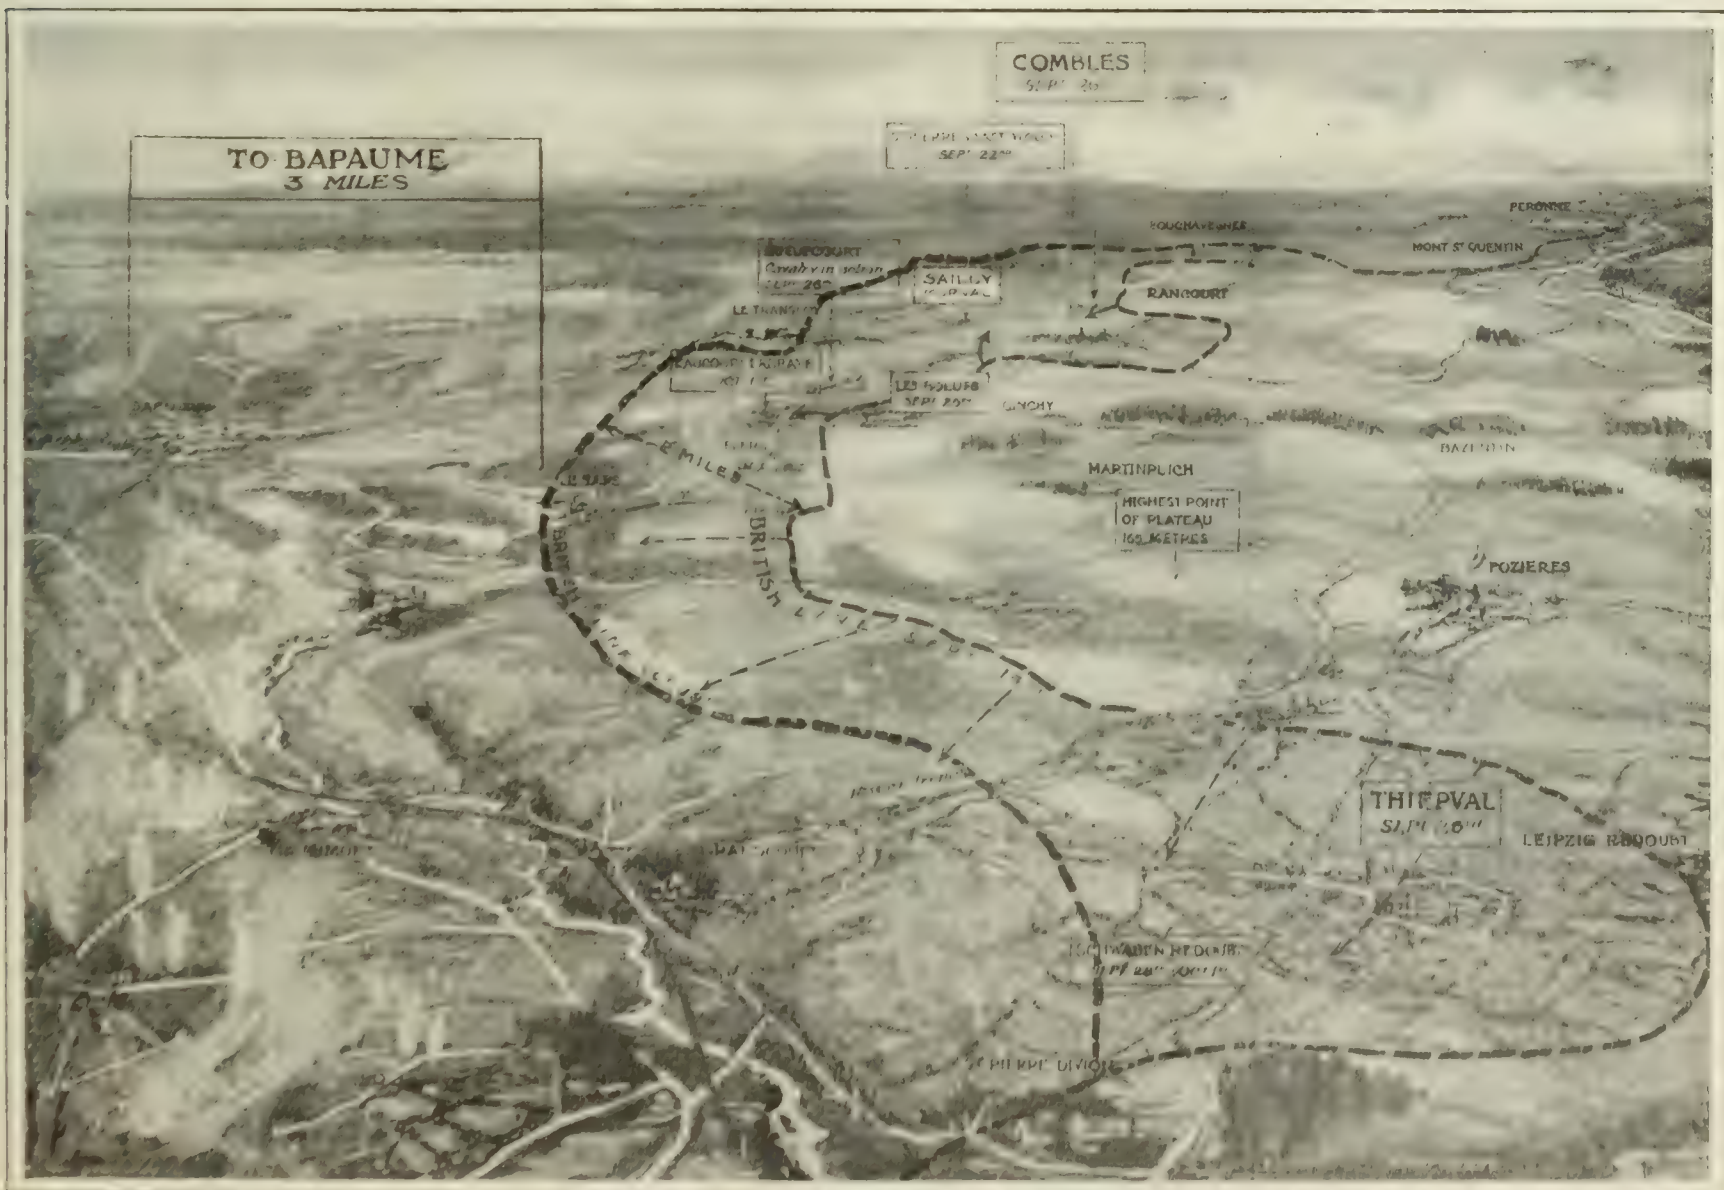

Sallisel, was increased a few hundred yards; the infantrymen's heads appeared over the parapets; then, in dashes, the men covered the short open space, throwing grenades, and within a quarter of an hour rockets sent up showed the airmen observing from the clouds that the position had been won. The airmen flew to the field

commandant's headquarters to take back the news.

Further to the south the French are closing in upon Chaulnes and have secured control of the greater part of the woods north of that town.

**French Troops Occupy Athens** The Allies were not satisfied with the seizure of the Greek forts and most of the navy, but on the following day presented an imperative note to the king demanding more sweeping concessions. King Constantine at first refused and threatened to withdraw to Larissa and set up an independent government there, but he was finally persuaded to give way. The French then took possession of what was left of the Greek fleet, including the two cruisers sold by the American government to Greece just before the war, the "Idaho" and the "Mississippi," now known as the "Kilkis" and the "Lemnos."

The Greek sailors who had been put ashore by the Allies were reviewed by the king who expressed his deep sorrow at their expulsion and his hope that they might soon return to their ships. The streets of Athens were filled with crowds bearing flags and portraits of

THE GREATEST BATTLEFIELD OF THE GREAT WAR

This new sketch of the Somme field, on which the battle has raged without cessation ever since July 1, shows why the capture of Thiepval is regarded as the most important victory of the English since the war began. The struggle is still going on over the last entrenchments of this system of fortifications, the Schwaben Redoubt. The capture of Le Maré and Grandcourt l'Abbaye have brought the British within about three miles of the important town of Bapaume. The French line which extends from Sallisel to the right is separated from Peronne only by the river Somme.

L. Asino, Italy

#### THE NAIL

the king, singing the national anthem and hooting the Allied legations and troops.

The first contingent of Allied marines sent to the capital were driven out by the Athenian people, but next day a detachment of a thousand French and Italians were marched into the city and took possession of the city hall, the Castalia barracks and the municipal theater. Machine guns were stationed so as to command the principal streets and a guard placed in front of the king's palace. The special police guard of King Constantine has been cut down from 4000 to 80 by order of the Allied Powers. Vice-Admiral du Fournet, commander of the Allied fleet, is now under the title of "Chief Inspector," actual ruler of the whole of Greece as well as of Athens. A strict censorship has been imposed and the press is no longer allowed to print matter offensive to the Entente Allies. In the last issue before the suppression of their freedom of speech the royalist papers published an appeal to the American press as the only bar before which Greece can obtain justice and sympathy for the destruction of the national liberties of Hellas.

#### Greeks Appeal to America

Incensed at the action of the Allies in seizing the Greek ships and forts and occupying Athens with their troops the Greeks held an anti-war demonstration in the capital and a procession of four thousand marched to the American Legation to ask the aid of the United States in the preservation of their liberty. The petition read as follows:

In the name of the people spontaneously assembled before the Legation yesterday evening, to come to you as a representative of the great, free, liberal American people, to register with you and thru you to the people you so worthily represent the protest of the Greek people:

The Greek citizen has decided to remain neutral because he does not think it to his interest to participate in the European war, and on this account he has become the victim of coercion by the rival groups engaged in the struggle. During the year past the rival groups gradually abolished all the functions of the Greek state, and now one of the groups even occupies our capital.

We are aware the American people always have fought for liberty against slavery and therefore appeal to their powerful influence to avert the subjugation of those who desire only to remain free. Owing to our exceptional position with respect to the powers in the conflict, such influence can

#### AND THE HAMMER

be exercised efficaciously only by America. We trust that the noble American people will lend a sympathetic ear to our appeal, and call for three cheers for the American people. Hurrah! Hurrah! Hurrah!

A rumor that an American fleet of thirty vessels was about to arrive for the protection of Greece aroused wild manifestations of joy in the crowd, but this was dispelled when it was learned that the American navy was represented in the Mediterranean by one small cruiser and a collier and that these were not likely to intervene.

#### The Rumanian Crisis

The sudden reversal of the fortunes of Rumania is one of the dramatic spectacles of the war. On August 27 King Ferdinand declared war. A month later his armies were in possession of 7000 square miles of enemy territory. Before the second month was over his troops had all been driven back to their own country. Rumania was invaded on three frontiers, and the Bulgars held 3000 square miles of her territory. If we may believe the Berlin reports, King Ferdinand has lost a quarter of his army and a large part of his supplies. It is no wonder that he has sent out an urgent appeal to the Allies to come to his rescue.

But it is difficult to see what they can do at the moment. General Sarrail shows no disposition to risk sending his eight-power army into the interior so long as the Bulgars hold the Struma River on the east and Monastir on the west. The Italian demonstration toward Triest has not seriously alarmed the Austrians. The incessant pounding on the Somme front by the British and French is not regarded by the Germans as serious enough to prevent them from shifting some troops from France to the Balkans.

The only source of immediate aid is Russia, but for some mysterious reason Russia has been slow to act. Just now when her help would be most effective she seems paralyzed. General Brusiloff has made no progress in his drive toward Lemberg for more than a month. When Rumania entered the war it was with the expectation, presumably based on explicit assurances, that a large Russian army would be sent at once into the Dobrudja and so on to Constantinople. But it seems that only a few divisions of Russians were sent and these were late so they lost fifty miles on the start and are now being driven

Paul Thompson

#### THE ALLIES HAVE TAKEN 250,000 GERMAN PRISONERS DURING THE WAR

How to take care of the captured prisoners on the Somme is an increasingly difficult problem for the Allies. This detachment is being conducted to a temporary camp near the rear lines

back further. There cannot be any lack of men, for Russia's annual increase in population is more than half the total population of Bulgaria. So we are forced to conclude that the Russians have run short of shells again and must wait until the deficiency is made good from England and America. Rumania stocked up with Krupp ammunition during the war, but when this is exhausted she will have to be supplied from Russia, and this means that most of it must come via Archangel on the Arctic or Vladivostok on the Pacific for the Rumanian factories are inadequate.

If, then, Falkenhayn should be able to strike across from the mountains to the Russian boundary, a distance of seventy-five miles, Rumania would be cut off and fall as easy a victim to the Teuton armies as Serbia did. Last week his armies advanced twelve of these seventy-five miles, but the Rumanians have driven them back and seem to be able to hold the mountain passes for the present.

**The Conquest of the Dobrudja** While Falkenhayn's armies are being held up in the Carpathian Mountains on the north, Mackensen has renewed his attacks in the Dobrudja on the south. The Dobrudja, as will be seen from the accompanying map, lies between the Danube River and the Black Sea and forms the connecting link between Russia and Bulgaria. Evidently the entrance of Rumania into the war did not take the Germans by surprise. Their plans were laid in advance for this contingency, and General von Mackensen, who distinguished himself early in the war by his brilliant campaign in Poland and later by his swift conquest of Serbia, was put in command of three Bulgarian divisions numbering about 70,000, supplemented by a few German regiments and some Turkish troops.

With this force he invaded the Dobrudja as soon as war was declared; in fact, before it was declared against Bulgaria. The Rumanian armies were over the mountains in Transylvania and the Russians had not come yet, so he advanced without much difficulty fifty miles beyond the Rumanian frontier. Here he was halted, for the Rumanians and Russians had established themselves on a line stretching from the river to the sea and about ten miles south of the railroad line.

This railroad line is of the greatest strategic importance, for it is the sole connection of Bucharest, the Rumanian capital, and Constanza, the chief Rumanian seaport. The railroad runs not far from the old Roman line of fortifications known as Trajan's Wall, which marked the northern limit of the Roman Empire. It crosses the Danube at Chernavoda by a bridge eleven miles long, extending over the broad river and the marshes beyond. If General von Mackensen can capture this bridge he will be able to threaten Bucharest from the east as he can now from the south by way of the railroad running from the Danube at

Turtukai to the capital. But the Rumanians will doubtless destroy the bridge if they are forced to leave Chernavoda.

Constanza or Kustendji, the seaport of the Dobrudja, has become a prosperous city since the construction of the railroad and bridge connecting it with Bucharest, and it now has about 12,000 inhabitants. As Russia has complete command of the Black Sea, most of the Russian troops sent to the Dobrudja have been shipped to Constanza by water instead of coming from the other direction by rail. Since Constanza is under the protection of the Russian Fleet, it would be difficult for Mackensen to take it, but he can gain his end of severing this line of communication between Russian and Rumania as well if he can cut the railroad behind Constanza.

This, doubtless, is the object of the offensive he started on October 19. This was a surprising success, for at the end of two days he could report the capture of 3500 Russians, 500 Rumanians, two cannon, five caissons and twenty-two machine guns. Several points on the Russian front were carried by storm, including Tuzla, the seaside terminus. Even if Mackensen does not succeed in breaking thru the Russo-Rumanian line in the Dobrudja, he may compel his enemy to shift troops from the Transylvanian side and so give Falkenhayn a chance to try another invasion thru the mountains.

**Austrian Premier Assassinated** Count Karl Stuergh, who has been Austrian Premier for five years, was killed on the evening of October 21, by Ludwig Adler. The assassin approached him while he was dining at a hotel in Vienna and fired three shots from a revolver into his head. So little has been allowed to leak out about Austrian affairs that it is impossible to say what political significance the murder has or what will be its effect upon the imperial policy. The Austrian cabinet was reorganized last November but there has been no meeting of the Austrian parliament since the war began. Dr. Adler is secretary of the Social Democratic party and editor of *Der Kampf*, a radical Socialist newspaper.

**Villa Active Again** During the past week Villa has increased the vigor of his attacks upon small bodies of Carranzistas and on October 20 defeated a force of two thousand federal troops under General Carlos Ozuna near the town of Santa Ysabel. The government soldiers were trapped between two wings of the rebel army, commanded by Villa and José Salazar respectively, and forced to retreat towards Chihuahua City. It is possible that Villa's victory will once more postpone the evacuation of Mexican territory by the forces of the United States. The Villistas, estimated from eighteen hundred to four thousand in number, have not only eluded or defeated every expedition sent against

THE STRUGGLE FOR THE TRANSYLVANIAN PASSES

The Rumanians have been expelled from Transylvania but are trying hard to hold the mountain passes and so protect their country from invasion. If the Austrian forces are strong enough it is obvious from a glance at the map that they might enter thru the Gyimes or the Tamos Pass and cut Rumania in two. The Bulgarians advancing up the Dobrudja took the Danube fortresses of Turtukai and Silistria and are now driving the Russians and Rumanians back to the railroad that connects Bucharest with Constanza and crosses the Danube at Chernavoda.

Paul Thompson

## THE SIMPLE RECREATIONS OF AN AIRMAN

At the Aviation Camp of the Allies at Salonica the Frenchmen have amused themselves by decorating the ground with elaborate designs wrought in flowers, shells and pebbles in a way to be fully appreciated only from an observation point in the air. Here appear the arms of the city of Carcassonne, in France, birthplace of General Sarrail, the Allies' leader in the Balkans, with the inscription "Glory to Carcassonne for the eminent chief whom she has given us."

them, but occupy practically the entire southern and western parts of the state of Chihuahua. General Carranza issued a decree on October 9 to meet the difficulties created by renewed bandit activity, suspending constitutional guarantees thruout the country, providing for the summary trial and execution of rebels and robbers and even authorizing execution without trial in the case of those who are taken in the act.

In spite of the frightful condition of anarchy described in Carranza's decree, the de facto government is proceeding with elections as if the country were at peace. On October 22 a general election took place for the new Constitutional Assembly which will revise the organic law of the Mexican Republic. Each state chose one delegate and one alternate for each 70,000 population or each fraction of that number in excess of 20,000. No opponents of the Constitutionalist regime were allowed to become candidates. The deliberations of the Assembly are expected to continue from the first of December to the first of February, and towards the end of this period a special presidential election will be held. It is now expected that General Carranza will be chosen with little or no opposition.

**The End of the Bayonne Strike** On October 20 the Standard Oil workers, whose strike had created a veritable reign of terror in Bayonne, New Jersey, returned quietly to their jobs, leaving the question of a wages increase for future negotiations to decide. It is not certain whether the dispute has been terminated or only postponed, as the men are contemplating the formation of a union affiliated with the American Federation of Labor, and it is very possible that should no wages increase

be granted by the Standard Oil Company, a new strike may be called. John A. Moffitt and James A. Smyth, government conciliation commissioners acting on behalf of the Department of Labor, induced the workers to abandon their strike, on the ground that the Standard Oil Company would refuse to admit any mediation until the strike was over. It is understood that the federal commissioners are now using their influence to induce the employers to announce an increase of wages, but it is not at all certain whether or not their efforts will prove successful.

What really broke the strike was the return to work of more than two thousand English-speaking employees under the protection of the police. Most of these men had not wanted to join the strike, but were idle because of the closing of the plants and from fear of violence. The return of these men enabled the Standard Oil Company to resume operation in Bayonne, and the effective policing of the city secured them against further intimidation. The strike of a thousand men at the Bayway Standard Oil plant collapsed even before the strike at Bayonne, and all the strikers returned to work at the old rates of pay. Friends of the Bayonne strikers complain bitterly of the conduct of the police. They declare that the authorities repressed crowds of strikers and sympathizers with needless violence, that the police lost their self-control and shot and clubbed at random, and that the measures taken to bar "agitators" and inflammatory literature from the city overstepped the limits of constitutional right. They also charge the newspapers with unfairness in exaggerating the amount of disorder prevailing in Bayonne before the city authorities had attained control of the situation.

**The Republican Campaign**

The Republican campaign is in full swing and Republican prophets claim more than 300 out of the 531 votes in the Electoral College as certain for Mr. Hughes. While the presidential candidate was campaigning in the Middle West, Mr. Roosevelt toured the Mexican border states. Mr. Hughes, speaking in Omaha, Nebraska, denied that if he were elected an "invisible government" of party bosses and corporation agents would be established at Washington, and asserted that he owed his nomination to his consistent opposition to "invisible government" when he was governor of New York. He branded Mr. Wilson's presidency as "an administration of unofficial spokesmen of mysterious influence." In Sioux City, Iowa, he defended his opposition to the Adamson eight-hour law. He insisted that President Wilson had plenty of time to meet the railroad crisis, since the Chamber of Commerce had asked for an inquiry into the situation as early as July 29. He declared that rather than have supported legislation which was passed without investigation he would have dared the strike; but he did not promise that the Adamson law would be repealed during his administration, since "you cannot repeal a surrender" and the law goes into effect on the first of January, more than two months before the change of administrations.

Ex-President Roosevelt devoted most of his speeches to the Mexican question. He inveighed with great bitterness against what he regards as the cowardly policy of the administration, pointed out that of all the foreigners resident in Mexico, Americans and Chinese were most frequently plundered and killed, and intimated that the best policy as regards Mexico would have been the one pursued by the United States in Cuba, the occupation and regeneration of the country by an American army. In a speech at Phoenix, Arizona, he compared the political position of Mexico with that of the Balkans:

After a decade of internal warfare and struggle in the Balkans the present world war resulted. If we let Mexico sink into permanent anarchy, and show ourselves too feeble to restore order, then sooner or later some Old World military power will itself step in and take possession, with results as disastrous to us as the anarchy in the Balkan peninsula has been disastrous to Europe.

The government in Mexico must necessarily interact with and upon the governments and population in the northern half of the South American Continent. A strong and stable government in Mexico, working in harmonious relations with the United States, could establish security for property and make it possible for American enterprise to carry railroads, irrigation works and other benefits of civilization into that territory.

**The Democratic Campaign**

President Wilson is still entertaining delegations from different parts of the country at Shadow Lawn, his personal headquarters during the campaign in Long Branch, New Jersey. On October 21 he address an audience of three thousand, many of

them farmers, on the issues of the election. He devoted the greater part of his speech to the needs of rural life, the advantages of coöperation in agriculture, and the constructive legislation of the present administration on behalf of the farmer, instancing especially the Federal Reserve act, the Rural Credits bill, the Underwood tariff, and increased appropriations for research.

The Labor Representation Committee of the American Federation of Labor has issued a public statement to officers of organized labor, strongly favorable to President Wilson and the Democratic Congress. In part, it reads:

Never at any time within the last fifty years have the workers had more at stake in any political campaign than in the one that is to be decided in the election November 7.

During the present administration and particularly in this campaign, there has been developed a clear-cut issue between the workers—the producers—and those who manipulate the products of the labor of others—the exploiters. . . .

During the present administration the organized labor movement has been able to secure recognition for the rights of human beings and opportunity for all to participate in the affairs of the nation in a degree that has never before been accomplished.

The dignity of human life and the value of the coöperation of those whose work is necessary to the processes of industry and commerce have been given an important place in considering all problems that concern the nation. This recognition has taken the form of legislation necessary to protect the interests of wage earners and in the ideals that have guided and directed national policies both at home and in our relations with other nations. . . .

The interests that have been seeking to plunge our country into war not only with European countries but also with Mexico are the interests that are represented by the most selfish and most conscienceless element of Wall Street. These elements have not stopped with an effort to use existing mistakes and wrongs as an excuse for war, and have not hesitated to endeavor

to create situations that brought the nation to the very brink of war. It was only by the determined resistance of the citizens who understood that an element of reasonableness was injected into the situation and action prevented until the true facts could be discovered and the will of the masses of the citizens could prevent the evil purposes and designs. . . .

The American seamen, the last group of workers who could under law be compelled to perform compulsory service, have been made free men and given the right to quit their ships when in safe harbors. . . .

Due to the initiative of President Wilson, the Congress extended the United States eight-hour law to include the workmen engaged in the operation of the railroad train service of the country, and a great national strike was thus averted.

#### Secretary Baker Stirs a Hornet's Nest

By an injudicious reference to American history in a speech delivered on behalf of the administration at Jersey City, Secretary of War Baker called down upon himself an avalanche of criticism. He defended the tolerance shown by President Wilson to the Mexican revolutionists, admitting that they were guilty of depredations and mischief, but asserting that similar lawless conduct had marked every revolutionary movement in history, including our Revolutionary and Civil Wars. He said that American soldiers in the Revolution had plundered churches, driven out ministers and plundered the country. This comparison of the Continentals and the Constitutionals at once aroused a chorus of indignation from the Sons of the American Revolution and other patriotic societies, and on October 19 Mr. Hughes himself, in an address at Youngstown, Ohio, gravely rebuked the secretary of war for lack of patriotism. Mr. Baker pointed out that his statements were made on the authority of John Fiske's "The American Revolution" and "A Critical Period of American History."

#### Thinking Over the U-Boats

Little more has been heard of the "U-53" and other German sub-Atlantic warships since the attack on British and neutral shipping near Nantucket on October 8, altho it has been rumored that the British sunk some German submarine, possibly the "U-53" not far from the site of the recent raid. The American Rights League has addressed a letter to President Wilson protesting against the inactivity of the administration in view of the Nantucket incident. The government is more concerned over the protests of Great Britain against the reception of the "U-53" at Newport. President Wilson refuses to debar submarines from the usual belligerent privilege of visiting neutral ports, but it is not improbable that additional precautions will be taken in the future to prevent visitors to belligerent submarines in American ports from conveying military information to their commanders, since the charge has been made that the "U-53" learned at Newport the date and course of sailing of trading ships bound for Allied countries. Transatlantic traffic is now nearly normal and insurance rates show a tendency to sink to earlier figures.

A persistent rumor that the "Lusitania" case had been settled by American acceptance to the latest German proposals has greatly disturbed the administration. Both Acting Secretary of State Polk and Joseph Tumulty, the President's private secretary, emphatically deny that there is any truth in the report. The text of the German note has never been given out, but in substance it expresses regret for the loss of American lives and promises indemnity, while not admitting that the act of the submarine commander was either illegal or unjustifiable. Democrats pronounce the rumor a campaign trick.

PRESIDENT WILSON ABANDONS THE "PORCH CAMPAIGN"

Perhaps the enthusiastic Western tour of the Republican candidate seemed a good example to follow. At any rate President Wilson left "Shadow Lansen" and is making round speeches too.

# THE BIG GAME

BY HERBERT REED

MODERN football has reached such an advanced stage that the fundamental problem of all coaches, East or West, North or South, is to turn out players with thirty-five-year-old heads on about twenty-year-old bodies. There are other tasks which vary somewhat according to the point in attack on which the coach believes he should put the greatest emphasis, the proper proportion on attack between plays relying mainly upon power and those relying principally on deception; but whatever his choice, and whatever his troubles, he must try in the month of October to develop football brains at a rate that would startle an instructor in mathematics or some other non-athletic subject. His success will not be apparent until November, when, as a rule, the more important games are scheduled. Right here it might be well to make it plain that by "important" games I mean those that are played annually over a term of years. Defeats will be met by the way, and at the hands of colleges that deserve to rank with the best, but the coach and his men must stand or fall on the outcome of what they call their "big" games. Thus while Harvard was beaten strictly on the merits of the day's work by Tufts, and Illinois by Colgate, it does not follow that the game was the correct season's measure of the power of the defeated elevens. In passing it is worth mentioning that both Tufts and Colgate have played good, sound football for some years with the added distinction of innovation on attack that was of permanent value to the game.

For many years, until Yale under Frank Hinkey reversed the process for the time being, the fundamental difference between East and West in coaching lay in the fact that Eastern men were prone to develop the defense first, while Western coaches, and they are good ones, too, began with the attack, and, indeed, the Western attack generally remained a jump or two ahead of the Western defense thruout the season. Recently, however, there has been a growing tendency to try to bring the two along together, which is one of the greatest problems a coach can face. There comes a time, and that usually about the first week in November, when a coach can feel reasonably sure of which type of eleven he has on his hands; will know whether his eleven is to be stronger on attack or defense, and so he will plan his work accordingly.

*Herbert Reed, better known as "Right Wing," has been for many years a student of amateur sport in this country and in England. He is the author of "Football for Public and Player."—THE EDITOR.*

It is ancient history that strong defensive elevens have won their big games against teams that were far superior in attack, which means for one thing that they have had fine punters and drop-kickers, and a line, especially on the ends, strong in down the field work. Occasionally even the punting has been turned into an offensive measure, deadly kicking to the corners of the field putting the opponents into almost as ugly a situation as if they had been driven there by a running game. It is therefore reasonable to suppose that a coach who begins the season

Paul Thompson

LE GORE OF YALE

with one or more good kickers at hand will do one of two things—develop this kicking game to its utmost value, developing the running attack later, or work up a running game as quickly as possible, feeling that the finesse of the kicking game can be imparted in a hurry.

The first method is by far the safest, and that is the method that has been adopted by John H. Rush, at Princeton, this October. He had at hand in the person of Driggs one of the game's greatest punters, and so he used this asset to defeat Holy Cross in the season's opening game, in the meantime working up the end play and seeking a backfield that was not asked to win the early combats by means of the running game, but was merely asked to get together. He was looking for the right combination, and the biggest problem in that combination lay at quarterback, a problem not yet solved. Princeton had a remarkably fine team last year in every essential save the headwork in the quarterback position. Rush has been determined to do better in that respect this season, with the result that he has been sending Ames in for one-half of the contest and Eddy for the other. Sometimes they have been under instructions, and again have been allowed to go their own way. In general, we find that punting won the opening game for the Tigers, and that drop-kicking was just good enough to defeat Tufts, which had beaten Harvard. Against North Carolina the disparity between the two lines, especially on one side, was sufficiently apparent to justify greater emphasis in kicking, with a forward pass slipt in from time to time. Thru October the line has acquitted itself well with occasional poor play at tackle, this latter apparently by no means incurable, and, equipped with good kicking and the first signs of a promising running offense which seems to be strongest just inside tackle or thru the guard positions, Princeton looks formidable.

Percy Haughton and his aids have faced about the most difficult problems in the East. They were beyond solution in time to come cleanly thru the October games, for they included the development of kickers and the filling of serious gaps in the eleven due to graduation and other things. The men were called together early and driven hard by Leo Leary and his assistants. Even Bert Waters, famed as a driver, was sent for to help in "putting the punch" in the eleven. This on the eve of the Tufts

Paul Thompson

CAPTAIN HOGG OF PRINCETON

On the whole, and despite the fact that the result of the Cornell game cannot be included in this review, I think there is enough evidence to warrant the expectation of the development of at the very least a good, average football team at Harvard. And it is quite within the range of possibilities that it will be better than average by the middle of November. Teams that have been turned out under the Harvard system of recent years have not infrequently come along with a rush in four or five days.

Yale's first month of play has been fairly satisfactory to the coaches. Tad Jones enjoyed the advantage of having at command, in the person of Le Gore, a fine, all-round back—a good kicker, a strong, elusive runner and an excellent hand with the forward pass. Thus he had all the threats needed in his backfield and so could make an early start with the running attack. The opposition was not very strong up to the Lehigh game, but, if I bar a rather puzzling and at times rather stupid type of play by the Eli ends, the defense showed vast improvement, and was especially sound against the forward pass. Swinging into November Yale seems to have better than an average outfit of backs, with one real star, field generals who are only fair, and a line that is still very much unsettled. Arthur Brides is in charge of the line and he has done well, altho the men are still not using their hands as a true Yale line should, and at times even the stance is wrong.

game. All to no avail. The players were too green to take the coaching at the rate it was given to them. Haughton came late to the task and found that Leary had been unable to give him a team so far advanced as in previous years. Now in the last few years Harvard has had a strong running game made up of a neat combination of power and deception, the latter being made by men whom Haughton called his "decoys," more familiarly known to other coaches as "two in deception," and all this was backed by fine kicking and end play. The whole was run with superb generalship. While such powerful backs as Wendell and Bradlee were in the game, with such a man as Hardwick on the end to cut down the secondary defense, Harvard went in for the force plays very largely, but put on the deception whenever it found opponents given to looking at their own feet rather than at the Crimson attack. Last year, because of the wonderful speed and feinting ability of Eddie Mahan, the emphasis was on deception, with results against Princeton and Yale with which we are all familiar. The interesting feature of Harvard's November play will be to see what Haughton's decision has been in the way of emphasis on attack. There is evidence in the October play that he has been trying out both forms and has not yet made up his mind. He has fast end runners in Casey and Willecox, both of whom will take a lot of coaching, and only fair backs so far in Bond, Flower, and especially Horween, who was expected to carry the burden of the heavier line running. Yet the development has been slow, and it has been handicapped too by the fact that the Crimson line has also been very green. In the early games there was none of that evidence of quick thinking, individually and in the team sense, that has distinguished the Crimson defense of recent years.

Paul Thompson

CAPTAIN DADMUN OF HARVARD

There have been times, too, ever since the opening of the season, when certain of the Yale forwards, including Captain Black, have been rather too easily spilt. However, the Blue is certainly more formidable than last year, and there are internal evidences in the posting of certain of the men that the Blue still has at command the lateral pass. It may not be used much, but it is there.

Cornell and Pennsylvania, the ancient Thanksgiving Day rivals, began their campaigns well equipped with promising material, the Ithacans, however, having lost the greater number of stars. Cornell enjoyed the advantage of the continuance of a sound and successful coaching system, while Pennsylvania came out for the first time under Bob Folwell. Dr. Sharpe's problem at Ithaca was to fill the vacancies left by Cool at center, Shelton at end, and the great Barrett in the backfield. To the outside public the loss of Barrett seemed the greatest misfortune, whereas in reality Cool was the hardest man to replace. The Ithacans run nearly all their plays from kick formation, the ball going direct from center to runner, which means that everything depends upon the passing from the center, which, under this system, is complicated and difficult. How well the coaches have been able to fill Cool's place will have been fairly settled in the Harvard game. The indications are that Cornell will have another great line, with promise of good ends. There are also plenty of high-class backs. The Quakers made an excellent start, more promising than I have seen in years, and this despite the defeat by Swarthmore. Like Cornell, the Red and Blue is well equipped with backs, and the kicking department is in good hands. The principal difficulty, I think, will lie in getting the generalship in good

Underwood &amp; Underwood

CAPTAIN MUELLER OF CORNELL

order, for the lack of it nearly lost the opening game, and Bell, at quarterback, fumbled away the Swarthmore match.

Army and Navy, at the close of the October building process, were closer together than was the case a year ago. The Soldiers have a wonderful line from tackle to tackle, experienced quarterbacks, and at least three remarkable punters and drop-kickers who can be used in the backfield at the same time. Incidentally, Charley Daly, who heads the coaching staff, and Lieutenant Prichard, who is helping with the backs, were among the most remarkable quarterbacks in the history of the game, a significant fact. If the Army team is not run with perfect generalship in its big game it will not be because the coaches did not know how to teach it. The real West Point problem is the development of ends. At Annapolis there seems to have been marked improvement over a year ago under Lieutenant Ingram, who is heading the coaching staff for the second successive season. There is in evidence a much better rounded attack, a line already showing considerable strength, and a good backfield, which may be handled by Roberts, a Plebe who made a handsome record at Colgate. The eleven was beaten by a single point by Pittsburgh, but in that game met one of the most brilliant running attacks the East has to show, albeit somewhat marred by fumbling.

Under the coaching of Glenn S. Warner, Pittsburgh shows promise of another good year, the field leader being Captain Peck, one of last season's three great centers. As a deviser of brilliant end run formations Warner has no master, and his attack is usually very strong in other respects. The eleven is fighting it out with Syracuse as these lines appear, and there is no doubt that Syracuse is to have another strong team, this time under the coaching of Bill Hol-

lenback. Because of the type of Warner's attack such a game is a hard one for the defensive ends. Syracuse still has that wonderful pair of guards of a year ago, however, Captain White, the biggest man playing football, and Schlacter. These, by their ability to break thru, are terrors to any attack, often breaking it up before it can get out against the tackles and ends. Hollenback is a capable and versatile coach, and before the season is over should show a few ground-gaining devices of his own.

Dartmouth faces the same old problem, that of finding a quarterback whose generalship is up to his individual play. Frank Cavanaugh believes he has one in the person of Cannell, but up to the Georgetown game the Green had met no opponent strong enough to settle the point. With Thielscher, Gerrish and Duhamel carrying the ball and Gerrish punting, the eleven from Hanover has an attack that is remarkable for its power, especially hard to stop just thru the tackle position—the close slant play that has always been such a terror in American football, ancient or modern. In common with Dartmouth and Syracuse, not to mention Cornell, Brown University simply galloped thru the early season, rolling up big scores. So good is the material this year at Providence that Ed. Robinson, the veteran coach, seems to have no particular individual problem on his hands. He simply has to bring his eleven along to concert pitch in team work.

The South demonstrated very little in the first month of the season, most of the scores being very one-sided, and the Southerners who ventured North failing to show their accustomed strength. Vanderbilt and Georgetown seem to be comfortably in the lead at this writing.

Prospects are bright for Michigan in the West—that is, in upholding the reputation of the Middle West,

since Michigan's really big games are with Eastern elevens. Michigan teams are, however, like their coach, of national interest. The outlook was not promising when Yost first called his men together, but with the return of the famous Captain Maulbetsch to top physical condition, and the discovery of a capable quarterback in Sparks, the Maize and Blue began to look up a little. Whenever Yost and his cohorts come East one hears a great deal of "trick plays," etc., and Yost has invented a lot of deceptive forms of attack, but when it comes right down to brass tacks he does not build on them as heavily as the public thinks. His supporters, yea, his idolizers, will tell you that all he needs is a couple of good backs who can forward pass, and good ends, and he will have a wonderful team. Yost knows better. "That's all very well," he will tell you, "but there never yet was a fine football team without a strong line."

On the Pacific Coast the University of California, under Andrew Smith of Pennsylvania and Eddie Mahan of Harvard, looks promising, altho for a real line on the team one will have to await the issue of the Oregon game. There seems to be particular danger in that section from the University of Washington, with which eleven Gilmour Dobie has been terrorizing many miles of football territory for years. It is planned that Syracuse is to play the championship eleven of the Pacific Coast after the close of the Eastern season, and Pennsylvania, too, is looking for a game on the Coast. Transcontinental football, however, has yet to settle any fundamental dispute between the two sections. And with all this revival of real American football in California Leland Stanford Jr. University still clings to English Rugby, a game in which she can find no serious rival save club teams like the Olympic and the Barbarians.

**T**HE first appearance of the British in history is Cæsar's account of how their sithe-armed chariots dashed into the Roman lines. The latest reports from the seat of war tell of armored motor-cars driving against the German trenches, evidently a modern development of Boadicea's favorite weapon of war. We reproduce above the first photograph of these land dreadnoughts that has reached this country. The machine lays its own track so it can go over rough or soft ground, cross a trench and even climb in and out of the craters made by the high explosive shells. Its

## THE STEEL-SHELLED AL

weight, power and the long grip of its caterpillar wheels enable it to plunge thru barbed wire entanglements and thickets. Previous to the war some eighty caterpillar tractors of American make and of 60 to 75 horse power had been sent to Germany and Austria, and in the last two years Great Britain has purchased over a thousand such machines from this country.

The new war engines appear to be built upon a similar plan. A broad belt of interlocking steel links runs upon

## DILLOS OF THE SOMME

the ground and over the top. The machine pictured above has evidently been disabled in action, and where the caterpillar belt has been torn away on the right the sprocket wheel may be seen. The purpose of the wheels and axle outside the armored shell is not clear. In the American farm motor such wheels serve to support the front half of the machine, but in this war motor the traction belt runs the whole length, and such a machine could be steered and even turned in its own length by simply

throwing one belt out of gear. The muzzles of two machine guns in revolving turrets may be seen on the left of the photograph.

The secret of these gigantic military motors was well kept until the morning when they suddenly appeared on the British front and plowed their way slowly and indomitably across the zone of fire and over the German trenches. They are invulnerable to rifle, machine guns or shrapnel. Several of them have, however, been wrecked by shells or have broken down in the midst of the battle and their crew all killed or captured.

# SOCIALISM VS. MILITARISM

BY ALLAN L. BENSON

CANDIDATE OF THE SOCIALIST PARTY FOR PRESIDENT OF THE UNITED STATES

SO far as I have power to influence the direction of the Socialist campaign this year, I lay the emphasis upon the plain tendency of the American capitalist class toward militarism. That American capitalists and their servants in office deny the existence of such a tendency is to be expected. I believe the Kaiser, as the representative of the great German capitalists, still insists there is no militarism in Germany. It is my understanding that opponents of militarism need not wait to attack it until its backers make open confession.

Acts sometimes speak more loudly than words. President Wilson says he is opposed to militarism. But what has he done? He has used his power to force thru Congress the greatest military appropriations that any nation ever made in time of peace. When the nations of Europe were pulling themselves together for war, not one of them made such appropriations as the American government has just made. Even Germany's appropriations for the second fiscal year preceding the war seem small in comparison. Look at the official figures. The naval figures, with the exception of those pertaining to Austria-Hungary, are from the last number of the United States Naval Yearbook. The army figures

and Austria-Hungary's naval figures are reproduced from official figures reprinted in the *World Almanacs* for 1914 and 1915:

MILITARY APPROPRIATIONS OF THE NATIONS NOW AT WAR FOR THE FISCAL YEAR THAT ENDED JUNE 30, 1914.

	Navy	Army	Total
Great Britain ..	\$237,530,459	\$224,300,000	\$461,830,459
Germany. . .	112,091,125	183,090,000*	295,181,125
France ..	90,164,625	191,431,580	281,596,205
Russia ..	117,508,657	317,800,000	435,308,657
Austria-Hungary. .	35,975,338	47,571,755	83,547,093
Italy ....	49,550,147	82,928,000	132,478,147
Japan ..	48,105,152	49,000,000	97,105,152

THE WILSON MILITARY APPROPRIATIONS FOR 1916-17

United States .. \$313,384,389 \$349,092,123\*\* \$662,476,512

\*Estimates for 1913-14. Appropriation for next year not available.

\*\*Made up of \$267,596,530 for the army proper, \$25,747,550 for fortifications, \$20,000,000 for a nitrate plant and \$34,523,000 for army and navy deficiency.

The facts about the Wilson military appropriations are worthy of particular consideration. One is that they are far and away greater than any other nation ever made in time of peace. The other is that Republicans criticize them because they are too small.

I am aware that the pretense is made that these appropriations are for three years. This is a "three year program." The inference is that there will be no more appropriations for two years. That is what the uninformed are expected to think while they are paying the bills in the form of higher living costs. I by no means

regard this as a "three-year program" in any such sense. I have long observed these gentlemen at work. I well remember how Mr. Schwab, in 1896, endeavored to wheedle from the Government more than contract price for some of his goods on the ground that he had created special plants to produce them which would soon be useless for the reason that the navy, "in ten years, would be completed"! I know there is no such thing as "completing" a navy that is competing in size with other navies. I know there is no such thing as satisfying a naval officer that the navy with which he is connected is large enough. I know the policy of the militarists is to get as much as they can whenever they can and always to ask for more. Our navy is already so large that about \$140,000,000 is required annually for maintenance. We shall have to have another appropriation next year for that. Additional ships will increase the cost of maintenance. We shall have to appropriate money for the increase. Furthermore, our militarists will next year discover that, while we have made a fine start toward "protecting" the nation, we sadly need so many more dreadnoughts, so many more battle cruisers and so many more destroyers, for all of which appropriations will be asked.

This is not mere idle prophecy. It is projecting the history of the past into the future. It is based upon the way our militarists work.

**B**UT the unparalleled number of millions that the Wilson administration and the Democratic Congress have appropriated for military purposes—these millions by no means constitute the only signs of militarism. The military laws of the State of New York constitute another sign. They were enacted last spring without notice and without public demand during the last hours of a dying legislature. The Governor now has power to draft, at any moment, any and every male citizen of military age. Under the guise of “physical training,” military drills are enforced upon school children, while boys between the ages of sixteen and nineteen are to be given training that is acknowledged to be of a military nature. A Republican legislature and a Republican Governor enacted these laws, but a Democratic President, when he came to write his party’s platform in July, uttered no word against them. He could not. On June 3 he had approved a bill under the terms of which he, himself, took the power arbitrarily to draft citizens of the United States into the Federalized militia. The bill to which I refer is the so-called Hay-Chamberlain Army Reorganization bill. The draft provision is in Section 79. At first the bill was made to read that when battalions of the national guard should be sent away on service, reserve battalions should be formed and that the President should have power to “call” enough citizens to create new battalions. This was the form in which the bill was first passed by the House. But the bill was sent to a conference committee and when it came out the word “call” had been changed to “draft.” The committee in which the change was made was composed of Senators Chamberlain of Oregon, Beckham of Kentucky, Broussard of Louisiana, Du Pont (a powder peddler of Delaware) and Representatives Hay of Virginia, Dent of Alabama and Kahn of California. Many members of the House who voted for the bill on its final passage said they did not know “call” had been changed to “draft.” But the bill, with “draft” in it, was signed by the President.

We Socialists take these matters seriously. We believe militarism is bad. We believe it is as bad in the United States as anywhere else, and we object to it more in the United States than anywhere else. We do not believe that life will be worth living or that civilization can endure if in-

dustry is to continue upon a basis of private ownership for private profit with its inevitable search for foreign markets in which to dispose of the goods that the workers cannot buy because of insufficient income. The struggle for foreign markets gives rise to the necessity of fleets with which to “back up” aggressive diplomacy, and the necessity of paying bare living wages to enable one group of capitalists to compete with other groups that are also paying bare living wages, gives rise to the necessity of maintaining large armies. This is particularly true in America, where, because of our remoteness from other nations, a large army is needed neither for defense nor for the conquest of foreign markets.

We Socialists most emphatically challenge the statement of American militarists that our great military appropriations are made for defense in any true sense of the word. We well know the purpose for which they are made. Our naval appropriations are made to enable American capitalists, after the European war, to hold the enormous foreign trade that Europe lost and American capitalists won as a result of the war. American capitalists have suddenly and unexpectedly come into possession of a large fraction of the world’s trade. From a nation that had no merchant marine, we are about to become the world’s second maritime nation. We are today building more merchant ships than any other nation. We are building these ships to carry the trade that Europe lost. And we are preparing to build 157 more warships, because we know that Europe, after the war, will try to recover her trade, and our capitalists mean to hold it even at the cost of war! That is the kind of attack that American capitalists fear and against which they are preparing.

**W**E Socialists are violently opposed to the buying of foreign trade at such a price. We are opposed to foreign trade at any price that means simply the selling abroad for private profit of goods made by American workers that they were unable to buy because of the difference between their wages and the value of their product. But we are particularly opposed to foreign trade for private profit when it means (as it now does) not only the exploitation of the workers, but the placing of their lives in jeopardy to maintain, by a show of armed force, American capitalists’ foreign trade. We assert that the history of no nation may be cited as proof that foreign trade brings more than a bare living to the workers. Great

Britain leads the world in foreign trade, but the rapacity of the British capitalist has brought about even the physical deterioration of the worker. We Socialists also assert that America, if it would, cannot “hog” the world’s trade and hold it. We are the richest nation in the world, but we are not richer than all the other nations, or even richer than the nations of Europe. The more foreign trade we might get, the more we should be hated by our nearest rivals, and sooner or later a military combination would be made among them that would first impoverish us to keep up with them and eventually lead to our conquest.

We Socialists warn the nation of these perils. We challenge the statement of President Wilson that militarism is not here because, notwithstanding our great military appropriations, there is no desire in America to attack others. We know the people of America are peaceful. We know the peoples of Europe were peaceful. But we also know the European war is of economic origin; we know there were capitalists in Europe who preferred war to the sacrifice of what they regarded as their interests, and we believe there are great capitalists in America who would prefer war to the sacrifice of their interests.

**S**Ocialists also charge that all of President Wilson’s legislation was incapable of ending the industrial depression until the European war dumped so many billions of gold into the country that business had to revive; that such “prosperity” as we now have, while it means hundreds of millions to the capitalist class, means only more work for the workers for wages that, however “high,” are only as high as the cost of living; that the average railway profit of \$4100 a mile went to 607,630 stockholders who represent but six-tenths of one per cent of the population; that the profits of other corporations are similarly absorbed; that the increase, since 1913, of \$41,000,000 in the national wealth still leaves the workers upon farms and in factories with no prospect for the morrow but more work for a bare living, and that what this nation needs is not a great foreign trade, but such economic arrangements as shall enable productive workers to consume the full value of their own products. In short, Socialists, this year as always, advocate public ownership and democratic management of the nation’s great industries—combined with another innovation—public ownership of the Government.

# PROHIBITION PRINCIPLES

BY J. FRANK HANLY

CANDIDATE OF THE PROHIBITION PARTY FOR PRESIDENT OF THE UNITED STATES

**T**HE Prohibition party, for the twelfth time, is asking the American people for their suffrage. Eleven times have they refused its request, save in relatively insignificant numbers. It has never received in any election more than 265,000 votes. And yet, each successive national election it has declared its principles, nominated its candidates and repeated its demand for recognition.

Were it not posset of a great moral vision, expressive of actual human need, and based upon sound principles, it would have died long since. It has lived because it has spoken the conscience of the unselfish and the altruistic.

It has so stressed its dominant demand—the abolition of the liquor traffic, and the divorcement of government, state and federal, from partnership therewith—that those not affiliated with it have quite generally come to think of it as a party of one principle. If that were true it might well be that it still would be entitled to support, for a single principle may so hold within it the public welfare that it would justify the party's existence and entitle it to support.

But the Prohibition party, as now constituted, is not a party of a single principle. In fact, it is the only real

progressive party left in American politics.

It stands for the enfranchisement of women by state and by federal action, not as a matter of expediency or as a thing inevitable—as the Republican and Democratic parties stand for it—but because it believes the ballot to be woman's just due—her inherent right. It stood for women's enfranchisement when it cost it votes and lost it prestige. Had it been clothed with power, women would have long since been enfranchised by federal constitutional amendment.

The Prohibition party stands for peace with the nations of the world—peace with honor, peace without the surrender of a single substantial American right.

It stands for the establishment of a world court of arbitral justice—a world court with power, with authority to adjudge justiciable controversies between nations as courts now adjudge controversies between the sovereign states of this republic, and if clothed with power it would exert its good offices for the establishment of such a court. It stands for a world police force back of the world court when established—a police force great enough to enforce the decrees of such tribunal.

It stands for the maintenance of

the Monroe Doctrine inviolate. This new world has been dedicated to human freedom, and this nation in a peculiar sense is the trustee of that great right on behalf of every nation within its boundaries. The American people, however, cannot claim the benefits of this doctrine and refuse to assume or discharge the responsibilities and the duties which inhere therein.

If there is to be no European intervention in the affairs of any American nation under circumstances amounting to disorder and anarchy, then the security of the lives and property of European citizens living or sojourning in American nations must be assured and guaranteed by us. This duty we are performing in some instances with punctilious care, notably in Haiti and San Domingo, and in another, a more notable instance—in Mexico—we are failing, and have long failed, to perform it, so disregarding our obligations as to justify grave concern when, later, the nations, the property of whose citizens has been confiscated or burned, and the lives of whose citizens have been taken, demand reparation at our hands.

If we owe this duty to the citizens of foreign governments living or sojourning in Mexico, we owe an even more imperative duty to protect the

lives and property of our own citizens who live or sojourn there. In the event of a breakdown of government across the border it is the duty of this government in the interest of civilization to do whatsoever shall be necessary to establish law and order in that distracted land.

We are opposed to the violation of the sovereignty of the Mexican people and would countenance no war of aggression against them. But responsible, stable government must be established there, tho armed intervention be required to establish it.

THE Prohibition party stands for reasonable military preparedness, but it does not believe in militarism or in universal military service. It believes that an appropriation for military preparedness in a single session of Congress aggregating \$625,000,000 is more than "an initial step" toward the preparedness required. If such preparedness is only "an initial step," and the policy is to be adhered to and continued, the end will be the militarization of the nation.

The Prohibition party stands for Americanism. But what is Americanism? It is difficult to define; too impalpable perhaps to be defined. But we know that no man, no set of men and no party has a monopoly of it. It is as big as the hundred million men and women who inhabit this land, who think its thoughts, vision its ideals and do its work—as big as America.

It's the soul and heart of that common impulse that binds us together as a people, and yet goes beyond our own safety and welfare. It believes in the great world fact that all peoples are involved in a common destiny and that international peace and justice between all peoples are essential to the working out of that destiny. And, believing in our high responsibility, not only to ourselves but to all peoples, it is willing to sacrifice, if need be to the uttermost, to defend these ideals and effectuate its aspirations.

For two years the nations of Europe have been at death-grips with one another. It is not strange, nor is it uncommendable, that persons born in any of those lands, but now living here, should be stirred by emotions of interest and sympathy for the land of their birth. But that such interest and such sympathy should lead them to indulge in thoughts and expressions of disrespect to the duly constituted authorities of the land of their adoption, or to deeds of conspiracy and acts of aggression against this government, is so repugnant to the spirit of loyalty that is this country's solemn due, that it cannot be tolerated, and should be, wherever

and whenever it occurs, repudiated by universal public opinion and suppressed by the strong hand of the Government if necessary.

The Prohibition party stands for a non-partizan tariff commission. It believes the people have a right to know the basis of every tariff duty levied. It stands for trade reciprocity with the nations of the world—the reciprocity of James G. Blaine and of William McKinley.

It believes in a tariff based upon scientific investigation and ascertainment, and not on partizan advantage or upon the enhancement of great and powerful corporations and combinations.

Duties should be so levied and adjusted as to secure to American labor and American manufacturers such degree of protection as to equalize the difference in wages between the labor entering into any American commodity, and the labor entering into any foreign commodity with which such American commodity is compelled to compete.

It stands for the creation and maintenance of an American merchant marine, but it is opposed to government ownership of ships and to the Republican policy of ship subsidies. An adequate merchant marine can be created and maintained without either the one or the other. It can be done by the admission of materials for the construction of ships free of duty, the admission to American registry of ships purchased abroad, by liberal payment for carrying the mails and for transport services, by the reservation to ships of American registry of all shipping from the United States to any of its possessions and by the liberalization of harbor rules and charges and navigation laws.

It stands for efficiency in the administration of the national government.

The whole administrative machinery of the government should be revised by a board of non-partizan experts to the end that departmental duplication of work and responsibility may be minimized and an adequate and efficient system of supervision and accounting installed.

It believes that the budget system should be adopted and that the President should be given power to veto any item in any appropriation bill. There should be an end to the extravagant and shameful misuse of public money in river and harbor and public building appropriations.

It stands for arbitration of differences between capital and labor; "for the prohibition of child labor in factories, mines and workshops; for an eight-hour maximum day, with one

day of rest in seven; for more rigid sanitary requirements and for such working conditions as shall foster the physical and moral well-being of the unborn; for the protection of all who toil by the extension of employers' liability acts; the adoption of safety appliances for the protection of labor; and for laws that will permit the just division of wealth which labor and capital jointly produce; and for provision for those who suffer from industrial accident and occupational accidents and diseases."

THE Prohibition party stands committed to all these things. Taken all in all, they form a broad, progressive and comprehensive movement touching the social welfare, the economic and material interests and the civic life of the American people, and entitle it to the confidence and support of the people at the polls.

But while it is committed to these things, it is convinced that they can not be fully effectuated while the alcoholic liquor traffic has governmental license and sanction. While the trade in rum exists there can be established no effective program of social justice, no real conservation of men and women, no triumph of the humanities.

In a brief while, many millions of men, drilled into high efficiency and disciplined into abstinence and sobriety, will re-enter the industrial life of Europe. Confronted with desperate necessity, the nations there will make superhuman effort to regain the markets they have lost. If, in competition with this new, effective and insistent force, we are to retain industrial and commercial mastery, we ourselves must attain to the highest efficiency.

While the traffic in alcohol survives, America cannot be efficient nor its people at their best. Nor can there be adequate military preparedness. In case of war we should find what Europe has found, that greater than enemy armies is this foe of humankind.

The Prohibition party, of all the political parties of America, is the only one pledged to destroy this traffic, and if given power it will keep the pledge.

The Prohibition party stands for the basic, elemental right of the American people to govern themselves. This great primal right of the people is challenged by the traffic in alcoholic liquors, organized, purposeful and arrogant—a traffic infinitely greater in its wrongs to the children of men than chattel slavery ever was.

In the face of that challenge both the Republican and the Democratic

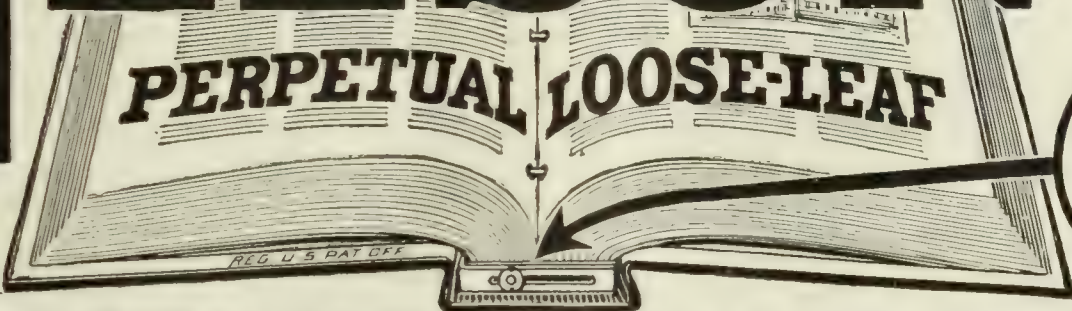

# "LOOK IT UP IN NELSON'S"

The World's Great Rulers, Statesmen, Diplomats, Scientists, Specialists and Scholars, when seeking the most Accurate and the Latest Information depend upon Nelson's—the World's Greatest Question Answerer—Because by means of Nelson's Perpetual Loose-Leaf Binding Device Nelson's is years later than any of the other Encyclopaedias, which are bound in the old way of stitching and gluing. Nelson's Perpetual Loose-Leaf Encyclopaedia is perpetually new—IT CANNOT GROW OLD.

## HOW NELSON'S LOOSE-LEAF REVOLUTIONIZED ALL ENCYCLOPAEDIA MAKING

When on November 15, 1907, Nelson's Perpetual Loose-Leaf Encyclopaedia was perfected, newspapers and magazines and publishing houses everywhere recognized the great practical value of the loose-leaf binding device as applied to Encyclopaedia making—because by this means Nelson's Encyclopaedia could be kept *always new*, and could be relied upon to supply the facts of today as well as the facts of yesterday. At once the cumbersome, unsatisfactory method of issuing year books was superseded. Since its appearance in 1907, Nelson's Perpetual Loose-Leaf Encyclopaedia and Research Bureau for Special Information has achieved the most remarkable success in the history of Reference Book publishing, and is now to be found in all parts of the civilized world—in Government Departments, Libraries and Educational Institutions wherever the English Language is spoken.

# NELSON'S

PERPETUAL LOOSE-LEAF

REG. U. S. PAT. OFF.

THAT BAR AND NUT SOLVED THE PROBLEM

# ENCYCLOPAEDIA

## & Research Bureau for Special Information

The fact that Nelson's Perpetual Loose-Leaf Encyclopaedia is the standard authority in every quarter of the globe is in itself the highest recommendation. No book which is not thoroughly good could stand the inquisition of these hundreds of thousands of readers and continue to sell as Nelson's is selling now.

### Bound in Twelve Handsome Volumes

Treating over 1,000,000 Topics with 7,000 illustrations, 500 new maps and plans, models, manikins, and colored plates. The Patented Loose-Leaf Binder makes a volume so practical that by simply turning a nut the pages are loosened, the obsolete pages easily removed, and the new pages substituted. The Publishers issue to subscribers not less than 250 revised pages each six months—In March and October thereby making Nelson's Encyclopaedia always new and abreast of the times.

### Nelson's Research Service Bureau

Nelson's Permanent Research Bureau for Scientific Reports and Special Information and Special Correspondence is the only organization of its kind in existence. It is prepared to answer fully and freely any question, to supply *free* any information that Nelson's subscribers may ask or may want to know. Any time a subscriber wishes a special report on any subject, large or small, old or new, he simply writes to Nelson's Research Service Bureau with the positive assurance that he will promptly receive the latest obtainable and most dependable information on that subject.

## The World is Moving Fast. We Must Move With It

Sciences change overnight. Discoveries of the last week—inventions of yesterday. The man or woman who progresses is keeping abreast of the times.

Encyclopaedias that served you well within the last decade are now practically obsolete. They tell you nothing of the Great War in Europe—destined to change the map and history of the world, the history of Mexico and the United States (down to 1916), the most recent developments in the armies and the navies of the world, the new United States Army and Navy acts passed in 1916, the Democratic and Republican Conventions of 1916, and thousands of other subjects and current events that cannot be found in any other Reference Work.

### EXCHANGE

We are constantly receiving inquiries asking us to make an allowance for old encyclopaedias to apply as part payment on Nelson's. We have therefore prepared a price list stating the amount allowed, which will be mailed upon request.

When All Other Encyclopaedias Fail

City..... State.....

parties are silent, both confess their inability to meet it.

Ex-President Taft, in the city of Boston, before the assembled bar of the State of Massachusetts, speaking against the amendment of the Federal Constitution prohibiting the liquor traffic, made the startling statement:

It would be a futile and an idle thing to amend the Federal Constitution prohibiting the liquor traffic, because the nation could not enforce the amendment if it made it.

Here is a confession made by the highest representative of the Republican party, that representative constitutional government has failed in this nation. If an amendment to the Federal Constitution prohibiting the liquor traffic, or any amendment, made in the slow, thoughtful, orderly process provided by that great instrument for its amendment, representing the crystallized conviction, the purposeful will and the high resolve of the American people, cannot be enforced when made, then representative constitutional government fails in this nation.

There were those, and of them I was one, who, when they heard Mr. Taft's confession, did not believe the Republican party would accept his confession or make it its own.

WE went to the National Republican Convention at Chicago and begged it to accept the challenge, begged it to make some affirmative declaration on the great issue involved. But it would not! On the contrary, it refused, wrote a silent platform, and nominated a candidate for President who in all his life, whether as a public official or as a private citizen, has uttered no public word against the traffic or in behalf of the great basic right it challenges—a candidate who, within the month, has toured the states of Montana and California, where state-wide fights for prohibition of the traffic are pending, and the states of Washington, Oregon and Colorado, where fights are being waged to destroy prohibition already won, and in all the trip of four thousand miles he uttered no word of encouragement or support to the struggling hosts who are fighting there to win an initial victory over this traffic, or to retain the victory over it they have already won.

If he will not speak in behalf of state-wide prohibition at an hour like this, when in states where the issue hangs in the balance, what right have we to expect national prohibition at his hands if we clothe him with power?

The Republican convention in Chicago refused to accept the challenge

of the liquor traffic, or to commit itself in any way to national prohibition because men like Charles Warren Fairbanks, the Republican candidate for Vice-President, had packed the convention with liquor representatives. I make the charge flatly, broadly and purposefully. I challenge him to deny it.

In my own city and his, the city of Indianapolis, he deliberately chose as a delegate to the Republican national convention, and as his personal representative, a wholesale liquor dealer. And a few weeks ago, on the occasion of the notification of his nomination for the Vice-Presidency, he chose as the master of ceremonies in his own home, out of all the splendid Republican personnel in the commonwealth of Indiana, this same wholesale liquor dealer.

And since his nomination to the Vice-Presidency, and his acceptance of the high honor, he has actually refused, tho it was presented to him three several times, to sign a remonstrance against the granting of license to retail intoxicating liquors in his own ward, in the city of Indianapolis—tho he knew that if he did not sign it, he would be counted in favor of the traffic. His Jew tenant signed it. His butler signed it. But Mr. Fairbanks would not. Can you expect at the hands of this man who would not even give his name to a remonstrance against the traffic in his own ward, the national prohibition of this traffic?

THE Democratic candidates, Mr. Wilson and Mr. Marshall, on this first and fundamental issue, are no better.

Failing to obtain affirmative action in Chicago, we went to the Democratic convention in St. Louis, and begged it to accept the challenge and to declare for national prohibition. But it, too, refused, wrote a silent platform, and renominated a candidate as silent as Mr. Hughes. Clothed with all the constitutional power of the great office for three years, he has uttered no word and lifted no finger in behalf of prohibition or hinted at acceptance of the traffic's challenge.

We were recently in the State of California, where a state-wide fight is on for prohibition, and we found the enemies of prohibition—the brewers, the winery owners—proclaiming the President in their official publications as chief among the statesmen of the country who are opposed to prohibition and in favor of California remaining wet.

We did not desire to do the President an injustice. We desired to know his attitude. And that we might

know his attitude the campaign manager of the Prohibition party, on the 20th of September, sent the President the following message:

You are quoted by the enemies of prohibition in California in their official publications, as chief among those opposed to prohibition. Have they any authority for so using your name? Prohibition party special train touring the state. It will be a pleasure to announce that you are in favor of state-wide prohibition for California, if you will so permit. Answer will reach us any time tomorrow, Bakersfield, California, care Prohibition special train.

That was weeks ago. All this time the telegram has been in the President's hands, but he has made no answer. His failure to answer justifies the belief that the California wets are right, and that the President of the United States prefers that California should remain wet.

Speaking in the city of Baltimore a few days after he received the telegram from Mr. Stewart, the President made a declaration which goes far to corroborate the statement of the California wets that he is opposed to prohibition:

There is only one thing I have ever been ashamed of in America, and that is its timidity in face of foreign competition.

Here we have it at last from the President's own lips. He is not ashamed of the alcohol liquor traffic with its debauchery, its intimidation, its crime and its civic corruption. And he is not ashamed of the partnership between the Government at Washington and this, the greatest racial evil that ever curst a nation or damned a people.

And the Democratic candidate for Vice-President is even worse. As Governor of the State of Indiana, he sent an executive message to the General Assembly imploring it to repeal the county local option law under which seventy-two out of the ninety-two counties of the state had voted dry and eliminated 3000 saloons, on the ground that, as Governor of the state, he was unable to enforce the law. Upon his recommendation the law was repealed and 2000 licensed saloons returned to the state. There is blood on his hands—a damned spot that will not out.

Such are our principles, and such are our ideals. We believe in them intensely. The welfare of the nation seems to us to be indissolubly dependent upon their effectuation. We shall battle to make them the accepted principles and ideals of a majority of all the people, and in so doing we are discharging, as we believe, the highest duty that can be devolved upon the citizens of a free government.

*Indianapolis*

# When you read The Independent, you take part of the Chautauqua Reading Course

*Do you know you can pay a little more, making your total expenditure \$5 a year, and have all the material and advantages of the course?*

Reading a competent review of current topics has always been one requirement of the Chautauqua plan. This is now covered by "The Story of the Week" in The Independent.

The Independent, for a survey of events in the foreground. The books, for historical background, unification of ideas, and discovery of lasting principles. A monthly bulletin, The Round Table, for direction and help, allotment of reading by weeks, lists of collateral books, etc.

Germany between Two Wars, *Fife*. France under the Republic, *Bracq*. Belgium, the Land of Art, *Griffis*. The Things Men Fight For, *Powers*.—four books of extraordinary interest and value, in substantial cloth binding.

The Independent, weekly. (Subscription extended a full year from present expiration date.)

The Round Table, monthly.

Membership and service of editorial and correspondence departments.

All for a total cost, material postpaid, of . . . . . **\$5**

This remarkable bargain in books, plus what made Chautauqua famous, educational plan and guidance for adults, explained fully if you mention "Independent Offer," addressing

**Chautauqua Institution**  
Chautauqua, N. Y.

# If Your Eyes Are Not Normal

there is a perfectly safe and natural way of restoring perfect circulation of blood, which is all that weak eyes require.

It is in the nature of a gentle massage given over the closed lids for five minutes at a time twice a day, and for twenty years this method had been successfully used in correcting eye troubles and bringing back normal eyesight to young and old—

Many of those whom it has benefited had very serious eye troubles too, as is shown by their voluntary letters on the subject.

Just note what leading authorities say on the subject of eye massage—Doctor De Schweinitz of Philadelphia, Professor of Ophthalmology at Jefferson College, has stated that in treating even so serious a condition as dreaded cataract of the eye, massage of the eye-ball "has been followed by improve-

ment in vision and deepening of the anterior chamber." The Medical Record, in treating the same subject, says that "the most feasible plan seems to be properly applied massage."

This system of massage to which we refer is fully explained in a scientific book on "The Eyes—Their Care, Their Ills, Their Cure," which may be obtained free on request from *The Ideal Masseuse Co.*, 1968 Broadway, New York City, if you will mention The Independent.

The most effective helps for our weaknesses nowadays are often the most simple and safe. Hosts of people have saved themselves from the nuisance of constantly wearing eye-glasses by using this massage (or exercise), so it will probably be well worth your while to at least inform yourself further by writing for the little book which treats the subject so thoroughly.

## The Market Place

### LOANS AND CREDITS

Arrangements have been made for a new credit of \$100,000,000 in favor of a group of French industrial companies and firms, to cover their purchases here. The bills or acceptances will have a term of 90 days, with the privilege of five renewals. French treasury bonds will be deposited with the Guaranty Trust Company as security, and the return will be a little more than 6 per cent. The acceptances will be made available for discount or purchase by banks of the Federal Reserve system, and direct participation by the public is not involved.

Argentina intends to issue bonds of a consolidated loan, for the refunding of previous issues, and this will be done with the assistance of the Guaranty Trust Company. Since the beginning of the war, Argentina has negotiated here five loans, amounting to \$79,500,000. It is reported that Russia seeks a loan of \$50,000,000, and that the terms of a new British loan will soon be announced.

### STOCK MARKET RECOVERY

Owing to the sharp decline of prices on the 9th, caused by news of the sinking of ships near Nantucket Light by a German submarine, and to subsequent losses, the New York Stock Exchange record for the week ending on the 14th showed a decided downward movement, with net reductions for active stocks ranging from 3 to 9 points. For fifty representative shares the average decline was about 3½. The break on the 9th, due to fear of complications that might lead to war, had been preceded by one on the 6th, that had for its cause the report that Ambassador Gerard was bringing a peace message from the Kaiser.

In the following week, however, there was a general recovery. At the beginning it was seen that investors and traders had become optimistic, convinced that the peace report had been unwarranted, and that the submarine's exploits would cause no international disagreement. There was a fresh series of million-share days. On Monday, the 16th, sharp advances so changed the aspect of the market that the record showed a net average gain of 2 points for fifty representative stocks. Nearly 5 points were added to the price of Steel shares, which had fallen to 108 in the preceding depression. Thruout the week there were large transactions in Steel,

amounting in two or three of the days to more than one-quarter of the entire business.

After Monday the movement was an irregular and uncertain one, but with an upward tendency, until Friday, the 20th, when this tendency became more pronounced. A net gain of 4 points for Steel (367,000 shares) on that day raised the price to 119%. For the five full days the net average increase, for fifty stocks, was more than 3 points, showing almost a complete recovery from the decline of the week preceding. All anxiety concerning war questions having been laid aside, the favorable financial and industrial condition of the country had due weight.

Among the incidents of the week was the increase of the Illinois Central's dividend rate from 5 to 6 per cent and the announcement that the New York Central at the beginning of next year would issue \$25,000,000 of treasury stock, offering it at par to stockholders, who would be entitled to 10 per cent of their holdings. The money is to be used for improvements.

#### THE COST OF LIVING

Those prices which directly affect the cost of living continue to rise. With wheat selling at about \$1.70 in Chicago, the bakers there are paying \$9.50 per barrel for flour, the highest rate in twenty years, and talking about 7 cent loaves of bread. The export movement of wheat has not been checked, and the National Bakers' Association is appealing to President Wilson for an embargo. Reports concerning the wheat harvest in nearly all European countries are unfavorable. In Argentina the estimate of production has been greatly reduced. Large purchases of wheat have recently been made in Chicago by the joint agency that now represents Great Britain, France and Italy in procuring supplies of grain. Corn prices are following those of wheat, and are higher at Chicago than at any other time in 24 years.

The price of cotton in the New York market has advanced to a little more than 18 cents a pound in response to orders received from various parts of this country and from Europe. New additions to the prices of cotton goods have been made. Holders of cotton say that the foreign demand would not lose strength if the war should end next week, because the exhaustion of supplies in Germany, Austria and other countries would compel them to buy. The Fall River cotton mill employees are soon to ask for a wage increase of 10 per cent, in addition to increases amounting to 15 per cent already granted this year.

A sharp advance in the price of coal, both anthracite and bituminous, is predicted, mainly because the output has been restricted by a shortage of labor. Men have been drawn from the mines to war supply factories by high wages. Settlement of the milk controversy in New York has been followed by a price increase amounting to \$24,000 a day in the great city.

## "Sanatogen, mind you, is not a mere stimulant—"

Between stimulants and tonics there's a vast difference. The stimulant picks you up, only to drop you again almost as quickly. The tonic gives you a benefit that is more lasting.

Even between tonics there is a vast difference. The urgent need has been for a tonic that would not only restore but which would add to the body's very sum and substance by storing up a reserve fund of energy upon which to draw during periods of unusual strain.

It was to meet this need that Sanatogen was created—a union of purest protein and organic phosphorus. How well it has filled this need one can judge from the enthusiastic praise given it by so many famous men and women as, for example: John Burroughs, Col. Watterson, Arnold Bennett, Lady Somerset, etc., and from the unique endorsement given it by more than 21,000 physicians, under whose competent observation Sanatogen has demonstrated its true tonic value.

As Richard Le Gallienne, himself a grateful user of Sanatogen, writes;

"Sanatogen is no get-well-quick remedy. It professes no dishonest possibilities with nature. It does not lift you up one moment, to leave you in the lurch the next. But what it does it does for good!"

So you may be sure that when you accept Sanatogen's tonic help you are receiving lasting benefit.

Sanatogen is sold by good druggists, everywhere, in sizes from \$1.00 up.

Grand Prize, International Congress of Medicine, London, 1913.

## Dangerous Indigestion

Indigestion, Constipation and the more serious ills to which they lead are in common to many men and women. They cause pain and suffering that Dr. John Harvey Kellogg's "Text Book of Sanatogen" tells how to prevent and remedy such disorders. The greatest relief is found in diet and digestion here gives you the results of his long experience as superintendent of the Battle Creek Sanitarium where he has studied and treated thousands of cases of indigestion and constipation. "Colon Hygiene" is a book of facts—not theories. Do you want to renew your energy and stop suffering from headaches and backaches? Have your eyes clear, your skin healthy, and feel the exhilaration of good health thrilling through your body? If so, send this coupon now for a free examination of this splendid book. Learn how easy it is to live like a new man or woman—the pleasant personality that comes from good health—to become satisfied with the joy of living. All this, and more, you may get from Dr. Kellogg's book of 400 pages, which the coupon will bring to you. This free examination offer is limited, so send the coupon now before it is withdrawn.

# The Wonders of Deep Breathing

By O. HARRELL, M.D.

**O**XYGEN is the basis of life. It is oxygen that gives the blood its sparkling redness. It is oxygen that gives the body its warmth and energy. It is oxygen that makes it possible for the food we eat to be transformed into bone, muscle and tissue. Oxygen is to the body what draught is to the steam boiler. Cut off the draught to the furnace and you will smother the fire. Cut off the free supply of oxygen to the human boiler, through shallow breathing, and you will smother the vital fire, which means that every muscle and nerve cell will become weak, sluggish and paralyzed.

The forthgoing truths are recognized the world over, which is proved by the fact that deep breathing is taught in every school, every institution of physical training, and in the army and navy of every country.

The point is simply this: You cannot run a one horse power engine with a one cat power boiler. Yet this is exactly what most of us try to do. Few persons have strong lungs, and those who have strong lungs do not use them. We are shallow breathers; sufferers from oxygen starvation, and still we wonder why we are depressed, nervous, underweight, and why our vital organs fail in their duty.

Breathe, Breathe, Breathe, if you want Health, Strength and Endurance. Have a competent instructor teach you how to breathe. I recommend especially Paul von Boeckmann, the foremost authority of breathing in America. In order to give wide publicity to his teachings and discoveries, he will send his book, "Super-Conscious Deep Breathing and Nerve Building," free to anyone who will write to him, Studio 22, 110 West Fortieth St., New York. This offer bears with it no obligations, but when you have read the book you will feel that you owe him a debt of gratitude for having unfolded to you the startling facts he presents. It contains more real information than most books sold at a high price.

Royal, Smith, and Underwoods for \$15 and up; 100, 150, and 200 for \$20 and up. With every machine we include a polished oak typewriter table with drawers and a set of 12 books for \$10.00.

MINNESOTA TYPEWRITER EXCH., Dept. L,  
310 Third Avenue, S.E., Minneapolis, Minn.

## THE NEW BOOKS

### A PICTURESQUE RADICAL

It is the life of an explorer in the realms of thought and social theory that is outlined in Edward Carpenter's *My Days and Dreams*. To Americans Edward Carpenter is vaguely known as an admirer of Whitman and a poet of democracy. Of the many-sided activities of this original man the general public has no notion. Born of a prosperous middle-class family, Carpenter went to Cambridge, stroked his crew there, cut into the heart of the culture of his college, took orders, and accepted a fellowship. Thenceforth a successful academic career was assured him.

From this comfortable prospect he turned away. His nature rose in revolt against all the ideals of British respectability, and he took his place in the van of "advanced" thinkers. In politics he became a socialist, with anarchy as the distant goal. He was a vegetarian; an anti-vivisectionist; a teetotaler; a wearer of sandals, the sworn enemy of boots and shoes; a practitioner of the simple life; devoted to market-gardening, letters, lecturing, philosophizing. To some he was the prophet of a new social and moral order, to many a voice in the wilderness talking dangerous and fantastic nonsense. The present volume is a sketch of his life, allusive rather than circumstantial, and full of curious interest.

*My Days and Dreams*, by Edward Carpenter. Scribner. \$2.25.

### THE TURNING POINT

Mr. Hilaire Belloc's second volume of *The Elements of the Great War—The Battle of the Marne* confirms his position as a foremost civilian military critic. Of that supreme conflict on the Marne which, as he shows, decided the ultimate fate of the war, he has weighed the evidence to hand with careful and impartial judgment. He explains, for every reader, how it developed that what was purposed to be a fatal blow dealt by the almost superhuman German military machine fell short, and how in the resulting confusion a masterly French counterstroke dispelled the danger of another such attack. From the haze enveloping the operations on the Marne he illuminates two features which hitherto have escaped the due attention of even military critics—General Joffre's "Mass of Maneuver" strategy, and the Battle of the Grand Couronné. The manner in which General Joffre employed the "Mass of Maneuver" was by concentrating in the rear large and practically independent bodies of reserve taking orders only from the High Command and prepared to strike in at a favorable moment.

Thus it was that General von Kluck suddenly found his exposed right flank

seriously threatened by the "Mass of Maneuver" army of General Maunoury when the Allied left under General French seemed on the verge of annihilation. It was his summoning reinforcements from the German Center to meet this emergency that led to what Mr. Belloc terms a "dislocation," and the opportunity for the blow delivered by General Foch's "Mass of Maneuver" army which turned the Marne into a decisive French victory. Mr. Belloc withholds blame from General French for not attacking Von Kluck, for, apart from the exhaustion of his force, his part would seem to have been to hang on to the end of the line but refrain from any action which might jeopardize the success of General Maunoury.

The significance of the able discussion of the Battle of the Grand Couronné in relation to the Marne must impress the student of military movements. Reckoning by divisions Mr. Belloc estimates the opposing forces at the Marne as seventy-five German to fifty-one French in a numerical proportion of more than seven to five. This is probably a very conservative estimate of the German strength, for when we come to numbers of men to a division—an elastic term—we find there have been German divisions of over 22,000 opposed to Allied divisions of less than 20,000. The book is illustrated with numerous plainly instructive diagrams, and should become a standard work on the Great War.

*Elements of the Great War, The Battle of the Marne*, by Hilaire Belloc. Hearst. \$1.50.

### CHOOSING ONE'S WORK

There are still large sections of the population that resort to palmists and card shufflers, astrologers and bumpologists for guidance in the selection of horses, spouses, occupations, and other important accessories to happy living. To these modern science offers nothing but new and high-sounding names. To other sections of the population, however, the results of patient laboratory research may offer a new point of view and new methods for reaching important decisions.

Dr. Hollingworth's *Vocational Psychology* adequately exposes the fallacies of the phrenologies and physiognomies as agencies for discovering native traits of vocational significance. He recognizes the limitations of the laboratory method, limits as yet to a large extent determined by the fact that the operations mental and muscular involved in the various occupations have not yet been adequately analyzed; but there are limits determined by the nature of the human organism, as well as those determined by the method itself. That a mere beginning has been made in this field is indicated by the fact that

this most complete summary of the subject does not even touch the problems which are raised by the effects of the various kinds of work upon the worker.

*Vocational Psychology*, by H. L. Hollingworth. Appleton. \$2.50.

### HAMLET AMONG NATIONS

Three serious studies of Russian affairs have recently come to us from Great Britain where the need for an understanding of the great ally is giving rise to a large amount of pro-Russian literature. *Self-Government in Russia*, by Paul Vinogradoff, professor both at Oxford and Moscow, is a very compressed study of the gradual rise of what outsiders are prone to think a sudden change in Russian government since the Russo-Japanese war. It explains the effects of the various political changes rather than the changes themselves. The chapter on popular education is especially interesting. Professor A. H. Murray introduces C. E. Bechhofer's *Russia at the Cross Roads*. This takes up in most readable way the various forces at present active—the racial elements in the empire; the unused wealth; the Mir; the ancient communal system and its possibilities; the orthodox church and other religious forces; Rasputin, whom the author talked with; and, in the closing chapter, the necessity for either Russian ownership or the neutralization of the Dardanelles.

James Y. Simpson, of New College, Edinburgh, has made a most careful and sympathetic study in his *Self-Discovery of Russia*. Not covering all the historical ground of the first book mentioned, nor as picturesque or as coherent as the second, it has a wider scope. There is broad minded investigation of the effects of the prohibition of vodka, for instance, a description of the efficient system that has been developed among the local governments by the sudden need of caring for the sick and supplying the needs of the soldiers. Both Mr. Bechhofer and Dr. Simpson consider some form of self-government for Poland a matter of course, and both agree as to the safety for the rest of Europe as well as the benefit to Russia in the granting her rights in the Dardanelles. Much of Dr. Simpson's argument is given in quotations from Russians and Poles, and his book has the additional value of an index lacking in both the smaller books. From an American journalist comes one of the most informing and interesting of all the books on Russia brought forth by the war. Richard Washburn Child took time to really see what he went to see, and his account of the spirit of the people, of the women, of the vodka prohibition, of American dulness in commercial dealings with the Russians, and above all his story of the little known, but appalling sufferings of the refugees from the front make *Potential Russia* much more than the note book of a clever reporter.

*Self-Government in Russia*, by Paul Vinogradoff. Dutton \$1.25. *Russia at the Cross Roads*, by C. E. Bechhofer. Dutton \$2. *Self-Discovery of Russia*, by J. Y. Simpson. Dutton \$2. *Potential Russia*, by R. W. Child. Dutton \$1.50.

## A Warmer Home in Winter A Cleaner Home in Summer

**W**INDOWS equipped with Chamberlin Metal Weather Strip—and there are ten million of them—prevent draughts, save money in coal bills, exclude dust, smoke, soot and noise. Chamberlin Metal Weather Strip is an interlocking device that protects your home at the most exposed points—the windows and doors.

Glance at the illustration opposite. Note how snugly the Chamberlin Equipment fits the window. No crevice to let the cold air in or the warm air out. It is not unusual for Chamberlin to save 20% to 40% in fuel cost. It does it for thousands of enthusiastic owners. Moreover, Chamberlin assures an evenly heated home.

Chamberlin Equipment on your windows means freedom from window troubles for all time. It is not sold through dealers. It is made, installed and guaranteed for ten years by the Chamberlin Metal Weather Strip Co.

## Insurance

Conducted by

W. E. UNDERWOOD

### WHO BEARS THE EXPENSE?

In an article recently appearing in this department, it was observed that even under the best results which skilled and economical management could attain, life insurance is an expense. A correspondent in Calgary, Alberta, Canada, asks if I refer to the expense incurred by the company in carrying the risk, or to the expense incurred by the person insured.

The company, if properly managed, is at no expense whatever. It must collect from the insured more than enough to cover the cost of the service. I meant, therefore, that life insurance was an expense to the insured.

Is not the fact apparent? Somebody pays the death losses and agency and management expenses. In this case there are only two parties: the policyholders and the company. The company—and by the word company I mean the corporation which collects and distributes the money—could not long exist if it bore the expense. It follows, then, that the policyholders do.

My correspondent asserts that if the insured under a Term policy survived the contract period, or if the insured under a non-participating Whole Life policy lived to an advanced age, my position might be correct; but that a participating contract in a well established company is not an expense. He adds: "In event of an early death the face value would be much greater than the deposits by the assured, and in event of a long life the dividends of the contract would produce a paid-up contract before the deposits would reach a sum equal to the principal."

Answering the first clause of this statement: up to the date of early death the policy was all expense to the holder to the extent of the total premiums paid, a very small sum compared to the amount insured; but the sum insured in the shape of a death benefit immediately became an expense to his surviving fellow-policyholders. Answering the second clause of the statement: we know that at most ages the total premium on a Whole Life policy is very much less than the sum insured. At age 40 the Single Premium, calculated on the American Experience 3 per cent basis, is \$503.14 per \$1000. If an insured under this arrangement dies the first year, his personal expense is \$503.14, and that of his fellow-members, \$496.86. If he lives out his "expectation," 28 years, and if money is worth 5 per cent, the gross cost of his \$1000 insurance is \$1151.18. To get at the net cost we must ascertain the cash surrender value at the end of the 28th year, to which must be added the sum of all the divi-

### DIVIDEND

**KINGS COUNTY ELECTRIC LIGHT & POWER COMPANY**  
Brooklyn, N. Y.

67th consecutive Dividend.

The Board of Directors, at a meeting held October 16, 1916, declared a regular quarterly dividend of 2 per cent on the capital stock of the company, payable on December 1, 1916 to stockholders of record at 3 P. M., November 20, 1916.

Checks for the above dividend will be mailed.  
P. R. ATKINSON, Treasurer.

dends and interest thereon. But as few persons pay a single premium, we will take the cost of \$1000 insurance, Whole Life, age 40, on the annual premium method for 25 years.

The annual premium would be \$30.94. At 5 per cent for 25 years the gross premium payments would be worth \$1550.49. Assuming that the dividend will average 20 per cent of the annual premium during the whole period, these at 5 per cent would aggregate \$310.20. Add to this the cash surrender value at the end of the 25th year, \$488.02, and we have \$798.22, which deducted from the gross cost, \$1550.49, shows us that the net cost has been \$752.21. On the same basis of calculation the net cost during the first ten years would be \$154.67.

But detailed calculations are unnecessary. Go back to the fundamental facts: there are death losses and management expenses; the company is but a medium through which the policyholders carry out the scheme of insuring each other; their premiums are money, and money is worth interest.

T. T. M., Washington, D. C., asks for "a good rule for determining what amount of fire insurance should be placed on a house," adding that he can see why neither the original cost of construction nor present market value would constitute a satisfactory standard. Assuming a total absence of moral hazard thruout the period of insurance, a sum equaling 100 per cent of the present market value would be just and proper to insurer and insured. But this theory is not practicable in many cases and good judgment on the part of the insurer would place the insurable value at about twenty per cent less. The amount insured under a fire policy represents the maximum for which the insurer is liable and as actual market values fluctuate, it is obvious that an adjustment of the loss becomes necessary for the purpose of ascertaining the value destroyed at the date on which the loss occurred. In other words, the insurer undertakes to make good the actual loss suffered in a sum not exceeding the amount written in the policy.

E. C. W., Boone, Iowa. There are a number of text books on both the theory and practise of life insurance which are of value to beginners in the business. One of the most comprehensive is "Life Insurance; a Text Book," by Solomon S. Huebner, Ph.D., published by D. Appleton & Co., New York, at \$2. The Northwestern Mutual Life and the Mutual Life have distributed what they call Educational Leaflets, both of which are of great practical value. On the subject of rates and dividends, "Flitercraft's Compend," published by A. J. Flitercraft, Oak Park, Ill., is an authority. Current history may be followed by reading several good insurance journals. For addresses and discussions, procure the proceedings of the National Association of Life Underwriters, 58 Pine Street, New York City, the Association of Life Insurance Presidents, 165 Broadway, New York City, and the American Life Convention, Thomas W. Blackburn, secretary-treasurer, Omaha, Neb.

H. A. B., Oglesby, Ill. Well established life companies of the first class discourage the use of Term policies for long periods because as the vast majority of insured persons survive the periods, they make no progress in building up a provision against death, with the result that the conclusion reached is unsatisfactory. Nearly all the companies indicated will issue five and ten year Terms with the privilege of converting them before expiration into Ordinary or Limited Payment or Endowment policies for the same amount.

## Presents THE GENIAL PHILOSOPHER

"HALLOWE'EN!" sneered the Cynical Sciolist, gazing ruefully at his silk hat which had been knocked off his head by the seeming inadvertence of a Halloween reveller. "Say rather hollow-e'en! Sheer emptiness! Idiotic, slap-stick tricks! Look at that hat! Ruined by an invisible piece of twine strung from a lamp-post to —"

"Hold on there, Brother," cried the Genial Philosopher. "Not so fast. Have a heart—be human just a minute. Didn't you ever play any of those Halloween pranks yourself? Did you never enjoy the thrill of fastening a tic-tac upon a neighbor's window, and waiting in a hidden nook nearby to witness his wrath? Best of all did you never, as the clock struck the mystic hour of midnight, with a mirror in one hand and a lighted candle in the other, walk backwards down the cellar stairs, and, peering into the mirror's depths, try to discern therein the face of the one you loved best?"

"Sure I did," returned the Cynical Sciolist. "I've been as big a jackass as the rest of our poor suffering humanity, but I've reformed. I've tried that mirror trick dozens of times, but it didn't work. When I looked in the glass all I ever saw was myself."

"And yet you say it didn't work!" laughed the Genial Philosopher. "You of all people in the world. If you were looking for the face of the person you loved best, in Heaven's name whose face did you expect to see if not your own?"

"Piffle!" ejaculated the Cynical Sciolist. "And all that rot about Ghosts! Who the dickens believes in Ghosts these days?"

"I do, for one," returned the Genial Philosopher. "The world is full of 'em, and is what it is today because of 'em. Invisible, intangible, realities. The most real of all real things, because everlastingly fixed."

"Of course, if you take the narrow view of what a Ghost is, you are justified in regarding them with suspicion. The notion in some people's minds that a Ghost is a cold, dank, clammy bit of malarial ooze that rises up out of nothingness to haunt them is, of course, foolish. That is the kind of Ghost that Coleridge doubtless referred to when, in answering an acquaintance who had asked him if he believed in Ghosts, he replied, 'No, I have seen too many of them.' But the *real Ghosts*, the true spirits of the past that come to haunt us—what indeed would we be today without them?"

"The Ghosts I mean are the great spirits of the past that still live in our hearts, and whose teachings are vital to our growth. Homer, Moses, Shakespeare! Cromwell, Washington, Jefferson, Hamilton, Lincoln!

### AND THEN THE GHOSTS CAME

Every nation that has records, my friend, has its Ghosts, and only those nations that have never enjoyed a taste of civilization are without them. England's Ghosts are Richard Coeur de Leon, King Arthur, Alfred the Great, Milton, Horace, Virgil, Cæsar, Leonardo da Vinci, Michael Angelo—these are some of the Ghosts of Italy. Where would France be today deprived of the spirits of Joan of Arc, Henry of Navarre, Moliere, Racine, Rabelais, even of that of Napoleon? And we ourselves, are we not constantly haunted by our great galaxy of Ghosts appealing to us from their high pinnacles and offering us so lavishly the rich gifts of the spirit we so sorely need in our present emergencies? When you, for instance, my dear Sinnick, have been overcritical of other sections of your country, and are thanking Heaven that you at least are Podunk first, last and all the time, have you never been haunted by the spirit of Patrick Henry, come to whisper in your ear—*I am not a Virginian, but an American!* When you talk about Peace At Any Price did good old Ben Franklin's Ghost never come to you to tell you that even *Peace may be purchased at too high a figure?* And in your occasional moods of criticism of what you are pleased to call Militarism did Washington's Ghost never bid you remember that *to be prepared for War is one of the most effectual means of preserving Peace?*

"Then take the Ghosts of Literature—why, I know a man who having failed as a plumber decided to take up literature. Reading the modern magazines had shown him what an easy stunt it had become, and when some one told him that while a plumber might fail at writing romance, as a writer of free verse he could not possibly do worse

than any of its most successful practitioners, he decided to become what he properly called a Verse Libertine. He bought a fountain pen and a pad, and started. His first production he called "How Many Jackasses Are You," and it went this way:

I am four jackasses.  
One is hitched to a cart,  
Resenting his job,  
And braying at space.  
Another has his nose in the thistle-patch,  
Filling his tum-tum with thorns to aid his digestion.

A third is ruminating under the greenwood tree,

And the fourth—  
He is kicking another jackass out into the universe.

How many jackasses are you?

"Excellent work," said the Cynical Sciolist.

"For a Plumber, yes," replied the Genial Philosopher. "But when he had written that, and had bought enough return-stamps to cover the probabilities, he retired to await the dawn when he should burst upon the Horizon of Letters as a true Poet. And then the Ghosts came. Wordsworth, and Shakespeare, and Rossetti, perched themselves on the foot of his bed. Wordsworth read him his *Sonnet on Milton* and his *Ode to Duty*. Rossetti gave him three of his *Sonnets of Life*, and Shakespeare handed out his *All the World's a Stage* soliloquy. Then they faded away, and poor old Sodderpipe turned over on the other side, and, lo and behold, on the top of his bureau sat Shelley, and Keats, and Poe. Shelley advanced to his bedside and recited his *Ode to a Skylark*. Keats jumped off the bureau and sang his *Hymn to Pan*, and old Poe got to work on him with the rhythmic measures of *The Bells*—and what do you suppose that Plumber did?"

"Woke up," said the Cynical Sciolist.

"Precisely," said the Genial Philosopher. "He woke up to the fact that he wasn't a Poet at all, judged by any decent standards, just as you, haunted by the broad Americanism of Patrick Henry, by the self-sacrificing heroism of Nathan Hale, by the profound philosophy of Benjamin Franklin, and the far-seeing patriotism of George Washington, will realize how narrow is your Podunkian Provincialism, and how blind you are to the difference between the spirit of Militarism and a decent Preparedness."

"Your story is not convincing," laughed the Cynical Sciolist. "Literary Ghosts don't haunt Plumbers. No plumber ever heard of Shelley, Keats, Rossetti and —"

"This one did," said the Genial Philosopher. "He learned all about them in my library. While waiting for his Helper to return with articles to repair my pipes he used to sit in my den reading poetry at my expense at the rate of four dollars and a half an hour."

## REMARKABLE REMARKS

EMPEROR WILLIAM—The Lord of Hosts is with you.

LILLIAN RUSSELL—Go to bed with a clean face.

THEODORE ROOSEVELT—I am a peaceful literary man.

DR. FRANK S. ABBOTT—Be merciful to the drug fiend.

CONDUCTOR PASTERNAK — Conducting cannot be taught.

CHARLES E. HUGHES—I am opposed to being dictated to.

CHARLES WARREN FAIRBANKS—Our patience is exhausted.

THE BISHOP OF WORCESTER—No one plays golf any more.

REV. W. R. YARD—I am not interested in the life after death.

PROF. H. E. FOSDICK—There have never been any good old times.

JOSEPHINE DASKAM BACON—A mother is better than a matron.

THE BISHOP OF LONDON—The Londoner has the heart of a lion.

PRESIDENT HADLEY—Yale stands for poetry as distinct from prose.

DAVID LUBIN—President Wilson is neither a dreamer nor a cabbage.

MICHAEL MONAHAN—In regular English Riley is superior to Robert Burns.

BISHOP T. F. GAILOR—The greatest danger to American life is irreverence.

SECRETARY MCADOO—Wall Street has always dominated the Republican Party.

VICE-PRESIDENT MARSHALL—I am one of these blind-eyed fatalists who cannot be scared.

THOMAS A. EDISON—This talk of the United States being despised is all nonsense.

DR. CHARLES E. JEFFERSON —If one nation is armed, then all must arm; therefore none should arm.

REV. ROBERT WATSON—Billy Sunday is the best known, best hated, and best loved preacher now living.

WILLIAM F. MCCOOMBS —There is no need of rubber shoes when you are appealing to the people.

ED. HOWE —The Democrats are as good as the Republicans, and the Catholics as good as the Protestants.

HARRY A. FRANCK—A traveler is a man who tosses a toothbrush into his pocket and strolls out of town.

GIFFORD PINCHOT—The war party in the United States is essentially a moneyed and leisure class party.

KING CONSTANTINE —The holy ikons that have protected you in the past will protect you in the future.

MARGARET HINCKLEY, Labor Leader—The next time a cop attacks you women grab him by the feet and turn him upside down.

DAVID ROTROFF—Logansport, Indiana, has a ball player so full of pep he slides home when he is forced in by a base on balls.

MME. HELENA PADEREWSKI—There are no children in Poland today under eight years of age except the sons and daughters of war brides.

IRVING S. COBB—Except dogs afflicted with fleas, sage grouse are the only members of the gallinaceous or scratching tribe that are gizzardless.

CORRA HARRIS—If a preacher has never seen the inside of a ballroom or danced with a woman he is sure to have an evil imagination about such things.

MEYER LONDON—I am going to be a member of the Sixty-fifth Congress and no ignoramus of a Tammany Hall-kosher-ham sandwich statesman can keep me from it.

CARDINAL FARLEY—If the children of a parish are not taught the law of God, in a generation or two the Catholic Church will be as deserted as are those outside the faith.

THE POPE—Our bitter grief over the frightful bloodshed is increased by the fact that our repeated efforts for peace encounter contemptible attempts to cast suspicion on our motives.

GERTRUDE ATHERTON—I have heard a cultivated European woman say that it was unthinkable that any decent women would ever live again with the men who had lived so long like filthy beasts in the trenches.

## BOOKS AND WRITERS

John Wanamaker long ago made concerts an important part of his shop. Now another New York firm, Lord & Taylor, is introducing literary lectures in its book store. The first is on O Henry, whose life is shortly to be published.

Since the British Government has put difficulties in the way of importing foreign language Bibles from Stuttgart the supply for our foreign speaking citizens is short. Here is a cargo for the German U boats! If they don't bring them we may have to print a few ourselves.

The New York Public Library is giving out Mark Twain's stories in all sorts of languages. There are twelve put into German, six into Hungarian, five into Bohemian, several in Danish, Swedish, Finnish, Spanish and Italian, and even the folk who read only Polish or Little Russian can laugh over *Huckleberry Finn*.

We were led into a discussion of the Russian sense of humor by the item of news as to the great popularity of Booth Tarkington's *Seventeen* in Petrograd. But the discussion closed on the discovery that buyers were American, English and French war correspondents!

Margaret Deland has been busy this summer, in the time her new novel *The Rising Tide* left her, with the collection of the American Author's Fund for wounded of the Allied armies. Authors were asked for a dollar each. \$2400 came in, and has been sent to the Serbians, the Italians and to France, much of the last appropriately to Edith Wharton for distribution.

In two books of reminiscences this year figure two tablecloths, those of hostesses who had the amusing notion of making guests write their names on the table linen. These signatures were later outlined, on cloth—one in white, one in red. The wife of Toby, M. P., author of *Nearing Jordan*, is one, Mrs. Alec Tweedie, author of *Tablecloths*, the other of these autograph collectors.

Some years ago a little Greek girl, Demetra Vake, landed in this country. At sixteen she began to take care of herself and worked first on a Greek newspaper. Then, because she did not meet English speaking people, she turned her languages to account and taught French. A few years ago she wrote *Haremlik*, one of the best studies on Turkish women ever written, and her new book, *The Grasp of the Sultan*, comes out this autumn.

## *The Finality of Gorham*

In all branches of human endeavor, in Industry, in Art, and in Letters, there are certain names which convey the idea of finality, outshining all others as the North Star outshines subsidiary planets.

*Gorham is that name in Silverware.*

And when you buy Sterling Silverware with the celebrated Gorham imprint on it,  you have the satisfaction of knowing that you have purchased the finest silverware for the money that the world affords.

For sale by leading jewelers everywhere.

## *The Gorham Company*

*Silversmiths & Goldsmiths*

*New York*

## THE INDEPENDENT VOTER ON NOVEMBER 7

**T**HE campaign closes. The tumult and the shouting die. The voter, alone in his square little wooden cell, must answer the question for himself, Whom to vote for? If he is a "good" party man—rock-ribbed Republican or dyed-in-the-wool Democrat as the case may be—he need not hesitate. Seldom has it happened that the tickets of both parties have been headed by men of such character, ability and reputation. Wilson belongs to the best in the Democratic party; Hughes to the best in the Republican. No man who believes in his party first, last and always need feel a pang of regret as he casts his ballot for Hughes or Wilson electors. But what of the independent voter? For whom shall he vote?

We might answer that question categorically, with a single name, and support our assertion with heated, positive, partizan arguments. But The Independent does not care to appeal to the reader who would meekly accept such a leading, and faithfully follow it. The Independent thinks for itself. It wants readers who think for themselves. To such readers it conceives it to be its function to provide food for thought.

The independent voter's answer to the final question must depend on his answer to another, What do I want in a President? He must decide for himself whether he wants the Wilson kind of President backed by the Democratic party, or the Hughes kind of President backed by the Republican party.

The parties are as they are. The Democratic is the party traditionally instinct with sympathy for the masses, with its historic record marred by the stain of slavery and characterized, whether for good or ill, by a belief in states rights and in the undesirability of any governmental concern with the life of the people that can be avoided. The Republican is the historic party of nationalism and strong, efficient government, its record bearing the stigma of dominance by special interests and of exaggerated sympathy with property.

The Democratic belief in states rights and in a minimum of governmental action has been largely modified, under the leadership of Woodrow Wilson, in the direction of nationalism. The Republican tenderness toward the propertied interests has received, under progressive leadership, conversion into a militant defense of popular rights. Even on the question of tariff, once the major point of party antagonism, the two parties have come to differ rather in degree than in principle.

As to the two candidates themselves, in point of integ-

rity of purpose, highmindedness, and fearlessness of conviction, there is nothing to choose. Each man is his own master; each has fought the bosses of his party to the death. They have widely different types of mind; Mr. Wilson feels more deeply, Mr. Hughes thinks more incisively. Mr. Wilson has the broader, warmer sympathy with humanity; Mr. Hughes has the more clear-cut intellectual grasp of political and economic facts.

What can be expected of each of the candidates, as set forth by himself during the campaign? The Republican campaign has been directed primarily against Mr. Wilson's foreign policy; the Democratic campaign has been based primarily upon the Wilson administration's record of legislation. The administration's friends congratulate the country that he has kept it out of war. The administration's critics assert that in keeping us out of war Mr. Wilson has made unnecessary and deplorable sacrifices. Mr. Hughes promises to strengthen our national foreign policy in its upholding of the rights of American citizens and the American people. Mr. Wilson promises a continuation of the splendid program of legislation which has been enacted on behalf of the popular welfare.

The weakness of the Republican position is that the Democrats have passed so many excellent laws on important subjects that little can be offered by the opposition that does not seem either unnecessary or imitative. The weakness of the Democratic position is that the Mexican problem is still in chaos, our army is still in Mexico, our militiamen still on the border, and no plan to end the difficulties has yet seen the light, even in the councils of the excellent Joint Commission now meeting at Atlantic City; that the administration's foreign policy did not prevent the wanton killing of scores of American citizens, for whose death no compensation whatever has been received.

There is one more leading point of difference between the two candidates—on the President's action in the eight-hour case. The strength of the Democratic position is that the disastrous railroad strike was averted, and that the eight-hour day, as a general proposition, is in the line of industrial and human progress. The strength of the Republican position lies in the effectiveness of the criticism that the President yielded to the threats of a group in the nation, and in the plausibility of the declaration that the eight-hour day established on the railroads is not an eight-hour day at all—in the sense of a shortening of the railroad man's actual working hours—but a mere device for compelling an increase of wages.

It is with these considerations in mind that the independent voter must approach the ballot box with its huge question mark on November 7.

There are two other things he can do than vote for Wilson or Hughes. He can vote the Socialist or the Prohibition ticket. But to do so is to give up the privilege of having an active voice in the actual selection of a President. He can vote the Prohibition ticket because he is so keenly alive to the evils which flow from the liquor traffic that he would rather stand up and be counted against their continuance than really to help elect the President. He can vote the Socialist ticket either as a general protest against existing economic inequalities and oppressions or because of a positive belief in the Socialist program as the way toward the light. In either case he can have the satisfaction of feeling that, being in a hopeless minority, he is probably right; but he will not make his vote effective in determining how the nation shall be governed during the next four years.

So the independent voter goes to the polls. He will choose according to his temperament, his beliefs and his sympathies. His vote will, as usual, decide the election.

### THE INNOCENT BYSTANDER

THE neutral's lot is not a happy one. Whatever he does or does not do he is sure to offend one party and usually both. If we had thought to gain a little gratitude by sending out a flock of destroyers to pick up the refugees from the ships sunk by the "U-53" we now know we were mistaken. Lord Beresford, speaking in the House of Lords, said, "But for the gallantry of the American naval service lives would have been lost. This being so the United States was rather aiding and abetting this shocking state of affairs." Would Lord Beresford like to have had us let them drown so that the United States would be compelled to declare war on Germany?

What particularly aggravates the English is that the United States destroyer "Balch" complied with the request of the "U-53" to move to one side so that the submarine could torpedo the British liner "Stephano" after her crew and passengers had taken to the boats. "Do you suppose that a British warship would stand idly by and watch a Japanese submarine sink an American vessel?" is one of the questions asked. Of course not. England is the ally of Japan and so the British warship would naturally be expected to join in and help the Japanese sink the American vessel. But in case the British Government did not construe its treaty with Japan as obligating it to take part in a war against the United States, the only thing the warship could do would be to move out of gun fire and give the Japanese a free range.

That is in fact just what the British, French, German and Japanese warships did for us in Manila Bay. Admiral Dewey in his autobiography says that on August 9, 1898, he notified the foreign men-of-war to shift their anchorages so that he could bombard the Spanish forts on the following morning, and they complied; the British with willingness, the Germans with reluctance. It was indeed a bitter disappointment to Admiral von Diedrichs to have to stand by and watch the city and the land coveted by his Kaiser fall into the hands of the Yankees. There were three German cruisers in the harbor then, with about twice as many men as Dewey had in his whole fleet. The cable was cut and Admiral Dewey had

to act upon his own responsibility when he threatened Diedrichs with war if he did not keep his ships out of the way. In the enforcement of his blockade, Dewey had the support of only one of the four foreign commanders in Manila Bay, Captain Chichester of the British ship "Immortalité," and when the American fleet passed the "Immortalité" on their way toward Manila her guard was paraded on deck and her band was playing Dewey's favorite march. When the foreign men-of-war were officially notified that the city was in American possession "only Captain Chichester," says Dewey, "acknowledged the notification by firing the national salute of twenty-one guns with the American ensign at the main."

In this crisis of our national life, the British were neutral, but it was neutrality of a very friendly kind, much the same sort of neutrality as we are displaying toward England at the present time. It is well for both Americans and British to recall this incident now when our tempers are strained by the problems of the war.

### EUROPE ASKS OUR HELP

VISCOUNT GREY, Secretary for Foreign Affairs in the British Cabinet, now publicly endorses the program of the League to Enforce Peace and commends Mr. Wilson and Mr. Hughes for their espousal of the cause. He even went so far as to say, in his address before the Foreign Press Association last week: "If the nations had been united in such an agreement and prompt in resolution to insist in 1914 that the dispute must be referred to a conference or The Hague, that the Belgian treaty must be observed, there would have been no war." But most significant of all was his advice to the neutrals, in which he said: "The best work the neutrals can do for the moment is to try to prevent a war like this from happening again."

This is a direct challenge to the United States. It means that the Allies at least want us to lead in the great reconstruction after the war. Now, therefore, is the time for the League to Enforce Peace to spread its propaganda into every corner of the land. It would be a burning disgrace if, when the nations assembled at the close of the war to build up a new civilization, the United States were not ready to play a part in the great reconstruction. The League to Enforce Peace has given to the world the one great constructive idea born amid war's universal destruction.

### AN INTERNATIONAL PEACE PARK

IT has been suggested that at the close of the war Palestine be set apart as a peace memorial. The significance of such an international undertaking would be immeasurable. Since we have city, county, state and national parks, why not an international park? If such a plan were to be adopted no more appropriate place could be chosen than that little stretch of territory that has influenced so mightily all modern states.

What rivalries it would allay to have this Holy Land under international control and open under favorable conditions to the pilgrims and travelers of all countries and creeds! For the moiety of the price of a small war this land where the Peace Movement was born and cradled could be made a world sanctuary of natural beauty, holy memories, and inspiring ideals. Why not establish

an International Palestine Peace Park to heal the wounds of war and commemorate the greatest human sacrifice for ideals the race has ever made?

### THE REAL INVASION FROM MEXICO

THE American people have had many yellow warnings against the army of Japanese spies and soldiers disguised as students, merchants, farmers, cooks and mechanics, swarming over our unsuspecting land, and waiting only for a given signal to rise, unite and seize the republic. This week we have some remarkable figures to disclose about the "200,000 trained Japanese soldiers" in Mexico you have all read about who are only waiting "Der Tag" when they can march north to form a junction with the Japanese Northern Army of Occupation. Here are the facts. There are now in the Mexican Republic 2000 Japanese, of whom 300 are women and children. Of the 1700 male adults, about 800 are mining laborers, 400 are farmers, 200 are domestic shopkeepers, and the remaining 300 include storekeepers, physicians, carpenters, tailors, fishermen and miscellaneous laborers. As these figures are given out by the wily Japanese legation in Mexico, it is quite evident that in order to fool the people of the United States they simply dropt off two ciphers from the real figures. To arms, citizens! To arms!

### ARE WE PREPARED

We have not a moment to lose. We must get out of this condition of being fatted capons. If this country is worth anything it is worth saving.

THUS spake H. M. Byllesly a few days ago at a luncheon in Chicago, where \$30,000 was subscribed to start a National Organization to induce Congress to pass legislation making military training and military service universal among the youth of the land.

Apparently, then, we are in for a campaign to make every male citizen in the United States a soldier. What should be the attitude of sensible people on this question?

In the first place, universal service in time of peace is so revolutionary a departure for this country that it can only be urged as a dire and all-compelling military necessity. Is there any such necessity? Let us see. Congress has just authorized a defense budget of \$67,344,000, the greatest sum ever appropriated in time of peace by any nation on earth for military purposes. The naval program laid down will give us in three years 157 additional ships. Altho our navy was already third in rank among the nations of the world, our fleet is to be increased by ten battleships, six battle cruisers, ten scout cruisers, fifty torpedo boat destroyers, sixty-eight submarines, one hospital ship, three fuel oil ships, two ammunition ships, two gunboats, two destroyer tenders, one fleet submarine tender, one transport and one repair ship. We are to have 87,000 sailors to man these ships. This means that our naval program, which cost \$150,000,000 in 1913, the year before the Great War, will this coming year cost us \$588,000,000.

The army program is not one whit less impressive. The infantry is to be increased from thirty-one to sixty-one regiments, the field artillery from six to fifteen, the cavalry from fifteen to twenty-five and the

coast artillery from 170 companies to 363. The standing army is to be increased from 102,000 to 220,000. Every soldier is to enlist for seven years, three years of active service, four years of reserve service. In ten years there will be 2,000,000 men training every summer. The National Guard has been increased and become practically a part of the regular army. It is calculated it will comprize about 440,000 men. The army program which in 1913 cost only \$100,000,000 has expanded to \$267,000,000.

When it is remembered that the navy is our first line of defence and that, according to Admiral Vreeland, no navy today can operate at more than fifty per cent of its strength over 3000 miles from its base of supplies it would seem as tho we ought to be equal in fighting strength to any possible opponent in our own waters.

But, since Admiral Dewey has said that our navy is already as good as any on earth and General Miles has said that our army could drive any foreign foe into the sea that landed here before they could go back and get reinforcements and President Wilson has said "this country is not threatened from any quarter," we may conclude that our present military forces are large enough at least to "hold the fort" until our great citizen volunteer army can be recruited, equipt, drilled and prepared for action.

The experience of England in the present war demonstrates that a volunteer citizen army recruited after the war has begun is as good as any possible conscript army, no matter how long and highly trained, if only a little time is given to get going. The army and navy of the United States as provided under the recent legislation would seem to be able to give the American citizen that time whenever the country needs his services. Why take him out of civil life till then?

### WILL WOMEN VOTE?

OVER three hundred thousand women have registered for the election in Chicago.

Still the anti-suffragists go on with their cry that women do not want to vote.

Perhaps not; but they *will* vote.

Nearly a third of a million women registered in a single city! What have the woman's-place-is-in-the-home people to say to that?

### RUMANIA IN PERIL

JUDGING by the looks of things, Ferdinand of Rumania may soon have to decide whether he will stay in his capital and be captured or escape by the one railroad that is still open and join the other kings in exile, Albert of Belgium, Peter of Serbia, and Nicholas of Montenegro. The Rumanians seem helpless. The Russians have failed to come to their rescue and no other country can.

Apparently the Allies made a mistake in bringing Rumania into the war at this time. The hopes that were entertained a few weeks ago, that it would mean the conquest of Hungary, the crushing of Bulgaria, and the recovery of Serbia, have proved fallacious. Doubtless the entrance of Rumania did cause a weakening of the other fronts, and to this we may ascribe the gains of the British on the Somme, of the French at Verdun, and of the Italians at Gorizia. But these gains so far do not begin

to compensate for what the Germans will gain if they carry out their present campaign to completion.

The *London Times* says: "A successful invasion of Rumania might enable the enemy to hold out for at least another year." This is quite likely, for in Rumania the Germans will find an abundance of petroleum to furnish fuel for their Diesel engines and gasoline motors. Rumania is rich in corn and wheat, and besides this season's harvest there is last year's store, which was bought up by the British to keep it from Germany, but which could not be delivered because the Dardanelles were not opened. If this grain is not burned by the Rumanians as that at Constanza was, it will go far toward relieving German hunger. So will the 3,000,000 cattle, the 5,000,000 sheep, and the 1,000,000 pigs that feed on the Rumanian pastures. The conquest of the Dobrudja, now almost accomplished, will give the Teuton powers the command of the Danube from source to sea, and this will serve not merely for grain delivery but will enable them to send their submarines down to the Black Sea and thence into the Mediterranean.

Rumania was made by sticking together two different countries, Moldavia and Wallachia, and so it is shaped like an elbow. Now Falkenhayn is pushing on the inner angle while Mackensen is pounding on what we should call the "crazy bone," but which the maps name the Dobrudja. Falkenhayn is only fifty miles away from Bucharest on one side and Mackensen only thirty miles away on the other side. If they meet Rumania will be cut in two.

Two years ago, when the Allies were urging Rumania to join them, Premier Bratiano refused, saying that Rumania was too exposed to enter upon such an adventure without ample guarantees. He urged that his country was fortified only on the eastern side against Russia, that being allied with Austria-Hungary the Carpathians had never been put into a state of defense nor mountain troops developed, that the Rumanian army was dependent upon Austria and Germany for its war material, and that a successful offensive from Hungary would soon penetrate to the capital and would then cut the country in two.

These were certainly cogent arguments against entering the war, and one wonders what guarantees the Allies offered sufficiently strong to make him reverse his judgment, especially since the participation of Bulgaria has more than doubled the danger to Rumania.

### CAMPAIGN NONSENSE

**P**OLITICAL campaigns breed absurdities as stagnant pools bring forth mosquitoes.

One of the most fantastic of the present campaign is the Democratic assertion that a Hughes administration would mean the recrudescence of reaction and the dominance of special interests.

Hughes and reaction? Lengthen out your memory a little. Ask any special interest in New York State how much comfort it got out of Mr. Hughes as governor. Ask the Bourbons of the Empire State how they liked Mr. Hughes when he sat in the Executive Chamber at Albany.

Hughes and special interests? Nonsense.

Another story of equally fantastic absurdity comes to the public regrettably coupled with the name of so high-

minded a gentleman as Henry Cabot Lodge. It runs to the effect that when the second note to Germany on the "Lusitania" case was about to be sent, President Wilson had written a postscript assuring Berlin that the American insistence on "strict accountability" need not be taken seriously, and was deterred from sending it only by the unanimous protest of his Cabinet.

It did not need the hot denial of Assistant Secretary of State Breckenridge, from whom the story was alleged to have come by a roundabout route, to stamp it as a pure invention.

The President is not the man to eat his own words like that.

### HEALING OLD WOUNDS

**T**HE long controversy between the trustees of Vanderbilt University and the authorities of the Methodist Episcopal Church, South, left some bitterness which has been gradually vanishing since the Supreme Court decision in favor of the university. It is now announced that the Right Reverend E. R. Hendricks, Senior Bishop of the defeated denomination, has consented to deliver a series of lectures at the university. This is a gracious act on the part of the Bishop and will do much to heal the old wounds.

While some will take occasion to condemn this most Christian and brotherly arrangement, the wisdom and highmindedness of the church's senior representative will be generally commended. The Methodist Episcopal Church, South, is to be congratulated on having such a magnanimous dignitary, and Vanderbilt University on securing such an able lecturer.

### COMPULSORY ARBITRATION

**A**LTHO New Zealand has had a law for the compulsory arbitration of industrial disputes for a generation, the principle has never extended beyond the Antipodes until Norway the other day adopted the reform. According to the *American Scandinavian Review*, whenever the King shall find a labor dispute threatening the welfare of the community, he can decree that it shall be settled by arbitration and forbid in the interim a strike or lockout. The board of arbitration consists of a chairman and two members appointed by the King and two members appointed by the contending parties. The board can declare judgment even in case neither party appears before it, and the award is binding for a stated period not to exceed three years, unless the disputants should agree upon an extension of time. Either side can refuse to carry out the award, the employers by going out of business and the employees by resigning their jobs. But if they strike or lockout it becomes a punishable offense.

This scheme has a little too much of the royal flavor about it to be popular in a democracy, but it is a long step in the right direction. Whether we here in the United States, in view of the present eight-hour agitation, adopt the Canadian plan of the compulsory investigation of industrial disputes, or merely go in for voluntary agreements or "protocols" for obligatory arbitration, the New Zealand and Norwegian plan of compulsory arbitration is the one that probably all nations will have to come to in the end.

THE MISSING LINK

# THE STORY OF THE WEEK

## The Danube Bridge

From Bucharest, the capital of Rumania, a railroad runs east to the Black Sea at Constanza. This crosses the Danube at Tchernavoda by one of the longest bridges in the world, for the Danube as it approaches the sea swells to the width of a thousand yards and floods the low western bank for miles besides. So the Tchernavoda bridge has to stretch over more than eleven miles of river and marsh. Its construction twenty years ago gave to Rumania a direct outlet to the sea and the old Roman city of Constanza, named after the sister of Constantine the Great, became a booming port from which Rumanian grain and oil were shipped to Europe. Just now this port, railroad and bridge are of more importance than ever, for it was thru Constanza that the Russian troops were coming to defend Rumania against the enemies investing the country on three sides. Deprived of the Dobrudja, Rumania becomes an isolated inland nation like Serbia or Switzerland.

Since the Dobrudja lies between Rumania proper and the sea, the possession of this territory has always been regarded by the Rumanians as essential to their national security and prosperity, altho it is largely barren and the inhabitants were more Bulgars and Turks than Rumanians. Part of the

Dobrudja was taken from Turkey by the Rumanians in 1877, the rest of it from Bulgaria in 1913. No wonder then that the Bulgars are overjoyed at regaining the land which they have always regarded as theirs by right of nationality.

Under the leadership of Field Marshal von Mackensen, and with the aid of some German and Turkish troops, the Bulgars entered with eagerness upon the invasion of the Dobrudja just as soon as Rumania declared war against Austria two months ago. The first thrust brought them to within ten miles of the railroad, but here they were halted by a line of entrenchments stretching from the river to the sea. The Russians held the center and the Rumanians both wings. Against the eastern part of this line Mackensen concentrated his heavy artillery and on the morning of October 19 opened fire. The hills near the sea defended by the Rumanians were captured the first day and on the second 3000 Russians including a regimental commander were taken prisoners.

## The Capture of Constanza

The Russians and Rumanians retreated to the railroad so hotly pursued by the forces of Mackensen that they had no time to rally. Constanza was evacuated without a struggle and the Bulgarian cavalry

swept on to the north in pursuit of their flying foes. The Russians tried, on October 23, to make a stand at Medjidie, where the branch line coming up from Bulgaria joins the railroad from Bucharest to Constanza, but the capture of Constanza gave Mackensen a chance to attack Medjidie from that side as well as from the south and the Russians were routed that evening. Part of the Russo-Rumanian forces managed to get safely across the Tchernavoda bridge; the rest retreating north, are not yet out of danger because the Dobrudja is a blind alley and they have the sea on one side, the river on the other and the swamps of the Danube delta ahead of them.

The Rumanians blew up the Tchernavoda bridge before it could be captured by their foes, but how completely it is destroyed is not reported. It would be difficult to demolish altogether so extensive a structure in a hurry, and if it can be rebuilt it may be used for an advance upon Bucharest. Otherwise it would be easier for the Bulgars to cross the river at Tutrakan, where it is narrower and from which a railroad leads to Bucharest only thirty-five miles away. The Rumanians crost on pontoons near here earlier in the month and Mackensen ought to be able to do the same.

In this four-day fight in the Dobrudja the troops of Mackensen took nearly 7000 prisoners including 75 officers, and their booty comprises 12 cannon, 52 machine guns and several hundred railroad cars. How much of the stores at Constanza fell into the hands of the invaders is a question. The Rumanians claim that they burned up the grain elevators and the oil tanks before they evacuated the city, but the Germans assert that most of these are intact and full of supplies. Seventy Turkish vessels which had been interned in the harbor by the Rumanians were released by the capture of the city. The Russian flotilla slipped out just before the Bulgarian cavalry entered. The sailors had been employed up to the last moment in setting the stores on fire. This seems to have been the only service rendered by the Black Sea fleet, tho one would have expected it to have taken an active part in the defense of the seaports of the Dobrudja. The German bulletin states that seven Russian warships tried to operate against the troops marching on Constanza along the coast but were "forced by countermeasures"—whatever that may mean—to keep so far off shore that they could not accomplish their purpose.

On the mountain frontier Falkenhayn has made considerable progress during the week, altho the Rumanians claim now to have got the upper hand. But he has taken Vulcan Pass on the west as well as Tomos and Predcal

THE CONQUEST OF THE DOBRUDJA

Field Marshal Von Mackensen, with a mixed force of Bulgars, Germans and Turks, has driven back the Russians and Rumanians and captured the railroad line that connects Bucharest with the coast. A detachment of Bulgar cavalry, moving up the coast, first took the seaport of Constanza, then swinging to the left drove their enemy from the railroad junction at Medjidie. After running as many trains as possible over the Danube at Tchernavoda the Rumanians blew up this famous bridge leaving a considerable part of their army on the eastern side. The troops left behind have retreated into the northern part of the Dobrudja, where they are hemmed in between the swamps and the sea. On the northern side the Austrians under Falkenhayn have invaded Rumania thru the Tomos and other passes and are trying to gain the railroads leading to Bucharest.

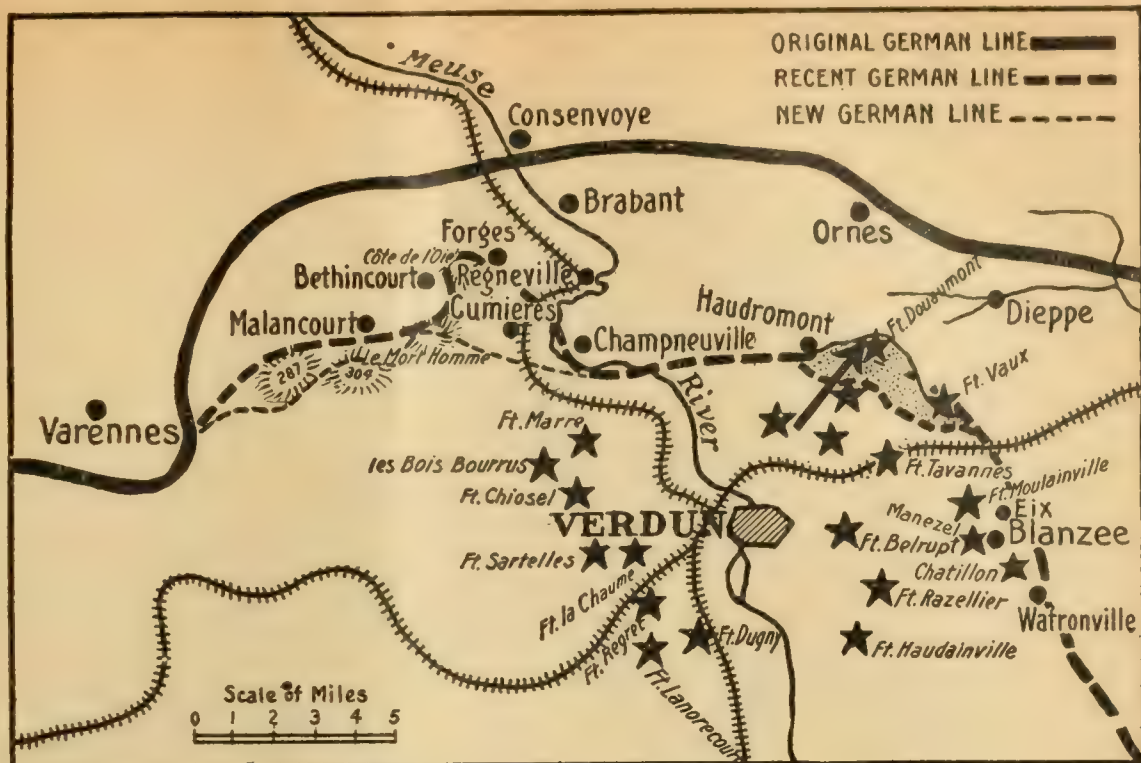

passes which lead from Kronstadt to Bucharest. This brings the Austrian army close to Kimpolung, which is at the head of one railroad leading to Bucharest and close to Sinaia, which is on the other railroad also leading to the capital. Sinaia is picturesquely situated on the southern slopes of the Transylvanian Alps, and here the late King Carol built his summer palace, so its capture would have a sentimental if not a military importance. The failure of the Rumanians to hold the mountain wall was in part due to their lack of artillery and in part to their inefficient air service. To remedy the latter, 128 French aeroplanes have been shipped to Rumania via Russia, and four British aviators from the Greek island of Imbros flew over Bulgaria and landed at Bucharest, more than 300 miles away.

#### French Regain Ground at Verdun

We have grown so accustomed to

the plodding progress of military operations in France that we have almost forgotten the possibility of sweeping movements like that at Verdun this week, and in fact the war has furnished few such dramatic surprises as that the French should win back in five hours what it took the Germans five months to gain.

It will be remembered that in the western field this year the Germans concentrated all their efforts upon the reduction of the fortress of Verdun, which stands at the corner of the defensive frontier of France. Starting as early as possible in the season before the Anglo-French offensive could be launched, the Crown Prince attacked on February 21 and soon took Douaumont, one of the outer ring of forts, five miles northeast of Verdun. Then the French rallied and offered such a stubborn resistance he was never able to get more than a mile or two nearer on this side, altho for months men and ammunition were sacrificed with unparalleled prodigality in the attempts. The Germans are estimated to have lost between four and five hundred thousand men about Verdun.

#### FRENCH VICTORY AT VERDUN

By a sudden advance last week the French regained the fortified hills northeast of Verdun. Fort Douaumont, which the Germans took last February, is now in the possession of the French, and they have Fort Vaux almost surrounded. The dotted area is the territory gained by the French in their new drive.

When the Allies started their drive on the Somme it was necessary for the Germans to shift part of their forces to this quarter. Probably also they have sent some to back up the Bulgars in the conquest of Rumania. This has apparently weakened the German lines about Verdun, so that General Nivell was able with only three divisions to drive the Germans back beyond Douaumont in the course of a single afternoon.

The bombardment of the German lines began at dawn on October 24, and at noon the infantry charged, sweeping swiftly over the battlefields that a few months ago figured in the despatches every day—Fleury, Côte de Froide Terre, la Caillette, la Chapitre and Thiaumont, up to the quarries of Haudromont on the left and Fort Vaux on the right. These two points the Germans are still holding, but their repeated attacks on the center have not dislodged the French from any of the gained ground. The French took 4500 prisoners and their losses were not half that number.

**A Channel Raid** One of the surprises of the war has been the success of the British in keeping in constant communication with the continent. Millions of troops have been transported back and forth across the English Channel without loss. The Germans secured a sea base close by when they took the Belgian Port of Zeebrugge, but the Channel has been so well protected by patrol boats, mines and, it is said, great steel nets, that the Germans have rarely attempted and never succeeded in interrupting the trans-channel traffic.

Now, however, it seems that the Germans are entering upon a more aggressive policy. On the night of the 25th a flotilla of ten torpedo boats from Zeebrugge made a raid on the Channel and sunk one transport, the

"Queen," which by good luck was not carrying passengers. The crew was saved. One of the British destroyers, the "Flirt," was lost and another, the "Nubian," disabled and grounded. A number of small outpost and guard were also sunk. The German report says that all their torpedo boats returned safely. The British claim that two of them were sunk.

**Norway and the U-Boats** The action of the neutral nations in regard to submarines is not the same. The Dutch Government has taken the same stand as the American and recognizes naval submarines as warships and commercial submarines as merchantmen. The Norwegian and Swedish governments, on the contrary, have complied with the British request and have forbidden belligerent submarines to enter their waters except in cases of emergency, when they must remain on the surface and fly the national colors. The German Foreign Department has registered a strong protest against the action of Norway as contrary to international law, as embodied in the Hague Convention.

In order to make Norway realize the danger of such discrimination against German warships of the submarine type an active campaign against Norwegian shipping has been undertaken by the German navy. During the first three weeks of October twenty-three Norwegian steamers, insured for \$5,000,000, were sunk by German submarines on the charge of carrying contraband. On October 24, thirteen Norwegian vessels of various kinds were reported sunk, and on the 26th nine more, valued at nearly \$2,000,000. The British, Danish and Swedish shipping has suffered next in order to the Norwegian. There has been little loss of life, as the crews are given time to escape.

#### THE GREAT WAR

October 23—Mackensen takes Constantza and Medjilie in Dobrudja. Austrians take Vulcan Pass.

October 24—French regain Douaumont at Verdun. U-boats sink twelve merchantmen.

October 25—Rumanians blow up Danube bridge. King Constantine agrees to demands of Allies.

October 26—German counter-attacks at Verdun repulsed. German torpedo boats raid English Channel.

October 27—Russians bombard German lines west of Lutsk. Dr. von Körber accepts position of Austrian Premier in place of Count Stürgkh, assassinated.

October 28—Reichstag votes \$3,000,000,000 more for war purposes. England refuses to remove blacklist.

October 29—French closing in on Vaux at Verdun. Italians bombard Austrian lines on Carso.

The German U-boats now range up the Norway coast and into the Arctic Ocean, and so command the route to Archangel, Russia's only port this side of the Pacific. If the Germans succeed in stopping this traffic it will prevent the Russians from getting the munitions for want of which they are unable to push their offensive against Austria. The port of Christiania is virtually closed by the three German submarines that guard the entrance to the fjord.

The U-boat campaign is a severe blow to Norway, for that country is largely supported by its shipping, and this has been immensely profitable during the war. The sympathies of the Norwegian people are more strongly pro-British than either of the other Scandinavian nations, and it is quite possible that the German attacks may drive Norway to seek British protection and perhaps to enter the war on the side of the Allies.

Field Marshal von Hindenburg, now in supreme control of the conduct of the war, is trying to put a stop to the agitation for a ruthless use of submarines against British shipping, regardless of American opinion. For this he is being bitterly assailed by Count von Reventlow, who demands the unrestricted employment of Germany's strongest weapon against England, in spite of American protests. The papers opposing the Chancellor and Hindenburg argue that since the British liners are now armed with guns of long range for the express purpose of sinking submarines at sight, they can no longer claim exemption from attack as innocent merchantmen.

**A Greek Republic?** The provisional government which ex-Premier Venizelos has set up at Salonica in opposition to the King has received recognition from the Allied Powers and even the American representatives treat it as a de facto government. Yet it is hard to say what kind of a government it is, since

there is still a king nominally ruling Greece and French officers are actually in control. The Greeks in America are said to be mostly supporters of Venizelos and are contributing to his funds. They are anxious to enlist in the army he is raising to fight on the side of the Allies against the Bulgars, and the provisional government is hoping soon to open recruiting offices in the United States.

A great many Greeks who have lived in America are now in their native land and they are disposed to favor the overthrow of the monarchy. It is said that Venizelos has in mind the establishment of a Greek republic and that in this he has the support of the French commander-in-chief, General Sarrail. But such a movement would probably be suppressed by the monarchical members of the Entente Alliance. This is confirmed by an editorial in the *London Times*, which states that the protecting powers will see to it that the monarchical principle is safeguarded. But the *London Daily Mail* protests against such action by the British Government:

Rumor says that the obstacle to a republic is not in Greece, but in the courtly minds of statesmen elsewhere, for example, Viscount Grey. But it seems incredible that the theory of divine right should have any considerable supporters in England. If the Greeks want a republic we see no reason why they should not have it.

The *London Daily Express* speaks plainly of the desirability of removing Constantine from the throne, but is ambiguous about which form of government is to take his place:

The King's father owed his crown to France and Great Britain. They who set up can also pull down. Constantine has had rope enough. He is determined to pay no heed to warning or advice. The continued intrigues in the Greek capital are hindering the campaign in the southeast, and are a fruitful source of weakness and distraction. It had become the duty of the Allies, both to Greece and to the general European cause, to bundle out this Teutonic-Danish King, and to set up a really national government in Athens.

**Is There a Border Plot?** Secretary of War Newton D. Baker, the *enfant terrible* of the present administration, has sprung another sensation upon the electorate. Barely had the excitement caused by his injudicious comparison of the American revolutionists with the Mexi-

can insurgents died away, when Secretary Baker made public a charge that "enemies of the administration's policy toward Mexico" had plotted with Villa and other opponents of the de facto government in Mexico to attack the American army of occupation or make some raid across the border before election day in order to discredit President Wilson and make certain his defeat. General Funston and General Pershing were warned by the war department to be in readiness for such an attack. The bandits are said to have been paid in silver coin and supplied with ammunition from the Amer-

ican side of the border. In view of the recent activity of Villa this warning from an official source is regarded as highly significant and important.

The Republican managers, putting a hasty construction upon the statement of Mr. Baker, received it with amazement, indignation, and something very like satisfaction. They felt that President Wilson had made an irreparable blunder in permitting a subordinate to charge his political opponents with so gross a crime. Secretary Lansing was forced to explain that the conspirators to whom Secretary Baker had referred were not Americans but refugee Mexicans who had every interest in disturbing the peace between Carranza and the United States and in inflicting a blow upon the Wilson administration. He did not believe that citizens of the United States would be guilty of participation in such a plot. Eliseo Arredondo, Mexican Ambassador Designate to the United States, expressed his belief that a border attack was planned with a view to impeding the negotiations now going on between the representatives of the United States and the de facto Mexican government. He thought that an incidental motive might be to influence the coming elections not only in the United States but in Mexico as well, where the Carranza government has promised to submit to the verdict of the Mexican electorate after a stable government has once been established.

In spite of Secretary Lansing's explanation of the warning by the Secretary of War, and Mr. Baker's approval of his interpretation, Republicans are inclined to believe that the incident will provide them with good campaign material. They say that if there still is danger of an attack on the border in spite of all the moral support that the administration has given to the Carranza government and the sending of the regular army and the militia to help it crush Villa and his followers, then the conclusion is inevitable that President Wilson's policy has been a failure. The government at Washington hopes, however, that the exposure of the plot and the precautions which have been taken to meet it, will frustrate any attempt to carry it into effect. A statement by Luis Cabrera, chairman of the Mexican delegation to the Mexican-American Joint Conference, issued on the authority of the Mexican News Bureau, charged American officials with aiding anti-Carranzista plots by permitting the smuggling across the border of munitions for the rebels and by not deporting the agents of Villa and other opponents of the de facto government who are carrying on a hostile propaganda on American soil. American officials indignantly deny that they have shown any laxness in guarding the border.

**The Mexican Civil War** The outcome of the battle of Santa Ysabel on October 29 is still a matter of doubt, since the reports from Carranzista sources still represent it as a victory or at least an in-

decisive engagement, while all other accounts agree that it was a triumph for Villa. At all events, Villa is still alive and free to renew his attacks whenever an advantageous opportunity arises. Because of the disturbed condition of the country, it is thought probable that some American regiments may remain in Mexico till the end of winter, and the War Department has suspended for the time being furloughs to enlisted regulars who have served in the army long enough to entitle them in normal times to enter the reserve. Villista bands are said to be operating within twenty-five miles of General Pershing's outposts. Villa is relying upon national feeling in Mexico to rally the people to his cause, and it is rumored that he has ordered the American army to leave Mexican soil.

Carranza's troubles are not all to be laid to Villa's charge, altho Villa is, of course, the most serious menace to the de facto government. Felix Diaz is still waging a vigorous guerrilla warfare in the states of Colima, Oaxaca and Mexico in southern Mexico, and Zapata is fighting and plundering almost to the suburbs of Mexico City. Perhaps it was this renewed activity in the neighborhood of the capital that gave currency to the recent report that Carranza had made up his mind to leave Mexico and seek refuge in some other country from difficulties which had grown too great for him to master. Carranza himself emphatically denies that the enemies of his government are gaining strength either in the northern or southern parts of Mexico. His statement represents Felix Diaz as defeated in several recent skirmishes and now fleeing toward the frontier of Guatemala.

The victory, or whatever else it was, at Santa Ysabel gave Villa practical control of the countryside south and west of Chihuahua City. The insurgents have used this control to isolate

the city from southern Mexico by cutting railroad lines and telegraph wires and burning the Ortiz bridge, thirty miles south of the city. Some fear exists that Villa may decide to attack Chihuahua City. If he does, the battle may decide the fate of the rebellion, since the Carranza Government has concentrated some eleven or twelve thousand men in the city, which is probably a larger number than all the insurgent bands combined.

### The Wilson Campaign

President Wilson has abandoned the porch for the railroad platform. During the week he visited Ohio and spoke there on the issues of the day. In an address at Cincinnati he made one of the most significant remarks of the entire campaign. "This present war," he said, "is the last war of this or any kind involving the world that the United States can keep out of." He said that in his opinion the business of neutrality was over, not because he wished it so, but because war is now waged on such a scale that the position of neutrals has become intolerable. He urged that the international difficulties of the future demanded the organization of a League to Enforce Peace and that the United States could not if it would remain outside of such an alliance. He also scouted the Republican cry that the prosperity created by the war would pass away with it and expressed his belief that the economic foundations of the country were sufficiently sound, thanks to such wise legislation as the Federal Reserve act, to meet any competition that might arise after the war.

The Democrats are pointing with pride to several prominent men who have rallied to their standard, such as Henry Ford, the automobile magnate of Michigan; Victor Murdock, the Progressive leader in Kansas; ex-President Eliot of Harvard University, and Thomas A. Edison, the most

famous of American inventors. All four of these men have issued public statements within the last few days favorable to the Democratic candidate. Henry Ford, it will be remembered, was a candidate for the presidency in the Republican convention at Chicago and received the vote of Michigan.

The last days of a campaign are always turbid with charges and counter-charges. The allegation that has attracted the most popular interest during the past week was that Mr. Hughes had entered into a secret agreement with Jeremiah A. O'Leary, promising that if he were elected by the aid of German-American votes he would insist upon England's observance of American rights at sea. The Republicans not only deny that there is any truth whatever in the accusation, but charge in their turn that President Wilson desired a postscript added to the second "Lusitania" note to Germany which would have made that document much milder in tone and was only dissuaded from this step by the protest of his cabinet. Secretary Lane denounces the charge as a campaign falsehood.

**The Hughes Campaign** Mr. Hughes spent a very busy week making the last grand tour of his campaign for election. On October 26 Mr. Hughes spoke before an audience of workmen and others in Hartford, Connecticut, warning them that the present Democratic tariff was inadequate to insure the continuance of prosperity after the end of the Great War. In Boston he promised ten thousand hearers to appoint "the ablest cabinet the country can supply" if he should be chosen president. He remarked that in his opinion the privileges of American citizenship, including the right to be protected in any part of the world by the authority of the United States, could not be withheld at the pleasure of the government, but must be maintained under all circumstances. On the following day he went to New York State and told an audience of two thousand in Utica that a vote for the Republican

© Brunkerhoff in Boston Journal  
THEY'RE ALL SHORT THIS YEAR

national ticket was a vote for peace, since peace could only be secured by upholding the self-respect and prestige of the nation. In Rochester he emphasized the unpreparedness of the United States to meet European competition.

Cornelius N. Bliss, treasurer of the Republican national committee, filed a statement of campaign receipts and disbursements up to and including October 23. According to his report, the Republican party received a campaign fund of \$1,667,757 from more than twenty-two thousand persons. In 1912 only two thousand Republicans had given money to the national committee's fund, showing the wider popular appeal of the party this year than formerly. The Democratic national committee, however, reported contributions from more than forty-one thousand persons. The total Democratic fund was \$1,006,283; much less than the Republican. Both parties were able to show a small balance of money still unspent when the official statements were filed.

On the following Monday Mr. Hughes entered the Middle West for a series of speeches to strengthen the loyalty of Ohio and Indiana.

**The Roosevelt Campaign** Ex-President Roosevelt's tour of the western states must be considered by itself, for, while the Colonel is supporting the Republican cause with whole-hearted loyalty, his arguments are his own and his point of view is not always that of the other organization leaders. On such questions as Mexico, the tariff, the need of civil service reform, national woman suffrage, and the unflinching defense of American rights the speeches of Mr. Roosevelt and Mr. Hughes are much alike; but few Republican leaders besides Mr. Roosevelt have championed compulsory military service or dwelt upon the merits of the European war. In a great speech at Denver on October 24, Mr. Roosevelt emphasized certain domestic policies upon which the Progressive party laid great stress in 1912, but which had largely dropt out of sight during the present campaign. He charged President Wilson with having neither enforced nor modified the Sherman Anti-Trust Law, which law he condemned as negative and hostile to the progress of trade and industry. He favored the Progressive remedy for the evils of big business; regulation rather than suppression. He advocated a vigorous use of the federal taxing power and control of interstate commerce to secure an adequate standard of living for the workman and the workingwoman. Finally, Mr. Roosevelt lauded the spirit of coöperation and public interest in the welfare of the individual which had given Germany such strength, and warned his hearers that without industrial organizations the United States could not compete with European countries of superior collective efficiency. On October 26, Mr. Roosevelt denounced the disloyalty of "professional German-Americans" before a large audience at Chicago, specifying in particular Professor Münsterberg of Harvard University. On Saturday, October 28, he spoke in Brooklyn, denouncing the President for saying that in future great wars America would be unable to stay neutral.

WHAT WOULD YOU HAVE DONE?

# THE SHAKE-UP OF LITERATURE

BY EDWIN E. SLOSSON

WHEN this weary old World got to the end of Chapter XIX of his history he turned over the page with a yawn and the wish that he would find Chapter XX more exciting than the *fin de siècle* stuff he had been reading. He found it so.

The real dividing line between the two eras is not the century mark, but August 1, 1914. If any book written after this date is the same as tho it had been written before we may safely say that it has little relation to actual life. It is not merely in trivial externalities such as the use of Petrograd instead of St. Petersburg but an indefinable tho easily detectable alteration of spirit. In more than one novel published last year it is possible to tell just how far the author had got when he opened the morning paper and saw that war was declared. We of the present generation used to be amused at our parents because they dated every event in their lives as "before the war" or "after." But we are already falling into the habit altho we live in a peaceful land.

## WAR PLOTS

WHAT an effect the Civil War had upon American literature is more readily realized by an outsider than by one of us. It is not merely that the struggle against slavery brought out the best of our poetry and prose, but the great conflict is still furnishing our writers with motives and plots. A few years ago on a Pacific steamer I got to talking with a young New Zealander about American literature. "I have stopped reading American novels," he said. "They are all the same and I know the formula. Virginia mansion—southern girl—northern lover—southern rival—Ft. Sumter fired upon—war—wounded—he saves him—he saves her—peace and wedding bells."

Of course I denied the slander on American literature, but I could not help thinking of it the other night when I dropt into a motion picture show and found them reeling off this same old plot. Now if fifty years after the Civil War is over its incidents are still the staple of our stories we may imagine how long literature will be concerned with the Great War.

Books about the war have been published at the rate of more than two a day for the last two years. An index to war books being prepared by the St. Bride Foundation Library, London, has already reached its fourth volume and contains two thou-

sand titles. Probably this does not include much of the German war literature, which is exceedingly voluminous. Before the war Germany was maintaining a three-power standard in books, publishing some 36,000 volumes a year to 12,000 in Great Britain and as many in America. Many of the German publications are pamphlets, but a German pamphlet is no light matter.

There is, however, no chance for Americans to ascertain what is the present trend in German literature. Old England, like the careful mother she is, goes thru all the mails and throws out anything likely to contaminate our innocent minds, that is, anything "made in Germany."

But if there are no books from Germany, there are more about Germany in English than ever before; more in fact than about all the other countries put together. Somehow it is felt that Germany requires explanation. The British seem to be taking an extension course in German philosophy and politics, and are translating the most portentous works which they had no time to read in the leisurely days of peace. There are surprisingly few new books about Austria-Hungary or France, and not so many about Russia as there should be. A "cultured person" used to be defined as "one who has been to Italy." Most cultured persons wrote a book about it. It was, as Howells once said, the favorite American pastime. Howells ought to know, for few have indulged in it so freely as he. At any rate, Italy, which used to head the list of travel books, has now dropt out of sight. There is in fact a conspicuous slump in illustrated travel books and all works on the fine arts. This is the chance for our American artists and publishers to show what they can do, now while they are freed from the competition of effete Europe and the pauper labor of antiquity. But perhaps they are showing what they can do.

Comparing the list of new American books for 1915 with that for 1913, we are struck first by the jump in religious books which have ousted sociological books from their place next to the fiction, and sent it down to fifth. In fact religion would stand at the head of the list now if we added to it, as we might justifiably, a part of those classed under philosophy. Third in the 1915 list stands history, which has jumped up from the ninth place, and then comes poetry and drama, which used to be eighth in the number of books published during the year.
